And when we do and when we listen to the knowledgeable, professional voices, and I believe I have heard most of them, no one could say this is a copper fashioned clearcut decision, but this is what we in the law call not a reasonable doubt but a preponderance of the evidence.

I have had the opportunity to meet with the distinguished Senator from Ohio, Senator GLENN, for whom I have the highest regard particularly on military matters, particularly on aircraft matters. He knows way more than I will ever know about them. I have had the opportunity to be in restrictive sessions there and to be briefed for hours each morning. I have talked to various personnel before and after President Reagan's administration, and I think I have listened to the best of the best and I have more than overwhelming evidence in my judgment that the Stealth bomber is not only technologically feasible it is very, very realistic and very, very probable and they have what in the military is an IOC date of either one can argue 1988 or 1989. Secretary Harold Brown wrote his article.

The distinguished Senator from Indiana, who is presiding, asked the former Assistant Secretary of Defense for Planning, Mr. William Perry. He said 1989 or 1990. They have been using that date right along.

We know, and it is said in the clear because I would not want to get into any kind of restricted information, but it is said in the clear in the Perry testimony that the difficulty in reality is not so much of the design of the plane and it depreciating so quickly as it is in the appreciation of Soviet fire control systems, their look-down shoot-down capability, and that is as much as can be said.

But they are moving and they are moving on schedule, and—that is why a B–52 equals a B–1 as just reported by some of the testimony that we heard in the Appropriations Committee. It is the improvement on the part of the Soviets relative to detection, and fire control that brings us to a crisis in 1990.

Let us jump to that window of vulnerability. It is very interesting that when the Senator from Georgia and the Senator from Nebraska, Senator EXON, were cross-examining Assistant Secretary of Defense Perry about the window of vulnerability, Secretary Perry did not accept service on that window of vulnerability.

It is generally thought to relate to the ICBM and now they are vulnerable. Yes, they are vulnerable, and that opens the window, but not really opens the window, if you please, according to Mr. Perry, but actually lets one see through it. The window has not been opened with respect to the triad. We have the Trident and we have the B–52 manned strategic bomber, and I will go into that if we get into debate because the Senator from Utah, who has also my greatest respect as he is a former pilot of many, many years, and knows more about aircraft than I ever will, is very, very much concerned about the age, usage, and worthiness, one might say, and cost of repair and maintenance of the B–52.

I, as many others right here understand it to be a very, very usable plane into the 1990's. But they all cut off at 1990.

You are not dealing with that particular problem in relation to the B–1 or the B–52 until 1990.

While the ICBM is threatened, we rely now, and they withhold from strikes, we know—at least we think—on account of the Trident and on account of our manned penetration bomber. We hope to repair that ICBM leg of the triad as of our action yesterday, and we are looking now to the time period that we do have and the problem at hand.

The real problem, if you were to look at this and measure it, is in the testimony of everyone intimately connected with it on the point of the B–1 not being able to be relied upon after 1990.

In the Armed Services Committee that was not a casual portion of the testimony by Secretary Weinberger. Secretary Weinberger responding, if you please, to questions by Senator EXON from Nebraska, stated:

I think there is no question whatever that we will not be able to use the B–1 as a penetrator after 1990.

This is all relative, but you have to vote yea or nay. You cannot vote maybe. You have to vote aye or no on this, and you have to make your judgment and make your call on it. So it can vary by some months, but they are pretty categorical on this.

Secretary Weinberger, in answering the question of Senator WARNER from Virginia, said:

If you do the B–1 only, you spend a lot of money.

This is their testimony, incidentally, a month ago, a little less than month ago, in November, November 5, or exactly a month ago before the Armed Services Committee.

If you do the B–1 only, you spend a lot of money. Again I am trying to guess at the extent of development of the Soviet air defenses. So if I use a couple of years—

You can see he is not casually throwing it out, he is measuring that judgment—

So if I use a couple of years, give me leeway, 1989, 1990, probably 1988 to 1989, you lose the ability to penetrate unless someone wants to direct suicide missions, and that is not anything I am going to do.

That is the Secretary of Defense less than a month ago.

But there is no question about his particular judgment on that because everyone has come down with the same thing. By the beginning of the nineties, the B–1's effectiveness as a penetrator is greatly diminished. By then its proponents say it will become a great conventional plane. But when do we need the B–1 or any new plane as a conventional plane. Dr. Perry, when Senator QUAYLE asked him about this answered:

My feeling was that the need date for the airplane was probably not until the mid-1990's rather than the mid-eighties.

I can go through all these different records, and bring them out, because you just do not want to wing it here trying to save money. I would rather make the error on the cost on the side of extravagance, I would rather make the misjudgment—and everybody says that is an understatement, that that fellow has been trying to appropriate an entire nation's economy for national defense—but that is not necessarily the case—I would make the error on the side of making sure we had a strong enough defense.

But we have two planes and we do not have to go into all the costs. One of the things Dr. Perry laments is that we have slowed down. That is why there is this transfer amendment for the refurbishing and coming on board faster of the Stealth with the B–52D's being phased out in 1986 under his testimony. But the Stealth bomber has been slowed down, the cruise missile has been slowed down, and Dr. Perry goes into all of these things.

I am rather persuaded by that testimony. I think the full force politically, if you please—I understand the Air Force—and I know because I tried to get information on end strength on another amendment, and as I stated on the floor, I might as well have gone there as a Communist. They did not even want to talk to me, did not even answer the call, I could not get any information out of them. So they know how to get lockjaw toward a U.S. Senator, to give, and get, and release, and resist as they wish.

But in any event, the Air Force, I understand, wants to come in now and wants to run up all the costs of the B–52. They have about a $21 billion pad in there but this debate does not affect those costs really one iota. The B–52G's and H's stay onboard until 1993, give or take a year. There has been plenty of testimony. They got under Dr. Perry's testimony a good usage for 10 or 15 years, so you do not have to get into that Mickey Mouse of "Oh, heavens, for the same amount of money you can get a B–1." That is not the case.

This is a $40 billion amount that is needed elsewhere, and needed now.

Let us talk about the amount itself because that is one of the most interesting features. We talk a different language in this National Congress. If you look at the particular projections of costs, you will find in this one item of weaponry alone we are talking substantially the difference that stopped the Government on Monday morning when President Reagan vetoed the continuing resolution for appropriations.

We had argued in the back rooms, President Reagan wanted $1.5 billion for foreign assistance, for foreign aid. He called Mr. WHITTEN, the chairman of the conference, from Mississippi; he called Mr. WRIGHT, the majority leader over on the House side. They said:

Mr. President, if you, the President, say in Latin America we need this money, we will give you $500 million.

We were all on that conference committee, so substantially the difference was another $500 million to $700 million that we broke up the whole Government over.

Well, here is one item, dear friends, and look at it. In 1982 the Department of Defense says it is only $2.5 billion, but CBO estimated, using all the facts and figures by GAO and others, that that cost is going to be $3.2 billion in 1982; in 1983 $4.2 billion according to the Department of Defense; but CBO says it is $5.7 billion, that this program is scheduled to cost in outlays by 1984—and, we are talking about just inflation, not all the add-one, and I will get to the Proxmire letter, the letter of the ranking member of our Appropriations Committee, and what was left out. But these are the realistic items to make the B–1 the fine instrumentality. they call it; you are spending almost $9 billion in 1984; $11.3 billion in 1985; and $10.5 billion in 1986.

As a budgeteer I am looking at $39.8 billion. Mr. President, I ask unanimous consent that this table showing the CBO estimates of cost of the B–1B and the Department of Defense estimates, with the difference of $11.9 billion in estimated costs be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

B–1B ESTIMATES

[In billions of dollars]

	82	83	84	85	86	Cumulative
CBO	3.2	5.7	8.9	11.3	10.5	39.8
DoD	2.5	4.2	6.2	8.0	7.0	27.9
Difference	.7	1.5	2.7	3.3	3.5	11.9
DoD inflation	7.2					
CBO inflation	9.2					

Mr. STEVENS. Mr. President, since the Senator has a normal break there, will the Senator yield for just a question?

Mr. HOLLINGS. Yes.

Mr. STEVENS. I wonder if we might explore the possibility of a time agreement on the Senator's amendment, something that would provide, say, that we would vote no later than 6 p.m.? Would the Senator be willing to do that?

Mr. HOLLINGS. I would aim in that direction, I say to the Senator, but I could not make the agreement. I think if I could get through these opening remarks, then I know the distinguished Senator from West Virginia, the distinguished Senator from Arkansas, and the distinguished Senator from Georgia want to speak and I just cannot tell. There is no way for me to tell. I think we waste more time trying to get to an agreement. I will work toward that, we are not trying to stretch this out at all.

Mr. STEVENS. I am just looking for a matter of balance, a little fairness.

Mr. HOLLINGS. The great balance and the great fairness to the people of America are our national security and particular our national economy. That is what I have in mind. I am not worrying about Senators now. I am on the floor and I will discuss this matter.

I was up here and we had all your nonsense at 2 in the morning and 3 in the morning. You put on a charade and wasted me for 3 days. I did not say anything. That was pure sham down in the well, twisting arms to send a bill that we said was going to be vetoed. We could have had the continuing resolution out. This was Hollywood east. Do not give me that stuff about balance. [Laughter].

I have the floor and I want to be heard on this, because I want to try to get ahead of that Soviet crowd within the economy of this country. I am tired of wasting money, like everybody else. I think I know a little about the budget.

Mr. STEVENS. Would the Senator yield for one more question?

Mr. HOLLINGS. Yes.

Mr. STEVENS. I appreciate the complete friendship that you expressed in that answer. [Laughter.]

Let me ask the Senator again in a different way. Would the Senator contemplate an outside time at which we might notify Senators that this amendment might come to a vote today?

Mr. HOLLINGS. I will contemplate it, but not out loud. [Laughter.]

Mr. STEVENS. Would he allow me to contemplate something between 6:30 and 7?

Mr. HOLLINGS. I will try my best, even for less. But let me see how much time my other colleagues may need. I cannot tell. The Senator from Ohio wants a substantial time on this and he is on your side on this particular question. So let us be fair.

I am getting now from staff a list that seven Senators wish to be heard. At 10 minutes apiece, that is 70 minutes. The Senator from Ohio will take a good half an hour. I do not know. Let us get going. I think we will save time.

But I think if you really look—here we talk of a $700 billion budget and here is where cost overruns commence because we are not candid. We gobble up the defense budget with one piece of weaponry and then we tell the Commandant of the Marine Corps—I just talked to him the other day. He was saying in the markup over in the Appropriations Committee, "Can you help me on this?" I said, "General, if I can get the room to do it, I think that this certainly should come first. I think you are our first line of defense. If we go nuclear, there is not going to be any line. But if we go conventional, I take it it will be the Marines. And they are the best. I want to support them."

But there I am. I cannot give the infantry a fighting vehicle, I say to the Senator. I would like to fight the way you and I fought in World War II. We went forward a certain number of kilometers. But you cannot just walk and march and crawl with the use of gas in Laos—gas.

With gas used in Cambodia, with gas used in Afghanistan, they are just not going to march forward like they do in that parade that they put on for Senators at Fort Myers. You know, that was a pretty parade. But that is not going to work.

The Soviets have 76,000 infantry fighting vehicles to take care of their troops moving forward. We have zero. And you are telling me about the B–1 penetrating bomber. If you want to know the most inefficient way—and the Senator is a former pilot who flew over the hump in China. I remember we saw the place where you landed at Beijing as Senator Mansfield used to say—not Peking, "Beijing."

So, all right, we landed at Peiping. But the point of the matter is that you cannot, if you please, fly those planes and get everything you want, all the weaponry, and leave the infantry, the Navy, the Marines, and everyone lagging behind because of a penetrating bomber that is going to be the last thing to be used in a nuclear exchange.

I asked the best of the best. Maybe he will identify himself on the floor in a minute, because he is on the other side. But I said, "Senator, you are a pilot and you are an astronaut and you know better than anybody else. Can you conceive of a B–1B ever being used, except to penetrate in a nuclear exchange as a penetrating bomber?" And the gentleman said, "No." And that is about the only time they would use them.

I cannot conceive, I say to the Senator, of a more inefficient and what we call in the law, last clear chance, to get at Moscow, than a manned, penetrating bomber. We can try ICBM's, SLBM's, ALCBM's, cruise missiles, Titans, Persian II's—I have a long list—as Commander in Chief before you send a crewman wandering around Moscow in a penetrating bomber. I can tell you that. And that tells a lot of the story.

Could it be that what the Air Force wants is the most expensive tactical bomber they can possibly conceive and give up on the manned strategic bomber, the manned penetrating bomber? Is that really their goal in this particular debate?

We have waited so long, we have tried so hard, we failed so much, that now is the time and we will at least get one good, modern, fine bomber. Even though it might be used as a cruise missile carrier, even though it might be used only as a tactical bomber, we will at least have that. And if we have to get to that other, we cannot say it out loud because it would be disloyal to the fraternity, but we will just go ahead and use cruise missiles.

Is that what they are saying? Then let them come out and say that and come back down to what we are going to pay for a tactical bomber or a cruise missile carrier, $400 million.

That is the most expensive route you can possibly contemplate. I think, in reality, that is what we are getting to.

Questions were asked. The Senator from Indiana asked: Is it not just a strategic attack bomber? Before the Armed Services Committee, Dr. Perry said the Stealth was going to be used for both. We were going to replace the B–52's all the way around after 1990 with the Stealth bomber.

You have no shortage of bombers. Dr. Perry testified that rather than B–1, more F–15E's. We have F–15E's coming along. They are great planes. That is

what the Saudis wanted. If you go back to that, they did not ask for AWACS, they asked for bomb racks.

Mr. STEVENS. I keep hoping the Senator will let me answer a question. He keeps asking the question and he answers them before I get a chance to answer them.

Mr. HOLLINGS. Then he said more F–16's. That is what the Israelis used on the reactors there at Baghdad. I could go on down the list, A–6's, A–7's, F–18 s—we have thousands of bombers coming out of our ears tactically. We are not short of bombers, but we are short of ammunition.

The Senator from Ohio pointed out that we are short on fuel and steaming hours. That is disgraceful. One training crew can shoot one missile and win one competition and the other crews sit there and look at it. It is a disgrace to take a Redeye missile and let only the crew that wins the competition shoot it and the rest look at it.

You ought to read the article in the Los Angeles Times concerning the use of electronic space games for training. I believe I had a debate with the Senator from New Jersey about Fort Dix and Fort Jackson. If this is the route we are going to take we ought to close them both down and let soldiers go to Atlantic City in the penny arcade and use one of those Ataris, let them walk on the boardwalk in their shorts and shoot on those little machines, if that is the kind of war we want, because they are not firing real bullets. It is a disgrace not to get the ships we need. It is a real disgrace not to go ahead with one particular restricted program that is so high on this list that you and I cannot discuss.

Mr. STEVENS. Is that a question?

Mr. HOLLINGS. No; that is not a question. I am going down my grocery list of where the priorities should be with every Senator. Because what is going to happen is, you are going to win your vote and then for the next 4 years we are going to have cost overruns and crowding out of every bit of readiness and a chance for the military to be proud and do their job.

The greatest morale deterrent that I know of is for a soldier not to be able to fire his weapon. Go out there at Grafenwohr in Germany. The first month, in October of last year, the fiscal year, they fired up 70 percent of their ammunition. They were through for the year. And there is no use for you and me to fly to Heidelberg to find out why they were on drugs. If I were a 19 year old and did not fire my rifle sometime, I would try some drugs or a fraulein or something, would you not? [Laughter.]

I mean, we act like it is a mystery lately; that American youth have deteriorated. They are fighting, ready to go, but you will not give the tools to them. Why? Because you have an obsolete, expensive, $400 million a copy B–1B that you demand, that you do not like but you are carrying out the orders of HOWARD BAKER and the majority.

Mr. STEVENS. Can we have a little dialog on that? How much time do you think a pilot spends in a simulator for his weather training or an astronaut spends in a simulator compared to the time they are actually flying the vehicles that the distinguished Senator from Ohio and the distinguished Senator from New Mexico flew? What are you talking about firing? We were out there firing guns, the M–1.

Mr. HOLLINGS. Sure, simulation is great.

Mr. STEVENS. Why do you have to spend $250 to $1,000 a copy for practice when you can do it with something like an Atari? Let me tell you, he is a much better pilot because he was in the simulators and I am a much better weather pilot from flying in the Link trainers than I would have been flying in the soup from the beginning. Where you are wrong is you are on the attack that says you have to spend money for real hard, round ammunition.

Mr. HOLLINGS. Right.

Mr. STEVENS. Or you have to spend all of this money rather than using our technology. The secret of what we have now is that the B–1B is a different bomber than the one that was stopped. The B–1B is different, it has a different mission, that the one that was stopped. This debate, I hope, will get around to it.

It is nice to be on the same side as the Senator from Ohio for a change today. We will get around to talking to you about some of these things.

I wish you would let us answer some of these questions.

Mr. HOLLINGS. You will answer them. We will not run out of time. One minute you want to restrict the time and the next minute you say we are running out of time.

Mr. STEVENS. But the Senator mentioned my statements in the beginning about the question of whether we could afford the course we are on. It is correct, as chairman of this committee, I held hearings all year, up even until October, and was not convinced that we had the right course until we got down into the basics and into the dollar signs and looked at what we were doing.

The course the Senator would put us on would make us rely upon the B–52's into the nineties and have no bridge between now and the success of the ATB technology.

Mr. HOLLINGS. Mr. President——

Mr. STEVENS. If we were involved in a situation where we had the ability to take that risk on a dollar sign basis, it might make some sense, but we do not have the right to take that risk, to risk the country's future, on the successful completion of the research and development that is associated with the ATB technology. Our decision was to maintain the B–52's as long as they are needed, until we get the B–1B's, and then to go to the B1–B's and all the time concentrate on ATB as much as the country can afford, adopting into the B–1's as they become new generations the technology that is proven so that as we get into the nineties we still have asset value.

If we put all our eggs in the B–52's when we get past the 1990's, it is like having relied upon the Edsel and we are at the end of the line. If the technologies do not come through, if the breakthroughs are not there that we anticipate in ATB, we would have no new system. We have to have a bridge from the Edsel.

By the way, it would be a darn good Edsel, but it would be an Edsel by the 1990's.

The B–52 is a good machine now and as testimony has shown, it is equivalent to anything else we can do between now and 1990. It is a good penetrating bomber until the B–1 is delivered. But the B–1 can follow on from that. It is a B–1B. It might become a B–1G by that time. But all the time we are looking to the breakthroughs that will come with the ATB technologies.

I think everyone here ought to be dedicated to the ATB technologies. I said that to my good friend, the minority leader, yesterday. This is the genius of America, to develop the ATB technology. We will do it and we will use them as soon as they are proven. They will be followed into the B–1B's as they become the C's, and the D's, and the G's, just as the B–52H is right now. The B–52H is a lot different airplane than it was when Harry Truman put it into being back in his period as President.

I would say to my good friend, and he is going to lecture us, do not forget that those of us who were very skeptical have been skeptical all through the year until it was proven. We have the proof. I put Dr. DeLauer's declassified letter into the RECORD 2 days ago. I hope every Member of the Senate will read it. I have offered to have the classified version of that letter at my desk for anyone who wants to read it.

Really, it is not necessary to make the decision on the floor of the Senate to have that classified information as compared to this amendment that the Senator from South Carolina has because it is proven. It can be proven categorically.

It is a cost-effective decision to make plans now to retire the B–52's when they have not lived out their existence and to have a bridge to go on, not just in the 1990's, but the B–52B's will fly well into the year 2000. I hope the Senator will let us take that case. I know he will.

I wish this was a clear amendment to just strike the B–1 money. The amendment is an amendment which is quite complex. It is quite long, as a matter of fact, because it spreads the B–1 money all throughout the bill and raises a lot of peripheral issues that may or may not be easy to take care of it.

Mr. HOLLINGS. Would you vote for it if we changed the amendment around that way?

Mr. STEVENS. No. I say it would be cleaner for me to deal with it as chairman of the committee to decide where the money went if you won. I would be horrified if the money deleted from the B–1B went where you want to put it. That is what I am saying, my good friend.

Mr. HOLLINGS. Mr. President, let me try to finish my statement and then we can move to some of the others. I see the Senator from West Virginia is waiting. Defense Secretary Weinberger's position on the B–1 has been keenly ques-

tioned by the former Secretary of Defense Harold Brown—who incidentally has served at the appointment of both Democratic and Republican Presidents. You will recall he was on the strategic arms limitation talk team in Helsinki back in 1971. Secretary Brown's observations on Secretary Weinberger and the B–1 appeared in the Washington Post on November 13. You will see how prophetic Mr. Brown was from the following quotes from the Post article. Mr. Brown said:

Defense Secretary Caspar Weinberger has indicated that the B–1 will be able to penetrate Soviet air defense until 1990—a year or two after deployment of the 100 B–1's included in the October second strategic program. After that, he suggests, the B–1 can effectively be used as a cruise missile carrier, for which it is grossly overdesigned and overpriced. Moreover, he judges that an advance technology "Stealth" bomber, employing recently developed techniques to reduce the observability of the aircraft by Soviet air defenses, could reach its initial operational capability by 1989, 3 years after that of the B–1. The Stealth bomber, because it is still in development, cannot be as certain to be operational on schedule predicted as can the B–1. But the B–1 manufacturing capability does not extend very far below the prime contractor, and will have to be rebuilt—and the program now includes over $2 billion of B–1 development funds. Moreover, there is a serious risk of diversion of funds from Stealth development and production into the B–1, particularly once the B–1 production line has begun and all the usual political pressure to keep it going has built up.

Is that not why we have the amendment drawn that way? Where do we put money back in? Into the Stealth. That is exactly what is occurring here already, in December 1981.

I quote further:

The B–52 force may now not be modified to be able to preserve a reasonable penetration capability into the late 1980's under expectation that the B–1 will serve that purpose.

Mr. President, is that not prophetic? Is that not what we have in the amendment? They have cut back on that particular beefing up of electronic design. There is nothing wrong with the airframe, engines and everything else. They are just more modernized, more advanced electronic equipment.

Quoting again finally from Mr. Harold Brown's article in the Washington Post, Friday, November 13:

We will lose assurance in the B–52's ability to penetrate some time after 1985, and in the B–1's penetration capability about 1990. The B–1 will have to depend on electronic countermeasures for its penetration and this is a game of measure and countermeasure whose outcome cannot be confidently predictable.

Mr. President, let me move on, because there is no risk—you can talk to anyone involved. We are not asking anyone to take a risk and send out all the secret letters, all this is open. In fact, if the media wants to be better informed, all they have to do is ask Ike Pappas, he can tell you. Ask George Wilson. He can tell you.

I could go down the list. They are writers and reporters, I say to the Senator; they keep abreast. It is really a constant game, a discipline, almost, reading the different magazines and talking to the persons involved. But, in the Budget Committee, we have to all of a sudden look—and we are not looking now at what Senator HOLLINGS or Senator BYRD or Senator STEVENS may want or not want. We are looking at what President Ronald Reagan said was necessary in his March budget and, then, when his program had faltered in September, what he knocked out of it.

If his economic program had worked—and heaven knows, we gave him all the Democratic votes for his spending cuts; we gave him all the Democratic votes for his tax cuts; we gave him all the Democratic votes and otherwise for AWACS and foreign policy. This is a Reagan Congress, which seemingly no one wants to report on. Here is what he then cut out when his program did not work, and I shall have to go into these items because this goes to the very heart of what we need when we sit down and look at the modernization and readiness cuts of some $5.2 billion in the Army.

We reduced the end strength, we debated that, $35 million just in the Army. They made reductions in operation and maintenance, canceled or adjusted funds for the camouflage screens, RDF improvements, tactical automation, and communications.

It cuts support funds for activation of new units that totals $79 million. The reduction in M–1 tank procurement reduced the tank buy from 720 to 665. What does that mean? That makes Chrysler look bad. They were good when we were buying 720, but when you cut them back, all of a sudden, you make private free enterprise, the industrial producer, have to take that unit cost with inflation and put it back in the other way and instead of getting the economical buy which the Government needs and the circumstances warrant, then we get the expensive buy and we run around like Chicken Licken—ooh, cost overrun.

Here is where the cost overrun is, in the B–1, I say to the Senator. When you go to this B–1 and cut economical tank buys out, you are starting your cost overruns in your tank program. Do not come back next year and tell us about it.

The Reagan budget amendments make a reduction in war reserve training ammunition inventories, $159 million; reduces truck and cargo vehicle procurement levels $126 million; and reduces the UH–60—that is that Blackhawk helicopter—Patriot and Roland procurements.

They reduced the M–88 Recovery vehicle procurement, and there are the R. & D. reductions.

Let us pause there for a moment. When you look at the national defense budget and you look at our competition, the competition they are talking about is unequal. I get letters saying, "Why can't we produce a tank as economically as the Russians?" I do not know what their cost is. I do not know if in Communist countries they allocate costs.

In any event, it is a rather amusing thing, because the truth of the matter is that they spend on personnel around 18 or 19 percent, about 18 percent on personnel costs. We are right up there at about 60 percent of the entire defense budget on personnel costs. That leaves us what for research and development? That means that they can spend about 35 percent for research and development and have been doing it for a 10-year period. They can get into space, they can get into lasers, they can get into the ballistic missile defense, and try and make their radar superior and different other things that we now hear about. And we are limited to less than 10 percent for R. & D.

Where does the cut come for research and development? The cut comes right here with this B–1 inclusion, because in order to make room for it, we have to cut the Army $137 million, we have to cut the Navy $198 million, we have to cut the Air Force $620 million out of research and development, and you have to cut the Department of Defense $92.4 million, for a total of $1,048,300,000.

When you cut that billion dollars out of R. & D., that puts you behind and you are playing catchup ball. You are trying to get ahead.

America's freedom depends upon the superiority of its technology. When that tank comes up, yes, we can build a cheap, tough tank, if we are going to build to 50,000. We only have 11,000. You know why we are not going to build 50,000? Because we are not going to man them. We are not going to have that big an Army. I have a bill in for the draft. We cannot get the personnel. We are not going to have 50,000 tanks, so our tank has to knock out three to five of their tanks every time we raise our heads, so we are going to have to have superior technology.

When we get the superior technology, which is the posture of our national defense, we have to have the superior soldier. That means the superior soldier intellectually. Therein is the problem. It is not the guts and the character, it is the preparedness of that volunteer soldier that has been going down. He cannot handle this technology. We are not getting a cross section of American society. So we are going in one direction for the superiority of technology and in the other direction for personnel that just cannot handle it.

Is Congress going to give us 50,000 tanks? If so, I shall hush. But they are not going to do it. So I have to insist on R. & D. I cannot afford to cut it. I know we can wisely spend way more on it. I know our people are smarter. I hope the Congress is not dumber, and that we are going to hereby cut all of this.

Well, these cuts we are talking about go right on down to the Navy. And not just in research and development funds. What about additional ships? What about the *Oriskany*? The Armed Services Committee on the Senate side put that in last year. And President Carter signed it. And now we are going to do what? Cut Jimmy Carter's defense budget this afternoon. And some want a time agreement.

Get on with it, they say. We can take Carter's budget that he signed into law

on all of these items and cut them back. They were found very, very necessary when everybody was moving toward a national election last year, but now that we are moving to national bankruptcy, they say, well, let us hold up and let us go with the B–1 and make sure that keeps 137 contractors and 25 States happy to the tune of $40 billion.

There just is not any constituency for ammunition and all these other things I am listing. And on we go. We can cut the Marine Corps operating support another $80 million, delay activation of Victory ships for prepositioning.

You know how I could use the $40 billion? Twenty-five for the rapid deployment force. It exists just on paper. You and I know that. Is that not something? We think we settled the Persian Gulf program by agreeing to something in 1985, 4 years from now, on the AWACS. Is that not a great defensive, bold move, Congress? My heavens above. They should be ashamed of themselves.

I would use $25 billion for fleshing out the rapid deployment force and $15 billion on the Guard and Reserve. I can see those on the Armed Services Committee nodding, because they know we are way down. We do not have any equipment there, do not have the manpower. We should bring them up to strength, and it will take $15 billion. I will put that in the record. We are 176,000 men shy. Is that not a tragedy?

They talk about readiness and ask, "What is the matter with those people parading in downtown London and downtown Rome?" They are saying in Italy that they will take the Pershing missiles, they are saying, "You don't have a draft. You don't have a conventional force. You don't have a conventional capability. You don't have the national willpower. You can't even get deployed on your own continental limits the MX missile, but you are telling us, in the next breath, to accept the Pershing missile."

Here is what this kind of forced political judgment has been doing to us in this National Congress. We could not debate the 5-year needs of the Army, the Navy, and the Air Force. I can go down the line: the Harpoon procurement, the logistics and engineering support, the $224 million for the FFG–7.

These items that I list emphasize Commander in Chief Ronald Reagan's grocery list, not HOLLINGS'. This is what he found necessary, and this is what he has cut out now in his new green book, which is entitled "Highlights of the Fiscal 1982 Budget Revisions, June 1981 and September 1981, With Strategic Program Changes."

This Departmment of Defense book includes cuts that were originally in there with relation to the Air Force, the JCS RDF funding for airlift support. We have no plane. Where is that CX or C–5A, or where is the plan? We are going to talk more about that later.

Also, O. & M., Rapier missile, KC–10. We brought that up. We tried to get it in, and in lockstep they knocked it down. The MC–138. I could list them all.

Mr. President, I ask unanimous consent to have this list printed in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

EXAMPLES OF REDUCTIONS IN MODERNIZATION AND READINESS ACTIVITIES PROPOSED IN PRESIDENT REAGAN'S OCTOBER 1981 REQUEST

Total of examples of modernization and readiness cuts: $5.2 billion.

ARMY

[*Proposed savings (in millions of dollars)*]

1. Reduce end strength by 6,300: activities of new units delayed; deactivation of a brigade; agreed to in authorization: $35.
2. Reduction in O&M: $79.
a. Cancels or adjusts funds for camouflage screens, RDF improvements, and tactical automation and communications.
b. Cuts support funds for activation of new units.
c. These cuts agreed to in authorization conference.
3. Reduction in M1 tank procurement: $276.
a. Reduces tank buy from 720 to 665.
4. Reduces war reserve/training ammunition inventories: $159.
5. Reduces truck and cargo vehicle procurement levels: $126.
6. Reduces UH–60A, Patriot and Roland procurements: $654
a. Authorization agreed with most of the cut.
7. Reduce M88 Recovery vehicle procurement: $5.
a. Authorization cut $24 million.
8. R&D reductions: $137.
Total of proposed savings: $1,471.0.

NAVY

[*Proposed savings (in millions of dollars)*]

1. Reduce O&M funds for Oriskany carrier: $8.
2. Reduce O&M funds for Trident support: $10.
a. Authorization cut $30 million.
3. Cut costs for fleet modernization upgrade of General Purpose Ships: $80.
a. Agreed to in authorization.
4. Cut Marine Corps operating support: $10.
a. Reduce the buy of camouflage screens.
b. Cut funds for exercises with Maritime Prepositioning Ship Force.
c. Agreed to in authorization.
5. Delay activation of Victory ships for prepositioning purposes—impacts on Persian Gulf preparedness: $50.
a. Agreed to in authorization.
6. Reduce steaming hours: $173.
a. Authorization agreed to about $115 million.
7. Reduce flying hour mission readiness: $28.
a. Affects Indian Ocean/Persian Gulf operations.
8. Cut Marine Corps training activities: $4.
a. Agreed to in authorization.
9. Decommission nine ships: $15.
a. Agreed to in authorization.
10. Real property maintenance: $40.
a. Reduction adds to the backlog of deferred maintenance projects.
11. Reduce logistics and engineering support: $30.
a. Reduces engineering software support and aircraft modification installations.
b. Affects AEGIS support, ASW support, various aircraft and other logistic requirements.
c. Agreed to in authorization.
12. Cancelled activation of Oriskany: $561.
a. Includes both ship and aircraft support.
b. Agreed to in authorization.
13. Reduce Harpoon procurement: $50.
a. Cuts buy from 340 to 240 missiles.
b. Agreed to in authorization.
14. Reduces FFG–7 procurement from 3 to 2 ships: $224.
15. Cancels TAKX Maritime Prepositioning Ship program: $392.
16. Reduce and delay Marine Corps procurement of Copperhead, VIPER and guided missiles/ammunition: $45.
17. Reduce Marine Corps procurement for maritime prepositioning items: $15.
18. R&D reductions: $198.
Total of proposed savings: $1,933.0.

AIR FORCE

[*Proposed savings (in millions of dollars)*]

1. Reduce end strength by 6,000: $42. a. Agreed to in authorization.
2. Cut JCS RDF funding for airlift support: $79. a. Agreed to in authorization.
3. Reduce B–52D operations support: $19. a. Agreed to in authorization.
4. Cut O&M for Rapier missile: $5.
5. Reduce special education programs for handicapped dependents of service personnel: $8.
6. Reduce A–10 procurement from 60 to 20: $275. a. Agreed to in authorization.
7. Cancel KC–10 program: $500.
8. Reduce B–52 modification/spares program: $83. a. Agreed to in authorization.
9. Cut UH–60 procurement from 12 to 6: $31. a. Agreed to in authorization.
10. Reduce funds for MC–130H: $33.
11. Delay Rapier procurement delivery and cancel Minuteman extended survivable power program: $77.
12. R&D reductions: $620.
Total of proposed savings: $1,772.0.

Mr. HOLLINGS. Mr. President, the main point is this. The Senator from Kansas (Mrs. KASSEBAUM) had another view of the B–1. I was the B–1 gung-ho Senator. She said to me yesterday: "Senator, I don't understand how you can change."

I said: "Well, quite to the point, the economics will change me very quickly."

I would do anything to get this Government in the black, and I would do anything to build a strong national defense. To reconcile those two needs, there is no way in the world we can take, over a 5-year period, $40 billion and allocate it to a piece of weaponry that is going to be, at best, fifth or sixth in line in usefulness for penetration of the Soviet defense, at a cost of $400 million each.

Someone said, "Well, you're going to join that whole crowd that opposed you." I do not mind that.

My trouble is that we have this responsibility and we do not have the room for this, and we just cannot afford it. We are not letting down our Air Force bomber capability. In long range, there is no gamble. The B–52's are there, and I have testimony galore on it. The B–1 will not be performing after 1990, according to Dr. Perry and Caspar Weinberger. The Stealth can and will work, and it will be on line 1988, 1989, 1990, and thereafter, and take over both strategic and tactical operation. Until that time, we can jump forward on the ATB.

Someone was saying something about the Soviet B–1. All I can say is that the task is not to equal the technology but to surpass Soviet technology, and we have to do it within a free economy, and to do that you have to have public support. The only way you can get public support for national defense is to show that you are making good, rational, hard judgments at this time. The Nation will support it if it can be proved. But if they see you are just playing games and yielding to pressure and actually allocating away the readiness of their troops in the field, I do not think they will support it.

Mr. President, I promised to yield to the distinguished Senator from West Virginia.

I thank the distinguished chairman, as a cosponsor.

In trying to move along, I yield to the Senator from West Virginia, then the Senator from Michigan, and then the Senator from Arkansas.

Mr. GARN. Mr. President, will the Senator yield for a question before he yields the floor?

Mr. HOLLINGS. I yield.

Mr. GARN. I will save my speech for later.

I should like to debate many of the points of the Senator. In essence, all the Senator has said, which he has repeated several times—at least, I interpreted it that way—was that we will fall off the end of the world if this ceases to be effective at all. Is that a fair analysis of what the Senator has said?

Mr. HOLLINGS. I do not have to analyze it. We do not fall off the world. Everyone knows it is a relative thing, and it has been attested to with relation to your own Secretary of Defense and my Secretary of Defense, for whom I have the greatest respect.

What you are really trying to measure is not us and the B–1 capability. You are trying to measure an intention, but this occurs in the open testimony by Dr. Perry before the Armed Services Committee, relative to Soviet detection capabilities.

On that score, Secretary Weinberger—not to fall off the end of the world—used this dramatic language:

> If you do the B–1 only you spend a lot of money—again I am trying to guess at the extent of development of the Soviet air defenses, so if I use a couple years, give me leeway 1989, 1990, probably 1988 to 1989—you lose the ability to penetrate unless someone wants to direct suicide missions and that is not anything I am going to do.

Mr. GARN. I thank the Senator for the answer. He gave it in his initial speech.

However, I think it might help to reflect back on the debate on the B–52, because we have heard many times that this airplane will last only 43 years.

In January 1953, the feeling in some U.S. Air Force quarters was that the difference between the B–47 and the B–52 was not worth the cost of the latter program. The Strategic Air Command also anticipates getting supersonic bombers soon enough to make the B–52 shortly a short-term, interim, measure.

So we hear it again today: The B–52 is going to be shortly a short-term, interim, measure. In 1953, 28 years ago, we were arguing that we should not go to the B–52 because it will not last long enough; it is too expensive; keep the B–47. Thank God we did not make that mistake then. So we still have the B–52 today, in light of that 28-year-old testimony saying that it is going to be just fine into the 1990's.

I suggest that we not make the same mistake over again and that we go ahead with the B–1.

Mr. HOLLINGS. Mr. President, I yield to the distinguished Senator from West Virginia.

Mr. ROBERT C. BYRD. Mr. President, the distinguished Senator from South Carolina is very able. I enjoy listening to him. He is very persuasive and very hard working.

I think that his statement here today is a very illuminating and very interesting one.

I have not yet made up by mind as to which way I shall vote on this amendment. My comments will be brief and will not go directly to the amendment.

I call attention to the fact that the news media has continued to report that most of the amendments offered by Senators on this side of the aisle are intended as an attack on the funding for the B–1 in this bill.

Last evening I took the floor in an attempt to clarify the situation. I called attention at that time to a wire service item of the United Press which inaccurately characterized Democratic amendments in such fashion.

AP last evening was also reporting in part as follows:

> DEFENSE SPENDING
>
> (By W. Dale Nelson)
>
> WASHINGTON.—Meeting solid Republican resistance, Senate Democrats failed repeatedly Wednesday to shift funds to military needs they said are more pressing than President Reagan's proposed B–1 bomber fleet.

Such reports constitute an inaccurate characterization of the amendments thus far offered by Democrats.

I take the floor to point out that now for the first time since the debate started on this bill, we have pending an amendment that will indeed transfer funds from the B–1 to a variety of other worthwhile military functions, including readiness, procurement of various weapon systems, ships, and other items. This is the first amendment, if it is adopted, that will take one thin dime out of the B–1 account, and we are now in the third day of debate.

Prior to this amendment, the amendments that were offered from this side of the aisle were add-on amendments, with no transfer of funds from the B–1 and no shift of funds from the B–1.

One of the amendments was offered by Mr. GLENN that provided for additional funding for restoration of the full amount of requested Navy steaming hour programs. There was no shift of funds from the B–1.

Another amendment offered by Mr. HOLLINGS was for additional funding for restoration of reduction in Air Force and Army active end strength. There was no transfer of funds away from the B–1.

There was an amendment which I offered providing additional funds for the advance technology bomber. There was no shift of funds away from the B–1, no deletion of funds.

There was another amendment offered by Mr. HOLLINGS to allow for additional funding for procurement of ammunition for the Army. That was in the amount of $148 million. There was no shift of funds, no attempt to transfer those funds away from the B–1. It was an add-on amendment.

Then there was an amendment by Mr. LEVIN providing for additional funding for the procurement of four KC–10A ATC aircraft for the Air Force. Again there was no shift of funds from the B–1, no transfer of funds from the B–1. It was an add-on amendment.

And there was an amendment by Mr. EXON for $60 million additional funding for Army force modernization. There was no transfer of funds from the B–1, no shift of funds from the B–1, no deletion of funding from the B–1.

So the record should be clear. These amendments have not constituted any effort whatsoever on the part of Democrats to whittle away at the B–1. It is an unfair characterization, not meant to be unfair, of course, but being inaccurate it unfairly characterizes the efforts of those on this side of the aisle who have attempted to add on funds for various items which we think are necessary to strengthen the defense of our country and to carry out the administration's program as it was presented to us earlier on.

We are now on an amendment that, for the first time, would transfer those funds from the B–1.

So I just simply wish to make that point again for the record and I hope that if any other Senator wishes to speak on this matter at this point, he do so.

Mr. LEVIN. Mr. President, I fully concur with the assessment just made by the minority leader. As a matter of fact, as a cosigner of that letter with Senator HOLLINGS and a cosponsor of this amendment with Senator HOLLINGS, it is very clear that the amendments which were voted on yesterday and up through this amendment now were add-ons. They were not transfer amendments from the B–1 to those items.

The issue there was whether the cuts which had been made in military readiness between March and October by the administration were going to be accepted by this Senate. The issue was whether the readiness deterioration which we have seen physically between March and October was going to be stamped with approval by this Senate. The amendments sought to restore critical items of military capability. They are not partisan items. They are some of the most basic questions of rapid deployment, operation and maintenance, ammunition, and other readiness items. They should not be partisan items. They were not intended to be in any way. These were intended to restore critical readiness items without taking away from the B–1.

That is the way those items were offered by various Senators. They were intended to be voted on in that way and only now, as the minority leader indicates, are we on an amendment which would transfer funds to readiness items. Until now these were add-on amendments which some of us would have funded one way or another but they were not amendments which deteriorated or detracted from the B–1.

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield?

Mr. LEVIN. I am happy to yield.

Mr. ROBERT C. BYRD. I thank the distinguished Senator.

I think it is important that the people of this country understand and that the press understands that the amendments we have offered thus far would not have any effect on B–1 funding. They would not whittle away a little here, a little there from the B–1 program, as such press report imply.

As a matter of fact, some Senators who very strongly support the B–1 program have also supported some of the add-on amendments.

Mr. BENTSEN. Mr. President, will the Senator yield?

Mr. CRANSTON. Mr. President, if the Senator will yield, I am one of those Senators, and I wish to speak about that.

Mr. ROBERT C. BYRD. I yield.

Mr. BENTSEN. Mr. President, the minority leader has made the point for me. I am a strong supporter of the B–1B and have been for quite some time. Yet I voted for these additional add-ons to the military procurement bill because they are important and I thought that Senators NUNN and HOLLINGS and others made a contribution in bringing those kinds of amendments before us.

Mr. ROBERT C. BYRD. I thank the distinguished Senator, and I yield to the minority whip.

Mr. CRANSTON. Mr. President, I wish to say that I also am a very strong and constant supporter of the B–1 program and have been over many years and am now.

I sponsored the amendment in last year's defense authorization bill to insure that we have an effective, manned bomber program, and I insisted that the B–1B be included in that amendment, although if some other bomber proved more effective for the national needs of our country based upon an unbiased decision, I would accept that decision.

I will deal later in this debate with the reasons for my support for the B–1. I will oppose the Levin-Hollings amendment which seeks to delete funds for the B–1.

The amendments that we have been dealing with up until this point for the most part—those that we are discussing—are amendments that constitute a very serious effort to improve the readiness of our military forces.

These amendments restore funds that were in the President's original March budget request, coming from the Republican administration, however, now opposed almost unanimously on the Republican side. These amendments were all endorsed overwhelmingly in May by the Congress in the defense authorization bill.

What were these amendments? They were to provide full funding of the requested money for Navy steaming hours; they restored reductions in Army-Air Force active end strength; they provided funding for the advanced technology bomber; they provided ammunition for an Army that needs more ammunition than is now available, and so forth, and so on.

I supported these amendments because I believe they provide what we need for our Armed Forces. I did not support them because I wanted funds to go for these purposes instead of the B–1. I do not, of course, support that approach.

But these amendments serve a very valid purpose, in my opinion, and that was the opinion of the administration until it ran into a budget crunch.

Our national defense, more than any other, should be based on what is needed for the security of our Nation with less respect to budget aspects, although, of course, we have to take that into account.

In addition, it was stated throughout the debate that these amendments were not alternatives to spending money on the B–1.

As to the Stealth, I strongly support the Stealth program. I do not view that as necessarily competitive to the B–1. It is a technology we should explore. We should see if we can develop it. We well may. On the other hand, we may not, and if it turns out that we cannot develop and cannot deploy it, and it is not worth deploying the Stealth technology, then we should have the B–1 ready to go, and it is ready to go and ready to fly. That is why I support the B–1 and also the Stealth.

I will get back to the B–1 at a later stage in this debate.

Several Senators addressed the Chair.

The PRESIDING OFFICER (Mr. NICKLES). The Senator from New Hampshire.

Mr. LEVIN. I believe I had the floor, Mr. President.

Mr. RUDMAN. Mr. President, will the Senator from Michigan yield? I will be very brief.

Mr. LEVIN. I yield.

Mr. RUDMAN. I just want to say, in response to the statement of the very distinguished minority leader who, as is his usual habit, stated meticulously and precisely what has happened on the floor and how it has happened, that on the 25th of November we received a letter, a very thoughtful letter, which many of us studied in great depth. It was signed by the Senator from Michigan and the Senator from South Carolina.

It listed from (a) through (o) a number of changes in this appropriation, and it said:

> Therefore, we, the undersigned, intend to offer to the Department of Defense appropriation bill for FY '82 an amendment to delete funding for the B–1 bomber and allocate the savings to certain defense modernization and readiness priorities.

It also said, to paraphrase, that we have to make some choices.

Now, the fact of the matter is that the distinguished minority leader is absolutely correct. That is not the way it came to the floor. But I think it is not beyond the realm of possibility for some of us to have the faint idea that these amendments, offered one by one, followed by this amendment now, have some bearing on priorities.

So I simply state that the minority leader is correct in his statement. But those of us who have felt there was some choice being made here have more than faint reason to believe that.

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield?

Mr. LEVIN. I would be happy to yield.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished Senator for his statement. He may very well have arrived at that conclusion, that may have been his interpretation. But the truth of the matter is that any careful reading of those amendments will find there is no verbiage whatsoever that provides for any shift of funds or any transfer of funds from the B–1. They are strictly add-on amendments.

There will be a time, however, and it is here now, when Senators will have an opportunity to vote on an amendment that transfers B–1 funding into other items, and Senators can have their choice.

But it is inaccurate for the amendments that have been offered thus far to be characterized as efforts to whittle away or to delete funding from the B–1. It is simply not so, and I want the record to so show.

Mr. LEVIN. Mr. President, before I begin my remarks supporting the pending amendment, I just wanted to add one thought to the statement of the Senator from California. Not only were the add-ons previously offered in amendments additions which had been supported in the President's March budget but they were also add-ons which were supported by both the House and the Senate in their authorization bills.

It was not until the authorization conference after the October defense reductions submitted by the President that, in fact, those cuts in readiness were made. So there was a lot of prior support in the Senate and in the House for the amendments which were individually offered up to the point that this one now is before us.

Mr. President, relative to the now pending amendment, we are weakening our Nation by buying 100 B–1 bombers instead of buying 100-plus additional Stealth/advanced technology airplanes above and beyond the 123 Stealth airplanes already provided in the administration proposal.

The issue is not whether we will have a new bomber, but which new bomber or bombers we will buy with our billions. The issue is not maintaining our B–52's instead of buying a new bomber. The B–52's are going to be replaced in either event—whether we buy the B–1 or the Stealth bomber.

The issue is whether we want more bombers or less. The issue is whether we want better planes or less capable planes. The issue is whether we want longer penetrating bombers that can penetrate for 25 to 30 years or whether we will pay billions for the B–1, which can only penetrate from 5 to 10 years; and the issue is whether we want to buy more bombers, better bombers, longer penetrating bombers at less cost.

This all-Stealth amendment will result in more bombers, better bombers, longer penetrating bombers for less cost.

Mr. President, an important consideration in choosing the Stealth bomber instead of the mixed B–1 Stealth force proposed by the administration is that we will be able to buy more planes.

In testimony before the Strategic and Theater Nuclear Forces Subcommittee, Dr. Richard DeLauer, the Pentagon's research and development chief, said that a mixed force of 100 B–1's and 132 Stealth bombers would cost $114 billion, and that an all-Stealth/advanced tech-

nology bomber (ATB) force would cost $112 billion.

What he did not say is that the all-ATB force, the all-Stealth force, would consist of more planes. I cannot reveal how many more since that number is classified. However, the fact remains, and it is available to each of us in the Senate, that we can get more planes for our money.

Second, Mr. President, the Stealth planes are more capable. In testimony earlier this year before our Strategic Subcommittee, the then Commander-in-Chief of the Strategic Air Command, Gen. Richard Ellis stated:

The most pressing requirement is to prepare for the long-term—1990 and beyond—to develop a new technology bomber with the earliest possible initial operational capability (IOC). This new strategic bomber must have the capability to penetrate the projected defense environment of the Soviet Union into the next century.

Our studies show that, if we act now to take advantage of significant new technologies, bombers will be able to penetrate even the most sophisticated radar defenses. Over the next few years, great improvements will be seen in propulsion; reduced aircraft weight; non-reflective composites; dramatically lower radar and infra-red signatures; improved countermeasures and refined avionics. Air Force studies and preliminary development work indicate these new technologies are ready for melding into a strategic penetrator with the required characteristics and capabilities.

So spoke General Ellis.

Even B–1 supporters, in their "Dear Colleague" letter call the Stealth bomber "our premiere penetrating bomber," and Defense Secretary Caspar Weinberger, on November 5, said:

It is certainly accepted by everybody that we will have to have something better than the B–1 and that we have the ability to get something better starting now.

So spoke Secretary Weinberger.

Mr. President, it is true that we cannot talk too much about the Stealth on this floor, as a number of us have pointed out. But it is well known—and I can say this on the floor, having checked carefully to be sure I can—it is well known that, in order to more quickly resolve technical uncertainties regarding the design and subsystems of the ATB, $300 million could be prudently added to the DOD budget request for fiscal 1982. Our amendment provides this additional $300 million to accelerate resolving these uncertainties because we believe that the ATB is the only strategic bomber which will be able to meet our nuclear requirements successfully and long enough to justify the high price we are asking our citizens to pay to modernize the bomber leg of the Triad.

Our amendment is not a vote against buying a new bomber. It is a vote in favor of buying a better new bomber faster.

It is not a vote to weaken our Nation militarily by denving it the B–1 bomber. It is a vote to strengthen it militarily in the strategic arena by providing it with the advance technology bomber as fast as possible. So an all-Stealth program will provide more bombers. I think that is undisputed. Stealth is a better bomber. I think that also is undisputed.

Third, even the administration concedes the longer and greater penetration capability of the Stealth bomber. The Stealth bomber will be an effective penetrator through its 20- to 30-year lifespan. The B–1 can penetrate 5 years per Secretary Weinberger early in October. He increased that to 10 years a few days later. To get the Stealth's vastly improved penetrating capability we will have to wait but a few years. While the B–1 bomber will be available earlier, just when is a matter for debate, it will only be able to penetrate for 5 or so years after deployment.

For every B–1, we buy, giving us a few years penetration in the late 1980's, we will lose 20 years of Stealth's later penetration in the 1990's and into the next century.

The B–1 bomber just will not be able to accomplish for long enough the very mission which justifies the large expenditures the taxpayers and their elected representatives in Congress are willing to make to maintain the air-breathing leg of the strategic nuclear deterrent Triad—penetrating Soviet air defenses to attack targets deep within the Soviet Union.

Administration witnesses contradicted themselves many times before the Strategic Subcommittee of the Senate Armed Services Committee when they testified about the penetration capabilities of the B–1 bomber.

On November 4, 1981, the new Commander-in-Chief of the Strategic Air Command, General Davis, told the subcommittee:

But mission profile of the B–1 as I envision it is a penetrator and it will have the capability for a number of weapons, both gravity and cruise-missile weapons, well into the 1990's, then we can make it a standoff weapons as we get the advanced-technology bomber.

General Davis later defined "well into the 1990's" to mean the B–1 could penetrate Soviet air defenses until "1995."

However, the next day, Defense Secretary Caspar Weinberger, sharply contradicted this statement by testifying that after 1990 you lost the ability to penetrate unless someone wants to direct suicide missions and that is not anything I am going to do.

So there would be no doubt about his testimony, Secretary Weinberger, later said the following in response to a question by my committee colleague, Senator EXON, who asked:

The last time you were here I believe it is correct to say you testified that the B–1 probably would not be an effective penetrator of the 1900's.

Secretary WEINBERGER. I think that is generally correct. We are not sure of the exact years. I said a moment ago to Senator Warner 1989; 1990, probably, right in that range.

Recognizing that Secretary Weinberger was saying something quite different from General Davis, Senator EXON gave the Defense Secretary another chance to clarify his remarks. Senator EXON said:

Yesterday in front of our committee in open session, Gen. Bennie Davis, the head man at SAC, testified that it would be a penetrator he thought until 1995. I only cite these grave differences and signals that we are receiving both from you and from our top military commanders as making our decision on which way to proceed that much more difficult.

Secretary Weinberger's immediate and prompt response was as follows:

I think there is no question whatever that we will not be able to use the B–1 as penetrator after 1990. If it goes to 1992, that will be a little extra dividend.

In any event, it is certainly accepted by everybody that we will have to have something better than the B–1 and that we have the ability to get something better starting now.

Well, you can imagine the consternation this caused, because here was the highest official in the Department of Defense, the President's most trusted adviser on national security, saying that the B–1 would only be useful for its major reason for even being procured—to penetrate the U.S.S.R.—for only 3 years after it is deployed.

The Defense Secretary was saying that the American taxpayer was being asked to spend $20 billion to $40 billion for a few years of penetration capability; $10 billion a year is a heavy price to pay, and it destroys what little reason there is for buying the B–1.

So what happened then after the alarm bells began to ring in the Air Force and the Pentagon?

Only 4 days later, a lengthy letter from both Secretary Weinberger and Central Intelligence Agency Director William J. Casey was delivered to the committee declaring that the following miracle had occurred to improve the B–1's penetration capabilities. This letter concluded:

DoD analysis based on the results of these tests indicate the B–1 would have the capability to penetrate anticipated Soviet air defenses well into the 1990's.

A hurried hearing to rescue the B–1 was arranged for the same day. The head of the Pentagon's Research and Engineering Office, Dr. Richard DeLauer, and the Chief of Air Force Research and Development, Lt. Gen. Kelly Burke, rushed to the subcommittee to throw water on the raging fires of doubt about the B–1's penetration capabilities.

Dr. DeLauer was asked by Subcommittee Chairman WARNER, "How long will the B–1 be able to penetrate the projected Soviet air defense system?"

He responded:

Depending upon the nature of their chances, the estimates will vary up to the mid-1990's, depending upon what the reaction of the Soviets will be, depending upon what our advances might be in the future ECM capability.

So it will vary between 1990 and 1995, depending upon how bad they do and what target you talk about.

The subcommittee did wonders for the B–1's ability to penetrate simply by meeting often enough. In 4 days we added up to 5 years penetration capability.

I asked the chairman to consider scheduling a meeting for the next week, because I thought DOD and the Air Force would return to say the B–1 could now penetrate into the next century.

The fact is, Mr. President, that DOD and the Air Force are flim-flamming the American people and the Congress with these later estimates of the B–1 bomber's penetration capabilities. They knew as nearly as June of this year that Secretary Weinberger was correct in his initial

testimony that the B–1 could not penetrate beyond 1989 or 1990.

How did they know? Because the Secretary of the Air Force, Verne Orr, on June 2, 1981, possessed information from which only this inescapable conclusion could be drawn.

This information establishes firmly that the B–1's capability to penetrate begins to decline well before the Air Force and DOD now are contending.

This information further demonstrated that our much-maligned B–52's would be able to successfully attack the Soviet Union until well after the Air Force and DOD are claiming they can.

This information also demonstrates that our B–52 force will be able to do the same job as the B–1 until well into the 1990's and until the Stealth bomber becomes operational.

I will be happy to share the classified details of that information with any of my colleagues who wish to come over to my desk at any time during this debate to see that information.

The American people will seriously doubt our collective wisdom if Congress decides to pay tens of billions of dollars for a new aircraft only able to attack the Soviets in the same way as our present aircraft.

This dismal prognosis about the B–1's ability to penetrate Soviet air space has been well-documented in other information available to our committee.

Testimony last year before our committee clearly indicated that, by the late 1980's the B–1 would not be able to penetrate improving Soviet air defenses without unacceptable losses.

Former Air Force Secretary Hans Mark, a highly respected scientist and now Deputy Director of NASA, the National Aeronautics and Space Administration, testified about the B–1 as follows:

> With respect to the B–1, if we were to go ahead with the program today, the B–1 could be ready almost at the same time as the FB–111, say a year later, but it is not a big time difference. We are talking about three or four years in either case. But the same argument applies to the B–1 that applies to the FB–111. The airplanes have a problem in terms of meeting the strategic nuclear deterrent requirement, and my judgment is that accelerating M–X or accelerating the cruise program would be better ways of spending that money.

In the Defense Department's latest attempt to convince our NATO allies about the major improvements in the Soviet threat during the past years—its 99-page glossy publication issued just a few months ago and entitled "Soviet Military Power"—the following conclusions were presented about the upgrading of Soviet air defenses:

> The U.S.S.R. has persevered and is today entering a period of weapons system deployment aimed at measurably improving capabilities, primarily in air defense.
>
> A number of new interceptor aircraft types could enter the air defense force over the next decade . . . to increase the effectiveness of their force, the Soviets are developing an increasingly effective airborne warning and control system (AWACS) to detect low-altitude penetrators.

Last year, our committee heard expert testimony that the "Soviets strategic air defense, the new generation, will be reaching its full deployment" only shortly after the B–1 is deployed.

This new air defense system, based on what we know about it now, can be expected to severely degrade the ability of any presently designed bomber to penetrate Soviet airspaces—primarily because this new system is expected to include effective look-down/shoot-down radars and missiles on new Soviet AWACS and fighter-interceptor aircraft.

Air Force Secretary Verne Orr was recently quoted as saying that the B–1 bomber is "10-year-old technology, and costly."

All this leads one to ask several hard questions:

Why should we spend so much money to buy ourselves an outdated aircraft which will not be able to penetrate Soviet air defenses?

Why should we buy a B–1 if it will not be able to penetrate, according to the Secretary of the Air Force, much longer than our B–52H's?

Why should we buy the B–1 for the "shoot and penetrate" role if we can use the B–52 G's and H's in that role for many years into the next decade and well after the Stealth bomber will be able to take over the penetration role from any present type of aircraft?

The answer to all these questions, Mr. President, is clearly that we should not buy the B–1 bomber.

Proponents of the B–1 will try to rebut these arguments by claiming that some new developments in electronic countermeasures will permit the B–1 to penetrate longer than this dismal prognosis demonstrates.

They will bring out a newly completed study called the "Joint OSD/Air Force Bomber Alternatives Study," as well as relatively recent results from a bomber penetration evaluation program, in an effort to counter this B–1 penetration projection.

However, continuous information contradicts these overly optimistic contentions by B–1 proponents regarding the issue of ECM in particular and the conclusions of both the bomber alternatives study and the bomber penetration evaluation results.

In February 1980, in a report entitled "Planning the Strategic Bomber Force of the Future—Many Issues Must be Resolved," the GAO stated:

> There is skepticism within the Department of Defense as to how much reliance should be placed on electronic countermeasures and whether they can be designed now against a threat which has not yet been well defined.

In August 1981, GAO, in a report entitled "Countervailing Strategy Demands Revision of Strategic Force Acquisition Plans," stated the following about prospects for development of electronic countermeasures:

> Whether an effective system can be developed and deployed by the mid-1980's is uncertain.

For the past year, the then Commander of the Strategic Air Command and his Vice Commander, General Ellis and Lt. Gen. Lloyd Leavitt, have been pessimistic about the prospects that any non-Stealth bomber could penetrate successfully improving Soviet air defenses by the late 1980's.

General Ellis, I might point out, is held in extremely high regard by all members of the Armed Services Committee on both sides of the aisle for his expertise and candor, especially about the Soviet strategic threat and what is needed to combat that threat.

Earlier this year, General Ellis testified that the Soviets would deploy significant numbers of improved air defenses well before the time when DOD now is contending the B–1 will no longer be able to penetrate.

Several of us on the committee also are well aware of the great skepticism the Strategic Air Command had only 7 months ago about prospects for developing effective-enough ECM to permit B–1's to successfully penetrate improving Soviet air defenses in the future.

Just 2 weeks ago, General Ellis had what I think should be the last word about the prospects for improved electronic countermeasures being able to insure B–1 bomber penetration.

He testified:

> We have depended on ECM in the past. We have historically lagged the offense with ECM countermeasures, effective countermeasures, on the order of 5 to 10 years, depending on the system.
>
> While I don't say that it is impossible that we will have the ECM that can do it at that date, I say it is a weak crutch and it is one that could be protected by early development of the ATB.

Again, Congress must ask itself:

In the face of such prospects for developing the ECM upon which the B–1 must depend to penetrate, should we spend all this money to buy an aircraft which cannot perform the primary mission for which any future strategic bomber should be procured—penetrating Soviet defenses?

The administration will argue that the bomber alternative study and the bomber penetration evaluation, recently completed, provide evidence that the B–1 is a very effective penetrator.

The bomber alternatives study and the bomber penetration evaluation must be placed in their proper perspective along with Secretary Orr's information.

First, I understand that Secretary Orr based his submission to Secretary Weinberger and Deputy Secretary Carlucci in June on the results of both the bomber alternative study and the penetration evaluation. The results from these efforts were available then, I have been informed, even though formal printing and presentation of them was not done until October.

Second, a rigorous reading of the results of both efforts reinforces, rather than diminishes, the skepticism with which one must regard the B–1's future utility as a strategic penetrator.

Despite the surface impression that appears to support the B–1 case, better scrutiny of the reports reveals that the advanced technology bomber out-performs the B–1 force now being proposed for the most demanding strategic missions.

It further reveals that several of the key assumptions upon which are based a more sanguine assessment of the B–1 are overly optimistic, are based on inadequate test data, are only computer projections of ECM defensive systems which

do not yet even exist and are predicated upon deployment of a B–1 force much larger than that now being proposed.

Third, it must be emphasized that our assessment of Soviet air defense threats would not change in the short period of time between June and October without some miracle being visited upon the Soviets or us.

Not only does it take us months, if not years, to collect and analyze all the thousands of bits of intelligence data which must be pieced together like a vast jigsaw puzzle to reach overall conclusions about the threat, but it takes years for the Soviets to develop and deploy air defense radars, aircraft, and missiles.

Assessments of our own capabilities require similar lengths of time.

We should be extremely skeptical of any late-breaking and almost miraculous improvement in the ability of the B–1 to penetrate Soviet air defenses, whether this improvement is reported to have occurred in only the 4 months between June and October, or the 4 days between Secretary Weinberger's testimony and his later joint letter with CIA Director Casey.

So to summarize where we are: The issue is not whether there will be a new bomber but which new bomber or bombers. We can get more bombers with an all-Stealth force than with a mixed force. We can get better bombers, we can get longer penetrating bombers and, now let me add, we can get all that for less money.

The mixed force proposed by the administration would cost at least $2 billion more than the all-ATB force, $114 billion against $112 billion. In fact, the all-ATB force would cost even less but the actual number is classified. I do have it here and would be happy to show it to any of my colleagues.

We must ask:

If we therefore can get more of a better bomber for less money, why should we buy the B–1 at all? Some may try to argue that, if we do not buy the B–1, we have no options when our present bomber force loses penetration capability in the second half of the 1980's. This is clearly not the case. We have at least two options for maintaining the viability of our bomber force for the 5 years or so before Stealth is operational. First, we can deploy more cruise missiles on our B–52G's and B–52H's; and second, we can increase the alert rates on our B–52G/H's.

First. Under the Carter plan, we had the option to deploy 5,000 ALCM's on our B–52 force. Under the Reagan plan, only 3,000 cruise missiles are to be deployed on the B–52's and B–1's. Clearly, we are actually opening a wider window just to finance the high costs of the B–1 bomber. We can choose instead to close the tiny window by deploying the full 5,000 cruise missile complement to our existing strategic bomber force.

Second. Another option which would help close the tiny window is to increase the alert rate on our B–52 G/H force. This could be accomplished by the middle of this decade if we plan for it today, according to present SAC Commander Davis.

We have workable options and they can be accomplished for much less than the $20-, or $27-, or $40-billion cost of a bomber that will be obsolete for its function of closing this window a short time after its deployment. The answers to our defense problems are not always to be found in purchasing more hardware; they are to be found in purchasing the right kind of hardware, the systems that can do the job and do that job for an extended period of time, and in using our existing systems to their best advantage.

I have suggested two simple and direct methods of closing the window without resorting to the expensive purchase of the B–1.

Clearly, Mr. President, the choice of the Stealth technology over that of the B–1 will provide us with a plane that will do the job, penetrate Soviet air defenses. And just as clearly, we can use our existing and planned forces to maintain the viability of our bomber strategic force until we receive the Stealth bomber in the early 1990's.

Yes, you can close the tiny window a bit with a B–1. But there are cheaper and better ways. And, remember, going with the B–1 is creating a 20-year window of B–1 vulnerability when B–1 can not penetrate but Stealth can.

And remember, we are not naked in the late 1980's. We will still have tremendous penetrating capability in our submarine-launched missiles and land-based missiles and by then we will have thousands of air-launched cruise missiles as well.

Indeed, going with the B–1 will weaken us in the next 5 years because part of the price of paying for the B–1 is early retirement of the B–52's and Titan missiles.

The following exchange between Senator NUNN and Gen. Bennie Davis on November 4 in front of the Strategic Subcommittee makes that point clear.

Senator NUNN. Aren't we in effect, whatever the reason and whatever the budgetary pressures, are we not in effect extending the window of vulnerability for a longer period of time by reason of the phase-out of these B–52's and Titans?

General DAVIS. In terms of absolute numbers, certainly you lose capability. In terms of some items that I have proposed, like let's consider keeping a couple of squadrons of D's in longer and the fact that you have a fairly long phase-out period for Titan II's, you lose an increment of capability. There is no question about that.

Senator NUNN. We are really going down in capability in the next four or five years, isn't that correct?

General DAVIS. But it is not precipitously.

Senator NUNN. But it is a gradual reduction in capability over the next five years?

General DAVIS. In absolute terms, yes.

In a response for the RECORD, General Davis went even further by stating:

Phasing out the B–52D and Titan will result in fewer weapons committed to the SIOP (nuclear war plan), reduced target coverage and less megatonnage.

He presented one option for lessening the impact of these reductions in our deterrence capabilities—increasing the alert rates for our B–52 G and H force—but then stated this could not be done until 1985. Between now and until 1985, in other words, the window of vulnerability would open wider, thanks to the B–1 bomber.

The other main argument against an all-Stealth force is that Stealth technology is uncertain. But even the principal B–1 advocate, Secretary Weinberger, testifying before the full Armed Services Committee on October 5 stated clearly, directly, and unambiguously that:

Our vigorous ATB program will lead to that plane's deployment under current plans beginning in 1989.

On October 28, 1981, Dr. James Wade, the principal deputy Under Secretary of Defense for Research and Engineering, told the Strategic Subcommittee:

Our vigorous ATB program will lead to that plane's deployment in the early 1990's.

SAC Commander Ellis was confident we could deploy Stealth bombers by 1990. He was afraid that opting for B–1 would delay that—a process already happening. Last year, he wrote a member of the House Armed Services Committee:

Opting for the B–1 at this time could preclude procuring a more advanced aircraft available by 1990. What makes this a legitimate concern is that B–1 technology is representative of the late 1960s, or maybe 1970, and that aircraft could become obsolete in the nineties as a strategic penetrator.

So everyone from Weinberger and Allen and Wade, proponents of B–1, to Ellis, proponent of Stealth, agree that Stealth will be ready by the early 1990's—as early as 1989, depending on funding.

Arguments against that point of view can be answered but they are all classified and highly technical as are the arguments for that point of view. So, the reasons given to go to B–1 just do not hold water. Indeed, what the B–1 will do for us is rob funds from the Stealth bomber program and other important strategic and conventional defense improvement endeavors.

How much will the B–1 rob us? How much it will cost depends on the day you ask and whom you ask but it is somewhere around $20 to $40 billion.

The Air Force and the Defense Department seem to be trying to outdo each other in providing Congress with misleading, incomplete and contradictory cost estimates.

Air Force and DOD have consistently understated the costs of the program.

DOD and Air Force have been stonewalling the Congress in its efforts to obtain complete and independent cost data, especially on an extremely dubious and padded comparison purporting to show it is cheaper to build the B–1 than it is to rely only on our B–52 bomber force, which no one proposes, or to go with a Stealth bomber program.

The Pentagon's own independent cost analysis improvement group estimated that the program would cost between $27 to $28 billion in constant, fiscal 1981 dollars. That is significantly above DOD's advertised $20.5 billion constant dollar program.

The Congressional Budget Office has computed the program cost in real dollars, the dollars we actually spend. Using CBO's inflation rates, which are more realistic than the administration's self-serving overly optimistic rates, the cost of the B–1 program is between $29.9 and $39.8 billion.

DOD officials also have stated that the

cost of procurement and R. & D. for the proposed mixed force of B–1 and advanced technology bombers would be approximately the same as an all-Stealth bomber force.

While the exact numbers are classified, I can assure my colleagues, and have the chart, that the Air Force's own cost estimates show that we can buy more Stealth bombers than the total mixed force of 100 B–1's and 132 advanced technology bombers for several billions of dollars less than it will cost us just to buy the mixed force.

Even on a unit cost basis, and again despite misleading claims by DOD, each Stealth bomber in an all advanced technology bomber program would cost less than each aircraft in a mixed force of B–1's and Stealth bombers.

Of course, the advanced technology bomber will be able to accomplish the strategic nuclear penetration mission for 20 years after it becomes operational, the B–1 only for 5 to 10 years, again depending on the day the DOD testified.

Let me present an audit trail, if you will, of the contradictory and misleading statements by Air Force and DOD officials on the costs of the B–1 program, as well as appropriate rebuttal material.

On October 5 and 6, 1981, Dr. Delauer, Undersecretary of Defense for Research and Engineering, and Lt. Gen. Kelly Burke, Chief of Air Force Research and Development, told the House Defense Appropriations Subcommittee that the B–1 program would cost $19.7 billion in fiscal 1981 dollars.

Shortly after this, the General Accounting Office circulated a draft statement of facts showing that some $2.266 billion in questionable reductions were made by the Air Force to reach its original $19.7-billion estimate. GAO further identified some $1.6 billion in possible additions to the program—of which $1.1 billion in add-ons was later acknowledged by DOD and Air Force witnesses before various congressional committees.

Only 3 weeks later, on October 27, 1981, Milton Margolis, head of the Pentagon's Cost Analysis Improvement Group—CAIG, testified at a Governmental Affairs Committee hearing that an independent Air Force estimate had increased that estimate by between $500 million and $1 billion, not including possible additional subsystems.

The next day, October 28, DOD's comptroller, Assistant Defense Secretary Jack Borsting testified to the Armed Services Committee's Strategic Subcommittee that the program cost $20.5 billion in fiscal 1981 dollars, with the possible addition of another $600 to $900 million more for further additions.

On October 29, General Burke disclosed that an Air Force audit had indeed added some $600 million to the $20.5-billion estimate, thus bringing the total for the B–1 to at least $21.4 billion.

Just 2 days later, CAIG, the office which was established in the Pentagon to provide the Secretary of Defense program cost estimates independent from those provided by the military services, on the theory it might be less prone to understatement, informed Secretary Weinberger that the B–1 would cost between $27 and $28 billion, as I mentioned earlier.

I ask unanimous consent to have printed in the RECORD at this point the 20-page draft statement of facts from the GAO.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF FACTS FROM GAO

The attached paper summarizes issues and supporting facts disclosed during GAO's review of the Long Range Combat Aircraft program. It is provided to facilitate an exchange of views between the GAO staff involved in this review and interested Congressional staff. This material has not been reviewed by Air Force or DoD officials nor has it been fully coordinated within GAO. Accordingly, each page is marked DRAFT. Every effort has been made to stay current with the LRCA program as it evolves. The program is however very fluid at this time and some changes may not be reflected in our work.

Our review indicates an operationally ready multi-role bomber would cost significantly more and take longer to deploy than the Air Force estimates for this program. Cost and schedule goals set by the Air Force contain the LRCA program to acquiring a basic penetrating bomber having less mission capability than Congress directed. Substantial costs are omitted from the $19.7 billion cost estimate likely to be incurred as the program proceeds. The specific results of our review are highlighted below and discussed in detail in the attachment.

HIGHER COSTS ARE LIKELY

The $19.7 billion represents a rough estimate of the basic program's cost. It reflects over $2 billion in questionable reductions made to accommodate the Air Force's cost goal.

At least $1 billion of expenses directly related to LRCA development, production, testing and initial deployment are funded outside the program and consequently do not appear in the $19.7 billion.

More than $1.5 billion in additional cost are likely as testing requirements evolve and improvements are made to the basic aircraft such as:

Cruise missile capability,

External weapons carriage,

Expansion of the basic weapon complement, and

More capable defensive and offensive systems.

Contrary to program office estimates, use of nonstandard avionics in the LRCA could lead to higher acquisition costs, lower reliability, and less growth potential.

LIMITED CAPABILITIES

The established initial operational capability goal for LRCA does not represent or require operational capability. Program officials estimate it would be at least mid-1987 before they could complete nuclear certification and obtain the required combat readiness rating needed for nuclear alert.

While LRCA could carry many types of nuclear and conventional weapons, the current program provides for only two nuclear and two conventional types. Moreover, operational restriction on these weapons may be present until testing, not funded under this program, is completed.

The LRCA, as currently proposed, is not configured or equipped to carry cruise missiles. Extensive modification (internal and external hardware, wiring, and electronic systems) would be needed to provide this capability.

The Air Force decision not to enlarge the rear bomb bay for all practical purposes permanently limits LRCA to carrying only eight cruise missiles internally. This decision raises questions about payload flexibility and survivability of LRCA as well as the total production quantity programmed for ALCM.

While offensive and defensive systems provided by the program might be appropriate for today's nuclear and conventional missions. Air Force studies indicate more capable systems will be needed in the future.

QUESTIONABLE REDUCTIONS IN THE BASIC COST ESTIMATE

Initial cost estimates for the LRCA developed by the Air Force program office were reduced by over $2.0 billion to accommodate the Air Force cost goal. These reductions are shown below.

Items changed	Change to the cost estimate (millions)
Engineering change order budget	$440
Change in avionics learning curve	100
Change in airframe learning curve	500
Reduction in avionics production estimate	86
Consideration of multiyear procurement for production lots III, IV and V	800
Transfer of engine CED to CIP account	40
Deferral of air vehicle depot support development	300
Total	2,266

The engineering change order budget provides funds to correct safety and operational problems disclosed during system development and testing. It is also used to improve the maintainability and reliability of various subsystems. The $440 million change represents about a 30 percent reduction to the original estimate and could according to program officials limit the Air Force's ability to correct system deficiencies and keep future support costs low. The learning curve estimates represent anticipated production efficiencies realized as successive units are produced. Such efficiencies are difficult to predict without specific production experience. The learning curve changes made to the LRCA estimate have not been negotiated with LRCA contractors.

The basis for the $86 million reduction made in the avionics production budget could not be explained by the program office. The Air Force's $800 million allowance for multi-year procurement economies is questionable because it assumes a stable production program before system testing is completed. Congress will authorize multiyear procurement for LRCA; and, an $800 million savings can be realized. The transfer of engine component engineering development from the program estimate is not authorized under Air Force regulations. Development of air vehicle depot support is deferred to some later date not yet established.

DIRECTLY RELATED LRCA EXPENSES NOT INCLUDED IN PROGRAM COSTS

Major categories of expense directly related but unrecognized in the LRCA program cost estimate are funded within other program elements.

These costs are shown below.

Cost category	Estimated cost (millions)
Engine component improvement program	$115.0
Interim contractor support	[1] 500.0–2,000.0
Production facilities improvement	70.0
Manufacturing technology enhancement	169.7
Base facility improvement	173.0
Operational test and evaluation	[2]
Nuclear weapons certification	[1] 500.0–750.0
Conventional weapons certification	[2]
Total	1,527.7–3,277.7

[1] Anticipated cost range.
[2] Cost estimates for these items were not available.

The component improvement estimate of $115 million provides funds through 1987 to improve the engines maintainability and re-

liability beginning with acceptance of the first production aircraft and continuing throughout its operational life.

The Air Force plans to acquire interim contractor support for organizational and intermediate maintenance two years beyond IOC and depot maintenance 3 years beyond IOC, while Air Force capability is established. Estimated costs range from $500 million to $2 billion.

Production facilities improvements and manufacturing technology enhancement estimated at $70.0 and $169.7 million, respectively, are needed to modernize existing production capability. The $19.7 billion program cost estimate depends on the production efficiencies these investments provide.

Improvements to existing bomber bases to accommodate LRCA are estimated to cost $173 million. This is a preliminary estimate which will be refined once base selection is made.

Operational test and evaluation of the LRCA and certification of the aircraft for nuclear and conventional weapons carriage will be funded by the Strategic Air Command. Nuclear weapons certification is estimated to cost between $500 and $700 million. Cost estimates for operational testing and evaluation and conventional weapons certification are not yet available.

PROGRAM GROWTH IS LIKELY

Early in the LRCA program planning phase the Air Force Systems Command established a set of ground rules defining the basic aircraft configuration and testing to be included in the LRCA program. The resulting "baseline" program satisfies the Air Force cost goal but many desirable items were excluded. Program officials strongly contend the baseline program must be maintained to achieve the $19.7 billion program cost estimate. Nevertheless there has been continuing pressure to add some of the excluded items back into the program. Those which may be added are shown below.

Possible additions	Estimated cost (1981 dollars in millions)
Cruise missile carriage	650
A second inertial navigation system	220
Rear bomb bay enlargement	175
Fuel tank inerting system	(1)
Electromagnetic pulse testing	(1)
Full-scale fuselage fatigue testing	140
Permissive action link-command disable	(1)
Forward looking infrared sensor	125
Simulator development and production	337
Low frequency/very low frequency communications	(1)
Hardware, testing, electronics and support for additional weapons	(1)
Improvements to offensive and defensive systems	(1)
Total	1,647

[1] Cost estimates for these items are not yet available.

The LRCA program includes the structural reinforcement needed to carry 8 cruise missiles internally and 14 externally. The Air Force estimates the additional cost of converting these provisions to actual cruise missile carriage will be $650–800 million. When cruise missiles are added to LRCA a second inertial navigation system is required and expected to cost $220 million. The LRCA could carry 8 more cruise missiles internally (for a total of 16 internal 14 external) if the rear bomb bay is extended. This modification involves a structural change to the rear fuselage section of the aircraft which would be impractical to do after aircraft are produced. Air Force officials advise cruise missiles will be added to LRCA in the future, however, the rear bomb bay enlargement is not planned.

A fuel tank inerting system provides protection against fire caused by high energy projectiles. The initial B–1 design included this system but it was deleted to reduce cost. LRCA's conventional mission makes this system desirable and it may be added later in the program. Neither electromagnetic pulse testing or full-scale fuselage fatigue testing were performed on the B–1. Air Force officials advise these tests would validate the LRCA design and may be added to the program at a later date. The permissive action link is a required nuclear safety device allowing flight crews to permanently disable nuclear weapons carried on LRCA. DOD officials said this capability is necessary and will be added to the program.

A forward looking infrared sensor (FLIR) has been part of the B–1 program since its inception. The Strategic Air Command (SAC) considers a modern FLIR a requirement to supplement the LRCA's forward looking radars. The FLIR is particularly desirable for identifying targets in high threat areas when radar emissions would highlight the bomber's presence. DOD officials advise the LRCA's new radar may eliminate the need for a FLIR. Should the radar prove less capable than expected, SAC's requirement will be reconsidered. Air Force official advised development of LRCA simulators for crew training has been deferred until the aircraft design is more mature. Low frequency/very low frequency communication systems provides improved communications under certain threat conditions. Additional costs will be reviewed as weapons beyond the basic complement included in the program are added to LRCA. LRCA's offensive and defensive systems are designed to accommodate enhancements which may be required to accomplish future missions.

NON-STANDARD AVIONICS MAY COST MORE

The basic LRCA design utilizes avionics which do not satisfy military standards recently adopted by the Air Force. The program office contends incorporation of these standards would:

Cost an additional $65 million,

Delay the LRCA schedule 6–12 months, and

Preclude a fixed price contract for avionics.

Air Force regulations allow these standards to be waived if it is technically not practical to use the standard, or if non-standard components will be significantly more cost effective over the system's life cycle.

The Air Force reviewing authority found the program office's request for a waiver was not supported on either technical or life cycle cost basis. In recommending the waivers be denied the reviewing authority wrote:

"Our conclusion is that costs are lower using standards. Front-end acquisition costs are reduced and life cycle costs are, at a minimum, $63 million less. Schedule appears to be of equal risk with or without standards, however. reliability, supportability and operational readiness will improve significantly with the use of standards."

The standards at issue are:

Military Standard 1750A: Sixteen bit computer instruction set architecture,

Military Standard 1589B: Jovial J73 single higher order programming language,

Military Standard 1760: Aircraft/store electrical inter-connection system, and

Military Standard 1553B: Aircraft internal time division command/response multiplex data bus.

LRCA WILL NOT BE COMBAT READY AT IOC

The LRCA program is structured to achieve an initial operational capability in June 1986. Initial operational capability, however, is narrowly defined as delivery of the 15th aircraft to the Strategic Air Command and bears little relationship to the aircraft's combat capability. Moreover, the first LCRA squadron will not be ready to assume nuclear alert for at least one year after IOC. It would be at least mid-1987 before limited nuclear certification is complete and the first squadron achieves the required combat readiness rating needed to assume an alert posture.

Nuclear certification of the aircraft and its initial complement of nuclear weapons is a pacing item since testing must be performed on production aircraft and support equipment, and may require a year or more to complete. Additionally, before LRCA can assume a nuclear alert posture, flight and maintenance crews must be trained and essential logistics support must be in place.

LRCA'S INITIAL WEAPONS COMPLEMENT IS LIMITED

The LRCA program provides a basic complement of four weapons for which a limited carriage, weapon release and safety certification program is planned.

The weapons included are described below.

Weapon, type and delivery profile	Maximum number carried: Internal	Maximum number carried: External
B-61, nuclear bomb, gravity drop	24	14
SRAM, nuclear missile short range standoff	24	14
MK-84, conventional bomb gravity drop	24	14
MK-82, conventional bomb gravity drop	84	44

Although the LRCA is being designed to carry nuclear and conventional weapons internally in three 180-inch bomb bays and externally from 14 hard points, only internal weapons carriage will be provided under this program. Since the current inventory of B–61 and SRAM nuclear weapons is only sufficient to load 100 LRCAs internally, external weapons carriage or use of B–52s as penetrators will require additional weapons to realize LRCA's full potential. There are other nuclear and conventional weapons in inventory and being developed which are identified for LRCA carriage. See the attached table. The Air Force, however, has not established a specific plan for adding to LRCA's basic weapon complement.

The LRCA program provides for a limited weapons test program which will not be sufficient to fully certify even the limited number of weapons in the basic complement. Program officials advise this program will test each weapon only for the optimum delivery profile. For example, SRAM may be tested for high speed, low altitude launch while conventional gravity bombs may be tested for high altitude low speed delivery. Specific test points for each weapon have not yet been determined. Further weapons release testing and certification will be performed by SAC. This testing is not included in the current program or the program cost estimate.

The LRCA program provides capabilities needed to perform todays nuclear and conventional missions but by the late 1980s improved capabilities may be necessary. Air Force studies of future nuclear missions for example, emphasize damage assessment/strike tactics and attacks against imprecisely located and or movable targets such as mobile missiles, relocated command centers and field units. Only manned bomber force has the potential to seek out and attack such targets. These studies emphasize the importance of the bombers long range, and large payload for future conventional conflicts particularly in support of rapid deployment forces. Gravity bombs, however, are deemphasized in favor of medium range standoff munitions launched and directed by bombers having sophisticated target identification and weapon guidance systems. To perform these missions, LRCA will require a high resolution, long range radar and possibly a forward looking infrared sensor system. Standoff weapons and related guidance system will also be needed. Additionally, the Air Force recognizes more capable electronic countermeasures systems will be necessary to assure penetration of future Soviet defensive systems.

TABLE I.—MAXIMUM PRIMARY WEAPON LOADS

[SRAM—Short Range Attack Missile. ALCM—Air Launched Cruise Missile. LDGP—Low Drag General Purpose. SE—Snakeye-High Drag Fin Configuration. TMD—Tactical Munitions Dispenser]

Weapon class and designation	Approximate weapon weight (pounds)	Maximum number carried: Internal: Config. A 3–180 in.	Internal: Config. B 1–265, 1–180 in.	External *	Total number carried
Nuclear gravity drop:					
B-28	2,540	12		8	20
B-61 †	718	24		14	38
B-83	2,408	24		14	38
Nuclear guided (stand-off):					
AGM-69 † (SRAM)	2,240	24		14	38
AGM-86B (ALCM)	3,300		(16)8	14	(30)22
Conventional guided-standoff: AGM-84 (Harpoon)	1,157	24		14	38
Conventional Gravity drop:					
MK-82 LDGP †	531	84		44	128
MK-82 SE	560	84		44	128
CBU-58	820	21		32	53
SUU-65 (TMD) MK-84 †	950	36		32	68
Conventional gravity drop sea mines:					
MK-56	2,134	9		8	17
MK-60 (Captor)	2,399	12		14	26

* Backup structural provisions for external hard points and internal ALCM carriage have been made.

† The possibility of enlarging the aft weapons bay for ALCM carriage allows for internal carriage of an additional 8 MK-82 weapons.

The Air Force included many of these capabilities in early program plans for LRCA but subsequently eliminated them to accommodate program cost and schedule goals. The current program provides only provisions for future subsystem improvement. There is no specific plan, however, to develop or add them to the LRCA.

CRUISE MISSILE CARRIAGE HAS BEEN DEFERRED

The Air Force acquisition plan and cost estimate does not include cruise missile carriage capability. Extensive internal and external hardware, wiring and electronic systems modifications would be necessary to provide this capability, and extensive additional flight testing and certification would be required. In addition, extension of the LRCA's rear bomb bay, which would double the aircraft's internal cruise missile payload, has been deleted from the current program to reduce cost and schedule risks. The current LRCA program, however, does include provisions for eventual cruise missile carriage. For example, structural reinforcement is planned for the forward weapons bay and the lower fuselage to accept cruise missiles which are larger and heavier than other primary LRCA weapons. The offensive avionics system is also being designed to accept cruise missile carriage and control functions.

Program officials advise a firm date has not been established for incorporating cruise missiles on the LRCA. This decision is dependent on total bomber force structure decisions now being considered by DOD. Since full cruise missile carriage capability was excluded from the LRCA programs early in the planning process, firm estimates of cost and schedule impact are not available Program officials are certain, however, that this capability could not be added to the proposed program and still meet LRCA's IOC. Similarly, no firm estimates for a separate modification program are available. It is clear, however, that adding cruise missile capability to the LRCA will not be easily or quickly accomplished.

Extension of LRCA's rear bomb bay would double the aircraft's internal cruise missile payload to 16 missiles, however, this modification was excluded from the current program to reduce cost and schedule risks. Since basic changes to the LRCA airframe are required, extension of LRCA's rear bomb bay after production is considered impractical. Accordingly, LRCA will be limited to carrying 22 cruise missiles, all but 8 externally. Similar payload restrictions will apply to future conventional and nuclear weapons which cannot be accommodated in LRCA's 180 inch bomb bays. While the Air Force's decision to exclude this modification supports near term program goals, the flexibility and payload requirements of LRCA's cruise missile and conventional roles may be more important.

The B–1 aircraft has three 180 inch bomb bays which can not accommodate cruise missiles or other large weapons being developed. Under the LRCA program, provisions are made to move the bulkhead separating the two forward bomb bays allowing carriage of 8 cruise missiles. Structural modifications to the aircraft's rear fuselage structure would allow extension of the rear bomb bay to carry 8 additional cruise missiles, providing a maximum capability of 30 ALCM (16 internal, 14 external). Estimated cost of this modification is $315 million of which $175 million is required for design changes and tooling and $140 million is needed for full-scale fatigue testing of the fuselage. The design work is considered extensive and adds additional risk to achieving LRCA's IOC. Because basic structural components must be redesigned, program officials advise the cost of performing this modification after aircraft are produced would be so high as to be impractical.

Since a final decision on full-scale fatigue testing for LRCA has not been made, program costs avoided by not extending the rear bomb bay may amount to only $175 million. Program officials were unable to quantify the additional schedule risk or expected delay this modification entails. Similarly, a comprehensive analysis weighing the benefits of increased flexibility and payload for cruise missile and conventional roles provided by this modification against near term cost and schedule impacts has not been made. Of particular importance are:

The ability of LRCA to carry and deliver all cruise missiles now programed for the bomber force,

The reduced range and increased vulnerability associated with external cruise missile carriage, and

The added flexibility provided by a larger rear bomb bay.

Current guidance calls for the acquisition of about 4,800 ALCMs to be carried by modified B–52 aircraft. When B–52s are retired, possibly in the early 1990s, LRCA is to assume the cruise missile carriage role. As currently planned 100 LRCAs could carry a maximum of 2,000 ALCMs. If the rear bomb bay is extended, 3,000 ALCMs could be carried. While future bomber force structure decisions must reconcile weapons and delivery vehicles, LRCAs with enlarged rear bomb bays offer greater cruise missile capability for a 100 aircraft force. Without this modification 36 additional LRCAs costing about $200 million each will be required to deliver 3,000 cruise missiles.

The additional aerodynamic drag created by external carriage of cruise missiles reduces LRCA's expected range significantly. Air Force studies show an estimated — percent range penalty for external carriage of 14 ALCMs. Additionally, we believe external carriage of ALCMs or other weapons makes KRCA more detectable by enemy radars. The degree of increased vulnerability for specific missions, however, has not been quantified.

Besides larger internal cruise missile payloads, an expanded rear bomb bay offers increased flexibility for weapons loading. Carriage of cruise missiles in the rear bomb bay leaves two 180 inch bomb bays available for other nuclear weapons or fuel. Similarly, such a LRCA can accommodate varing payloads of future conventional standoff missiles, gravity bombs and fuel.

Mr. LEVIN. Mr. President, besides raising questions about the costs of the program, it casts serious doubt on the military utility of the B–1

In fairness, several of the GAO's original concerns have been addressed by DOD and the Air Force, so that this statement of facts no longer is applicable on certain points. However, its major conclusions still apply, and raise disturbing questions about the entire B–1 program.

For instance, several of the additional costs identified by the GAO as questionable reductions and possible needed increases to the program have been confirmed by the Defense Department and Air Force, albeit a bit ironically as part of the administration's efforts to convince Congress that it actually can hold down the total costs of the B–1.

The irony of this is underscored by the many contradictions, conflicts, and outright misstatements which have marked the administration's attempts in this regard.

Even when they are attempting to sell the B–1, administration spokesmen have unwittingly provided Congress with information which sharply warns us "let the buyer beware!"

For example, on November 4, in conjunction with Secretary Weinberger's joint letter to Congress with William Casey, Deputy Secretary of Defense submitted a memorandum to the Secretary

of the Air Force purporting to establish firm guidelines for constraining B–1 costs.

Instead, this memorandum confirms that between $1.2 and $2.7 billion in additional B–1 costs, as identified by the GAO, are hidden costs and will be paid for outside of the program; these costs include simulator development, initial contractor maintenance support, manufacturing technology and production facilities improvements, and engine component development improvements.

I ask unanimous consents to have printed in the RECORD Mr. Carlucci's letter.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM FOR THE SECRETARY OF STATE

Subject: B–1 Program.

I have reviewed the Air Force and CAIG estimates of B–1 acquisition costs. To ensure that the program does not exceed its $20.5B budget (in FY81 dollars, including $.8B for internal and external cruise missile carriage, as summarized in the attached table), I am directing that the following steps be taken:

1. Besides providing internal and external cruise missile carriage, no additions will be made to the B–1 program outside the acquisition and operating concepts on which the POM was based.

2. The aircraft design consistent with paragraph 1 will be controlled so as not to exceed the presently programmed 6% ECO factor. If for any reason this becomes impossible, other features of the B–1 program will be modified to offset additional costs.

3. Simulators for the B–1 program will be funded within the simulator program described in the Air Force memorandum of November 4, 1981.

4. The development of an organic depot maintenance support capability will be completed within the $1.8B the B–1 program manager has presently projected for support equipment.

5. The Air Force should proceed with a vigorous multi-year contracting program to achieve the $.8B savings presently projected.

6. Interim contractor support, if needed until an organic intermediate and depot maintenance capability is available, will be paid for out of AFSC/AFLC funds provided for this purpose.

7. MANTECH, an Engine Component Improvement Program and Production Facility Improvements for B–1 will be accommodated within general Air Force funds programmed for these purposes.

A program management plan outlining your ideas on how best to achieve cost and schedule objectives for the B–1 program, including strict change control procedures, streamlined management, and prompt reporting of programmatic issues should be submitted to me through the Under Secretary of Defense for Research and Engineering within 30 days. Particular management attention will be paid to limiting cost growth in the airframe, support equipment, initial spares, and avionics. Quarterly reports will be sent to me describing progress achieved in carrying out the B–1 program within its budgeted cost. No change to the presently planned B–1 acquisition program or major changes in configuration will be made without my approval.

It is vitally important that we have an effective contract for this program, followed up by vigorous program management. I am asking Under Secretary DeLauer and General Counsel Taft to review for me the contract negotiating process on a continuing basis. When contract negotiations commence, I would like bi-weekly reports on the progress of these negotiations with emphasis on any problems you are experiencing.

FRANK C. CARLUCCI.

Attachment.

B–1 baseline program FY 81 (FY 81–87)

[In billions]

RDT&E	2.4
Proc	16.2
Spares	1.1
Cruise Missile Carriage	.8
Total B–1 Program Element	20.5

Mr. LEVIN. Mr. President, other examples which cast doubt on the administration's plan to restrain B–1 cost growth abound. Here is a list:

MULTIYEAR CONTRACTING SAVINGS

First, Mr. Carlucci's memorandum orders that:

The Air Force should proceed with a vigorous multi-year contracting program to achieve the $800 million savings presently projected.

Yet, as the GAO statement notes, and an independent Air Force cost estimate also questions, it is doubtful that as much savings as DOD projects can be achieved through multiyear contracting.

This is because, according to Mr. Carlucci's own criteria for multiyear contracting:

The item should be technically mature, have completed research, development, test and evaluation.

If the B–1B is technically mature, why must we spend at least an additional $2.4 billion in research and development on it according to the Air Force?

DOD itself, casts doubt on the prospects for multiyear contracting in an answer for the record to Strategic Subcommittee chairman, Senator WARNER, on October 28. DOD stated:

The Air Force estimate for the B–1B does include a cost savings of about $800 million for multi-year procurement. While we are very confident that substantial cost savings can be attained via multi-year procurement for stable production programs such as the F–16, we are less confident for the initial production for the entire B–1B system.

It is true that some of the B–1's components, and parts of the airframe itself, are common with other programs or are derivatives of other systems already in rate production and thus are candidates for multiyear procurement.

However, there are major aircraft components and subsystems which are unique to the B–1, and for which testing and rate production probably will not be achieved until too late in the program to permit multiyear contracting to save $800 million.

In addition, Rockwell has not built a B–1 airframe since 1976 or 1977, and all four of the B–1 test aircraft are different from each other. Additional changes to the aerodynamic design of the airplane are being proposed to reduce its detectibility to various Soviet air defense sensors.

Thus, the B–1 today is not the same aircraft built in the past, and contentions to the contrary used to justify rosey predictions of savings from multiyear contracting, and from optimistic "learning curve" savings which I shall address shortly should be greeted with healthy skepticism.

Furthermore, if the Air Force is so confident in the design and configuration of the B–1 to justify multiyear contracting, why does it plan for at least 1,000 more hours of flight testing?

Second, these same arguments apply to the $600 million in savings the Air Force is projecting from changes in the contractor learning curves for both the airframe and the avionics for the B–1.

Learning curve savings represent anticipated production efficiencies realized as successive units are produced, and we would expect there to be some reductions, over time, as the contractor work force obtains more experience assembling their products.

However, testimony before our subcommittee disclosed that the Air Force's combined learning curve for the airframe and avionics production is only slightly less than that of the contractors, which the service had criticized earlier this year for being too optimistic.

NUCLEAR WEAPONS CERTIFICATION

Third, GAO accused the Air Force of funding outside the program some $500 to $750 million in costs to certify the B–1 for the delivery of nuclear weapons. The Air Force contended that this cost was included in the $20.5 billion program cost. DOD testimony raises questions whether all these certification costs are included, however. Deputy Assistant Secretary of Defense for Strategic and Theater Nuclear Programs, T. K. Jones, stated that will not certified for delivery of one of the primary nuclear weapons in our arsenal, the air-launched cruise missile, as well as other nuclear weapons, until after late 1986.

This raises the very real possibility that the costs needed to certify the B–1 for major parts of its nuclear mission, will be accrued after the $20.5 billion price tag is paid, since this total only represents spending in the 1982–86 time period.

This means that not only will we not be buying a fully capable B–1 when it reaches its IOC in late 1986, but that we most likely will be paying more for it to achieve that capability.

PERMISSIVE ACTION LINK/COMMAND DISABLE SYSTEM COSTS

Fourth, GAO accused the Air Force of not including such a system in the B–1. Since this system is a safety device normally installed in nuclear weapons and nuclear delivery systems to prevent unauthorized control by terrorists, or detonation from accidents, it is a most important component.

DOD witnesses conceded that such a system would be installed in the B–1 and that it would cost about $30 to $40 million. Principal Deputy Under Secretary Wade gave these estimates to us on October 28, 1981.

When Mr. Wade returned to the Pentagon, he discovered that DOD's estimate for this job was exactly double what he told the subcommittee.

A correction was submitted for the record which stated that the system now would cost between $60 and $80 million, although it would arguably still be included in the $20.5 billion total program estimate.

Unfortunately, it seems that DOD did not tell the Air Force about this cost estimate, since the Air Force informed

the Congressional Budget Office that the costs of this system would be not $60 million, not $80 million, but $187 million in constant fiscal 1981 dollars.

So we can add $100 million more to the B–1 program, which is not shall change to your average taxpayer, and we can further question the accuracy of the lower estimates emanating from the Pentagon about this program.

ELECTROMAGNETIC PULSE TESTING

Fifth, GAO questioned why the costs for this component of the B–1 program were excluded from the DOD/Air Force cost estimate. I asked Dr. Wade the same question, and he responded "we should test, and we will test the plane."

I asked Dr. Wade how much such testing would cost, and he responded:

Normal cost of testing the fuselage is in the order of $100,000 a day and it takes basically 1 day's testing to get a good fix on the airplane.

Gratified that at least this would be a minor cost increase, I then asked him: "So that testing is less than $1 million?"

Dr. Wades response was a heartening and simple: "Yes."

Sadly, Mr. President, what was said on October 28 changed dramatically later, when Dr. Wade corrected his last response to be a simple "no," and provided a new price tax for the EMP testing of $20 million. And instead of a 1-day test, the committee was told it now would be a 6-month effort.

Mr. President, some might argue that a difference between $1 million and $20 million in a multibillion dollar program like the B–1 is insignificant. They might state that it is only "small change."

I would respond that it represents a 1,900-percent increase, and that Congress should definitely be conceded about 1,900-percent increases in any part of any defense or domestic program.

Twenty million dollars here and $20 million there sure mounts up, and that is why we have Federal budget deficits as large as we do. Our constituents said they wanted no more of such profligacy.

Our constituents have demanded that Congress and the executive branch exercise more rigorous examination of all Federal programs—defense and nondefense, Mr. President. They said they were fed up with underestimating or sloppy estimating.

The testimony of administration officials about the costs of the B–1 program can only force Congress to ask what else in the program has been grossly misestimated.

Congress should reject any program sold on the basis of such contradictory and questionable testimony. It should warily reject any protestations that promise that this administration will be able to constrain B–1 costs to within the advertised $20.5 billion, particularly in light of GAO and CAIG reports.

As the last word on the costs of the B–1B program, let me place in the RECORD at this point the letter from the Congressional Budget Office estimating the much higher B–1B program costs, in response to a request from our colleague Senator LEAHY, who serves on the Appropriations Committee. Senator LEAHY's statement making public this estimate is attached to the CBO letter, and I will read just two excerpts from it which cogently summarize the B–1B program costs:

Senator PATRICK J. LEAHY (D-Vermont) released new estimates of the cost of the B–1 bomber which show that this weapon system will be twice as expensive as the Air Force estimated just 4 months ago. These estimates were prepared by the Congressional Budget Office and,

The B–1 bomber will be obsolete before it is deployed. I do not believe we can afford a $40 billion flying Edsel, Senator LEAHY concluded.

I ask unanimous consent to have this material printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

LEAHY WARNS 100 PERCENT INCREASE IN B–1 COSTS WILL REDUCE MILITARY STRENGTH

WASHINGTON, D.C., November 6, 1981.—Senator Patrick J. Leahy (D–Vt.) released new estimates of the cost of the B–1 Bomber which show that this weapon system will be twice as expensive as the Air Force estimated just four months ago. These estimates were prepared by the Congressional Budget Office.

"Our national budget cannot afford this enormous cost, and our national security will not be improved by a penetrating bomber that cannot penetrate.

"In the mid-1980's, when our budget problems are most severe, the costs of this aircraft will be at their zenith.

"These huge costs will force higher budget deficits—and take money away from more effective strategic programs," Senator Leahy stated.

"These very large B–1 expenditures will reduce our military strength because fewer funds will be available for military readiness or for the Stealth Bomber which is widely agreed to be a superior aircraft.

"Cost estimates have increased so dramatically because original estimates were based on unrealistically optimistic economic assumptions and did not include all the required equipment and design changes.

"Unfortunately, we cannot pay for the B–1 with last year's dollars or build it without full equipment.

"The B–1 bomber will be obsolete before it is deployed. I do not believe we can afford a $40 billion flying Edsel," Senator Leahy concluded.

CONGRESSIONAL BUDGET OFFICE,
Washington, D.C., November 6, 1981.

Hon. PATRICK J. LEAHY,
Senate Appropriations Committee,
Russell Senate Office Building.

DEAR SENATOR LEAHY: In response to your request the Congressional Budget Office (CBO) has reviewed the investment (procurement and research development) costs of the B–1 bomber and assessed the impact of potential inflation on the program. Our estimate includes the total acquisition costs of the baseline bomber; the four major additional items that the Air Force has requested the contractor to examine; and as you requested, the items GAO has indicated should also be included in the cost of the B–1.

The baseline costs of the 100 bomber program as provided by the Air Force are, $19.7 billion (in constant 1981 dollars). In addition, the Air Force requested the prime contractor to examine four major items that may be included in the final contract. These four items are rear bomb bay enlargement, permissive action link/command disable system, air-launch cruise missile (ALCM) carriage, and ALCM avionics. The Air Force estimates that these additions to the program would cost $1 billion (in constant 1981 dollars).

As you requested, we have also analyzed the major investment items that the General Accounting Office (GAO) has indicated should be included in any cost estimates of the B–1. The GAO identified these items under three broad classifications: (a) questionable reductions, (b) expenses in other program elements, and (c) potential additions. These items are shown in Attachment 1. The identified cost for all GAO items is $5.5 billion (in constant 1981 dollars). For several of these items, including operational and electromagnetic pulse testing, conventional weapons certification, a fuel tank inerting system, low and very low frequency communications, and improvements to offensive and defensive systems—the GAO was unable to obtain basic cost estimates. We have therefore, not included estimates for these items in this assessment. Also, in estimating contractor support and nuclear weapons certification, the GAO anticipated a range of $1 billion to $2.8 billion; in this assessment we have used the mid-point of the GAO range for these two items.

After applying CBO's inflation rate assumptions to the full range of program costs discussed above, we estimate that B–1 investment costs will be $39.8 billion in then-year, or budget, dollars. With the Administration's inflation rate assumptions, the comparable cost would be $35.4 billion.

Attachments 2 through 5 provide year-by-year estimates of budget authority, using both CBO and Administration economic assumptions, for the baseline bomber (Attachment 2), the four options for which the Air Force requested contractor proposals (Attachment 3), the various items the GAO has indicated as being appropriate for any B–1 cost estimate (Attachment 4), and a summary of the total program costs (Attachment 5). Attachment 6 provides a year-by-year comparison of estimated budget authority and outlays for the total program.

These estimates, it should be noted, are for investment costs only; they are not life-cycle costs. They do not reflect the costs of operating the B–1 once it is in the Air Force inventory. Nor do they reflect the possible costs of other weapon systems to enhance the capability of the B–1 such as a new short range attack missile or a new tanker for aerial refueling.

I am sending an identical letter to Senator Proxmire and a copy to Chairman Hatfield. If your staff should have any questions concerning these estimates or the attachments they can contact Mr. Patrick Renehan of our Defense Cost Unit at 226–2840.

Sincerely,

ALICE M. RIVLIN.
Director.

ADDITIONAL ITEMS IDENTIFIED BY GAO

(In millions of constant 1981 dollars)

Subject, cost

Questionable reductions:
Engineering change order budget, $440.
Change in avionics learning curve, $100.
Change in airframe learning curve, $500.
Reduction in avionics production estimate, $86.
Consideration for multiyear procurement, $800.
Transfer of engine component engineering development to component improvement account, $40.
Deferral of air vehicle depot support development, $300.
Expenses in other program elements:
Operational test and evaluation, no estimate.
Engine component improvement program, $115.
Conventional weapons certification, no estimate.
Interim contractor support, $500–$2,000.
Production facilities improvement, $71.
Manufacturing technology enhancement, $170.
Base facility improvement, $173.
Nuclear weapons certification, $500–$750.
Potential additions:
Second inertial navigation system, $220.
Forward looking infrared sensor, $125.

Simulator development and procurement, $337.
Full scale fuselage fatigue testing, $140.
Fuel tank inerting system, no estimate.
Electro-magnetic pulse testing, no estimate.
Low frequency/very low frequency communications, no estimate.
Hardware, testing, electronics and support for additional weapons, no estimate.
Future improvements to avionics, no estimate.

ATTACHMENT 2. COMPARISON OF ADMINISTRATION AND CBO BASELINE B-1 COSTS (Budget authority by fiscal year, in millions of dollars)

	1981	1982	1983	1984	1985	1986	TOTAL a/
Development							
Constant 1981 dollars	210	670	620	460	430	40	2,430
Administration then-year dollars	218	750	741	583	573	56	2,921
CBO then-year dollars	218	762	761	608	609	61	3,017

Mr. LEVIN. As a Senator from Michigan, I know something about Edsels, Mr. President. At least the Edsel never cost between $250–$400 million per copy, which is what the B–1B will cost. Skepticism also must be expressed about the IOC of the B–1, based on the statements from DOD and the Air Force.

Secretary Weinberger told the full Armed Services Committee on October 5:

Specifically, we will develop a force of 100 B–1 bombers with an initial operating capability in 1986.

Air Force Chief of Staff Allen told the Strategic Subcommittee on October 29:

We propose to build and deploy a force of 100 modified B–1 bombers with an initial operating capability of 1986 . . .

However, DOD's own Dictionary of Military and Associated Terms, published by the JCS on June 1, 1979, and known as JCS Pub. 1, provides the following definition of "initial operational capability—The first attainment of the capability to employ effectively a weapon, item of equipment or system of approved specific characteristics, and which is manned or operated by an adequately trained, equipped, and supported military unit or force."

And, the B–1B IOC is being defined by the AF, according to GAO, as "delivery of the 15th aircraft to SAC."

Not only does this deviate from what is supposed to be a system's IOC, but GAO has been informed by AF that IOC for B–1B does not represent or require operational capability. GAO was told it would be at least mid-1987 before even limited nuclear certification of the B–1B is complete.

Most importantly, the Air Force's own strategic systems program office, according to GAO, stated to GAO investigators that:

It will be at least a year after the 15th aircraft is delivered before the first LRCA (B–1) squadron will have the capability necessary to stand nuclear alert.

I recognize that several witnesses before our committee this past month have denied this, Mr. President. Unfortunately, this would appear to be yet another example of the conflicting and contradictory sales job being played to the American people.

So, not only do we have a B–1 bomber program severely understated in costs by many billions of dollars, but it will not even deliver the advertised goods—inferior as they are—until a year later than is being contended.

Mr. President, the B–1 bomber will actually weaken us in strategic capability because it is causing a delay in the Stealth bomber and because it is diverting funds away from another highly promising classified program, which the administration has either drastically reduced or terminated completely. Since this program represents another challenge to the utility of the B–1, I can only conclude that it was slashed to neutralize its threat to the B–1.

Other ways we will be weaker strategically because of the Reagan strategic program are because it makes at least the following changes to the plan proposed by former President Carter:

First, retires the B–52D's in 1982 and 1983, years before the end of their useful lives: Until now, previous plans had maintained them in service for many more years.

Second, dismantles our Titan II missiles by 1983.

Third, fails to take advantage of the potential to deploy as many as 5,000 air-launched cruise missiles on our bomber force by deciding to deploy only about 3,000 on the B–52G's and H's and on the B–1. The Carter program would have deployed some 3,000 ALCM's on just our 170 B–52G's, and retained the option to deploy another 2,000 on our 90 B–52H's.

The program now before us forecloses this option to increase our nuclear firepower.

Fourth, retires our B–52G's and H's before the end of their useful lives.

Early retirement of the B–52's and of the Titan II missiles, which represent a significant proportion of the nuclear destructive megatonnage in our deterrent, was done simply to find money to fund other parts of the Reagan strategic program, SAC Commander Davis admitted to our Strategic Subcommittee. He did so in the following exchange with me on November 4, an exchange in which he also admitted we were foreclosing our option to deploy more cruise missiles:

Senator LEVIN. We are retiring the B–52D's earlier than you would like?

General DAVIS. Earlier because I don't have another capability, but in truth, I am sure the Boeing engineers never thought that that airplane would be in the inventory 26 or 27 years after it was produced.

Senator LEVIN. Well, according to that, you are talking about the D's. As of last year a D had a longer life than we are now.

General DAVIS. Yes.

Senator LEVIN. We are retiring them earlier now for fiscal reasons.

General DAVIS. That is right.

Senator LEVIN. Not for engineering reasons.

General DAVIS. No.

Senator LEVIN. As far as G's and H's?

General DAVIS. They are not as effective as the later models.

Senator LEVIN. But it is mainly for fiscal reasons that we are removing them earlier than planned a year ago.

General DAVIS. Yes.

Senator LEVIN. The B–52G's and H's according to Boeing Airframe claims, they should remain sound well into the 1990s, is that correct?

General DAVIS. That is right.

Senator LEVIN. And yet you are not using all of those even in terms of Cruise missile carriers, is that not correct, that we are only acquiring 3,000 Cruise missiles instead of a possible 5,000 Cruise missiles which they could carry. Is that not correct?

General DAVIS. That is approximately correct. We are equipping all of the H's and about 90 of the G's.

We would not need to make such false economies in our strategic program if we did not have to fund the B–1 program.

As I stated earlier, General Davis also admitted to Senator NUNN that the Reagan strategic program for the next 5 years actually opens rather than closes the well-publicized "window of vulnerability" this administration is so fond of describing.

Not only will buying the B–1 weaken our strategic posture, but paying its outrageous price tag will sap our conventional strength by diverting funds from needed conventional programs.

We have seen this already, as the fiscal 1982 Defense Authorization Act, and even the appropriations bill now before us, inadequately fund several important readiness areas because so much money is spent in the B–1 program. To pay for the B–1, we even are reducing the forces we need to maintain our commitment to defend the Persian Gulf.

We will be weaker militarily because the administration made significant reductions in nonstrategic programs in fiscal 1982 alone—cuts below its own original, March defense budget request—in order to raise the $2.4 billion proposed for the B–1 in that fiscal year.

The Reagan proposal has seriously cut our conventional force capabilities, and our amendment would restore many of them.

Less than a month after this body went through a bruising fight on the AWACS and F–15 enhancement package sale to Saudi Arabia—a package the administration argued was necessary to protect our interests in the Persian Gulf region—the President decided to cut our aircraft carrier presence there by 25 percent.

In doing so, he was reversing his position—which I supported—to keep two carrier battle groups on station in the Indian Ocean. His reversal meant that

half a carrier battle group would leave the very area of the world where the Soviets most directly threaten our national interests and peace.

Our amendment would restore the funds needed to keep two full carrier battle groups in the Indian Ocean.

The administration also proposed to cut the Navy's funds for steaming days per quarter—the time usually spent in training to increase readiness and in preparation for overseas deployments. Not only did it propose to renege on its March budget, but the steaming days it proposed actually were lower than those supported in President Carter's defense budget for the last fiscal year.

The Appropriations Committee is to be lauded for at least rejecting this reduction in steaming days, Mr. President. It added funds to the budget to restore this part of the Navy's operating tempo, even though it did not restore the funds for Indian Ocean presence.

The administration also slashed another program designed to improve our capabilities to rapidly deploy forces to the Persian Gulf and to Europe to defend our vital interests—the Air Force's KC–10A advanced tanker/cargo aircraft procurement plan.

Recognized shortfalls exist in our long-range airlift and aerial refueling capabilities. Mr. President, presently, the strategic air command which manages all our tankers because of their importance to successful completion of our nuclear bomber missions, must try to satisfy both strategic and conventional needs with insufficient resources.

The result is that both requirements are shortchanged, something General Davis testified about when he appeared before our subcommittee.

The general said this about the dilemma:

Modernization of SAC's tanker force is one of the Air Force's highest priorities. As you correctly noted, the air refueling shortfall has been of deep concern for several years. Today, (some) percent of the bomber force is limited in SIOP effectiveness due to inadequate air refueling availability. This condition will be exacerbated.

In addition, tanker support for general purpose airlift and fighter requirements will also increase over time. DOD planned enhancements to U.S. force projection capabilities cannot be fully attained without commensurate increases in aerial refueling capabilities. Of particular concern is the requirement to responsively deploy and employ our Rapid Deployment Joint Task Force, a formidable mission under the best of circumstances. Suffice it to say that the Air Force will continue to operate through this decade with a shortfall . . . unless aggressive steps are taken to modernize the tanker force.

Let me underscore what General Davis said:

DOD planned enhancements to U.S. force projection capabilities cannot be fully attained without commensurate increases in aerial refueling capabilities.

That means quite literally, Mr. President, that "we can't get there from here." Our tactical fighter aircraft will find it extremely difficult to ferry nonstop to the Persian Gulf or to Europe, and critical delays could occur in our efforts to reinforce those areas.

What are the administration's "aggressive steps"—to again reiterate General Davis—"to modernize the tanker force?"

It proposed to cut all eight of the KC–10 tankers it requested out of the budget as it tried to fund the B–1.

Instead of throwing the KC–10's out of the budget, Mr. President, the administration should have thrown out the B–1.

The authorizing and appropriating committees both rejected half of the total elimination of the KC–10 procurement originally proposed for fiscal 1982. They funded the purchase of four such aircraft.

Our amendment would add back sufficient funding to restore in fiscal year 1982 the entire buy of eight KC–10's—a program directly related to our capabilities to defend the Persian Gulf.

In trying to make room in the defense budget for programs like the B–1, the administration further carved up its original rceommendation by cutting the size of the Army by 6,000 soldiers, by stripping away some $60 million in operations and maintenance funds to support introduction of the new weapons systems needed to modernize the Army, and by reducing its procurement of tank recovery vehicles.

Personnel and operations and maintenance funding is not very glamorous, Mr. President, and tank recovery vehicles are downright ugly. But they are exactly the sort of unglamorous expenditures which form the very foundation of our Armed Forces. The personnel cut, for example, eliminates more than one combat brigade.

Another perfect example of such unglamorous, but necessary, "horseshoe nails" upon which our military "kingdom" is based, is training ammunition.

We have all heard many stories about how today's Army is not ready to fight because it never gets enough practice firing its weapons. Well, the President's October budget revision deleted $150 million in training ammunition from the program.

Our amendment would restore $148 million of this reduction, a restoration which would greatly enhance troop training according to the Army.

Our amendment also would restore the Army's end-strength by adding back funding for the 6,000 soldiers, provide the $60 million to adequately support the Army's modernization efforts, and increase the purchase of tank recovery vehicles.

Increased procurement of tank recovery vehicles also is needed to avoid uneconomic production rates and a possible, eventual shortage of such vehicles as the Army continues to increase its production and deployment of new tanks and infantry fighting vehicles.

And at a time when we should be trying to improve readiness, there is no good reason to cut the Army's size by 6,000 soldiers.

In addition to the reduced steaming hours and Indian Ocean presence, the Navy has been as short-changed as the Army by the administration.

At a time when it is talking about building a 600-ship Navy, the administration has been reducing programs aimed at adequately protecting and arming those ships we already have. It also has proposed retiring still-useful ships.

The President reversed his original budget request by about $80 million in the fleet modernization program, the endeavor which modernizes equipment and weapons systems aboard ships during regularly scheduled overhauls.

Examples of projects cancelled by the cut are installation of new Phalanx gun, close-in weapons systems for two of our newest destroyers and some 19 auxiliary ships, and the "hardening" or reinforcing of the superstructures of five more of our newest destroyers against shrapnel damage.

Early retirement of three active forces logistics support ships and six reserve destroyers and mine-warfare vessels also is being proposed to save money. In the case of the logistics ships, it remains unclear how the Navy will compensate for the loss of this capability in the near term.

Our amendment would prevent the cancellation of the fleet modernization projects as well as the premature retirement of these needed ships.

It also would accelerate our shipbuilding program by adding a fast attack nuclear submarine to the fiscal 1982 defense budget. If we are ever to reach and maintain the numbers of attack submarines the Navy savs we need, let alone ever have a 600-ship Navy, we must increase our construction rate. Our amendment adds $518 million to accomplish this improvement in our conventional warfighting capabilities against the Soviets.

These false economies in the conventional area would be unnecessary if the B–1 were not competing for scarce funds in the defense budget.

Our amendment seeks to restore the funds for these important programs to maintain our conventional strength, just as it seeks to restore the funds to maintain and improve our strategic capabilities in ways more cost- and military-effective than deploying the B–1 bomber.

I would now like to turn to the other justifications DOD and the Air Force try to use for the B–1 when the contradictions and weaknesses in their main hypotheses are driven home to them. They say that, even if the B–1 will only be able to penetrate Soviet air defenses for a limited period of time, it will then be useful as a standoff cruise missile launcher and as a conventional bomber.

It should be pointed out that, contrary to what some people are hearing these days in the Halls of the Senate, the Stealth bomber will be capable of launching cruise missiles and conventional bombs, as well as penetrating. We would not lack these military capabilities if we procured an all Stealth bomber force instead of the B–1.

SAC Commander Davis acknowledged this in a response to my committee colleague, Senator QUAYLE. He said:

The ATB will be able to carry a wide range of nuclear and conventional weapons, including the cruise missile. The design of the

ATB makes it highly resistant to Soviet defensive measures and will allow successful penetration against projected defensive threats and great flexibility to cope with unexpected threats.

In this regard, it also should be remembered that our present B–52 force will be able to perform these two missions—cruise missiles and conventional bombing—well into the 1990's and well after we would have enough Stealth bombers available for all three missions.

Besides the information I referred to earlier from the Secretary of the Air Force which demonstrate how long the B–52's will be useful, the Air Force Chief of Staff himself, General Allen, admitted this to our committee on February 6 when he said:

The Air Force position remains that B–52s will provide us with an effective cruise missile carriage capability well into the 1990s.

If, by the Air Force's own statements, our B–52's will be able to launch ALCMS well into the next decade, and the advanced-technology bomber will be available by then, there is no need for the B–1 even as a cruise missile carrier or conventional bomber.

Let me point out that the Air Force Secretary's information on the useful life for the B–52's and the deployment of the advanced-technology bomber are based on a comparison of "equal effectiveness forces."

In other words, this information shows that an all Stealth bomber force, used with our B–52's, will be able to deliver as many weapons on Soviet targets, as will the proposed mixed force of B–1's and Stealth bombers.

As for the conventional mission which some of our colleagues promote as a third rationale for the B–1, the words of the former head of Air Force R. & D. Lt. Gen. Alton Slay, place this shaky plank in the B–1 platform in proper perspective.

General Slay, who also was well-respected for his knowledge and candor before he retired, stated that the choice between the B–1 and the Stealth bombers should be heavily influenced by the following:

You will note my consistent use of the term "manned penetrator." That is not an idle use of words, it is a concise statement of my opinion of what should be the principal and paramount role to which any aircraft we choose should be designed. In the design of either the interim or the ultimate system, the tough and primary mission of penetrating Soviet homeland defenses to put nuclear weapons on SIOP targets should not be compromised in the slightest degree in order to allow it to do other interesting and even important missions like dropping hay to stranded yaks in Katmandu. Our philosophy should be "design the airplanes to do the hard job—penetrate—and, oh, by the way, as a fallout, it can also drop hay to stranded yaks."

Thus, General Slay has answered for the Congress the essential question upon which the choice of the advanced technology bomber force over a mixed force of B–1's and Stealth bombers rests. That question is "Whether it is more important to choose an airplane designed to optimize its ability to penetrate Soviet air defenses, and which also can perform the other missions with acceptable effectiveness, or one which will be more effective in Third World areas but with less effective penetration capabilities?"

The answer is we must choose the former aircraft type, and that is the Stealth bomber, and we must deploy it as quickly as possible, which this amendment is designed to support. And, it should be emphasized, Stealth can perform conventional missions, even dropping hay to stranded yaks.

The administration also says that maintaining the present force of B–52's will cost almost as much—$93 billion—as it would cost to buy the mixed force of B–1's and Stealth bombers being proposed—$112.2 billion.

This argument is perhaps the biggest "red herring" of all, Mr. President.

No one is discussing only maintaining the current force, without procuring any new bombers, as a viable option. That is what the trumped-up $93.4 billion represents.

We should be comparing the costs of the mixed force—$114 billion for 100 B–1's and 132 Stealth aircraft—to the costs of an all ATB program—which Dr. DeLauer testified would be $112 billion.

Both of these force options include the costs of maintaining and operating some portion of our B–52's for many years into the future, so regardless of what new bomber we choose, we will pay these costs as part of the package.

When we compare the two "apples and apples" force packages, only one conclusion can be drawn—it makes much more fiscal and military sense to buy an all Stealth bomber force.

The 2 billion less dollars that it would cost to buy 100 B–1's and 132 ATB's, we can purchase an even larger number of aircraft in an all Stealth bomber force. And we will be buying many more aircraft whose penetration capabilities are projected to last long after the B–1 loses whatever dubious penetration capabilities it has.

Another argument used by the administration is that building a mixed force of B–1's and Stealth bombers will greatly complicate Soviet air defense problems and force them to spend billions dealing with these problems instead of using those rubles for other military programs. This diversion of funds will constrain other Soviet military programs, it is argued.

The sad truth is, Mr. President, that the Soviets are already well on their way to developing effective air defenses against the B–1, because they have already invested much time and money into developing defenses against our air launched cruise missiles. As they develop an air defense against cruise missiles, which have a much smaller radar cross section to be detected than even the supposedly improved B–1, they obtain significant capabilities against the B–1. Only relatively marginal changes and investment to the already developing Soviet air defenses will be needed to defeat the B–1.

What really would complicate to the point of impossibility the job and price tag the Soviets would have to face would be a force composed solely of advanced technology bombers. No one, not even our own best scientists who far surpass the Soviets in their knowledge of designing and developing air defense systems, yet knows how to defend against the Stealth bomber.

Those who argue that deployment of Stealth will force the Soviets to start from the very beginning and build a different air defense system from the ground up to try to defend against Stealth, are correct. It will cost them untold billions to do this.

These conclusions were eloquently presented recently to our Strategic Subcommittee by former SAC Commander Ellis in response to the following question by Senator NUNN:

What I am trying to get at, really, is what are the Soviets going to have to do to counter the B–1 that they are not already doing now, and what are the Soviets going to have to do to counter the ATB in terms of air defense that they are not already doing now?

General Ellis: Let me comment generally on that. I will say that there are characteristics in the technology of the ATB which require a great deal more advanced sensors, Soviet sensors, radars, both in the ground-to-air radars and the surface-to-air missile systems, than would be required for the B–1 or any other interim bomber.

Our calculations have shown that these characteristics of the ATB will be such that it will cause them great difficulty through the 1990's and into the next century.

Senator NUNN: Are you saying that the Soviets will have to do enormously more in air defense in terms of expenditure of efforts to cope with the ATB than they will with the B–1?

General ELLIS. "Enormously" is difficult to measure, but it will have to do certainly a great deal more. When you talk with the industrial wizards of this country who are in the same business in terms of detection and they describe the problems they have in the development of systems that will be able to take care of the characteristics of the ATB, they don't know just how to do it.

If our people don't know how to do it and don't have an idea on how to do it now, I would say that the Soviets have an even larger problem. I don't know whether that is very helpful or not, Senator.

Senator NUNN. We can go into more detail, but would it be fair to say there is a very wide gap in terms of Soviet expenditures that would be required to cope with the B–1 air-defense-wise and the Soviet expenditures that are required to cope with the ATB?

General ELLIS. A great deal of the expenditures have already been planned and begun by the Soviets in trying to counter the ALCM. That helps very much with some of the characteristics that you worry about on the B–1, so much of what they are doing to handle the ALCM can be used as a fallout system for the B–1 problem.

The difference in the B–1 and the ALCM, of course, is speed, but speed is only one of three criteria or operational benefits or requirements that work into that solution. I can't give you—I don't think anybody has been able to figure out—the difference between exactly what will be required for the B–1 and Stealth, because we don't know even the magnitude of the problem to counter Stealth at this point. It is difficult when you don't know the magnitude of it to figure out the cost. We know, technologically, it is a very difficult problem.

The administration also argues that the B–1 is necessary because its capability to fly away or "escape" from its home bases is faster than that of present B–52's, and thus it is better able to respond to the threat of a surprise attack from Soviet submarine launched missiles.

The Pentagon's Doctor Delauer offered this rationale before the subcommittee on November 10. He said:

In contrast to the B–52, the B–1B will be able to survive, with high confidence, Soviet preemptive attacks on our air bases. In order to survive attacks by Soviet submarines patrolling off our coasts, bombers must be able to take off and clear the area around their home base within minutes. The B–1B can fly out faster than the B–52, and it is designed hard against blast overpressure and other nuclear effects. As a result, the B–1B will provide a much higher margin of safety in launch survivability, which, in turn, will reduce Soviet incentives for a surprise attack on our bombers.

Two days later, General Ellis blew this conjecture out of the water, so to speak, in this exchange with Chairman WARNER:

Senator WARNER. General, there has been a good deal of discussion on the improved capability of the proposed B–1B to cut down the launch time and therefore improve its survivability. Do you also attach a good deal of significance to that added development?

General ELLIS. Well, I add significance to it, Senator, but you have to remember that at the present time from your ICBM threat you have 30 minutes approximately.

Senator WARNER. I think it is the SLBM threat.

General ELLIS. On the SLBM, for those bases that are threatened by the SLBM timewise you take it up to the limit of the escape time. Then when you crowd that limit you disperse your forces to other bases.

So, there are ways to work around that.

General Ellis has spent the last 4 years, just before his retirement in August, worrying daily about the threat of Soviet submarines launching missiles against his B–52's in a surprise attack. Yet he considers it a "work around problem" which can be solved through dispersal of these bombers.

If we can "work around the problem with existing methods," Mr. President, we do not need to spend $40 billion for the B–1 because of its "base escape" capabilities.

I also would point out that another classified part of the Reagan strategic program addresses this issue and even further reduces the need for the B–1 for this reason.

The administration also argues that each part of the President's strategic program is "sacred" and must not be eliminated or else it will undercut his negotiating leverage with the Soviets as he is about to embark on a new proposal for arms limitations. He will lack bargaining chips, so to speak, and will not be able to negotiate from a position of strength, it is contended.

Considering the limited penetration capabilities of the B–1, Mr. President, the Soviets are hardly going to be impressed with this aircraft as a measure of American resolve and strategic strength, and as a "bargaining chip" in future arms negotiations.

Since the B–1 will only be able to penetrate for 4 years or so after its deployment, how much of a threat to the Soviet heartland will it be, and how much will this impress the Soviets? Not much.

For bargaining chips to be useful, in poker or in arms negotiations, they have to be worth great value, and they have to present a significant threat to your adversary across the table. The B–1 is neither, especially when compared to the advanced technology bomber.

What does represent a significant near-term threat to the Soviets are Titan II missiles with their great-destructive megatonnage, and our B–52D's. If this administration really was concerned about not undercutting the President's arms control initiatives, which I applaud, it would have not decided to prematurely retire these systems.

If this really was a concern to the administration, it would not have retired our Titan II missiles and all their great-destructive megatonnage, and the B–52D's. Both Republican and Democratic administrations have retained them as bargaining leverage in arms control negotiations.

The Titans are the only "heavy" missiles we have to compare with the Soviet, SS–18 heavy missile threat, the 308 formidable missiles this administration expressed so much concern about because they were not limited in the proposed SALT II agreement.

By prematurely retiring these Titan missiles, this administration has again weakened our Nation. It has done so because it has failed to demand any similar Soviet reduction in its heavy missiles for our own unilateral concession.

If we kept the Titan missiles, we would not be talking about the B–1's as a bargaining chip.

DOD and the Air Force compounded this error by foreclosing our option to deploy as many as 5,000 Cruise missiles on our B–52 bomber force. Such an overwhelming force of Cruise missiles would be a significant incentive to the Soviets to seek arms limitation agreements.

If they were to be deployed, we would again not need to talk about the B–1 as a bargaining chip in the President's arms control efforts.

We would not need to buy a B–1 bomber to support the President's arms control negotiations if we procured an even larger force of more capable advanced technology bombers to establish an even stronger position of strength for the United States than any B–1 bombers.

The prospects of an all Stealth bomber force will represent an overwhelming threat to the Soviets, a threat much greater than that posed by B–1 bombers. If that alone does not compel the Soviets to bargain for arms control, nothing will.

And I would add that there are several other major strategic programs which will be proceeding space without the B–1 bomber. Each of those represents more of a threat to the Soviets and an incentive to them for arms control than the B–1.

These programs include the Trident I and Trident II missiles and the more capable submarines which launch them, ground-launched and sea-launched cruise missiles—which the administration is proposing to deploy in larger numbers—and a new strategic gravity bomb.

Those are more than enough nuclear weapons and strategic delivery systems to support the President's arms control programs or any President's arms control program.

As a final word on the bargaining chips issue, Mr. President, I would suggest that the only way the Soviets will be impressed by the B–1 will be by its price tag. Unless we can threaten to drop dollar bills on Soviet targets, the Russians should applaud our decision to build the B–1 because it will drain the U.S. Treasury of the money we could more productively spend to procure more powerful weapons to send them to the bargaining table.

There is one additional point I would like to discuss before I summarize the many arguments against the B–1 and in favor of our amendments. Since the President's strategic program decisions were announced in early October, Congress has been treated to one of the worst examples of executive branch misinformation campaigns I have witnessed since entering the Senate.

Besides contradicting each other at almost every turn, administration witnesses have failed to provide Congress with much of the information it needs to make the best decisions about the Reagan strategic program.

Despite the fact that we held several weeks of hearings before the Strategic Subcommittee of the Armed Services Committee, many questions remain unanswered, including both those asked during the course of the hearings and those submitted later for the record.

In several instances, our committee has been told that detailed information still does not exist about some of the strategic programs for which Congress is being asked to begin appropriating billions of dollars.

No American these days would spend his or her hard-earned paycheck to buy a house or a car unless and until they knew exactly what he or she was buying. Yet the Defense Department and the Air Force are asking the American people collectively to make this kind of blind purchase.

DOD has refused to provide our committee with the cost estimate of the B–1 program developed by its independent cost analysis improvement group. Since that estimate totaled $27–$28 billion, far above the advertised program cost of $20.5 billion, it is understandable why the executive branch does not want Congress to examine it in detail. We might discover the weaknesses in the much lower estimate.

The Air Force also does not yet have a detailed plan for hardening existing silos in which it intends to deploy MX, and one of its proposed future basing options on which it wants to spend millions in R. & D. funds this year, the continuous patrol aircraft, is just a gleam in someone's eye.

I have tried to obtain some of this additional information through a still unanswered letter to Defense Secretary Weinberger which summarizes many of the outstanding questions. I shall place it in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMMITTEE ON ARMED SERVICES,
Washington, D.C., November 25, 1981.

Hon. CASPAR WEINBERGER,
Secretary, Department of Defense, the Pentagon, Washington, D.C.

DEAR MR. SECRETARY: During the hearings held by the Senate Armed Services Committee and the Subcommittee on Strategic and Theater Nuclear Forces on the President's Strategic Program, many questions have been asked that have required answers to be submitted for the record. I have some additional questions that I would like to have answered for the record.

The list of these questions is attached to this letter. I would appreciate your prompt response as the Defense Appropriations Bill will soon be debated in the Senate.

I would like you to answer these questions on an unclassified basis. If some questions cannot be answered on an unclassified basis, I would like the classified answer. My thanks in advance for your help.

Sincerely,

CARL LEVIN.

QUESTIONS CONCERNING THE STRATEGIC MODERNIZATION PROGRAM FOR THE SECRETARY OF DEFENSE

1. Mr. Secretary, what is the CAIG estimate of the costs of the B–1B bomber program? (Dr. DeLauer discussed this estimate in the November 10, 1981 hearing).

2. Mr. Secretary, under the Carter cruise missile program, 3000 cruise missiles were to be acquired for all the B–52G's with an option to deploy an additional 2000 on the B–52H's. On November 5, 1981, you testified that 3000 cruise missiles would be on line by 1984, but that they would be deployed on the B–52G's, B–52H's and the B–1B's. Under the Reagan program, do we still have the option of acquiring 2000 cruise missiles in addition to the 3000 planned, and would we have carriers for their deployment? When is the IOC of the 3000 cruise missiles under the Reagan program and when was the IOC of the missiles under the Carter program?

3. Mr. Secretary, on November 5, 1981, Senator Denton requested that you supply sufficient military expert justification for hardening Titan or Minuteman silos. Has this analysis been forwarded to you and when will you provide it to the Committee? Did this analysis include comparisons of the static and dynamic balances and simulated war exercises? What other options were considered along with the silo hardening option (such as deploying 100 MX in unhardened silos) and what were their costs?

4. Mr. Secretary, what is the year-by-year comparison of the Reagan and Carter force structures with static and dynamic measures? Please provide the results of any simulations that were run to compare the two programs.

5. Mr. Secretary, you have supplied figures relating to the investment cost of the B–1B. What additional costs to the Defense Department will be attributable to the B–1B and are not normally expressed as a part of the B–1B acquisition cost? What will be the life-cycle costs of the B–1B assuming that it would have a twenty year lifetime? How do these costs compare to the life-cycle costs of the B–52 and the Stealth bomber in constant and current FY81 dollars?

6. Mr. Secretary, you have supplied figures for the costs of hardening missile silos to house the MX. What are the costs of reconfiguring the MX missiles to fit each of the basing modes to be considered?

7. Mr. Secretary, while you supplied figures of the combined B–1B and ATB force (100 B–1B and 132 ATB), your office did not supply the number of ATBs included in the all-ATB force. If Dr. DeLauer was willing in public testimony to state the number of ATBs in the mixed force, why is the number of ATBs in the all-Stealth force classified? What is the number of ATBs included in the budget estimate reported by Dr. DeLauer? How much more penetrating capability would the all-Stealth force have than the mixed force?

8. Mr. Secretary, what is the detailed schedule for the development, modification, engineering and production of the B–1B? When will the critical design review take place? The FACT SHEET of the USAF on the B–1B indicated that the first operational aircraft would be delivered to SAC in Oct., 1985 with the first IOC of 15 aircraft in Oct., 1986 (a period of 12 months). The DoD has testified that the first aircraft would be delivered in 1986 and the IOC would be 1986. How does the old acquisition schedule, with 12 months between first delivery to IOC, compare to the new schedule, with less than 12 months? What portions of the new schedule have been compressed to reduce the time between first aircraft delivered and IOC of the force?

Mr. LEVIN. Mr. President, let me summarize the overwhelming and conclusive arguments against the B–1 bomber:

It will cost billions for the B–1, a bomber which will not be able to penetrate Soviet air defenses—its primary and most important strategic mission—long enough to justify this great expense.

It will divert funds from the Stealth bomber program, thus delaying deployment of that bomber beyond when it is possible to deploy it with acceptable technical risk and after when Stealth will be the only bomber capable of accomplishing the strategic nuclear penetrating mission.

Again General Ellis repeated just 2 weeks ago his earlier testimony that the advanced technology, Stealth bomber is "one of the highest priority programs that we have, "And that it was of a much higher priority than any B–1 program.

The B–1 will divert funds from critical conventional military programs, such as defending the Persian Gulf and Indian Ocean, maintaining readiness and training, and maintaining the size of the Army. Thus, it will weaken us in conventional military capabilities.

It will rob another highly important and highly classified strategic program.

It will divert funds from buying as many cruise missiles as we could deploy abroad our B–52G's, ignore the opportunities to deploy thousands more cruise missiles on B–52H's; it will force retirement of both these models of the B–52 well before they have reached the end of their useful service lives as cruise missile carriers.

It will weaken rather than strengthen our position in arms control talks with the Soviets.

We will open rather than close the alleged "window of vulnerability" to pay for the B–1.

All in all, we will be weaker rather than stronger with the B–1, Mr. President, and it will be the "Trojan horse" of our defense programs which supply-side economics is to the Nation's fiscal programs.

In fact, OMB Director David Stockman's recent admission about the shambles of supply-side economics and this administration's economic decisionmaking process is a fitting commentary on the B–1.

In this month's Atlantic Monthly, David Stockman is quoted as saying:

We didn't add up all the numbers. We didn't make all the thorough, comprehensive calculations about where we really needed to come out and how much to put on the plate the first time, and so forth. In other words, we ended up with a list that I'd always been carrying of things to be done, rather than starting the other way and asking, "What is the overall fiscal policy required to reach the target.

Mr. President, the B–1 bomber certainly does not add up, and it will certainly not be able to reach the target. I urge adoption of the amendment.

Mr. NUNN. I thank my colleague from Michigan. I want to congratulate the Senator from Michigan for his emphasis on readiness. He has spent an enormous amount of time dealing with this subject that is not one that makes the front pages but requires a tremendous amount of tedious work.

There is no higher defense priority today than in the readiness area that the Senator from Michigan is not only working on but is becoming a leader in.

I also want to commend my colleague from South Carolina who not only made a very important statement, but he made one that all of us, I think, can understand because the points he made, many of them, are things I am going to be saying in the next few minutes.

THE B–1 BOMBER

Mr. President, in making a determination on the B–1 bomber, I think it would be a mistake for the Senate to base its judgment primarily on technical comparisons of the B–1 and the advanced technology or Stealth bomber. I have talked to the Senator from Ohio on many occasions. I know we will be having a very fine statement from him today that will be on the other side of this question than the one I have at the moment. But he has indicated to all of us, and he is an expert in this area, that any new development program has uncertainty. And certainly the advanced technical bomber is not an exception to that rule.

There are also risks involved in developing and deploying new weapons systems, particularly when they involve technological breakthroughs. But, of course, this is the kind of risk that we must take if we are going to maintain our technological lead.

I think we should not be deceived into believing that there is no risk, however, in the B–1B bomber. The B–1B program has made important improvements over the B–1 in combining a reduced radar cross section with new electronic countermeasures. The experts, however, disagree as to whether these innovations will preserve the B–1's ability to penetrate through the 1990's.

Dr. Richard DeLauer and Secretary Weinberger—well, Dr. DeLauer, because Secretary Weinberger has made a contrary statement. Dr. DeLauer, Gen. Lew Allen, Gen. Kelly Burke, and Gen. Bennie Davis are all confident on this point about the B–1B. On the other hand, equally qualified experts like Dr. Bill Perry and Gen. Richard Ellis are skeptical as to the effectiveness by the early 1990's of the B–1B's electronic countermeasures capability and conclude that this is a "thin reed" on which to base our

hope for continued successful B–1 penetration.

These are well-informed experts and I certainly respect their judgments. They have good-faith disagreements on this very important point.

So I do not pretend here today to be making a final and conclusive technical judgment on the question of the B–1B and its capabilities after 1990 or even on some of the difficulties that may arise with the advanced technological program. But I do conclude that there is a considerable risk involved in counting on the B–1B as a penetrating bomber into the 1990's.

I believe, however, in all fairness, that the B–1 will be an excellent conventional bomber and it is a good standoff cruise missile carrier. So I conclude, Mr. President, unlike some who may conclude that the B–1 bomber, the B–1B bomber is not going to be an asset, I think it will be an asset. I think it will be a valuable asset in our aircraft inventory if it is produced. And I believe, also, that this vote, as the Senator from South Carolina has already indicated is clearly going to be in favor of that decision.

But my decision on the strategic program at this stage is not based on technical judgments, but rather on simple arithmetic and on priorities. You do not have to be a defense expert to understand that President Reagan is calling for a very large dollar increase in our strategic program. The $180 billion price tag that is frequently used in the news media for the strategic program really is a very conservative figure, because that figure is just for the next 5 years and that does not include the Trident II missile procurement, nor does it include the advanced technology bomber, nor does it include the final MX basing mode. So we are being asked to fund in this bill programs which are already underway or which will be beginning in the strategic area, and those programs include six major items.

First, the Trident program and the Trident II missile. Second, the modernization of communications, command and control. Third, the cruise missiles program. Fourth, the MX missile program. Fifth, the Stealth bomber proprogram.

The budget squeeze is very obvious. You do not have to even go to the conventional forces that the Senator from South Carolina has stressed so well to see the impact of all of these items coming in a compressed time period. They also impact our strategic programs. There have been budget cuts this year on several important strategic program components.

First of all, we are retiring the B–52D's by over 4 years earlier than planned. Second, we are retiring the Titan ICBM's earlier than planned. Third, we are slowing down the Trident submarine production, which results in less platforms in 1990. Fourth, in this bill we are complying with the President's request and we are cancelling KC10 tankers and we are having delays in the WC135 reengine program, which are essential for aerial refueling, both strategically and conventionally. Finally, we have, I think, some very significant and serious delays in certain classified programs.

Mr. President, I am convinced that priorities are not being clearly established in this defense program. Speaking only for myself, as far as strategic priorities are concerned, I would list the Trident program, including the Trident II missile—and I have already commended the President for going to the Trident II missile. I think that is enormously important, and that is certainly a strong plus of his program. I would list that program.

I would also list the modernized communications, command and control, the so-called enhanced C–3 package. I would also list the cruise missile program as being our top three strategic priorities.

The Trident II missile and the C–3 enhancement are extremely important initiatives that President Reagan, again, should be commended for.

I would follow these priorities with the MX missile program, provided—as we stated in lengthy debate last night—provided it is properly deployed, followed by the Stealth bomber program and finally the B–1B.

If the Senate had not last night sent the President and Secretary of Defense a strong message of dissatisfaction with his plan for deployment of the MX, I would have been, frankly, very inclined towards voting to cancel the MX program. I remain hopeful, however, that the Senate message will be fully understood by the President and by the administration. If the President cannot or does not come up with a deployment plan for the MX that makes sense and adds both to deterrence and to stability, I will favor abandoning the entire MX program at some point in the future. I hope that does not happen.

In the meantime, our job is to decide priorities, as difficult as that may be, and it is difficult. Under these six items—and they are all programs that cost a lot and they are all programs that will add to our deterrence. They are all programs that are important. But under these six items, my last priority in the strategic area is the B–1B.

The question is then raised: Can we afford, within President Reagan's overall defense budget, to fund these six major strategic programs? If the answer is yes, then, of course, there would be every reason to vote against the Hollings amendment. But, simple arithmetic tells me that the answer is no.

I believe that if we attempt to fund all of these programs over the next 5 years, our conventional capability will suffer greatly. I am particularly concerned as to the adverse effect on our tactical forces, our mobility program, and our rapid deployment forces. I know the administration is very concerned about our naval power, and I agree with the President about that concern. I certainly agree with the Secretary of the Navy and his great leadership in trying to beef up the Navy.

Let me just give you a couple of figures that I think indicate the extent of the problem the Senator from South Carolina identified here today. These come from a staff on the minority side in the Senate Armed Services Committee. These are not figures that are approved by the Senate Armed Services Committee officially, but it is a staff study and the staff members are people of great competence and expertise. These figures are based on the Navy's own figures.

The administration has talked on and on about a 600-ship navy. That is something that we would all welcome if it can be achieved. A 600-ship navy, if it is going to be achieved by the year 1992, according to this study, would require an expenditure of about $25.5 billion per year—per year—in 1982 dollars. Of course, that means constant dollars and that means you do not add inflation and you do not add anything else. It costs $25.5 billion per year.

Now, if you decide you are going to achieve that goal a little later—and I see the Senator from Rhode Island, who is very knowledgeable in this area, is on the floor and I am delighted—if you are going to achieve that 600 ship Navy a little later, in the year 2000, this staff study showed that it would require funding of $18.5 billion per year beginning in 1982, again in constant 1982 dollars.

What level of funding is in this budget for naval shipbuilding? The level of funding is $8.5 billion. That is approximately one-third of the level of funding that would be required to get to the 600-ship Navy by the year 1992. It is less than one-half of what would be required to get to the 600-ship Navy by the year 2000.

Actually, the number $8.5 billion represents the President's budget request. I am informed that $9.3 billion is in this bill, so there has been an $800 million increase. But the same ratios generally apply.

In other words, this very large defense budget, compared to previous years, does not even begin to move toward the 600-ship Navy. It does not even begin to move toward the 600-ship Navy. I think there is questionable judgment about whether it even moves toward a 500-ship Navy, although I do not have an analysis of that.

Mr. President, we recently read about a highly publicized Department of Defense report on Soviet military power. That report had page after page documenting the relentless expansion of Soviet conventional armaments and forces, including Army, Navy, and Air Force. The fiscal year 1982 defense budget that we are considering here today authorizes, in spite of the tremendous step forward that it is in many ways, fewer combat aircraft than were procured in fiscal year 1982, the last year for which final procurement figures are available, and there are fewer combat ships, 9 versus 10, than were in the fiscal year 1980 program. Of course, we have already gone through considerable debate on the other items that have been canceled, including the tanker program, a very important program, reduced Navy steaming, flying hours, Army ammunition procurement, as detailed so well by the Senator from South Carolina.

Mr. President, let us get away from details for just a moment and back off and ask what we are doing when we consider this budget. What kind of foreign

policy, and what kind of defense implications are here? I think we have to look realistically at what has happened in the world in the last few years.

The Soviet Union did not take Afghanistan with nuclear weapons. They are not intimidating and threatening Poland with nuclear weapons. I have not heard the first speculation anywhere by even those who are most pessimistic who believe that the Soviet Union would use nuclear weapons if they invaded Poland.

They did not hesistate to invade Hungary in 1956 when America had overwhelming nuclear superiority. They went right on in. They invaded Czechoslovakia in 1968 when America retained a nuclear advantage with both strategic and theater nuclear weapons. The Soviets do not control Angola, Ethiopia, and South Yemen because of the strategic window of vulnerability, although in all fairness I must add that their nuclear forces may very well tend to make them bolder with conventional forces and with surrogates. There is nothing that is going to change in that equation no matter what we do in the strategic area.

Mr. President, the series of amendments which have been rejected by the Senate this week, as the Senator from West Virginia just outlined, are just a beginning of the real focus on the defense budget squeeze. In spite of an increasing defense budget, we are now embarking on a severe squeeze of our conventional forces. These amendments which failed would have restored important conventional programs produced by the Reagan administration requests. We have gone over those time and time again.

Those who opposed those amendments in good faith, and I know they did in good faith, did so by asking a perfectly logical question; that is, Where is the money coming from?

This point of opposition to the add-ons will be repeated many times in fiscal years 1983, 1984, and 1985 as efforts are made to improve our conventional capability. So that is the message that should be coming out of this debate this week. The message should be, what is happening to our overall defense capability, not just what is happening to the MX and what is happening to the B–1. That would be a very sad era, and I think we would omit the most important part of this debate.

Mr. President, if my skepticism becomes a reality, and I say to my colleagues I hope it will not, the upcoming 1983 fiscal year budget will face an increasing squeeze on conventional forces and this pressure is likely to grow each year thereafter. I fear that in an era of increased Soviet use of conventional forces and proxy forces, America is inadvertently, and I stress that word "inadvertently," following policies which inevitably, if followed in future years, will lead to limiting our options to nuclear responses in any kind of all-out confrontation with the Soviet Union.

Mr. President, unless we are careful, we will soon be sowing the seeds of a strategic step backward in the 1950's and a strategy of massive retaliation. I would say again, and I stress the word, that would be "inadvertent." I do not believe anyone is advocating that.

Deterrence then, in the 1950's, was assured primarily by our strategic nuclear forces which, without any doubt, were superior. Such a posture may have made sense in an era when we enjoyed overwhelming strategic superiority, but in today's era that I have labeled as "clinging parity" and some have labeled "essential equivalence," it is strategy that indicates massive destruction or capitulation, neither of which is a counter-option our defense budget should give our country.

Mr. President, the question then is do we really want to move back toward such reliance on nuclear weapons? Do we really want to move back toward an era of massive retaliation without either John Foster Dulles as Secretary of State or also without nuclear superiority? We better start thinking very seriously about that.

Mr. President, I must also add that I believe, as I stated in February, the President's projected defense budget significantly underestimates and underfunds the programs contained therein. Under all of these circumstances, I believe that the B–1 funding is likely to delay Stealth technology and/or severely impact our readiness and our conventional capability. I fear that the recommended two-bomber program may end up producing so few units of each bomber that the per unit cost, the separate logistics, the maintenance and support, for each bomber becomes almost prohibitive. I believe by next year, certainly by next year at this time, it will be clearer than it is today that we have to face these unpleasant choices and we have to make some priority decisions which we are not making at this time.

I hope, again, that I am wrong. I believe either the B–1, the MX, or the Stealth program will have to be canceled or significantly delayed, or I believe that our conventional force posture and our readiness will be severely eroded.

If the administration cannot or does not come up with a sensible basing mode for the MX, then this program, in my book, becomes the likely candidate for termination. If these circumstances develop, I would then—and I want to make this clear at least for the RECORD, because this is not an easy decision; it is a close call. If these circumstances develop—that is, if the MX does not have a suitable basing mode, if one cannot be found, if one is not advocated by the administration—in that case, I would support termination of the MX.

I would also, at that stage, support the B–1 program, which I am now arguing against at this time. I would support it at that stage as a hedge against Stealth uncertainty and as a long-term conventional bomber in preference to the MX if the MX is deployed in fixed silos.

My decision here today, Mr. President, is one of priorities. It is one of priorities. Under the present circumstances as we now have them, particularly with the Senate sending the message last evening that we did expect alternative basing modes to be, in good faith, presented, I continue to support the MX and I hope it will be deployed in a rational manner that preserves deterrence and stability. But under these circumstances that we are faced with now, even though I recognize where the votes are, I shall support the Hollings-Levin amendment, which deletes the B–1 and transfers the funding to other very high priority areas.

In summarizing, Mr. President, and I think the Senator from Michigan for yielding and I am about to complete my remarks—in summary, we may never produce a Stealth bomber. I do not know. I hope we can. By attempting, however, to fund all of these strategic programs at one time, we are likely to produce a stealthy Marine Corps, a stealthy conventional Air Force, a stealthy Army, and a stealthy Navy. I hasten to add that there would be an enormous advantage in announcing that we have just landed a stealthy Marine division on the shores of the Persian Gulf or deployed a stealthy aircraft carrier to the Indian Ocean. I fear, however, that unless those announcements are very skillfully leaked, they will not be credible.

Mr. President, I believe President Carter made a serious mistake in canceling the B–1 in 1977, and I said so at that time. I have reluctantly concluded, however, that President Reagan is making a mistake in reviving this program in 1981.

Mr. WARNER. Mr. President, would the Senator yield for a question?

Mr. NUNN. I would be delighted, Mr. President, but the Senator from Michigan yielded to me and has the floor.

Mr. WARNER. May I ask the Senator from Michigan if I may just ask one question on my distinguished colleague?

Mr. LEVIN. Mr. President, I am happy to do so if the Senator from Georgia wishes to respond.

Mr. WARNER. Mr. President, the Senator from Georgia joined me in a series of hearings that were not completed but took place within the past 4 or 5 weeks by the Subcommittee on Strategic Weapons of the Armed Services Committee, in which the Senator participated many times, heard a series of witnesses. Yet I hear the Senator say today that it is his concern that the B–1 funding would "delay the Stealth funding program."

Mr. President, I expressly asked every witness that had any knowledge on that issue to speak to it. My recollection is that not one single witness provided testimony to the effect that the Stealth bomber would be delayed because of the funding profile of the B–1. As a matter of fact, the Senator joined me and others in writing to the Secretary of Defense for clarification on that issue if it were needed.

The Secretary of Defense replied on November 17, 1981:

> Regarding your concerns pertaining to the bomber program, let me assure you that I do not intend to permit the advanced technology bomber program "Stealth" to slip.

Can the Senator provide me with any reference in the record wherein there is a basis for the allegation that the B–1 program funding profile will in any way delay the Stealth program?

Mr. NUNN. Mr. President, I say to the Senator from Virginia that, of course, I have enormous respect for the Senator and the job he has done in the committee. I say that my statement here today was that it either will delay the Stealth bomber program or it will begin to erode our conventional forces. I stand by that statement. I think we already are seeing an erosion of the conventional forces in terms of what the President originally advocated and what he now advocates.

I just went through a rather lengthy description of a staff study which shows that, to get to the 600-ship Navy that we have heard about over and over again—from the same people who wrote that letter, by the way, stating that this would not interfere with the Stealth technology—to get to that, we would have to have a funding level between now and 1992, if that is the year we are going to produce the 600-ship Navy, of $25.5 billion per year in constant dollars; and if we are going to get to it by the year 2000, we have to have a funding level of $18.5 billion.

This defense bill right here, which is a very large bill, is $9.3 billion on Navy ship building. My point was not to try to pinpoint precisely what the B–1 funding combined—I combined it with all these other strategic programs, not the B–1 alone, the combination. My point is not to precisely identify what the squeezed program will be, but rather to show that we are going to have a severe budget squeeze in sum, and some programs that are very, very important will have to be squeezed. I hope the administration does not squeeze the advanced technology bomber. I am glad that I joined in that letter to the Secretary of Defense, and I am pleased that he came back with that commitment. But there is going to be a severe squeeze in the defense budget.

The administration did not anticipate taking out all these other items when they submitted the budget in January. Now we have a significant dilution in this budget. I do not think they anticipated changing the advanced technology bomber.

But I think it is going to be almost impossible to try to fund the Trident, to fund the cruise missile program, to try to have the CQ modernization—which I strongly support and the Senator from Virginia has had more than anybody to do with—and also at the same time to fund the cruise missile program and the two-bomber program. I fear that we may end up with so few numbers of B–1B's and, perhaps, the ATB, that we are going to increase the per unit cost even above the $400 million that we talked about, increase the per unit cost of the ATB further than anyone can imagine and, at the same time, create a tremendous inefficiency in logistics and manpower.

Mr. WARNER. If I understand the distinguished Senator from Georgia, it is based on his judgment, and not on fact in any record we can point to. As a matter of fact, the witnesses testified to the very thing, as reinforced by the Secretary of Defense, that Stealth would not suffer if indeed the B–1 goes forward and there is a shortage of money somewhere.

Mr. NUNN. The Senator is correct. That primarily came in answer to very precise and persistent and perceptive cross-examination by the Senator from Virginia. He sort of milked it out, with his very formidable cross-examination, and I am not sure I would call it an entirely voluntary statement. Nevertheless, it is in the record.

I must add that we also were told that we were going to have a 600-ship Navy.

Mr. WARNER. I thank the Senator from Georgia and the Senator from Michigan.

The PRESIDING OFFICER. The Senator from Colorado.

Mr. HART. Mr. President, I ask the Senator from Georgia this question: The fact is, and the record is clear, that the administration has reduced its own shipbuilding program already this year, has it not?

Mr. NUNN. The Senator is absolutely correct on that. They have reduced the shipbuilding program substantially, and I do not hear any more about a 600-ship Navy. In fact, I wonder where those plans have gone. They were enormously important.

Mr. HART. That is a way of underscoring the point the Senator is making, that the dollars are competing with each other, and what is being cut back is the big strategic program, and what is suffering are the conventional forces, particularly the maritime people this country is going to need in the 1980's and 1990's to maintain its posture in the world.

Mr. NUNN. I thank the Senator.

Several Senators addressed the Chair.

Mr. WARNER. Mr. President. will the Senator yield for a question?

Mr. LEVIN. I am happy to yield for a question.

Mr. WARNER. Since the Senator made a very careful record of the testimony relating to the penetration capabilities of the B–1 would the Senator feel it proper to refer to the letter of November 10, 1981, addressed to the chairman of the Armed Services Committee from the Secretary of Defense in which he states as follows:

Tests against advanced technology air defenses indicate a high degree of success with these techniques. DOD analyses based on the results of these tests indicate the B–1B would have the capability to penetrate anticipated Soviet air defenses well into the 1990's in a multitude of employment modes and to perform effectively as a cruise missile carrier and as a conventional bomber into the next century.

Mr. LEVIN. What is the question?

Mr. WARNER. Would it not be proper to put in the RECORD alongside the other testimony that the Senator included and the Senator consider this worthy of mention?

Mr. LEVIN. It is not only proper but I wish it included in the RECORD because it indicates exactly what I have been saying: That Defense Department witnesses will change dates about penetrating capability, they will change dates as to when Stealth will be ready, and they will change the cost of the B–1 day-by-day, week-by-week, because I believe that the DOD will do just about anything to sell this B–1 bomber. That letter is an example of this because the same person who signed that letter, Defense Secretary Weinberger, was asked three times at the same hearing as to how long the B–1 can penetrate and that same Secretary of Defense said, "I am not sending my people on suicide missions. Nineteen ninety is the date."

Quoting him directly, he said:

I think there is no question whatever that we will not be able to use the B–1 penetrator after 1990.

That is what the Secretary said over and over again a few weeks ago, and I know he has changed his position, and I am happy to make that letter a part of the RECORD to prove that change of position.

Mr. WARNER. Mr. President, I ask unanimous consent to have various letters from and to the Secretary of Defense printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

THE SECRETARY OF DEFENSE,
Washington, D.C., November 10, 1981.

Hon. JOHN G. TOWER,
Chairman, Committee on Armed Services, Washington, D.C.

DEAR MR. CHAIRMAN: The following joint statement is intended to clarify capabilities of the existing and planned U.S. bomber force to penetrate current and projected Soviet air defenses.

The intelligence community estimates that current Soviet air defenses would be unable to deal effectively with conventional bombers penetrating at low altitude because they ask sufficient deployed forces with the technological capabilities to detect, track, and engage such targets effectively. The Soviets have several programs underway that will substantially improve their capabilities to perform each of these key functions by the late 1980's. The impact of such improvements will depend on the pace of their air defense deployment programs and the progress they make in improving the technical capabilities of their radars, command and control systems, and weapons. Although the number of deployed units projected by the intelligence community for the late 1980's would not be sufficient to heavily defend all potential targets in the Soviet Union, the Soviets are likely to concentrate their better-quality defenses to protect the targets which they perceive to be most valuable.

Department of Defense analyses indicate that the B–1 will have better capabilities to penetrate Soviet air defenses during the next 10 years than other conventional type bombers.

"As new low-altitude-capable air defense systems are deployed in sizeable numbers in the last half of the 1980's, penetration of Soviet air defenses by aircraft such as the B–52 will become more difficult, particularly against those targets which the Soviets choose to defend heavily. This aircraft has a larger radar cross section and relatively slow low-altitude penetration speed, neither of which can be appreciably changed.

"The B–1 as originally designed, while having a radar signature smaller than the B–52, would nevertheless have been detectable by Soviet radars. However, continuing development and testing of radar signature reduction techniques has achieved a further tenfold reduction in radar signature relative to the original B–1 design. This reduced signature allows the B–1B to employ fundamentally new ECM techniques which cannot be applied to the B–52 due to its large radar cross section. As a result of the combination of reduced signature, higher penetration speed, and new ECM, Soviet defense engagement opportunities will be severely reduced.

Jamming power levels necessary to mask the remaining signature are achievable.

"Tests against advanced technology air defenses indicate a high degree of success with these techniques. DOD analyses based on the results of these tests indicate the B–1B would have the capability to penetrate anticipated Soviet air defenses well into the 1990's in a multitude of employment modes and to perform effectively as a cruise missile carrier and as a conventional bomber into the next century."

The planned Advanced Technology Bomber (ATB) will serve as an essential element of a mixed force of penetrating bombers and cruise missiles capable of holding at risk the whole variety of targets necessary to deter the Soviet Union through the 1990's and well into the next century. The ATB will ensure continuing capability against the extremely important targets which the Soviets would defend most heavily with combinations of their newest air defenses and mobility or superhardening. A mixed force of B–1 cruise missile carriers and the ATB will present an extremely difficult problem to the most sophisticated defense system—thereby requiring major expenditures by the U.S.S.R. on defensive systems that cannot be used to attack the U.S. and its allies.

CASPAR W. WEINBERGER,
WILLIAM J. CASEY.

COMMITTEE ON ARMED SERVICES,
Washington, D.C., November 12, 1981.

Hon. CASPAR W. WEINBERGER,
Secretary of Defense, The Pentagon, Washington, D.C.

DEAR MR. SECRETARY: On October 2, the President announced his long-awaited program to modernize American strategic nuclear forces. The five point package recommended by the President addresses many problems which have been associated with our strategic forces. In particular, we are pleased with the emphasis which has been placed upon command, control and communications and appreciate the support which you gave to similar initiatives taken by this Committee in the FY 1982 authorization bill. Also this Committee has, in the past, strongly endorsed the D–5 version of the Trident II sea-launched ballistic missile. We are pleased that you are committed to funding fully this missile consistent with an initial operational capability of 1989.

However, we do have reservations about some aspects of the President's program. First, the testimony taken by the Committee and its Strategic and Theater Nuclear Forces Subcommittee thus far concerning the current MX basing options being pursued by the Administration appears preliminary. Second, although the two-aircraft approach to the modernization of our strategic bomber forces has much to recommend it, we are concerned that initiation of the B–1 bomber program at defense budget levels anticipated could delay important programs including classified programs such as the advanced technology bomber.

Testimony before the Senate Armed Services Committee has suggested that there is validity to our concerns and has made it evident that actions can and should be taken to rectify, in part, shortcomings in the program which we have identified. Senior Defense Department witnesses have shown a sensitivity to the issues we have raised and have indicated a willingness on the part of the Reagan Administration to strengthen its strategic program by addressing these problems. We are writing to seek clarification of the President's position in this regard. Specifically, we would appreciate your responding to the following questions:

What steps do you propose to take to ensure that location uncertainty with respect to land basing of offensive and defensive missiles and defensive radars is preserved as an option for the planned decision in 1984 on MX basing?

What is the planned initial operational capability of the advanced technology bomber and is that program fully funded to achieve that objective?

What steps are you prepared to take to ensure that the initial operational capability of the advanced technology bomber will not be allowed to slip beyond that now planned?

What steps are you prepared to take to identify and fund additional efforts to resolve technological uncertainties or other issues so as to permit the earliest deployment of Stealth technology?

What steps are you prepared to take to provide the earliest production schedule for the classified program which was reduced by $350 million in the President's October budget revision?

Your responses may be of critical importance to the favorable consideration by the Congress of the President's strategic force modernization program and its component parts. We urge you to provide us with a clarification of the Administration position on these questions at the earliest possible opportunity.

Sincerely,

JOHN TOWER.
JOHN W. WARNER.
SAM NUNN.

THE SECRETARY OF DEFENSE,
Washington, D.C., November 17, 1981.

Hon. JOHN TOWER,
Chairman, Committee on Armed Services, Washington, D.C.

DEAR MR. CHAIRMAN: Thank you for your letter concerning the five point program for modernization of the American strategic nuclear forces. Development of that program involved some very difficult programmatic and budgetary decisions and some details still need to be worked out.

In keeping with the importance of this matter and to ensure that the development and pursuit of this program continues to have a high level of attention, I have asked Dr. DeLauer to chair a Strategic Modernization Program Executive Committee (EXCOM) composed of the senior leadership from my OSD staff and the Services. The immediate task of this EXCOM is to facilitate the coordination of the various facets of this program among the Services and appropriate elements of the OSD staff. This group has already begun to function, having met on two occasions last week.

With regard to your question concerning MX and the associated BMD program, the Administration's rejection of the MPS basing mode for MX was not a rejection of deception per se. Instead, this rejection was based on a recognition of the unfavorable economics of trying to build shelters faster than the Soviets could build more warheads to destroy the system.

The Administration intends to explore deceptive basing of offensive missiles and defensive components as an option within the BMD program. To do otherwise would exclude highly effective tactics, for example, preferential defense which the U.S. could use to gain leverage against the Soviet threat.

To accomplish the above we intend to do the following:

Establish a subpanel of the EXCOM chaired by the Deputy Under Secretary of Defense (Strategic and Theater Nuclear Forces) to ensure an integrated and balanced defense/offense system which could take advantage of deceptive techniques in both offense and defense components.

Provide appropriate program direction for the Army and Air Force.

Regarding your concerns pertaining to the bomber program, let me assure you that I do not intend to permit the Advanced Technology Bomber Program (ATB) (Stealth) to slip. As I stated in my letter of 10 November 1981, the ATB will serve as an essential element of a mixed force of penetrating bombers and cruise missiles through the 1990s and well into the next century. In accordance with the importance attached to the ATB, we have identified the technical risk areas and have adequately funded them. As soon as technical progress allows, we will move into full-scale development. Funds have been set aside in our out-year planning to fund this program fully and to cover the earliest start of full-scale engineering development that we now forecast to be prudent. We are, in sum, committed to proceed at the fastest prudent pace based on demonstrated technical progress. We intend to hold periodic technical reviews under the sponsorship of the EXCOM to reassess progress and future schedules.

Finally, with regard to the questions on classified aspects of Stealth technology, the Department is vigorously pursuing this area and will continue to do so for the foreseeable future.

I believe that these actions are consistent with the objective which we share, to build a survivable land-based missile force that is affordable and cannot be negated by responses known to be within the Soviet capability. I believe they will also lead us to the earliest availability of Stealth technology consistent with prudent technical, schedule, and budgetary risk.

Sincerely,

CASPAR W. WEINBERGER.

Several Senators addressed the Chair.

Mr. GLENN. Mr. President, will the Senator yield for a further question?

The PRESIDING OFFICER. Does the Senator from Michigan yield the floor for a question to the Senator from Ohio?

Mr. GLENN. Mr. President, will the Senator yield for that purpose?

Mr. LEVIN. I am happy to yield for a question.

Mr. GLENN. This will be brief.

The Senator bases much of his opposition to the B–1 on the Stealth technology and makes the statement that the Stealth is better, that that is "undisputed" I believe is the word he uses. I know that the Senator and I have sat in some of the same technological briefings on the Stealth technology, and I realize in open session at least here it is impossible to go into some of these details. I just cannot imagine having that kind of confidence in the Stealth technology, when we do not have answers in many of these areas and Stealth, in effect, remains a paper aircraft on a rubber schedule, basically, and it is just not something that is here in the immediate future, although I favor continuing with the R. & D.

But I am mystified as to why the Senator has this confidence and really thinks that technology is here now.

Mr. LEVIN. I am glad that the Senator asked that question.

We do have differences on this and the Senator from South Carolina, with whom I am cosponsoring this amendment, I think answered that same question. Basically, one can listen to the same briefings and come up with different conclusions. The Senator from South Carolina and I have been briefed by the same people as the Senator from Ohio.

I have again available for any Senator the specifics, the answers to the questions which the Senator from Ohio has raised

in private as he must because he cannot raise them publicly, and I am happy to share that, but we are all under the same liability. We are not able to argue the pros and cons of Stealth technology because of its high classification. All I can say is that Senator HOLLINGS and many others, and the Senator from Ohio and I in the same briefings from the same people, reached different conclusions.

The final answer to the Senator's question I shall quote someone who is a strong B–1 supporter if there ever is one. As a matter of fact, I just said he will do just about anything to sell it. Let me quote Secretary Weinberger, who said on November 5:

> It is certainly accepted by everybody that we will have to have something better than the B–1 and that we have the ability to get something better starting now.

Let me also say that the latest year of operating capability that anyone has given for Stealth, and these are B–1 supporters, is the early 1990's.

They have never deviated from this. Even Secretary Weinberger in his sfforts to sell the B–1 has never suggested that the Stealth plane cannot be ready by the early 1990's.

Mr. GLENN. Mr. President, if I thought the only mission for the B–1B was to be, was going to be, just the penetration—and I believe that is what was referred to in that timeframe, just the penetration mission to Moscow—that is not the only reason for having this airplane, and the reason why I favor the airplane I will mention later in a more lengthy speech here. But I think by the time we get around to trying to penetrate to Moscow we are probably going to have enough things, so that whether we have the B–1 or do not have the B–1 is something which is going to be reasonably academic at that time. It may not be true. But the conventional role of this plane is that it carries twice the bomb load, has much longer distance without refueling, all of that along with cruise missiles, and so on, which is quite apart from the 1990 timeframe that the Secretary refers to.

As far as the technical briefings we have had, I have asked the Secretary of Defense, the Secretary of the Air Force, the Joint Chiefs of Staff, David Jones, the Chairman of the Joint Chiefs, the program director, all of the list of questions that the Senator and I have gone over repeatedly. I do not know where he got his answers to those questions I have asked, but I have talked about these things for roughly the last 2 years with all of the technical experts, and they do not have answers to them. They say, "We hope we can work some of these things out," and I am for giving them money to help work these things out.

But the technology is just not here yet enough so that I want to see the security of my country based on that, and willing to rely on that now that it will be here and now, that it will work, and we are basing the security of our Nation on that, and that is just too sketchy yet to do all that. So I want to continue with this because many of the technologies developed under Stealth have much broader application than just to that airplane itself. It can be used on some other functions, as we are well aware.

Mr. LEVIN. In response to that question, I have here a staff document prepared by an Armed Services Committee professional staff member for Strategic programs, in which he has set forth the responses of the Air Force Stealth program manager to the questions which have been raised by the Senator from Ohio.

I am not able to compete obviously, with the Senator from Ohio in terms of all technological aspects. The Stealth program manager can and his answers are here. Again, I cannot make this public, since it is highly classified, but I will be happy to share it individually with my colleagues.

Mr. GLENN. I talked myself to the program manager as late as yesterday.

Mr. LEVIN. I think I was with you.

Mr. GLENN. You were there during part of that discussion. They still did not have answers to the questions I have been talking about over the last year-and-a-half or 2 years.

Mr. LEVIN. Others of us thought they did.

Mr. GLENN. I will be glad to read that hot document.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Texas.

Mr. BENTSEN. Mr. President, I cannot help but be amused about these timetables of 4 years, or 8 years, and maybe 10 years for the life of the B–1B bomber as a penetrator. I kept thinking back to the time I used to lead bomber raids in World War II and how we used to vie for some targets because some of us thought they were going to be easy while others thought we were going to get the tar shot out of us. I can also remember the evaluations of the generals as to the kind of defense we would be up against and how often they were wrong.

My kids tell me, "Well, dad, World War II, that is back when the Earth's crust was just cooling, wasn't it?" Not quite. But the abilities of the generals to tell what kind of defenses you are going to run into, and how long a bomber will be useful as a penetrator are just as fuzzy now as they were then.

To say it is going to be 4 years or 8 years with any degree of certainty is, I think, the height of arrogance. That is not the way it works out.

Mr. President, I do not think it adds up to say that we are going to restore America's military might and, at the same time, suggest we are going to turn down the B–1B bomber.

How can we aspire to a defense force that is second to none when one leg of our strategic triad, the B–52, is a product of early post World War II? I suspect, Mr. President, that many Members of the Senate would feel extremely uncomfortable to go out to National Airport or Dulles, and were asked to fly off into a real rough environment in DC–3's or DC–6's. They would not feel very comfortable and they would not like it at all. We all want to fly on modern, state-of-the-art aircraft. The B–52 was developed when the DC–3 and DC–6 were mainstays of commercial aviation. How, then, can we, in good conscience, ask American pilots and crews to fly an outdated bomber against one of the world's most sophisticated air defenses? That is, in fact, what we ask today's pilots to do and I can tell you the B–52 is not an aircraft I would want to pilot against the Soviet Union. I think its time we made a commitment to the B–1B bomber.

However, age is not the only problem of the B–52. It is an aircraft that was never designed as a low-altitude penetration bomber, and when you operate it at those altitudes you put additional stress on that aircraft.

In addition, the B–52 has only a limited capability to operate in a nuclear environment. It will cost tens of billions of dollars to continue to patch up the B–52 in the years ahead, and still there is no guarantee that the aircraft will remain serviceable until we can deploy a Stealth bomber.

Much has been made of the statement that the B–1 will only be able to penetrate Soviet air defenses for four years after it is deployed. This is an arrogant assertion that can never be proven. The question of penetration is enormously complex and depends on a wide variety of factors and circumstances. Mr. President, there is no one who can tell us with any certainty when the B–1 will cease to be able to penetrate Soviet air defenses. The 1990 date suggested to the Congress is arbitrary and unsubstantiated. It does not even allude to the combat circumstances under which penetration would allegedly become impossible.

No one, however, would seriously suggest that the B–1 is less able to penetrate the Soviet Union than the B–52. And I submit that should be an important factor in our decision to build the B–1.

The variables on all sides of the equation are such that we simply do not know when the B–1 will remain a useful weapon against Soviet defenses. A case has been made for 4 years, and it has been widely publicized. An equally convincing case could be made for a 6-, or 7-, or 8-year useful life time frame. But that is not the end of the matter.

Those who make the argument that the B–1 will become obsolete in the early 90s when we deploy a Stealth bomber may tend to underestimate the problems and production bottlenecks inherent in the development of a new generation of aircraft. Mr. President, I sat on the board of directors of Lockheed for many years and I gained some firsthand experience in the difficulty of solving the technical problems in aircraft design. Without being critical I can say that I can hardly remember any aircraft being developed right on schedule. When we consider the enormous problems and the technology involved in design and production of the Stealth bomber, it would not surprise me at all to see delays in development and deployment.

I think it is safe to say that most of the criticism of the B–1 relies on a worst case hypothesis. Critics assume the plane will not be able to penetrate the Soviet Union after 1990 and that Stealth will be developed on schedule. An equally convincing argument could be made for a

longer ability to penetrate by the B–1 and delays in Stealth deployment. In either instance, the B–1 looks better and better.

Cost—possibly approaching $40 billion—is the other argument frequently made against the B–1. There is no denying that the B–1 will be an expensive weapon, but we should also understand that there will be vast costs—on the order of hundreds of billions of dollars—involved in the effort to keep the B–52 operational until it is replaced by Stealth.

The choice is not between spending $40 billion for the B–1 and spending nothing. It is rather between spending $40 billion for a proven, modern bomber and spending perhaps $25 or $30 billion to keep an aging B–52 in the air without any guarantee that we can even succeed.

I recognize that the B–1 is an expensive weapons system, and some may be reluctant to make the investment when we can see a logical successor aircraft on the horizon. But what is the alternative to the B–1? It is an increasingly expensive, decreasingly effective B–52 fleet for the rest of this decade, and perhaps longer. That is not an alternative I am prepared to accept.

The argument in favor of the B–1 bomber is compelling and overwhelming.

The B–1B is a proven aircraft that can be deployed anywhere in the world at a moment's notice. There is an unfortunate tendency to view the B–1B only in the environment of Soviet air defenses, but I hardly need point out that sometime in the decade ahead we may well need to deploy a manned bomber in a regional conflict. The Middle East is only one possibility. In considering this question let us remember that the B–52 has seen combat, but never against the Soviet Union. There is much to be said for a modern, manned bomber that will enable this country to project its power anywhere in the world. Even the harshest critics of the aircraft would agree that the B–1B would be able to operate effectively against any non-Soviet target for many years to come.

Some people have been tempted to question whether this country still needs manned, penetrating bombers as an integral part of our deterrent. Perhaps, they suggest, we could get along with cruise missiles, the MX, and submarine-launched missiles. Perhaps the day of the manned bomber is over.

That argument overlooks the fact that the B–1B is both a credible and recallable deterrent that could play a unique and vital role in any future confrontation with the Soviets. As a general rule, we have some advance knowledge of Soviet buildups and impending crises. These periods of alert are particularly sensitive times in our relations with the Soviets, with symbols and nuances playing an important role. We can put the B–1B in the air as a show of force; we can refuel it and keep it up, ready to go. It can be an important sign of our resolve and concern in any crisis situation. You cannot send a missile up on patrol; you cannot call a missile back, and the distinction is important. Also, the very fact of the B–1B deployment would enormously complicate Soviet air defense strategy and therefore add immeasurably to our own national security.

Finally, Mr. President, the B–1B—unlike the B–52—has been hardened against the effects of a nuclear war. It has a much faster getaway time than the B–52 and is far more capable of operating and surviving in a nuclear environment.

To those who maintain that America cannot afford to build the B–1B while doing everything else necessary to restore our military credibility I would reply that the B–1B is an absolutely vital and essential element in any defense capability that is truly second to none. When you consider the fact that the Soviets have been outspending us year after year in defense; when you consider the state of our B–52 fleet and the costs of maintaining it; when you consider the importance of the manned bomber in our strategic triad, Mr. President, the conclusion is clear: America cannot afford not to build the B–1B bomber.

Mr. JACKSON addressed the Chair.

The PRESIDING OFFICER. The Senator from Washington.

Mr. RUDMAN. Will the Senator from Washington yield?

Mr. JACKSON. Yes.

Mr. RUDMAN. Madam President, I just want to announce that because many Senators have expressed a desire to speak, we now have 14 Senators on the list who wish to speak in favor of the B–1 program. I do not know how many wish to speak against it. But I thought Senators might like to know that it appears that we will have about 20 more speakers.

ORDER FOR RECESS UNTIL TOMORROW AT 10 A.M. AND UNTIL SATURDAY, DECEMBER 5, 1981, AT 10 A.M.

Mr. BAKER. Mr. President, it is clear to me, based on the list of speakers yet to be recognized, though not officially bound, a number of amendments apparently are still to be offered and that the Senate will be in late this evening. It may also be, as much as I hate to make the statement, that we will not finish this bill, even though we stay late tonight.

I have discussed this matter with the minority leader.

I ask unanimous consent that when the Senate completes its business today it stand in recess until 10 o'clock in the morning, and when the Senate completes its business on Friday it stand in recess until 10 o'clock a.m. on Saturday.

The PRESIDING OFFICER (Mrs. HAWKINS). Without objection, it is so ordered.

Mr. JACKSON. I wish to thank my colleague from Texas for an excellent statement.

Madam President, because of the importance of the decision to produce the B–1B aircraft and its associated costs, I would like to set forth my reasons for supporting the B–1B and voting against the amendment to eliminate funds for it from this appropriations bill. While there may be a need to increase funding for other programs as contemplated by this amendment, I cannot agree to fund those programs at the expense of the B–1B when confronted with this Hobson's choice.

In 1977, I voted against the production of the B–1 bomber because, in spite of the fact that it offered some improvements over the B–52's, it failed in my judgment to meet the need in two important respects. The ability of the aircraft to serve as a penetration bomber was not credible in view of projected Soviet Air Defense capabilities; moreover, while its penetration ability was not enhanced by the supersonic capabilities of the B–1, the engines required for that capability resulted in a less than optimum aircraft with regard to payload and range. I basically felt that the B–1 did not offer a significant enough improvement over the B–52 to warrant its cost to the national defense budget.

On October 2, the President submitted his strategic arms package to the Congress with regard to the production of the B–1B and the MX basing mode. Since the submission of the President's package, the Senate Armed Services Committee has held extensive hearings on it, including hearings devoted exclusively to the B–1B question under the able leadership of the Senator from Virginia (Mr. WARNER). These hearings, some of which were open to the public, have presented a complete analysis of the capabilities of the B–1B in comparison to the B–1, the B–52 and the advanced technology bomber. Some of the information presented in these recent hearings is the result of ongoing tests and analysis completed since the hearings last spring on the Department of Defense fiscal year 1982 authorization bill. These recent hearings on the strategic package, along with private briefings to answer questions submitted following the hearings, have led me to the analysis and conclusions that I am stating today.

I think that it is important to stress the point that the B–1B is not the same aircraft that the Congress voted to terminate in 1977. In outward appearances it still looks like the same aircraft, however, through continued research and development activities funded in the aftermath of the decision to terminate B–1 production, major improvements have been made in the aircraft with regard to its ability to perform its initial mission as a penetration bomber. Through the application of concepts flowing from our Stealth technology program, the radar cross-section of the B–1B has been reduced by a factor of 10 from the B–1 aircraft. Thus, the B–1B aircraft will be much harder to detect. This important technological improvement is coupled with significant improvements in the electronic countermeasures capabilities of the proposed design.

The Air Force assures us that the B–1B in comparison to the B–1 will have a more sophisticated avionics capability which has been under evaluation through the integration of prototype hardware into one of the four B–1's that were built prior to the termination of the B–1 program. The combination of reduced radar cross-section and improved ECM capabilities means that the B–1B can successfully penetrate Soviet air defenses for a longer period of time than the former B–1 aircraft could have. The B–1B should be capable of achieving its role as

a penetration bomber until perhaps 1995 or beyond with little or slight modification.

Another significant modification from the B–1 in the new design of the B–1B is the use of a different set of jet engines for what will be essentially a subsonic aircraft. This will greatly increase its payload and range capabilities without refueling. Whatever mission the B–1B is sent on, it will have a superior payload capability to that of the B–52 for bombs and cruise missiles. With regard to range, the B–1B will have as much range as the B–52 with the same inflight refueling requirements. The B–1B will have a maximum payload which is 167 percent of that for the B–1. For a typical mission, the B–1B can carry a 40-percent greater payload with a 20 percent longer unrefueled range than the B–1.

Madam President, I believe that another critical factor in my thinking on the B–1B aircraft was to evaluate all the pieces of our strategic puzzle. As part of that puzzle we need to take a long-term look at our manned strategic aircraft requirements over perhaps the next 30 years. The B–1B will probably not be capable of penetrating Soviet air defenses over its entire lifetime. However, a crucial fact is that the B–52's in our current inventory will have to be retired with ultimate phaseout in the 1995 to 2000 time period.

Thus, not only will a new aircraft be needed to serve in the B–52's current roles as a penetration bomber and as a conventional bomber, but also in its new role as a standoff cruise missile carrier by the middle or end of the 1990's. Under this approach, the B–1B will first assume the penetration bomber mission of the B–52's, as well as perhaps conventional bombing missions in areas where air defenses might render the B–52's vulnerable. As the B–1B's become vulnerable to Soviet air defenses for penetration bombing, they, under current administration plans, would be supplanted for this role by the advanced technology bomber sometime in the 1990's. At this point, the B–1B aircraft would naturally transfer to the roles of the B–52's as standoff cruise missile carriers and conventional bombers. The B–1B should be adequate for these missions over the remainder of its airworthy lifetime. The important fact is that the B–1B should have a useful life of 25 to 40 years.

A pivotal point, Madam President, is how to minimize the cost to the Federal Treasury over time from the requirements of a manned bomber capability, is it cheaper to build the B–1B and the advanced technology bomber or to build an advanced technology bomber and a follow-on aircraft for the less demanding roles of the B–52? It is probably impossible to answer this question with any absolute assurance today. However, because of the importance of maintaining the manned aircraft leg of our strategic triad, I believe that we must err on the side of caution. Because we cannot guarantee the continued availability of the B–52's for its currently projected remaining useful years nor the early availability of an advanced technology bomber, it is prudent not to stretch our strategic luck by leap-frogging the B–1B aircraft. I have been convinced through the recent hearings in the Armed Services Committee that the B–1B not only has sufficient penetration capability to provide an important period of strategic deterrence to the Soviet threat, but also that it will be a satisfactory design for the less demanding roles of a standoff cruise missile carrier and a conventional bomber over its remaining useful life.

Estimates have been provided to the Congress regarding the respective costs for meeting the requirements for a manned strategic aircraft by two options. One contemplates purchase of 100 B–1B's followed by an appropriate number of advanced technology bombers. The other option is to buy all advanced technology bombers and to make improvements in B–52's to allow them some continued penetration capability against Soviet air defenses until the advanced technology bomber is deployed. The costs for these two options are essentially equal within the errors of estimation. The scenario of skipping the B–1B production does not address how the stand-off cruise missile carrier role of the B–52's would be met after their retirement. Testimony before the Senate Armed Services Committee indicated that cruise missile carriage by the advanced technology bomber would not necessarily be a prudent use of such a sophisticated aircraft. Thus, these cost estimates ignore the possible cost for a follow-on aircraft to serve the standoff cruise missile carrier role after the B–52 retirement.

Another important element in my decision is coupled with the regrettable decision of the President to delay a survivable basing mode for the MX missile. While the President's decision will not be overturned by this Congress, it will result in a delay of several years in the deployment of the MX missile in a survivable basing mode. This, delay will exacerbate our loss of strategic parity with the Soviet Union. If we were to forego the production of the B–1B aircraft, the imbalance in our strategic systems with the Soviets would continue to widen through the 1980's with no means of narrowing the gap until the early 1990's. I find this inability to close the "window of vulnerability" for such a long period very troublesome. The Soviets are basically cautious militarily and test the waters before making new initiatives. I believe the Soviets would be more inclined to direct action or action by proxies to achieve their aims in various areas of the world if they felt that the United States lacked either the military capability or the national will to deter them. Production of the B–1B should add to the Soviet's perception of our national will to maintain an adequate deterrence and reduce their interest in adventurism throughout the world.

Another element in my thinking on the B–1B derives from my historical involvement in fostering the B–52 program. The decision to build the B–52's back in the 1950's resulted in the Soviets spending in excess of $100 billion on air defense to intercept our strategic bombers. If the Soviets are forced to spend more to attempt to counter military systems than we do to deploy them, then there is a twofold advantage to the United States, not only from the value of the system we have deployed, but also from denying Soviet planners the use of their military funds for other purposes. The deployment of the B–1B penetration bomber will force the Soviets to deploy already planned and required additional improvements in their air defenses to counter this new strategic system and will result in added stress on the Soviet military budget.

For instance, this stress will reduce the resources which the Soviet planners can commit to development and deployment of new air defense capabilities to defend against the B–52's as standoff cruise missile carriers and to anticipate the deployment of the advanced technology bomber. Without the added stress resulting from the production of the B–1B, the Soviets could forego many improvements in their air defense and would be able to divert some funds from their air defense program into new technology for other elements of their military program. The estimates are that the Soviets will spend in excess of $200 billion on air defense systems in the 1980's and still not be able to counter the B–1B until well into the 1990's.

I think it is also important in examining the strategic puzzle to address the question of whether or not these funds for the B–1B come at the expense of other important programs. In particular, a major concern of mine is that the funding of the B–1B not result in delay or diminution of our efforts to deploy the advanced technology bomber. Secretary Weinberger has committed to a program funding level for the advanced technology bomber which will not lead to this result. In his statement in the Washington Post on Monday, November 16, 1981, he stated in part:

> Early replacement of the B–52 by the B–1B . . . will not delay development of the advanced technology or Stealth bomber.

I intend to offer an amendment to this bill to insure that priority emphasis is maintained on the advanced technology bomber program. There is some prospect for adverse effect on other programs in the defense budget due to the commitment to the B–1B. I believe that that likelihood has been diminished by the reduced spending that will result from the President's decision not to deploy the MX missile in the MPS basing mode. The resultant delay in a decision on basing the MX missile will probably lead to a delay in this major expense of 3 or 4 years, thus limiting the pressure on the strategic arms budget.

I believe there will be additional savings over those currently projected because the Congress will probably not support the massive hardening of silos for the fixed deployment of the MX missile. Thus, we are in effect largely reallocating funds within strategic programs and not causing a significant impact on funds currently planned for conventional forces. Further, I believe that the major factor in deterring the Soviets from adventurism around the world is our strategic capability. We must try to maintain strategic parity as a high

priority. Thus, if we must err in funding our military forces, it should be on the side favoring strategic systems.

Madam President, the key to America's strategic deterrence is its technological excellence, and I believe that we should exploit that excellence at the earliest practical time to insure that the Soviets are constantly in the catchup mode of planning. While I support the advanced technology bomber program very strongly, there is some risk in going forward solely with the advanced technology bomber due to some revolutionary developments in technology that will be applied. The estimates prior to this year on the availability of the advanced technology bomber were probably as optimistic as current projections on its availability are pessimistic. The truth undoubtedly lies somewhere in between. I believe that we should maintain as aggressive a program as is possible to achieve the early deployment of the advanced technology bomber, but not to the exclusion of the B–1B aircraft.

The B–1B has penetration abilities which may prove important in other areas of the world as well. Through the export of Soviet military hardware, the air defense capabilities outside of the Soviet Union may well threaten the B–52's in the 1990's. Thus, our ability to project American military force into troubled areas of the world would be diminished. Also in the 1990's, the B–52 may confront an increased threat against it as a standoff cruise missile carrier. Its earlier retirement than presently planned for this mission would require a substitute aircraft.

The B–1B is superior to the B–52's in some respects with regard to this mission as well. For instance, the hardening of the B–1B against the electromagnetic pulse will permit this aircraft to fulfill this mission with a higher degree of confidence.

One final point of major importance. We are facing the decision on the B–1B just as President Reagan has made his far-reaching proposals to the Soviet Union for the mutual reduction of nuclear weapons in a stabilizing manner based on effective methods of verification. I strongly support the President's initiative. The United States and the Soviet Union began negotiations on intermediate range nuclear forces in Europe just this week in Geneva. The President's endeavor to achieve serious mutual arms reductions is bound to take time, patience and hard bargaining. This is a moment to signal clearly that the United States will maintain its strategic deterrent steadily into the future.

Madam President, there are a myriad of arguments for and against the B–1B. Many of these arguments are based upon projections into the future for which none of us have a perfect crystal ball to assess them. It is because of these postulated but indeterminate future situations that reasonable men can come to totally opposite points of view on an issue such as the B–1B. However, because of the significant improvements in the B–1B over the B–1 and the rapid deterioration of our strategic parity vis-a-vis the Soviet Union, I believe the most prudent step is to support the production of the B–1B. Now is probably not the time in history that we can afford to err on the side of hoping for a better thing to come down the road.

Madam President, I yield the floor.

Mr. GARN addressed the Chair.

The PRESIDING OFFICER. The Senator from Utah.

Mr. GARN. Madam President, first may I thank my distinguished colleague from Washington State. I hope our colleagues will listen to his words. I do not know that there is anybody in the Senate who has had a longer history of being a defense expert in this body than Senator JACKSON. As a matter of fact, I can remember many years ago when I was a young military pilot. I am not trying to make my colleague feel old, but he was in the Senate when I was newly out of flight training. I remember reading various defense magazines at that time, more than 25 years ago, respecting him for his great contribution to the defense of this country. I hope our colleagues will listen to his words of wisdom today.

I will be very brief, Madam President. The debate is a little bit amazing to me in that I never thought I would spend most of an entire term in the Senate of 6 years and into the 7th year having the same debate recur again. In 1977 some of the faces were different, but Senator John Culver, of Iowa, sat over there, and he and I debated in the Armed Services Committee on this issue, on the floor, on Meet the Press, and on Issues and Answers. Little did I believe at that time that in 1981 the same arguments would be going on. Nevertheless, they are.

A lot of statements have been made here today, a lot of quotes from various people.

May I just summarize from my own experience as a military pilot who has flown both the B–52 and the B–1—so I do not look at it from an academic standpoint of having to rely on the opinions of others but from personal experience of knowing a lot about the aircraft, having spent in excess of 10,000 hours in the left seat of airplanes—it really comes down to the choice of, do we continue in the air-based or manned bomber leg of the triad with an airplane, the B–52, that was designed right after World War II?

Again I said earlier in response to Senator HOLLINGS, and I would like to repeat, a quote from the January 5, 1953, issue of Aviation Week.

> Feeling in some USAF quarters is that the difference between the B–47 and the B–52 is not worth the cost of the latter program.

The same argument we are hearing today.

> Strategic Air Command also anticipates getting supersonic bombers soon enough to make the B–52 strictly a short interim measure.

In 1953, I say to my colleagues, the B–52 was going to be a short-term aircraft because they were soon going to get supersonic bombers. This is 1981 and we are arguing about that supersonic bomber today. We are hearing the same charges being made by the critics of the B–1B, namely that it is not worth the money and provides only a short-term interim capability. I anticipate the critics of the B–1B will be as mistaken as were officials on the B–52 nearly 30 years ago.

So the B–52 has been a fine airplane but it is an old airplane. It was designed as a high altitude bomber, not a low altitude penetrator. It has been used for many purposes it was not intended to be used for. Its design is now approaching 30 years of age. I have said many times that many of the crews flying it today were simply not born when it became operational.

Something that Senator GLENN would certainly agree with, Senator BENTSEN, and other military pilots in this body, is that the older an airplane gets, the more expensive it gets to maintain. You start manufacturing parts that are no longer in production, by hand. So whatever the estimates are on long-term maintenance of the B–52 fleet if we cancel the B–1, it certainly has to be fair that you subtract from the cost of the B–1 the cost of maintaining those additional B–52's.

I would submit to most anyone if you look at the record on aircraft, whatever they are, the long-term operation and maintenance costs have always far exceeded what the original estimates were for them. I see no different pattern of why that would be different on the B–52. You are going to find that in the year 2000, if you do not build the B–1, an astronomical cost to keep those B–52's flying and a much less capable airplane.

We are saying, then, "Well, fine, even some of the critics will agree with that, so let us go on to the Stealth."

I have sat here and listened to it. The Stealth is a paper airplane. As long as we are looking at some quotes, the Air Force Secretary Verne Orr described the ATB plane as a "paper airplane."

In addition, Gen. Bennie Davis, Commander in Chief of the Strategic Air Command, warned that, "While the technology for the Advanced Technology Bomber is a very exciting development, we cannot and should not depend upon this, as yet, unproven system.

Finally, it is well to keep in mind that the Air Force Chief of Staff, Gen. Lew Allen, responded to a tough question by Senator WARNER, the chairman of the Armed Services Strategic and Theater Nuclear Forces Subcommittee, that if given the stark choice between the B–1B and the ATB, he would choose the B–1B.

On the matter of it being a paper aircraft, all of us who have seen aircraft over the years start from the original idea to be put on paper. I cannot think in my 25-year military career, and reading back beyond that, of one single instance where we produced a major new aircraft in the time that we said it would be developed. So if it is fair, as Senator STEVENS has done, to add a cost increment increase on the average that it has cost overruns to develop aircraft over the years, it is also fair to add a time overrun. If you start adding that time overrun, even if you take the best guess of people who say you produce an ATB by 1991 and adjust the average, you are looking at 1995.

I would be willing to bet any Member of this body there is no IOC or initial in completion date on a Stealth until 1995. That does not come from anybody's testimony. It does not matter whether it is this Secretary of Defense or one from the past. That is a matter of taking the average of the time delays that have occurred on aircraft after aircraft. It will take you 15 years to produce an F–15 to replace an F–4. But now we are being told there is brand new technology which is very different, even from the standpoint of the pilot flying it, stability, and so on, new air frames, very new technology.

We are now being told with assurance on this floor tonight that, sure, we can do it by 1991, and we will probably do it by 1991.

I do not intend to be in the Senate by that time but I will sure be reminding a few of my colleagues who still are when we do not have a Stealth in 1995 and we are still trying to change something to make it a viable aircraft. And I hope we still have the B–1B still flying and still performing a number of missions.

Let me make just one more comment on the cost factor.

Whether you accept the 1981 dollars at $20.5 billion or some other estimates that go up to $39 billion, I think people ought to recognize what we are talking about in terms of cost. To put it into layman's terms so we can understand it, not minimizing the amount of money, I wonder how many people would buy an automobile if they went down to the dealer and not only the initial cost of the car, the base price of the car, was quoted and all of the extras, but then they said, "In addition, we are going to apply all of the interest, financing charges; we are going to put in all of the maintenance, all of the repairs, all of the tire replacements, everything you do for the life of the time you own that car, and we are going to lump all of that together. All the oil, the gas, everything, tire repairs, you name it, and that is the total price of your car." How many people would buy one?

So, when we say a B–1B is going to cost $20.5 billion or $39 billion, either figure, people should understand that includes everything. That includes all the gasoline, includes the simulators, includes the training, includes the spare parts. It includes the maintenance. It accepts an estimate for inflation over those years to get to that $39 billion. We do not price anything in that way execpt in the military. That is the one place we say, put in the whole cost of the system.

So, yes, it is a lot of money, but let us look at it in real terms and what it will buy. Let us also put it in perspective. If you are talking about $20 billion over a period of 20 years, that is about a billion dollars, or $2 billion a year if you use the high estimate. We can afford to spend $12 billion a year on food stamps—$12 billion. But we are being told that we cannot afford an average of $2 billion for a major weapons system to defend this country.

Simply to sum it up, the B–52 is an old airplane. It has served us well but it certainly will not into the 1990's. The Stealth is a paper aircraft. The only real thing, right now, to build up the bomber leg of the triad is a B–1B.

I hope this body will not make the mistake we have made, Madam President, over and over again, that they made in 1953 or were about to make and fortunately did not. I am sure glad we are not still flying B–47's.

THE B–1 BOMBER: NOW IS BETTER THAN NEVER

Madam President, I am both heartened and saddened today as I join with my colleagues in debating the merits of President Reagan's B–1B/ATB (Advanced Technology Bomber) proposal to modernize the bomber leg of our Nation's triad of strategic nuclear forces. I am heartened by this President's decision to reverse the Carter administration's cancellation of the B–1 bomber program—one of the most ill-advised national security decisions made during President Carter's time in office. Yet, I am saddened, as well, to think of the damage that has been done over more than a decade to the defense posture of this country.

We have failed to pursue vigorously enough the kind of resiliant defense posture that will be necessary to meet the Soviet menace and protect our national interests from a host of other challenges throughout the 1980's and 1990's. The decision in 1977 to cancel the B–1 was characteristic of this failure. Let us not repeat this same mistake. Today, we are paying the price in dollars, as the cost for this needed weapon system escalates; should the Congress fail to support the President's B–1B/ATB proposal, we may find that the costs have grown beyond dollars to the further endangerment of our security and our freedom.

I support President Reagan's initiative to pursue a two-bomber, B–1B/ATB, program for the following basic reasons:

First. It is a timely response for meeting an increasingly dangerous Soviet threat;

Second. It is a flexible response in the execution of its multi-faceted missions;

Third. It is a strong response which will enhance strategic deterrence and provide for an arms control negotiation position based on strength; and,

Fourth. It is a durable response which will provide for the long-term modernization needs of the bomber leg of the triad.

Timeliness, flexibility, strength, durability; these words illustrate the nature of the President's proposal. Let me address each of these in greater detail.

TIMELINESS

Recognizing the severity of the Soviet military threat to the security of the United States and its allies, and the need to close the window of opportunity which is emerging as a consequence of the shifting strategic nuclear balance, the Congress last year directed the President to make a proposal with respect to the deployment of a new, multirole bomber. In this regard, the conference report to the fiscal year 1981 defense authorization bill reads as follows:

> The Secretary of Defense shall vigorously pursue full-scale engineering development of a strategic multi-role bomber which maximizes range, payload, and ability to perform the missions of conventional bomber, cruise missile launch platform, and nuclear weapons delivery system in both the tactical and strategic role . . . to achieve an Initial Operational Capability as soon as practicable, consistent with the aircraft selected, but not later than 1987.

The B–1B will provide us with this capability in a timely manner; it will have an IOC of 1986, with full deployment achieved in 1988. Our confidence in reaching these goals is bolstered by the sturdy foundation upon which the B–1B program can build. Specifically, the B–1B rests, in part, upon our experience during the 1970's when the original B–1 completed an aggressive 1895 hour flight test program which clearly demonstrated the aircraft's operational utility and effectiveness. Having had the opportunity to fly the B–1, I personally can attest to this effectiveness and assure my colleagues that even the original B–1 constituted a marked improvement over our current fleet of aging B–52 bombers.

On the other hand, Madam President, the ATB program still must overcome major technical and operational uncertainties before it can enter our strategic arsenal. The IOC date for the ATB cannot be predicted with great certainty; my own guess would be that it will not be available until 1995, at the earliest. Let us remember that the Secretary of the Air Force, Verne Orr, has accurately labeled the ATB a "paper airplane." In addition, Gen. Bennie Davis, Commander in Chief of the Strategic Air Command, warned that, "while the technology for the Advanced Technology Bomber is a very exciting development, we cannot and should not depend upon this, as yet, unproven system." Finally, it is well to keep in mind that the Air Force Chief of Staff, Gen. Lew Allen, responded to a tough question by Senator WARNER, Chairman of the Senate Armed Services Strategic and Theater Nuclear Forces Subcommittee, that if given the stark choice between the B–1B and the ATB, he would choose the B–1B.

FLEXIBILITY

As has been mentioned previously, Congress mandated during its consideration of the fiscal year 1981 defense authorization bill the development of a long-range, multirole bomber which would provide a certain measure of flexibility in executing its missions. Those capabilities have been incorporated into the B–1B. It can be a penetrating bomber capable of making strikes deep into the heart-land of the Soviet Union against mobile and imprecisely located targets—a task that the cruise missile is either limited or unable to execute. Second, the B–1B will have from its initial deployment date the capability to stand off and launch cruise missiles against the Soviet Union, thereby saturating Soviet air defenses. Finally, the B–1B will contribute significantly to our quick-reaction conventional force projection capabilities. This may, in the long term, prove its most valuable contribution to U.S. national security interests, as we face the challenge of protecting a wide array of geographically dispersed national interests in Europe, the Mideast, South and Southeast Asia, and South America.

The B–1B, in combination with the

ATB, will comprise an extremely formidable force mix—one that will impose operational challenges and financial burdens on Soviet defenses. In a letter to Senator STEVENS, chairman of the Senate Appropriations Defense Subcommittee, Secretary of Defense Caspar Weinberger and CIA Director William Casey indicated that, "A mixed force of B–1 cruise missile carriers and the ATB will present an extremely difficult problem to the most sophisticated defense system—thereby requiring major expenditures by the U.S.S.R. on defensive systems that cannot be used to attack the United States and its allies."

The nature of the force mix provided by the B–1B/ATB bombers reflects the mission requirements of our long-range, strategic bomber force. In turn, those mission requirements are determined by the threat they are intended to address. To argue, therefore, that we can cancel the B–1B program and use the money to help balance the budget, to accelerate the ATB program, or to apply it to conventional forces is specious and misleading.

If we are going to address the threat, then the mission requirement of the B–1B must also be met. If we kill the B–1B program we must either delude ourselves into thinking that the threat is no longer so great or we must execute the required missions by other means. The first option is clearly unacceptable; the latter choice involves costs that, according to the Under Secretary for Research and Engineering, Richard DeLauer, will be greater than or nearly equal to the President's two-bomber proposal.

Madam President, I fully share the concern for and the commitment to the enhanced readiness posture of our general purpose conventional forces which has been expressed so ably by our colleague from South Carolina (Mr. HOLLINGS). He is right in one respect; the readiness of our conventional forces is not what it should be. In addition, the President's revised September budget will hamper or delay some earlier initiatives to restore the needed strength to our conventional forces. But these revisions were made because of overall constraints imposed by the Federal budget—not because funding for the B–1B program was preserved.

We have not done what was necessary in the past to insure a finely-tuned strategic and conventional force capability. We need a balanced modernization program to make up for this shortsightedness. The President has, on the whole, provided us with such a balanced program. Therefore, let us not be deceived into believing that the cancellation of the B–1B would constitute a panacea for our other well-recognized defense preparedness needs. Robbing the strategic forces, "Peter," in order to pay for the conventional forces, "Paul," will not serve the security interests of this country.

STRENGTH

Madam President, President Reagan's recently announced proposal to modernize our strategic nuclear forces will significantly strengthen all three legs of our strategic Triad, as well as our all-important command, control, communications, and intelligence (C^3I) network. The B–1B/ATB recommendation is an essential part of this initiative. We cannot rely on our aging B–52 fleet to carry the heavy burden of our long-range, strategic bomber mission until the ATB comes on line some time in the 1990's. Dr. DeLauer emphatically stated in correspondence with Senator STEVENS that "the B–52's ability to accomplish all three parts of its mission in sufficient numbers to be an effective and credible deterrent becomes increasingly questionable in the last half of the 1980's. In addition, the cost of the B–52's operation and maintenance is rising dramatically as its age increases."

President Reagan was elected on the platform of "Peace Through Strength." A versatile and potent force of B–1B's and ATB's is one of the best ways to insure that a policy of peace through strength by which to deter the Soviets and protect our far-flung national security interests is implemented. In addition, it provides the only solid foundation upon which to negotiate arms control agreements with the Soviets. In testimony before the Senate Foreign Relations Committee, Secretary of State Alexander Haig stated that congressional support for the B–1B program would contribute to the ultimate success of the START (Strategic Arms Reduction Talks) negotiations. If we are to negotiate from a position of strength, then we need systems deployed as part of our strategic arsenal, not undergoing further changes on the defense designer's drawing board.

DURABILITY

Madam President, Dr. DeLauer recently observed that "the combined (B–1B/ATB) program offers both near and far term modernization that will force the Soviets to improve their air defense program starting now, and continuing throughout the rest of the century." Moving ahead with these programs now will insure a timely response to an increasingly dangerous Soviet threat, while providing for the long-term modernization of our strategic bomber force.

Some questions have been raised about the penetration capabilities of the B–1B beyond the 1980's. These questions have been addressed on several occasions in official correspondence and congressional testimony. Rear Adm. E. A. Burkhalter, Deputy Director of the Defense Intelligence Agency (DIA), testified before the Senate Armed Services Committee to the effect that the B–1B will be able to penetrate Soviet air defenses well into the 1990's. That judgment has been confirmed by the Secretary of Defense, the Director of the CIA, and the commander in chief of the Strategic Air Command. The B–1B's penetration capabilities have been significantly enhanced by the addition of an upgraded, highly sophisticated electronic countermeasures (ECM) system, as well as a tenfold reduction in its radar cross section, as compared to the original B–1 design.

In its penetration role, the B–1B will function as a cruise missile carrier and long-range conventional bomber through the turn of the century and beyond. We are not buying an overpriced, interim bomber. In this respect, it would be good to reflect back on the history of the B–52. In January 5, 1953, edition of Aviation Week, the following judgment was recorded:

> Feeling in some USAF quarters is that the difference between B–47 and B–52 is not worth the cost of the latter program. Strategic Air Command also anticipates getting supersonic bombers soon enough to make the B–52 strictly a short interim measure.

And so it is today; we hear the same charges being made by the critics of the B–1B; namely, it is not worth the money and provides only a short-term interim capability. I anticipate the critics of the B–1B will be as mistaken as the officials who misjudged the B–52 nearly 30 years ago.

Let us then proceed with the deployment of the B–1B as expeditiously as possible, while continuing to work aggressively on a responsibility paced ATB program to provide for our premier, frontline penetrating bomber.

In short, Madam President, let us get on with the business of making America strong again.

Mr. WARNER. Madam President, I compliment the distinguished Senator from Utah for his analysis of the B–1B, based on his own experience as an aviator as well as his careful reading of the record.

Before the distinguished Senator from Washington leaves the floor, I wish to acknowledge his lengthy participation as ranking minority member in a series of hearings on the subject before the Strategic and Theater Nuclear Forces Subcommittee of the Armed Services Committee.

I also wish to put to him a question because he also serves in a dual capacity on the Intelligence Committee and is in a position, I think, to share with our colleagues a very important point that is not being brought out because of extreme classification. I believe we can allude to it in a colloquy here.

That is that the Soviet Union is not standing still with respect to its bomber program. I only wish we could impress upon our colleagues the importance of the B–1 in terms of what the Soviets are doing with aircraft of comparable capabilities. I wonder if my distinguished colleague from Washington would be able to comment on that.

Mr. JACKSON. Madam President, I am very happy to respond to my good friend. We have been aware for some time that the Soviets were not going to conclude their long-range bomber program with Backfire. They have deployed a very large number of Backfires, both for purposes of intercontinental strategic application and in support of their maritime forces. I think it is fair to say that we believe that the Soviets have been working and working very hard on a follow-on bomber to the Backfire. Depending on various scenarios, the Backfire does not have full intercontinental range except with refueling, of an intercontinental bomber of the capability of the B–52 in our current inventories. But the country needs to know that the Soviets have almost certainly given the

highest priority to the work that they are doing in connection with a follow-on to the Backfire bomber. This is going to pose, in the future, a very serious problem for the United States as the Soviets add on to all legs of their strategic nuclear triad.

They have pushed hard, as the Senator knows so well, in the large program to expand their strategic nuclear capability. What they have done in terms of intercontinental ballistics missiles is the No. 1 problem that we face in the strategic area, the whole family of intercontinental strategic missiles—the 17's, the 18's, the 19's—and then a whole family of intermediate range missiles—the SS–20's, now the SS–22's, and so on. So a follow-on to the Backfire will be there and we have to face that fact, I say to my good friend from Virginia.

Mr. WARNER. The point the Senator makes then is clear confirmation of the fact that this type of weapon—the B–1B—is needed in the U.S. arsenal.

Mr. JACKSON. Madam President, that is correct, and a weapons system that has credibility with the Soviets in terms of its ability to penetrate. The B–1B is not the B–1 of 1977. This point also needs to be made because it has an entirely different set of capabilities.

Mr. WARNER. I thank the distinguished Senator from Washington.

Madam President, I shall take one more minute to address an inquiry to the distinguished Senator from Ohio with respect to the ATB documentation displayed only by holding it up by our distinguished colleague from Michigan.

The Senator from Ohio and I have had an opportunity to examine this document jointly. The Senator has heretofore, on many occasions, been present at the briefings and I think we have done as much as anybody in this body with respect to investigating the capabilities of the ATB, as is our responsibility, on our respective committees. The document displayed by the distinguished Senator from Michigan certainly confirms precisely what the Senator from Ohio said earlier with respect to the risk in connection with this ATB. The ATB is definitely a project we ought to go ahead with, but we cannot at this time, based on the present progress in the technology, in the research and development, rely on the ATB to be a substitute for the B–1B.

Mr. GLENN. The Senator is absolutely correct. I went through the questions and the answers, as did the distinguished Senator from Virginia, who has gone into this in real depth. We have had many conversations about this whole Stealth technology, how we might bring it along faster, what could be done, but not rely on it now and bypass the B–1, because that would be a mistake. That technology is valuable, it is developing, but it is not here yet. We cannot go much beyond that on the Senate floor without getting into classified areas, which none of us wants to do right now.

I say, after having read the questions and answers which the distinguished Senator from Michigan had, they may satisfy him but they do not satisfy me, because they are the same questions I have been asking for the last year and a half or 2 years on the Stealth technology. Madam President, we do not have those answers yet, and to place the security of our country at risk at this point and say that we will just continue into the future but hope that, somehow, these things work out—I am not willing to go that route.

Madam President, I wish to respond to a couple of areas that have already been mentioned here and then make a little more lengthy statement.

Repeatedly so far in the discussions this afternoon, we have heard reference to the $40 billion program as though that is the figure we are supposed to accept now. I am torn two ways on this. One, is to correct it and put it back to its correct figure and the other is to hope they keep talking of those figures, because when they get back to the real figures, they will sound so low that people will be inclined to vote for it. The $40 billion figure that came out of one of the studies included many things that the Air Force does not even plan to have on the airplane and inflated the cost out to 1986 dollars.

I ask this body what other program we are accounting for in that way, of putting outyear dollars, added cost of inflation, and programs that are not even intended, that are only talked about as possibilities for the future, but which the Air Force says they do not plan. What other program do we do that with? None that I know of around here.

So the figure we have been given, the figure that the Air Force has substantiated, has been $20.5 billion. Are there new developments to come along, which they want to put something on in the future? Every plane we have had has had some growth potential in it that perhaps has resulted in some expense in the future. But to just double the cost of the airplane right now, going in, and put things on it that are not planned, and inflate it into outyear dollars is about as fallacious a way to try to shoot this thing down as anything I have seen around here.

So I do not agree with that. and I have the refutation of all those different increasing costs that have been alleged to go into the airplane—the GAO concerns, as they are called. I do not know that anyone wants to get into that kind of detailed debate here this evening and go through those things items by item. It will take several hours to do so.

If the opponents of the B–1 feel that their figures of, say, $40 billion and up are good figures, if they want to debate these figures this evening, I am prepared to debate as long as they want to. But let us not accept the figure of $40 billion. It is $20.5 billion. I think that with the experience we have had with the airplane so far, that is a reasonably good figure.

There is something else to be considered here. We are talking about all kinds of options. We are talking about whether we stay with the B–52 or B–52 with mods of some kind. Are we going to Stealth only? Are we going with Stealth with the B–52 backup; with the B–1 alone; with the B–1 with the Stealth R. & D., or none of the above?

I think the basic question, first, is this: Do we need a large, long-range bomber in any potential future conflict?

(Mr. CHAFEE assumed the chair.)

Mr. GARN. Mr. President, will the Senator yield for a question before he gets to his formal statement? I think this is very important.

Mr. GLENN. I yield.

Mr. GARN. It concerns what I was talking about and others were talking about earlier, about the date that Stealth and any of these options the Senator talks about would go to, and the matter of that slipping, talking about average slippage.

The thing I would like to say—which I am sure the distinguished Senator from Ohio would not say about himself—is that, forgetting orbiting the earth, this is the only test pilot we have in this body who has spent years testing new types of aircraft and modifications and so forth.

I bring that out and ask the question on the basis of mutual concern, not as Cap Weinberger, who has never flown anything except in first-class or coach section, so far as I know, and all these other experts who may not even have been buck privates, and suddenly they can come out with all these facts and figures, pulling them out of the sky, and we are going to produce a Stealth by 1989.

We cannot talk about any of the aerodynamics details. Here is a man who has test pilot experience, who has tested airplanes that are far less sophisticated aerodynamically than those we are talking about, perhaps. That is not a real world figure. We are not getting this from Senator GLENN on the basis of somebody's quotations, but from a man who has done that and knows what it is to fly these aircraft.

Mr. GLENN. I appreciate the Senator's remarks. They are very kind.

We are going into a wholly different regime and type of flight here. It is a very rare program that has ever come in on time, and I would expect this to be extended for some period of time. As for those who would say that we have a 1987, 1988, or 1989 IOC, I do not see that as being realistic.

Mr. GARN. Would the Senator from Ohio like to test-fly what they have ready in 1988?

Mr. GLENN. I might want to take a crack at it. But so far as putting it out and making it the No. 1 combat plane for our Nation is concerned and saying it is ready to go to combat—it is one thing to test it and try to work out the bugs of a new airplane. but it is another thing to put pilots into that kind of equipment, into combat, into harm's way, where their life is on the line. You want that airplane pretty well refined by that time, if you can.

That is the kind of thing you try to work out. Are we going to have those bugs worked out in the time period we have here on the floor this afternoon? I think it is grossly unlikely.

Mr. GARN. I thank the Senator from Ohio. I appreciate the answer and the background and lengthy experience from which that answer was derived.

Mr. GLENN. I thank the Senator very much.

Do we need a large, long-range bomber? That is a basic question in any future combat. My answer to that is, "Yes." Then, what roles do we see for it?

The amendment we adopted here about a year-and-a-half ago, or a little more than that, which was an amendment I proposed on the floor because I felt that we needed a replacement for the aged B–52, provided for 3 years in the study we asked the Defense Department to come back to us with. We called it a multirole bomber—MRB—at that time. We said, No. 1, it had to have an IOC, an operation date in 1987, first, to fill this role at the time period the B–52 would start phasing out.

It had to do three things. I had to be able to deliver the old, conventional iron bombs—smart bombs, as they are called—semiguided gravity bombs that have some maneuverability in going down, plus some plain, old conventional iron bombs.

It had to be able to launch cruise missiles, air-launched cruise missiles.

No. 3, nuclear weapons. I intentionally at that time listed that one last, because I do not see this primarily as the basic reason, as the penetration to Moscow, as being the main reason for this airplane. I think we need a power projection airplane quite apart from that particular purpose.

Mr. President, before I continue with my statement, I should like to return for a moment to a remark about Stealth, and ask unanimous consent to have printed in the RECORD an article published in the Wall Street Journal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, Sept. 18, 1980]

THE REAL QUESTION ABOUT STEALTH: WILL IT WORK?

(By Edward Teller)

If the average citizen is asked, what is Stealth? he or she is apt to say it is our new invisible bomber. A somewhat more sophisticated person might reply that it is a bomber which is under development, which is all but invisible to radar, and which will give us a decided advantage over the Soviets.

Stealth has already created a great deal of discussion. Most of this discussion focuses on questions of who gave away what secret and why. Indeed, the inquiry seems fully justified. Has classification been manipulated to serve political goals? However, this issue should not obscure what may be an even more important question.

To date, there has been practically no public discussion about the validity or significance of Stealth technology. Just how difficult is it to build such a bomber? Would it be reliably invisible, or could it be made visible by comparatively easy means? Numerous detailed discussions have convinced me that the cost and complexity of constructing such a fleet of bombers is greater—probably much greater—than the cost and complexity of modifying existing detection systems to make these "invisible" bombers visible again.

National policy most often seems to overlook the fact that providing clear information to the public may be even more important than trying to keep the Soviets from obtaining information. The latter may be effectively impossible; the former is so often neglected that the public is misled concerning vital matters of defense. Niels Bohr, the great physicist who practically created the atomic theory, said late in 1945, the most effective weapon of a dictatorship is secrecy, but in a democracy the weapon of openness is decisive.

It is a good general rule to make all possible progress in military technology and to worry about countermeasures later. I firmly believe that the present case is an exception. At least one proposal for a countermeasure exists. This method appears obvious and does not even require any extensive technological effort in order to allow the Soviets to detect, localize and destroy Stealth bombers.

Unfortunately, the rules of classification do not permit me to describe this countermeasure concept. Probably there are other valid methods of defense that exist. However, this one countermeasure is sufficient to make the usefulness of Stealth highly questionable.

The real danger is that the American people are being misled about the possibility of a practical and effectively invisible bomber. This is important not to the status of any single person but to the safety of the nation.

Careful congressional review should be given to Stealth with initial emphasis on determining how difficult it would be to effect countermeasures. It may be all but impossible to conduct such an investigation in an objective manner, but the attempt should be made. The review itself will probably have to be conducted in secrecy, but the American people should be informed of the essential conclusions.

One may, of course, argue that it would have been better to develop the bomber in complete secrecy. Such development would necessitate a major effort. One can hardly imagine that such activities would go unnoticed by the Soviets for long. Countermeasures seem so easy that even a couple of years, considerably less time than the actual production-time requirement for Stealth, would suffice for their deployment. One may also assume that the Soviet may never think of the appropriate countermeasures. To make such an assumption seems truly dangerous.

Although it is known that in military matters the Soviet Union is quantitatively ahead of us, we console ourselves with the thought that our technology is superior. I am afraid that while their civilian technology is lacking, their military technology may already be more capable than our own. There are many who agree that even if this fear is not just justified today, it will become fully justified within a few years.

All of us should be happy about good and well-founded news concerning our security. It has been asserted that Stealth changes the military balance back to the older and more stable situation in which the strength of the United States made the free world safe. But if our military developers can produce nothing better than the Stealth bomber, they should give less time to boasting and more to work on truly realistic ways to insure peace and stability.

Mr. GLENN. Mr. President, this article was published in September 1980, a year ago. It is by Edward Teller, one of the most distinguished scientists in the world—not just in this country, not just in California, but one of the most distinguished scientists in the whole world. He wrote an article entitled "The Real Question About 'Stealth': Will It Work?"

I will not read the article, but in talking about whether there were countermeasures and whether this Stealth technology would really have the effects we want it to have, he said:

At least one proposal for a countermeasure exists. This method appears obvious and does not even require any extensive technological effort in order to allow the Soviets to detect, localize and destroy Stealth bombers.

Unfortunately, the rules of classification do not permit me to describe this countermeasure concept. Probably there are other valid methods of defense that exist. However, this one countermeasure is sufficient to make the usefulness of Stealth highly questionable.

I have talked to Dr. Teller, and his comment there I have had on my list ever since I talked to him some time ago, and that is still on the list of unanswered questions as to why we think the Stealth technology is here now.

I repeat: I am very much in favor of all the R. & D. that the Stealth program can take. But to put our national security on the line and go directly to Stealth now and bypass the B–1 would be a tragic mistake for our country.

As many Senators know, I opposed President Carter's cancellation of the B–1 bomber in 1977, and I have since worked to keep the bomber program alive and to insure that we would have a replacement for the aging B–52 fleet that has served us so well for nearly a quarter of a century.

The basic premise that shapes my thinking on the bomber issue is that we will need a versatile, long-range bomber force well into the 21st century.

THE CONVENTIONAL ROLE

Penetration of Soviet airspace in a nuclear war has received the greatest share of attention in the bomber debate. Unfortunately, we have overlooked the requirements that our bombers must also be able to carry out conventional missions and to serve as cruise missile carriers.

In my own opinion, the most important of our bomber requirements is the need for deployable conventional forces that would allow us to avoid a disastrous reliance on the early use of nuclear weapons should deterrence fail.

In other words, we must have a demonstratable ability to project conventional combat power quickly into areas where naval and ground forces might take days or even weeks to reach in sufficient strength.

We have in areas of the world the awesome firepower that can be brought to bear with our carrier task force and our carrier battle groups, but we cannot have a carrier task force everywhere we may need to project forces in the interest of our own foreign policy and those of our allies as well.

But as recent budgetary reductions have shown we may not be willing to back up our rhetoric with surface forces needed in close proximity to our vital

In fact, just yesterday in this Chamber an amendment of mine was defeated that called just to restore the steaming money, the gas money, in effect, the fuel money, so we can keep two carriers in the Indian Ocean area instead of cutting it back in half as is being proposed in the interest of saving $74 million while at the same time we talk about our need to talk tough, be tough, and carry a big stick in that Persian Gulf area.

So I see the B–1 in a conventional role as being able to project power where we do not have carrier task force or do not have sufficient carriers in a particular part of the world in case something happens there, and this is a means of power projection.

I am convinced that after thorough assessment of the technology involved,

which we discussed earlier, that the so-called Stealth bomber is too far into our future to risk our national security on the chance that it can be developed more quickly no matter how much money is poured into it.

THE CRUISE MISSILE CARRIER ROLE

The requirements for a cruise missile carrying aircraft have most often been examined by focusing on the simpler part of the wartime mission—the attack by launching cruise missiles from outside Soviet airspace, thus avoiding hostile air defenses. This has given rise to an assumption that we can hang air-launched cruise missiles (ALCM) on virtually anything with wings and expect success with a minimum of expense.

Analysis of this sort ignores the fact that for an ALCM carrier to pose a credible deterrent, an enemy must not be able to destroy it as it sits on its alert bases. To successfully escape annihilation by submarine-launched ballistic missiles which give minimal warning which can be as short as 6 to 8 minutes a cruise missile carrier has to be able to escape from its base within a few minutes, a requirement that will soon exceed the capabilities of our B–52's, and a requirement that is beyond commercial aircraft modified for military use.

Also overlooked is that enroute to its launch points, an ALCM carrier must have its electronics protected from interference effects.

These interference effects have been called EMP, electromagnetic pulse, as well as nuclear explosive shock waves, but EMP can be countered somewhat as can some of the effects of nuclear explosions by hardening, hardening of the electronics systems such as those which cannot be done on the B–52 without huge expense but which will be done on the B–1 and which are so necessary to navigation, communications, which could otherwise be destroyed or be inoperable from this interference.

THE PENETRATION ROLE

As our cruise missile technology matures, I believe there will be correspondingly less demand for a penetrating bomber.

That does not mean that I see the time coming in the immediate future when cruise missiles are going to take over all of this role. But the penetration role, that penetration role of trying to get through the most hostile environment is one that I think will eventually be taken over to a large extent by the cruise missile but those also are still being developed.

But to judge a bomber's penetration capability—as many are now doing—solely on what we estimate Soviet defenses might be a decade from now ignores the lessons of warfare. In the air, as on the land, no defensive weapon can completely block a determined offense. The machine gun did not make the infantryman obsolete, nor, as the French learned, did the concrete of the maginot line hold against the imaginative flanking attacks of the German tank commanders.

Similarly, Soviet air defenses of themselves will not automatically signal the end of the manned bomber.

Just because their defenses are there does not mean that we will not try to get through those defenses. That has been the history of warfare.

There will be no magic moment when the Soviet Union becomes impenetrable, although I have no doubt that there are Soviet planners who would hope that we would reach such a conclusion and thus permit them to divert vast sums to offensive weaponry rather than being forced into defensive weaponry as they will be if we buy the B–1. And so I believe that the attempts to fix a specific year when a penetrating bomber cannot do the job is an exercise in futility.

What we must do is to face the brutal reality that as long as there is a manned bomber requirement—and there will be one until we can at least place part of our reliance on cruise missiles—we will have to be ready to send our airmen to do the job of penetrating Soviet air defenses. And we should send them in the best aircraft this country can produce.

THE B–52 AND STEALTH AS A MULTIPURPOSE BOMBER

As a multirole bomber required to perform the missions I have outlined above, the B–52 will have to be replaced well before the turn of the century.

I am convinced, after thorough assessment of the technology involved, which we discussed earlier, that the so-called Stealth bomber is too far into our future to risk our national security on the chance that it can be developed more quickly, no matter how much money is poured into it. Moreover, I do not believe that the Stealth concept would give us an aircraft that is sufficiently versatile to serve in a variety of combat roles, the variety that I have talked about. In spite of these drawbacks, I agree fully that we should continue to support spending for research on Stealth technologies because they obviously have many applications.

Because of its age alone, the B–52 is becoming rapidly less reliable. Originally designed in the mid-1940's as a propeller-driven bomber, the newest of these big planes are now almost 20 years old.

In fact, we have logbooks that actually have son flying the same aircraft their fathers flew in the Air Force before them. Actually the same aircraft, not the same type, but the same aircraft, sons flying the same aircraft their fathers flew before them.

If we opt for a "Stealth only" bomber fleet, we still have to maintain B–52's even at that stage for cruise missile carriage and conventional bombing, which could mean sending our airmen to combat in aircraft approaching 40 years of service at the turn of the century.

Just a few days ago here we had a debate on the battleships, and many Senators who now advocate retention of the B–52 then argued that because the battleship had 13 years of service life they were unfit for combat.

I find it somewhat inconsistent that some of the opponents of the battleship would now ask that young Americans be ready to go war in aircraft that are already antiquities, aircraft that make the battleships look mint new by comparison.

Both as a cruise missile launcher and as a conventional bomber, the B–52 will be increasingly unsatisfactory because it lacks the modern features of an aircraft such as the B–1. That was demonstrated. Seventeen of the B–52's were lost to relatively primitive North Vietnamese air defenses in the early 1970's. During the next 20 years, even deadlier air defenses will become common in the arsenals of many nations, thus greatly reducing the credibility of the B–52's in conventional roles.

In the event of nuclear war, even the comparatively less demanding mission of the cruise missile carrier might be beyond the B–52, since the old plane's wiring, communications, and navigation systems are protected adequately from the disabling electromagnetic pulse (EMP) effects of nuclear detonations.

Mr. ANDREWS. Mr. President, will my colleague yield a moment?

Mr. GLENN. I yield.

Mr. ANDREWS. I congratulate him on making an excellent statement. One of the things he is pointing out is the fact this is so much more modern aircraft than the B–52 and I think we should stress also it is a much more modern aircraft than the prototype B–1 that came off of the assembly lines 4 or 5 years ago because I understand there has been significant changes of the fuselage so it is not as perceptible on Russian radar screens and they have put more modern engines in the aircraft as well.

So this is truly a bomber of current technology. Is that not the way my colleague understands it?

Mr. GLENN. That is exactly correct. In the data we brought with us today here I think we had a listing of just a few of the things that are different between the B–1 and the B–1B.

The B–1B improvements over the B–1: longer range, air-launched cruise missiles carrier, improved penetrability, which includes the reduced radar cross section, improved electronics countermeasures, and ALQ–153 tail warning system—

Mr. ANDREWS. Putting in new engines.

Mr. GLENN. Improved avionics, and improved engines are the next two; modernized offensive avionics; enhanced capability of defensive avionics; standardized communication and traffic control equipment; movable weapons bay bulkhead for greater variety of weapon carriage; external weapons and fuel capability; increased gross weight—395,000–477,000 pounds—capacity for added range; added tail warning radar system; added cross bleed starting system to enhance fast base escape; and reduced radar cross section by one-tenth of B–1.

Those are just the obvious ones.

Mr. ANDREWS. These, Mr. President, are very important things to be pointed out to the general public. This is indeed and in fact an aircraft of the eighties, not of the sixties or seventies.

Mr. GLENN. I appreciate the Senator's comments in pointing this out. I think he made a very good point.

Mr. ANDREWS. I thank my colleague.

Mr. GLENN. As a multirole bomber Stealth's only strong suit is the possibility, and it is still a possibility, that a bomber-sized aircraft can be built that might be able to avoid detection by Soviet radars.

Actually what the Stealth-only supporters are really saying is that Stealth might be able to do well against the types of radars that our intelligence services estimate might be in existence 10 to 20 years from now.

If, of course, the Soviets do better than we estimate, Stealth could well be useless and America would be stuck with the B–52—if it can still fly—and there will be no replacement in sight.

We cannot overlook the possibility that Stealth's "clock of radar invisibility" could be completely shredded by the development of detection means other than the radars we know today.

Once again I would refer to Dr. Edward Teller's article which I entered into the RECORD just a few moments ago.

Teller wrote:

> Counter measures seem so easy that even a couple of years, considerably less time than the actual production time requirement for Stealth, would suffice for their deployment.

A spate of recent articles in technical literature support Dr. Teller. Already in advanced research is an "optical radar" that would detect aircraft—not by radio frequency energy that Stealth is designed to contend with, but by amplified light waves. Another journal discusses the uses of lasers in air defense warning systems, while a third describes a method of tracking aircraft by the turbulence resulting from flight through the atmosphere. And if these developments are not sufficient to cause doubts about Stealth, there are other advances in long-wave infrared sensors and in unconventional radars to worry about.

I will not go into technical detail, we cannot here, which we have said repeatedly, about why we have doubt about Stealth.

I am concerned that, for a variety of reasons, Stealth is being viewed by many as a panacea for our bomber problem. It is not. Security prevents full disclosure of the shortcomings of Stealth concepts in an open forum.

I must say this, that if this really is going to be an issue that is going to sway many votes, it would be my intention to ask for a closed session of the Senate. That could occur tonight, tomorow, or whenever, because I think it is important enough that we have the basics of the Stealth technology pointed out which, I think, we could probably do in closed session without getting into a lot of the details that might be bordering on giving away secrets anytime we try to get 100 people together and put out something of this classification. But we might, if this becomes a major issue in this evening's debate, want to go to a closed session.

But, after hours of briefings and discussions about Stealth with DOD officials and members of the scientific community, I have come to the conclusion that while the technology should be pursued, an operational, on-the-runway Stealth bomber is not in the cards in the foreseeable future.

THE B–1 AS A MULTIROLE BOMBER

In contrast to the B–52 and the conceptual Stealth aircraft, the B–1 is a truly multirole bomber.

In the conventional role, the B–1 can rapidly project massive nonnuclear power far from our shores. It can take off from bases in the United States, fly to Eastern Europe with a full internal load of conventional "iron" bombs and return without the use of refueling tankers. The B–1 can carry more conventional bombs internally than the older B–52's can carry both internally and on external racks. When both external storage of bombs and internal bomb bays are used, the B–1 can deliver 125,000 pounds of bombs—well over twice the payload of the ancient B–52. And because of its smaller radar signature and electronics, the B–1 will be far less vulnerable than the B–52 to the rapidly improving air defenses of nations outside the Soviet bloc.

As a cruise missile carrier, the B–1 is far superior to the B–52 and Stealth. In the initial portion of a nuclear war, the B–1, because of its speed will be better able to escape from its bases than can the B–52. Structurally, the stronger B–1 can withstand almost twice the blast pressure than can the B–52. The electromagnetic effects I spoke of earlier will disable the B–52, which is not hardened, while the B–1 is designed to withstand a high level of electromagnetic pulse.

In the penetration role, the B–1 has received a bum rap while we have simultaneously made the Soviet air defense gunners 10 feet tall. Although I believe the necessity of having a manned bomber run the risk inherent in penetration will decline in importance, this decline will occur because our technology will be able to come up with a better substitute—not because Soviet defenses can, at some magic point, make the U.S.S.R. impregnable.

It is not widely known, but the 1977 studies of the B–1 in the penetration role were seriously flawed, and those were referred to earlier on the floor, and I want to address those for just a moment to respond to that bit of information as I see it also. In that 1977 study—it was a theoretical study that I think went wrong—the failure lies in the assumptions: In the 1977 study the B–1 was pitted against undamaged Soviet defense systems, assuming that there had been no knocking out or no attempt to hit their defensive systems at all.

There was not any assumption there was then at that time a nuclear war and that there had been U.S. ballistic missiles fired that had probably taken out a significant portion of air defenses, and this was not factored into the penetration studies at the time.

Then next, the B–1's electronic countermeasures were not considered when evaluating the ability to penetrate. They did not even use the ECM capability in that 1977 study, and these have been updated over the past 4 years and have proven highly effective in fly-off tests against the best radars and missile defenses available.

The original tests did not assess the most likely scenario that the B–1's would be attacking the Soviet Union in the midst of hundreds—or thousands—of air-launched cruise missiles which could saturate surviving Soviet defenses. In other words, that study was basically based on the ability of single or low numbers of aircraft to get through without any of these other assumptions that would more likely be the combat scenario.

In a few words, balancing requirements against capabilities leads me to the conclusion that what we must have is a bomber that not only can penetrate, but that can also be used for other roles. And that bomber is the B–1.

In regard to the cost of a new bomber, we have to look at the costs we would have to pay for each practical option available to us.

I am just as much concerned about the cost of this machine as anyone in this Chamber. They are horribly expensive, and we are talking about this kind of money, $200 million for each airplane, and it is almost mind boggling. But you have to ask yourselves if we need it and do not have it what is the cost to our Nation?

So I asked the Air Force and the Department of Defense to lay out the total cost of each of these tactical options available to us. The following choices are:

Option 1, keeping the present B–52/FB–111 fleet modernized and flying until the year 2000. Option 2, buying and operating B–1 bombers to supplant our present B–52/FB–111 fleet and operating them until the year 2000. Option 3, keeping the B–52/FB–111 fleet until Stealth can become operational. Option 4, progressing from the B–52/FB–111 to the B–1 while continuing work on the Stealth concept, eventually producing Stealth aircraft when practical.

The Department of Defense analysis of these options showed that no real savings could be realized by option 1 over option 2 and that a mixed force of B–1's and Stealth aircraft, when practical, would probably be no more expensive—but much more effective—than a bomber fleet comprised entirely of Stealth aircraft.

A line-by-line examination of the CBO letter of November 6 that priced the B–1 program at nearly $40 billion that I referred to earlier revealed that the cost estimate was given to this level by adding features the Air Force does not require by assigning unrealistic cost to such aspects as the value of manufacturing experiences. The CBO then took this gold-plated program and inflated it to 1986 dollars by use of higher factors than in general use elsewhere in the Government or on any other weapons system that we are debating about in this bill.

My position can be summarized as follows: We will need a multiroll bomber capability in the 21st century. The present fleet of B–52's and FB–111's cannot meet this requirement. While Stealth research seems promising and must be fol-

lowed, we cannot rely on our present aging bombers until Stealth can be produced unless we are willing to accept high risk to our national security. I think we must build the updated B–1 while going ahead as fast as we can pursuing the Stealth technology.

Mr. President, I look at the B–1B program as a low-risk program because it is qualified from the systems standpoint. Four aircraft have been built. Over 1,900 flight test hours have been flown. There has been 7,550 engine flight hours; 37,556 miles have been flown below 400 feet on the automatic system for low-altitude running simulation. All high-load structures were subjected to ultimate load fatigue testing; a three-life-times projected airplane.

Gen. Tom Stafford, a close friend of mine, ex-Commander of Edwards Flight Test Center, where the B–1 was tested, stated that the B–1 test program was the most successful in the history of the Senate.

So the airplane is ready to go to production. Critical long lead time items necessary for production, such as forgings, toolings, and materials have been retained in storage and are readily available. The major portion of the engineering is completed. The design is mature. It has been thoroughly tested. A skilled corps of about one workforce is still in place, including hundreds with key engineering experience who have been on loan to other aircraft companies. Production facilities are available at Rockwell, including a new building and others which will be added depending upon the requirements of the program.

So I see the program as being ready to go. I do not think you can afford not to have it, even though it is a very expensive project.

Mr. BUMPERS addressed the Chair.

The PRESIDING OFFICER. The Senator from Arkansas.

Mr. BUMPERS. Mr. President, at this stage of the debate, it is difficult to say anything that is not redundant and that has not already been said in spades. But there are two or three observations I want to make and maybe, even at the expense of being redundant, try to emphasize a couple of points.

I think, first of all, we are not really deliberating this issue like a great deliberative body is supposed to. We are tonight, probably within the next hour or 2, going to vote on a weapons system that is bigger than any weapons system we have ever procured by a magnitude of somewhere between 2 and 5 times.

It has been said that one of the reasons for building a penetrating bomber is that you can call them back. Well that is true. You can call a penetrating bomber back after it has been sent on a mission. But I want to say to my colleagues tonight you cannot recall your votes. Once you vote tonight, we are embarked on building 100 airplanes that are going to cost, in then year dollars, $400 million each.

The only people in the world that I can envision really getting a pretty good deal out of this is the Soviet Union. The Soviet Union has been anticipating a B–1 bomber, or a follow-on to the B–52, for many, many years and everybody here knows that they have a classic air defense system designed for just this aircraft that we are getting ready to build.

Now you can talk about when the B–1 is going to be operational. That is a very narrow figure. Everybody knows that it is going to be operational sometime around 1985 to 1987. There is some considerable dispute about how long it will have a penetrating capability. But put the best light on it and it comes out to about 1995.

Ask yourselves: What is the mission of the B–1? Why are we committing $40 billion in this defense budget to 100 airplanes? What is its mission and how can it fulfill it?

Well, in 1977, the only thing I ever heard was that it was to be a penetrating bomber. Nobody talked about it being a conventional bomber, nobody talked about it being a cruise missile carrier. Indeed, at that time we were putting money in this budget to buy L–1011's and 747's to experiment with as cruise missile carriers. That was when we thought we were going to wind up with the SALT II treaty.

But now the argument is made, in justification, and in the certain knowledge that it is not going to be able to penetrate for any long period of time, that it is also a magnificent conventional bomber and it is also a fine cruise missile carrier.

Well, if you want a bomber that can shoot its cruise missiles and penetrate the Soviet Union until the mid-1990's, we have one—the B–52. Now that always provokes the same response every time it is mentioned—that they are older than the pilots that are flying them. And there is some justification for saying that and there is enough credibility to it for all of us to be concerned about the life of the B–52's. But all I am saying is I have never heard an Air Force general—and, indeed, I heard the President say less than 2 months ago—that we were going to spend billions of dollars retrofitting the B–52G's and H's with the goal that they will be able to shoot and penetrate the Soviet Union through the mid-1990's.

Now the amount of money we are spending on the B–52 does not make it brand new, but we are putting the best avionics and the best counterelectronics measures we have on it, and it will carry 20 cruise missiles. So, it is a conventional bomber. If you want it as a standoff bomber, it will carry 20 cruise missiles. And, if you want it to shoot and penetrate, every Air Force general I have heard talk says it will perform this mission through the mid-1990's.

So why are we putting $40 billion into a weapons system to duplicate what we already have and add to that the ATB? Well every time you start talking about the Stealth, the proponents of the B–1 say the Stealth is just on paper. It is rather tragic that we cannot debate some of the technology of the Stealth. But I will say this: There are two people for whom I have the utmost respect when it comes to research and development in the Defense Department, and I will tell you who they are. They are Dr. Bill Perry and Dr. Richard DeLauer.

I have heard both of them say personally to me that they have great confidence in the Stealth bomber.

Bill Perry says he can conceive of no reason, unless we funnel too many of our resources into the B–1, why the Stealth bomber could not have an IOC of 1989–1991.

I talked to an Air Force general the other day and he said it may be 1990, but he also expressed a great confidence factor in this bomber.

It is not a paper bomber.

Why are we going to build a penetrating bomber that will not penetrate when we have one coming on that will, assuming you believe in penetrating bombers? I have been an advocate of the Stealth and I still am an advocate of the Stealth, even though I think at some point we are going to have to debate again the value and the desirability of even having a penetrating bomber because everybody during this debate. and for the past 12 months, has put the most revolutionary weapon of this century on the back burner as though it does not exist, and that is the cruise missile.

Has anyone in this body heard one person from the Pentagon say that he does not think the cruise missile is going to work?

Bill Perry and Dr. DeLauer will both tell you that it is the most revolutionary weapon of the century, accurate to an unbelievable degree. I heard one general say you can put one in the Kremlin dining room, if you want to.

And we are going to put them on submarines, all of our Los Angeles and Trident submarines.

Mr. President, there is only one nice thing about the way this vote is going to come out tonight, and that is I will be able to say to all of my constituents and all of my friends when they start hearing these stories about how far behind we are in this and how far we are behind in that, "I am really sorry about that, but the B–1 ate that up like a piranha," and I will be telling the truth.

Is it cost effective to spend $40 billion for an airplane that we are all agreed upon is going to be superseded in 1989 or 1990?

Mr. President, I wish that everybody in America could hear this debate tonight. I would be delighted, incidentally, to debate this issue on national television, not only the B–1, but the second part of the amendment which would take the money you would otherwise put in B–1 and put it into some readiness items.

That is what this amendment does.

You know, Clausewitz said that you fight the kind of war you are prepared to fight. Are we prepared to go to war with the rapid deployment force in the Middle East? Are we prepared to fight in Western Europe if the Soviets decide to attack? Not if you believe everything you read and everything you hear from witnesses who come up here from the Pentagon.

What kind of war are we prepared to fight? We are prepared to fight a strategic nuclear war.

79-059 O-85-32 (Pt. 22)

When you start talking about the desirability of a conventional bomber because you can call it back, that was fine back when the novel "Failsafe" was written. But that was before we had submarine launched SLBM's; that was before we had ground-launched GLCM's. Our strategic planning does not include a first strike. Our strategic planning does not include a launch-on-warning attack. Our strategic planning is designed to keep a retaliatory capability so that if the Soviet Union launches the first strike, we have ample force to answer, not with airplanes, but with enough of our survivable ICBM's and our submarines.

Winston Churchill made the point in a different context and John Culver magnificiently and eloquently elaborated on it last year when he said the airplanes will get there when the war is over and can do nothing except make the rubble bounce higher.

Nobody doubts that for an instant.

Mr. President, our strength and the strength of this Nation is not entirely dependent on how many planes, tanks, and guns we have. Our strength relies, I think, just as heavily on the confidence of the American people in their Government and in each other. I think the way we feel about each other as Americans is important. I think that the strength of this Nation and the strength of its economy is as important as how many tanks, planes and guns we have.

What we have done now is assure a $100-billion deficit for 1982 by an administration, incidentally, which has said you cannot have a free lunch, you cannot have it both ways, you cannot spend more than you take in.

What has happened in the Administration's very first year? We are anticipating somewhere between an $80 billion and a $100-billion deficit. The President was dead right. There is no such thing as a free lunch. All we are doing is destroying a national consensus for a strong defense. If you do not think the tide is changing, talk to the folks back home. Talk to the people who have lost their jobs, all million-and-a-half of them in the last 3 months, and see how strongly they feel about this defense budget.

There are a lot of things that are important in this country.

I have voted for every defense budget since I have been in the Congress. Put that down in the record. I have voted for every defense budget that has come up since I have been here, but I am not going to vote for this one.

Mr. President, our strength lies, from a military standpoint, more in the kind of conventional forces we have right now than even our strategic forces, because a conventional war is the kind of war that we are most likely to have to fight. What do we do when we siphon off $40 billion for a plane of very limited utility? We jeopardize the rapid deployment force; and we jeopardize what we have as a conventional force in Western Europe.

The Army says today—listen to this—that we have only one combat-ready division, the 82d Airborne.

Think about that.

We consider ourselves the most powerful Nation on Earth, and the Army says we have one combat ready division.

Do you know what else the Army says? They say we have the ability to fight for 30 days in Western Europe. When the Senator from South Carolina offered an amendment to preposition equipment, to give our troops more ammunition, to raise that from 30 days to 60 days, to fix it so we could fight 60 days when the Army says that to have a credible deterrent in Europe, we have to have 180 days worth of munitions, we cannot even get enough money in this budget for an additional 30 days.

That is not something I dreamed last night. That is what the people come over here and testify to.

What else have we done?

Well, we have cut our manpower by 6,000. We are going to have 6,000 men fewer under this budget than we would have had under the projected Carter budget. And we talk about revitalizing our military strength and our armed services. We are buying this year, because of the B–1 siphoning so much money off—listen to this—20 percent fewer combat tactical aircraft this year than we bought in 1980.

We talk about ships. We want a 600-ship Navy. We want 540 ships by 1987. However, we are buying 18 percent fewer ships in this budget than we bought in 1980. Does that sound like a country that is really serious about rearming itself?

Those AWACS, which were so widely debated and the technology of which was so widely touted, cost $123 million. That plane out at Andrews Air Base, which the President is going to jump on—he will never make it, but we like to think he will—and guide the war from, cost $120 million. And this plane, the B–1B, will cost 400 million smokes.

How are we going to get to that 540-ship Navy? Well, we are going to bring out the old battleship *Iowa*, and the old battleship *New Jersey*. I did not hear anybody who was talking about those decrepit old B–52's talk about their being decrepit when we were dragging those old battleships out.

I am reminded of the story of Wellington. He was reviewing a little old ragtag company of troops one time. The officer in charge of the troops did not know they were a ragtag company. He said to Wellington, "Do you think these troops will frighten the enemy?"

Wellington said, "I don't know about the enemy, but they scare the hell out of me."

That is the way I think we are about the B–1. I do not know whether the Soviet Union is frightened by what we are doing here, but it scares the hell out of me. This program represents an unbelievable waste, and, I say to the Senators, you cannot recall your vote.

There is one other point I want to make on the Navy. While trying to reach a 540-ship Navy, we are going to build this airplane for $400 million apiece. It is going to have a 7- or 8-year life expectancy to perform the mission we are building for it. But you can build a guided missile frigate for the cost of two to three B–1 bombers, and it has a 35-year life expectancy.

The other day, I was coming back from lunch at one of the local restaurants. I looked up at that magnificent Hart building, with all that beautiful marble. I thought about all the abuse I took last year when I was running because I had voted for that building. I did not vote for the original appropriation, and I might have voted against it. But when I got here, the superstructure was coming out of the ground.

I remember my colleague who sits in the chair wanted to tear it all down and make a parking lot out of it. He cannot defend himself right now. Somehow, I got caught on the floor. They said, "Senator HOLLINGS will be back in a minute. Will you hold the floor until he gets here?" I spent 3 hours debating with my fine friend from Rhode Island in the chair, there. And I finally won it. I found out Senator HOLLINGS not only was not here, but that he was not coming. And maybe you think I did not pay a high price for that, last fall.

Now he shows up, 1 year and 5 months later. [Laughter.]

But to go on with the story, I looked up at that building and told my staff, "Can you imagine all the furor that building has caused in this country and that when it is finished, it will cost one-third as much as one B–1 bomber." And I have a feeling it will be here a lot longer than the last B–1 bomber.

Do you know what we are doing here, Mr. President? We are pandering to the American people, for whom I really feel and in whose judgment I have great confidence once they are given the facts. We are pandering to people who do not want to be pandered to. I can say that I have seen a couple of polls that show the American people are not very rhapsodic about the B–1 bomber.

I thought in 1977 when I was opposed to the B–1 that it was a fairly close call. It is no longer a close call.

Mr. President, I shall wrap up here by saying that I would like everybody tonight who votes for this to be prepared to go home and tell their constituents that they want their sons and daughters to enlist in the Armed Forces of the United States, but because we are to spend $40 billion for 100 bombers—$40 billion for 100 bombers—we may not have any guns and ammunition for their youngsters when they get in. Still, we think it would be a nice patriotic thing for them to do.

I did not blame the Senator from Alaska when he said this afternoon that he wished the amendment of the Senator from South Carolina did not reallocate this money for all those readiness items. I do not blame him at all. If I were voting against the amendment, I would wish it were not in there too.

I would like to go on national television and ask anybody who votes against this amendment to tell the American people that we have a 30-day war fighting capability in Europe, that we have cut TACAIR by 20 percent, and that we have cut our shipbuilding by 18 percent, and everything that goes with it. I guess the solution to this dilemma goes back to 1977, when we zapped this thing. At

that time we were going to build 244 of them. Do you remember that, Mr. President? Now we decide we just want 100. I think that means that anything that is not worth doing is not worth doing well.

When this vote is taken tonight, it will make the decision final. I have never heard anybody in this body boast about voting for the ABM that we spent $6 billion for out in North Dakota and dismantled before it was finished. I have never heard anybody in this body boast about being a great B–70 advocate. And I am going to tell you something: Within 3 years or maybe less, you are going to be hard pressed to find anybody in this country, or in this room, who is going to be boasting about voting for the B–1 bomber tonight.

We are pandering, I promise you, Mr. President. We are pandering and we are mistaken.

One night, Bill Perry and Senator HART and I were having dinner and we were talking about the relative technologies of the Russian and the American Cruise missiles. As you know, the American Cruise missile is vastly superior to anything the Soviet Union has. That is not classified; I know it and the Soviets know it. But their Cruise missile is about eight times bigger than ours. And Senator HART said, "I sure hope folks don't find out theirs are bigger than ours."

Well, in about 30 days, Mr. President, we are going to see all these magazine stories coming out. They are going to be reflecting what the generals are saying over here before the Defense Appropriations Committee and the Armed Services Committee about our inability to fight; that even though we spent $202 or $208 billion, we still do not have a war fighting capability in the Middle East; that we still do not have the ability to defend ourselves in Western Europe; that in fact, the number of ships in our fleet has not gone up anything like the required amount to reach a 540-ship navy by 1987; or that we bought more tactical aircraft in 1980, when the budget was about $140 billion, I believe, that we are buying with over a $200 billion defense budget this year.

It reminds me of Lucy holding the ball for Charlie Brown. Every fall she promises that she is not going to pull the ball out from under him. Every year, Congress does the same thing. We vote for all these exotic weapons systems and our defense capability continues to decline.

I want a strong defense, Mr. President, I want a lean, hungry defense. I want our youngsters to have the finest equipment in the world to fight with. When you vote against the Hollings amendment tonight, you are assuring the American people that they are not going to get it.

I yield the floor, Mr. President.

SEVERAL SENATORS. Vote! Vote!

The PRESIDING OFFICER. (Mr. MATHIAS). The Senator from Indiana.

Mr. QUAYLE. Mr. President, unfortunately, we are not able to have this debate on national television. But in due time, after the majority leader brings television proceedings to the U.S. Senate, we will at least be able to debate these issues on cable television. I am sure the Senator from Arkansas will join me and others to allow that to go through.

I should like to be exacting and try to quote someone who has been quoted very often, Dr. William Perry, who testified before our Armed Services Committee.

He said:

The B–1B will be extremely useful as a Cruise missile carrier.

Second, he said:

It will be useful, maybe close to optimum, in a nonnuclear engagement in a conventional war.

He said:

I think it is a fine airplane, and I think it has real capacity in conventional warfare.

He sort of summarizes his testimony:

So, to me, it is not a black-and-white issue. It is a priority judgment issue.

I tend to agree with him. It is a priority judgment issue, and when we get into situations such as this, where we have judgment, I think it is appropriate to turn to some of the military personnel and what they have said.

General Ellis was before our committee, and I asked him to assume that we are not going to go ahead with the basing mode on MX. He said:

If you don't have that, you had better have something else or some other system, and the B–1 or interim bomber is even more critical than it would have been if your MX was coming in.

So, in short answer, he says that if you are not going to have the MX on schedule, you had better do everything else you can do, including getting the B–1, or whatever you are going to get, as soon as possible.

General Allen has testifitd that this year the B–1 program is the No. 1 priority.

General Davis testified on November 4 that under the present circumstances, with the MX basing issue up in the air, his order of priorities is B–1B, MX, and Stealth.

It is a judgment call, a judgment decision, that we will be making.

Many statements have been made tonight, and there is no use repeating them.

I wish to emphasize one point made by the Senator from Utah (Mr. GARN) in reflecting on the debate in 1952 with respect to building the B–52. During that debate, it was argued that this would be only an interim bomber, that it would not be very lasting. In fact, 30 years later, we are still using the same bomber, and we are going to use it until 1995.

The B–1 is the same type of bomber. The configuration of the B–52 is 20 years old. We began the discussion of B–1 in 1970, and it will not be deployed until at least 1985 to 1987—15 to 17 years.

Now we are told, "Let us wait for Stealth. Stealth is just around the corner. Wait on the B–1 and go to Stealth."

I say that if we wait on the B–1 and go to Stealth, we will be having the same argument 5 or 6 years from now—wait for Stealth, because the son of Stealth is just around the corner. Wait and wait and wait is exactly what we have done.

I believe that now is the time to act, and the B–1B is the appropriate plane the Senate should consider.

Mr. President, for the past several weeks, the Senate Armed Services Committee has been considering the President's plan for improving the strategic posture of the United States. Formal testimony has been received from senior officials of the Department of Defense, Air Force, and Navy. Supporting data has been provided during many private meetings on key aspects of the proposed program.

After considering all of the facts, I am convinced that it is in the best interests of the country to proceed with a program to improve our strategic forces. I will vote accordingly.

Following the SALT I agreements, we had great expectations that the United States and the Soviet Union would use that treaty as a framework around which we could begin a gradual and mutually equitable reduction in our strategic forces. We looked forward to an easing of international tensions which would have permitted both countries to concentrate our resources on improving the quality of life within our borders, and throughout the world.

After SALT I, the United States refrained from developing or deploying new strategic weapons. The Soviet Union chose the opposite path—a path which has led directly to the heightened state of tension in which we find ourselvess today.

The Soviets were not content to achieve a strategic nuclear parity, but instead elected to gain a substantial unilateral advantage over us. Hundreds of massive SS–18's were deployed with greatly improved performance, raising the ominous potential for crippling us in a first strike. While such a move was legally permissible under the written terms of the agreement, it was wholly inconsistent with the intent of the treaty and with the spirit of arms limitation discussions.

Consider the destabilizing effect of that unilateral exploitation of loopholes in SALT I.

Immediately following SALT I, each of us had essentially equivalent missile forces which could not be destroyed by the other's ICBM's. Neither the Minuteman nor the Soviet's missiles had the accuracy and megatonnage to threaten either country's silos.

Both our ICBM forces were, at that moment, invulnerable deterrent weapons with the potential for retaliatory second strike capability.

Each side, thus, had substantial motivation to refrain from starting a nuclear war because neither side could gain a military advantage by striking first with ICBM's.

The Soviets now have deployed the SS–18 which can attack and destroy our Minuteman silos, while we must still rely on the Minuteman which cannot destroy their SS–18 silos. Any semblance of parity has been lost.

The Soviets' public pronouncements express alarm at the prospect of the United States developing the MX. They claim that it will be a destabilizing first strike weapon; yet they totally ignore the fact that the MX is essentially identical in capability to their SS–18. How can the Soviet Union be so hypocritical as to claim that the SS–18 is a defensive

system and the MX is an offensive weapon?

It is obvious that the Soviets are not anxious to reduce international tensions. It is obvious that the Soviets are not concerned about the massive expenditures on military hardware adding to the continuing hardships on its people.

It is obvious that the Soviets have no interest in recognition or accommodation of our mutual concerns.

It is obvious that the Soviets have only one goal in mind—overwhelming military superiority over the United States.

That simply cannot be permitted to take place. Regrettably, we must now act to restore some sense of parity.

The B–1B should be developed on a time-urgent basis as proposed by the President. Manned penetrating bombers are the only element of the triad which has been proven in combat, and they were decisive in turning the tide of World War II.

The B–52's are obsolete and can no longer be counted upon to perform penetrating missions. Consider that in their limited time of operation in Vietnam we lost 18 B–52's to the backward air defenses of the North Vietnamese. Is it reasonable to believe that these same aircraft can survive sophisticated Soviet air defenses in the 1980's? It clearly is not.

The B–52's are not only losing their military effectiveness, but the cost of maintaining them in flightworthy condition is becoming prohibitive. The Air Force has testified that it would cost $93 billion to keep our current bomber force in flying condition until the year 2000. Spending that amount of money on an increasingly ineffective system does not make sense.

Each of us has had an automobile which finally became too expensive to maintain. There comes a time when that car should be traded in on a newer, more efficient model. That is the point we have reached with the B–52's. It is time to trade them in and to commit our resources to building a replacement bomber. The only open question in my mind is: Which bomber?

After giving this question a great deal of time, thought, and analysis, I have concluded that the B–1B is the only realistic option open to us at this time.

The B–1B can perform the manned penetrating missions at least until the 1990's and possibly much longer. The B–1B's ability to penetrate is based upon its very small radar cross section and its defensive electronic system. Current and near-term technology cannot cope with that twofold capability, according to Air Force experts, and the B–1B's invulnerability is the key to its deterrent value.

Whether the Soviets can realize a long-term technological breakthrough and develop the means to defend against the B–1B in 1990, 1995, or 2000 is purely a matter of conjecture. There is simply no possibility of sitting down today and establishing a specific date at which time the Soviets will invent a solution to the B–1B.

It may well be that, like the B–52's, which have been in service for nearly 20 years, the B–1B's may last longer than any of us now have reason to believe.

The B–1B will also be a very effective cruise missile carrier, enabling us to also retire the B–52's from that assignment. It can further serve as a conventional bomber. In fact, Dr. William Perry recently testified that the B–1B is an optimum delivery system for non-nuclear weapons. We are, therefore, getting a threefold return on our investment, a new aircraft able to perform the Air Force's three primary attack missions for the next several decades.

There is no valid argument for skipping the B–1B and proceeding directly to the advanced technology bomber. Right now, Stealth is little more than a promising technology, but it is not currently translatable into a credible airplane design. We do not have the option to buy the ATB. As of this moment we do not even know how to build one.

There is ample historical evidence to lead one to conclude that the delivery schedule on a system as complex and technologically uncertain as the ATB is likely to suffer substantial slippage. Will the technology prove out in 5 years? In ten? By the end of the century? Ever?

It is dangerous, if not suicidal, to gamble our deterrent posture on our ability to produce an ATB which first, probably will not be operational on time, and second, may or may not frustrate the Soviet's ability to develop effective countermeasures.

The B–1B may not be the "perfect" airplane. In my year of service on the Senate Armed Services Committee, I have learned that there is no such thing as the perfect airplane, the perfect ship, or the perfect soldier.

But the B–1B is a very good weapon. It is available, and we can look forward to a high return on our investment.

Given the current budget situation and the uncertainty of MX basing, it would seem that the time for the B–1B is now. I urge my colleagues to support the construction of this airplane.

The need for the B–1B becomes even more urgent when we consider the uncertainty surrounding the MX program. While I have supported continuing the development of the MX missile, as the debate in this Chamber yesterday indicated, I have grave doubts about its basing mode.

The primary justification for a new land-based missile must be that it is relatively invulnerable to a Soviet first strike. If it is not, it will lose its deterrent value, which is the position we are facing with our Minuteman missiles.

It continues to distress me that, despite years of discussion and debate, we still lack an acceptable basing mode for the MX. The amendment which I cosponsored with Senators COHEN and NUNN, holds out yet another opportunity for the Department of Defense to solve the basing problem.

They have until July 1, 1983. If it has not been solved by that time then the future of land-based missiles will be in serious doubt. Perhaps other elements of our deterrent forces—specifically our submarine-launched missiles—should assume a greater portion of the deterrent role. While experts have testified that MX is vulnerable and that we do not know how to make MX invulnerable, no one—I repeat, no one—has stepped forward and suggested that submarines will be vulnerable for the next 15 to 20 years.

Concepts have been suggested by which the fabled Stealth bomber might someday become vulnerable, but no one has the sketchiest notion as to how the Trident submarine can be detected and tracked while on operational station.

Our strategic deterrent posture has been seriously eroded in the past 10 years. Recent Soviet actions have convinced me that this is the time to send the strongest of signals to the Soviets as well as to our European allies that we will not repeat the mistakes of an earlier era when, in our desire for peace, we allowed a potential adversary to build a massive military machine, while we watched and waited.

This desire for peace was seen as a sign of weakness. We must deal from a position of strength. The way to maintain peace, is to make war an untenable option.

Mr. RUDMAN. Mr. President, we have now had 3 or 4 hours of debate on this issue. Many things have been said, and it certainly indicates that there can be an honest difference of opinion on this issue.

I want to start out by saying that the Senator from Ohio has given a complete, detailed, logical, and unemotional argument in support of this program and against this amendment.

If I have learned anything in the 11 months I have been here, it is that on issues such as this, one can find evidence to support almost any position imaginable. This is not too much different from trying cases in jury trials in New Hampshire. You can find an expert who will testify about almost anything.

I think we all can agree that every quotation that has been given by every Senator during this debate, quoting someone at the Defense Department with an opinion, has been accurate and faithful. The fact is that they are opinions. The fact that somebody holds the title of Secretary of Defense, past or present, or director of research and development, or whatever, does not necessarily make those opinions any better than other opinions from people who, in many cases, have less expertise.

There has been a great deal of discussion here about penetrability, and there have been quotations from some of the same people, given at different times. But one thing cannot be argued, one thing cannot be refuted, and that is this: The B–52 force upon which we presently depend as the airborne element of the triad can in no way compare strategically of tactically with the B–1B that is being proposed at this time.

One significant point has not been raised on the floor of the Senate. We have heard cost figures bandied about, but no one has addressed the fact that the B–1 will cost more, but remarkably not that much more, over the remainder of this century than the B–52 force, which must be modified. Let us get into those figures, because the American people should know what we are talking about.

In the first place, the Senator from

Arkansas was correct when he spoke about a $400 million cost of the B–1B in outyear dollars. That is a little like saying that the Chevy you buy tomorrow for $10,000 may cost you $36,000 in 1994. We all know that. But we should talk about apples and apples, not apples and oranges.

Second, the CBO report, to which the Senator from Ohio referred was designed, in my view, for one purpose and one purpose alone—to inflate those figures that will be presented in debate such as this. I do not accuse the CBO of doing it intentionally. But when you look at the question they were asked, the answer they produced was inevitable.

The numbers furnished by Dr. DeLauer at my request, after a hearing of the Defense Appropriations Committee, are rather interesting. The figures the Pentagon now puts forth for maintenance and modification of the B–52 force until the year 2000 are approximately $93 billion. The best figures we can find for operating a 100-aircraft B–1 fleet, including construction, maintenance eventual modification, and deployment, would be $115 billion.

There are those who say that the figure of $93 billion for the B–52 is too high. I submit that it may be. Reduce it, if you wish, to any other figure you feel is reasonable. Some say 80, some say 70. The fact is that we are talking about a difference of between $30 billion and $40 billion over a 20-year period for deploying a first-rate, 1980's technology weapons system that, in terms of range, speed, maneuverability, load carrying, and countermeasures, is vastly superior to the B–52. Finally, I just want to add to what the distinguished Senator from Ohio said about Stealth. He is absolutely right. For the last week in this body, we have tried to talk about Stealth, and we always fall short of being able to say what we want to say.

Two points must be made. When you have that briefing and you look those program people right in the eye and ask them about the radar threats that might confront Stealth in the mid-1990's and the ability of that aircraft to counter them, the room becomes very quiet.

Second, anyone who is a pilot, anyone who has done any amount of flying—and we have the best testimony from the Senator from Ohio—knows full well after that briefing that to stand on the floor and indicate to the American people that there is a high likelihood of this system's being able to fly effective by 1990 just does not agree with the facts. It confounds the facts. We at least should deal with the facts to the extent we can.

The Senator from Arkansas makes a very good point. This is a great deal of money. There are many other things we need. We need conventional forces. We need a large Navy.

Mr. President, in this particular context that is like saying the people need both food and fuel. You cannot live, one without the other. And the fact of the matter is that to assure the safety of this Nation, we need a bomber system that is a product of the eighties, not the fifties.

I hope that we will defeat this amendment and I further hope that some day in the RECORD I can look back and say that I was right in my belief that we will never deploy Stealth as a strategic bomber. The sooner we recognize that the more efficiently we might proceed with work on other systems.

Thank you, Mr. President. I yield the floor.

Mr. CHAFEE. Mr. President, the defense appropriations bill which we are considering tonight will allocate over $35 billion more than last year's defense budget. The real growth which this figure represents is a 10 percent increase over the current year.

In the past 6 years, if we include this year's figure—the fiscal year 1982 budget we are considering tonight—we have increased defense spending by 35 percent after taking into account inflation.

Earlier this week, the Senate added to the budget another $91 million on this bill to rehabilitate the U.S.S. *Iowa*, a World War II battleship whose keel was laid 39 years ago.

Mr. President, I fear that the vote on the *Iowa* has come to symbolize the approach we are taking to defense issues this year, a willingness to support virtually any program. Any program that anyone can conceive flies here, because it is labeled defense. The Russians are coming down Pennsylvania Avenue, approve anything.

And this comes at a time when we are subjecting the remainder of the Federal budget to intense scrutiny.

There is no question that all domestic programs should be subject to careful and critical examination. I have supported many of the cuts that we have made. But the same standard should apply to the defense budget.

The real problem is that neither Congress nor the Department of Defense is thinking in terms of the future. The heavy hand of tradition, and we are hearing it all over this floor, the mystical conviction that we have to do now what we have done in the past, is dictating how we proceed and appears to be our guiding principle.

We just heard the distinguished Senator from New Hampshire speak about the "triad." The triad seems to have assumed mythical proportions. Land, sea, and air does have a marvelous tone. It is like the Marine Corps hymn: land, sea, and air deterrence, the triad.

I believe in a mix of strategic forces, but belief in the triad does not mean we need to proceed with the same systems that we have always had in the past.

What is happening here is that we are ignoring new developments, such as the increased numbers, range, and accuracy of the Trident missile, for example, and what the Trident submarine does for our strategic forces. Also being overlooked are the vast potential of our cruise missiles and the changing environment of the Soviet air defenses which, of course, make the penetration of a manned bomber increasingly difficult.

So what has been our response to all these changes? Our response is that we are going to approve vast sums for a manned penetrating bomber which will be obsolete as a penetrator within a decade after its production.

We are being asked tonight to vote on the funding of the initial phase of a program which will cost between $30 and $40 billion. This is for 100 aircraft. Each aircraft is going to cost between $300 and $400 million.

We are embarking on this major new spending program when we are already cutting other domestic programs and when we are being asked to cut them still more. More is to come. We have to cut $3 billion more before Christmas, all from the domestic programs.

We have already cut job training programs by 50 percent, block grants for education by 25 percent, and maternal and child health programs by 25 percent. We have reduced programs for school lunches and child nutrition by $1.5 billion.

Everyone knows what we have done to the domestic and social programs. No area was spared.

What did we accomplish? We managed to reduce the nondefense components of the budget by about $35 billion, nearly exactly the same amount by which we are going to increase defense. So we have not come away with a net nickel of saving.

I feel compelled to point out, Mr. President, to my colleagues that the defense budget is not unlimited. The sky is not the limit, but we are beginning to act as though it is. We are adding millions and literally billions to the defense budget as if these sums did not somehow count toward the Federal deficit, a deficit that started out a mere $42 billion for 1982, then went up $45 billion, then went up to $60 billion, and now it is up to $80 billion, and some are talking about a $100 billion deficit in 1982.

What has happened to all the rest of the savings that we have made in our budget? Difficult though they have been they are being gobbled up by this defense spending.

There is no question we need a strong defense, I know as well as anyone here. I voted for all kinds of defense programs, and there is no doubt that we need an increase in the 1982 budget for defense over 1981. Many of the items in the present appropriations bill are valuable and cost-effective contributions to the defense of this Nation. But we have to judge each program on its merit and its priorities. We cannot do everything. We have to make some choices.

I would say that this bill here tonight does not make those choices.

We cannot afford every strategic weapon, and I think the statement made by the distinguished senior Senator from Georgia earlier this evening was a very accurate one.

Make our priorities. Choose what is best. Do not go with everything. But that is not certainly true of this bill we have before us tonight.

We are being asked to consider spending a tremendous amount of money to purchase an aircraft which will not be available for at least 5 more years and which will have a useful life as a pene-

trating bomber of less than 10 years. At the same time we are meeting all the requested advance funding for the advanced technology bomber.

I think, Mr. President, that indeed we are lapsing into nostalgia around here. I know there are those who contend that the B–1 is a valuable stopgap measure for the late 1980's. I am not persuaded by that argument. The B–52 aircraft properly configured and maintained will be able to deliver air-launched cruise missiles (ALCM) which can penetrate Soviet defenses until well into the 1990's. At that point our advanced technology bomber will be there. There is no "gap" because of the B–52's and ALCM's. The argument for a new manned penetrating bomber prior to the 1990's is very weak.

What is really happening, Mr. President, is that those considerations which I believe should govern our deliberations on the defense appropriations bill are not being thoroughly considered.

We should spend our precious dollars on those programs which enhance our readiness, which provide us with the most cost-effective and militarily capable systems over the long run and which, while increasing our national defense capability, will not undermine our national economic health.

But this bill in no way conforms to that. For some unknown reason, which has not been explained to me, nor on this floor, this body seems to be prepared to pour unlimited amounts into strategic weapons while underfunding our conventional forces.

The greatest single risk which this Nation currently runs is that our conventional forces will be overrun or unable to respond properly when required.

We have talked about the Rapid Deployment Force here tonight. The Rapid Deployment Force is neither rapid nor deployable nor a force, and that is true of the rest of our conventional forces.

Our Nation faces extreme difficulties in conventional weapons. This amendment which we have here tonight strengthens those efforts, strengthens our readiness.

Where our funds should go, as has been pointed out so frequently this evening, is for more ships and more aircraft, more tanks, more conventional weapons of all types, not for the B–1 bomber.

It seems to me that the following points summarize the message I am trying to get across.

First, this Nation does not have unlimited funds. Congress has to recognize that, while we slash domestic and social programs, defense has to take its share. That has not been true up to this point. Every weapon the Pentagon or anyone else could conceive has been included in this bill and I am ashamed to see the *Iowa* added recently.

Second, our defense planning has a slavish adherence to traditional strategic weapons. The triad, as I mentioned, has assumed holy proportions. We must have a manned bomber, say those here tonight, because we have always had one.

Third, the greatest military danger this Nation faces is in conventional warfare. This amendment addresses that danger. The bill that we have before us does not do enough for increased readiness.

Mr. President, it seems to me obvious that the military-industrial complex is in full sway. That is bad for our defense, it is bad for our economy, and it is bad for our Nation, and I hope this amendment is approved.

Mr. EXON addressed the Chair.

The PRESIDING OFFICER. The Senator from Nebraska.

Mr. EXON. Mr. President, for a few moments I should like to address the amendment that is presently before us and, hopefully, hand-in-hand the defense appropriation bill itself which carries this amendment.

Mr. President, I hope that America will learn from this debate, but I doubt very much that it will; and I hope even further that the President of the United States will learn from this debate, but I doubt that very much also.

As the RECORD will show, this Senator has supported all of the add-ons for force readiness. It is appalling that the majority of this supposedly deliberative body rejected, essentially on a party line vote, all of the needed readiness and enhancements for conventional forces.

It seems to me we tend to look at defense needs all too frequently in isolation. We need a B–1 or we do not need a B–1. The facts are that we need a total integrated defense policy, and the facts are we do not have one. But consistent with the statement I have made, I am not in favor of the amendment before us which cancels the B–1B in its entirety.

There was a time when that would have been in order. That option was, in my opinion, eliminated with the October 2 last announcement by President Reagan of the cancellation of the mobile-based missile system for the MX.

Without the mobile-based MX system, which throws wide open the window of vulnerability, that the B–1, I think, has a chance to help close, therefore, I think it is wrong to eliminate the B–1B.

The need for the B–1B is not, therefore, in its own right but is required because of the President's decision on the MX basing mode.

I support the fiscal year 1982 defense appropriation bill with reservations, with the B–1B and the crippled MX program. Its totals are astounding but necessary. Some would question how anything so apparently well-funded would not cover every conceivable need for the military. Yet this measure falls seriously short in some areas, especially in convential-force readiness.

Several amendments were brushed aside by the majority that dealt specifically with the shortfall. While we did address to an extent the serious shortcomings of the administration's MX basing mode, we failed to set an overall balanced course to meet our security needs. Nevertheless, it appears this is the best we can accomplish at this time and the bill, therefore, when it is voted on, hopefully later tonight, should be approved, in my opinion, on an up-or-down vote.

Last year Congress advocated and passed a large increase in defense spending, and this legislation implements a second installment of the critical long-term program to enhance America's defense to the level necessary to protect our people and our vital interests around the world.

Nevertheless, Mr. President, I am greatly concerned and disappointed over the future direction of our strategic nuclear forces, those forces which represent the essence of deterrence.

The decision made by the President on October 2 regarding the future of the land-based leg of our strategic nuclear deterrence shocked the entire Defense Establishment, and this Senator as well, and yet I have heard, I have seen, I have read little about that since that time.

Before expanding further on this articular portion of the new strategic program, I want to say that I support many of the programs contained therein, which are vitally important. Improvements such as those in command, in control, communications and intelligence, which are vital indeed, and the specific recommendations made, followed very closely the proposal made by the Armed Services Committee earlier this year.

Proceeding with these developments and the Trident II missile is essential and represents an impressive new capability as well as our ace-in-the-hole against a future possible breakdown in arms control. Continuation of the air-launched cruise missile program, although at a disappointingly reduced level, is likewise highly important.

The development of the advanced technology bomber deserves more support, as well, and I have been somewhat surprised at some of the statements made on the floor of this body in that regard. It was most unfortunate, Mr. President, that the Senate rejected the Byrd amendment that could have advanced the system's IOC by a year.

When I first came to the U.S. Senate almost 3 years ago and became a member of the Armed Services Committee, I was skeptical of the proposal to base the new MX missile in some type of a mobile structure basing mode. However, during the course of countless hours of discussion and classified and unclassified testimony and briefings on the subject, my opinion was changed.

One by one the alternatives were presented and one by one they fell by the wayside due to vulnerability, technical difficulties or cost considerations. We investigated elimination of the land-based leg of our strategic deterrent triad, air basing, small submarine basing, trench basing, railroad basing, and road basing. All of these alternatives were found to be lacking and the Senate has voted many of them down overwhelmingly.

In short, deployment of the MX missile in a survivable basing mode was and still is imperative—both from a military standpoint and from the aspect of negotiating arms control agreements from a position of growing strength.

Unfortunately, I feel that the MX decision by the President of the United States is the real reason why we are here tonight considering the question and the B–1B proposal.

What did the Reagan administration

decide to do with the MX missile as part of its strategic nuclear forces modernization program? The administration took the political high road and the national security low road with regard to proposing a program which would help insure America's security and promote arms control initiatives.

The President managed quite nicely to appease his political constituencies in the West by killing the proposed MX missile and the basing system in Nevada and Utah, but he also accomplished something else, and that was not only to defer but to jeopardize achieving any solution to our most pressing strategic problem, the growing vulnerability of our land-based missiles.

The decision to place up to 50 MX missiles in existing so-called hardened silos and to defer a decision on the long-term basing mode until 1984 is unsound defense policy for many reasons. The Senate has wisely recognized this obvious fact by its overwhelming acceptance of the Cohen-Nunn amendment.

The administration's MX decision will open further and extend the so-called "window of vulnerability" about which we heard so much before last November and which I believe will exist during the latter part of the 1980's. It will also take us longer than anticipated to close this "window of vulnerability" under the President's plan. All should understand and accept that regardless of how unpalatable that might be politically.

Probably the most serious of all is the ill-conceived placing of the 10-warhead MX missile in place of the 3-warhead Minuteman III missile or the single-warhead Minuteman II and Titan missiles which would contribute to the unstable "launch-on-warning" doctrine we should instead be trying to avoid. It makes no sense to this Senator to place a more valuable weapon such as the MX in silos which are becoming more vulnerable with each passing month. During time of tension or warning of actual Soviet missile launch, there will be a greater tendency to "use them or lose them" rather than having our land-based missiles attempt to "ride out" an attack and then retaliate. This situation does not contribute to crisis stability—one of the administration's own properly-stated goals.

It should be understood by all of mankind that despite our persistence and pretentions for man's salvation, we continue to march, driven seemingly by forces beyond our intellectual control, to the brink of ultimate disaster. The emergence of new technology on the part of both of the super powers with instruments to not only destroy the other with a push of a button, but the ultimate in detection of who is doing what thousands of miles away, is leading us toward a hair trigger existence with oblivion. How soon will it be before we run the risk of an errant bird triggering a sensing device that shows a blip on a screen that is misinterpreted as a projectile?

This leads us to hope and pray that the current Geneva negotiations can at least be a constructive start toward arms reductions and control. Meanwhile, we must approve this bill which is our second installment on our peace through strength initiatives. In this regard, the Congress should insist that the administration "get their act together" on military-foreign policy initiatives.

The President's decision to retire early our current Titan II missiles is a puzzler. I do not understand why, 6 months before the beginning of strategic arms reduction talks, the United States is unilaterally dismantling Titan missiles—each of which has a nine-megaton warhead. This proposed action is not an example of formulating a strong START negotiating position. The same can be said for the proposed early retirement of our B–52D bombers, although the Appropriations Committee wisely added back partial funding to retain them in service. I hope the Air Force reprograms funds to obtain the remainder of the money necessary to keep them flying.

This leads me to a discussion of the administration's proposals for enhancement of the air-breathing leg of our nuclear Triad of forces. It appears to me that the decision to proceed with the B–1B bomber will definitely cause a delay in the introduction of the advanced technology (or Stealth) bomber—whether by design or necessity, due to scarcity of funds. If deploying the MX missile in a survivable basing mode as quickly as possible had been part of the administration's proposals, I do not see how I could have supported the B–1—especially in light of the promising capability offered by the advanced technology bomber.

However, this is not the situation we face. The October 2 decisions turned our strategic force planning "on its head" and a solution to the difficult problem of solving our land-based missile vulnerability has been delayed unacceptably. The need to get a proven capability into the field, in light of the MX indecision, brings me—most reluctantly—to the conclusion that I have no viable option to support the B–1B program. Without it, the "window of vulnerability" is thrown even more widely open.

The B–1B may not be the best system to fulfill all of the missions assigned to it; however, our options are limited in light of the position in which we find ourselves. Nevertheless, I am most conterned over the cost of this program. Estimates range from $28 to $39 billion for 100 aircraft—or $280 to $390 million per aircraft. What concerns me most is the effect which spending this large amount of money on one system will have on the rest of the defense budget. What effect will spending $30 to $40 billion on the B–1 over the next 6 or 7 years have on the goal of achieving a 600-ship Navy? The rapid deployment force? Our Army and Air Force modernization plans?

These questions have only been partially answered; however, early indications are that the effects will be quite harmful. At the same time the administration proposed proceeding with the B–1 bomber, they proposed cutting back on our naval strength in the Indian Ocean, the early retirement of Titan missiles and B–52 bombers which I mentioned before, cutbacks in equipment and construction for the National Guard and Reserve and reductions in the steaming and flying hours so necessary to training. What other sacrifices will we be asked to make to finance a two-bomber program?

This dilemma is brought about primarily because the administration refused to "bite the bullet" on an acceptable MX deployment. I sincerely hope, Mr. President, that during the next several months the administration will be receptive to the recommendations of the Senate and its Armed Services Committee on how best to meet the strategic nuclear challenge facing us as we move in the future to improve on the President's programs.

Mr. President, I yield the floor.

Mr. NUNN addressed the Chair.

The PRESIDING OFFICER (Mr. MURKOWSKI). The Senator from Georgia.

Mr. NUNN. Mr. President, I just want to take a couple of minutes, because I have been listening to the debate and I have heard repeatedly people talking about the submission by Dr. DeLauer identifying the cost comparison between the extension of the B–52 force to the year 2000 as compared to the ATB/B–1 combination costs.

I made this speech either yesterday or the day before. I, frankly, have been on the floor so much I am not completely sure. But this whole speech I would like to have printed in the RECORD again because it is apparent that what I consider to be erroneous figures are still being quoted in the debate.

I have heard no rebuttal to this position at all. The Department of Defense has this analysis. They have not come up with a rebuttal that I know anything about. If they have, I would certainly like to see it. If there is anything wrong with my analysis, I would welcome any kind of correction.

Just to summarize what I said in this comparison of something like $93 billion to something like $114 billion, I happened to ask General Ellis back in July of 1981 to tell me what would happen and what would need to be done to the B–52 force in order to extend it to be compatible with the ATB. So that comparison was submitted by the head of the Strategic Air Command, who was, at that time, the commander of the B–52 fleet.

At that time, he gave me a detailed description, one step after another, about what needed to be done on the assumption that there would be no B–1. I did not see the comparison that Dr. DeLauer had submitted for a good period of time, but I heard more and more Appropriation Committee members say that that was an important factor in their determination.

So I went back and got the Ellis letter. Then I compared the substance of what General Ellis was calling for and the substance of what Dr. DeLauer was calling for in his letter. And I would just like to share this very briefly with the Senate.

In July, General Ellis submitted this analysis. One of the things that he did not submit that Dr. DeLauer did submit was reengining for the B–52 G's and H's. Dr. DeLauer includes $6.3 billion for this reengining of the G's and H's. General Ellis did not.

So the question naturally arises: Is this $6.3 billion modification necessary or not? There is no testimony that I know of anywhere supporting this requirement.

Another item, Dr. DeLauer includes $4.3 billion as a requirement for modification of the B–52D's. General Ellis did not.

So the question logically arises, what is the justification for spending $4.3 billion on the B–52D's which all agree will be useless as a penetrator in the mid-1980's and which will not be modified to carry Cruise missiles? These planes were supposed to be phased out in 1987 even before the B–1 was revised. So I know of absolutely no testimony or analysis to support this $4.3 billion.

Item 3, Dr. DeLauer includes $5.7 billion for operating and support cost for the B–52D's beyond 1986. General Ellis did not. What is the basis for this cost estimate when the B–52D's under everyone's scenario would be phased out?

The next item is $4.9 billion for electromagnetic hardening work. General Ellis did not. General Ellis supports the January 1982 budget justification data as submitted by the Air Force in which the total cost of this program was stated to be $465 million. This estimate was based on actual testing supported by the nuclear lab.

So the question arises where is the testimony for this $4.9 billion and how do we go from $465 million for an item in January to $4.9 billion? Even in the history of Pentagon overruns I do not know of any 1,000-percent increase that has taken place in the period of 9 months, except in this DeLauer submission.

To summarize, the total of this submission has to be greeted with tremendous skepticism unless there is something forthcoming from the Department of Defense. Frankly, no matter how this debate goes, I think they ought to be required, and I will be asking them in committee, to submit and let me know how they justify this. We have enough problems without having what appears to be a $22 billion pad thrown in on comparisons. I do not believe this enhances the credibility of the Air Force or of the Department of Defense.

Again I would welcome any correction that they have. General Ellis has looked at this again, by the way, since we found this comparison of Dr. DeLauer. He went back and reexamined it and came to exactly the same conclusion. That has been within the last week.

The total of this is $6.3 billion for reengining B–52 G's and H's that was not in the Ellis submission; $4.3 billion for modification of the B–52D's; and $5.7 billion in operating cost for the B–52D's after 1986, and $4.9 billion for electromagnetic pulse hardening work. That is a total of over $21 billion that has been huffed up on the B–52 list. That means that the difference between the B–52 force, if these costs are eliminated, the extension of that force and the B–1 combination, is something in the neighborhood of $44 billion rather than $21 billion.

I know we are dealing with a lot of big figures but I think $23 billion is worth talking about even in the kind of economy and the kind of budgets that we have in the U.S. Government at this time.

STRATEGIC BOMBERS—THE ISSUE OF AFFORDABILITY

Mr. President, unfortunately, the major strategic issues facing us were not debated during the military authorization process because the administration did not submit its strategic program until the authorization bill was already in conference.

At a later point in the debate on this appropriation bill, I intend to have a longer statement on the President's overall strategic package because of the long-term and far-reaching consequences of that package for our national security. At this point I want to focus on just one problem area—the issue of affordability, particularly as it relates to the strategic bomber program.

Mr. President, I believe that our Nation must allocate sufficient resources to our overall security to assure our freedom and to provide every incentive for peace. It is naive, however, to assume that the defense budget is open ended. If we allocate so much of our defense budget to strategic programs that we allow our conventional posture to suffer, we will inadvertently decrease our options in protecting our vital interests without resorting to the use of nuclear weapons.

We have seen much focus on the $180 billion price tag for the President's strategic program. Few seem to realize that this $180 billion figure is only the 5-year (1983–87) cost measured in 1982 constant dollars. This $180 billion figure does not include inflation. Neither does it include most of the cost of the Stealth bomber, the procurement of the Trident II (D–5) missile, or the permanent basing mode for the MX. Given this budget situation, it is no wonder that the Army and Navy as well as some in the Air Force are concerned about the allocations of resources for conventional programs.

There are two critical questions on the B–1. No. 1, will the B–1 penetrate Soviet air defenses for a period of time sufficient to justify its expense as a penetrating bomber? In this area, the answer is a matter of picking your experts.

Dr. Richard DeLauer, Under Secretary of Defense for Research and Development, testified:

> I am confident that the low radar cross section of the B–1B and its state of the art electronics will allow it to penetrate to needed targets well into the 1990s.

Dr. William Perry, who held the same job in the Carter administration, testified:

> I have no idea how anyone could make that kind of projection if the penetration depended on ECM (electronic countermeasures). I can't think of any field in which there is more dynamics and in which there is see-saw back and forth between measures, countermeasures and counter-countermeasures.

The second question on the B–1 is a question of economics. The economic consequences of the B–1 may exceed its military effect. Can we afford to spend $400 million per unit for a plane that even in the best penetrating case will be limited to being a conventional bomber or a cruise missile carrier for most of its useful life.

Based on the Air Force's extensive research and development of the B–1, and Rockwell International's excellent reputation, I have confidence that the B–1 will be a sound airplane. The issue is how much should we spend for this plane as compared to extending the B–52's and accelerating the Stealth bomber.

Much attention has been given a recent DOD cost analysis as provided to Congress by Dr. Richard DeLauer during critical decisions by the Senate Appropriations Committee. Dr. DeLauer's analysis compared extending the current B–52 force and buying only Stealth versus procuring both the B–1 and Stealth.

For the purposes of analysis, these two estimates are approximately $93 billion for the current B–52 force extended and $114 billion for the B–1B Stealth program. These figures are about the same as estimates previously provided by the Air Force and contained in the Air Force Secretary's recommendations to Secretary Weinberger which has now officially been provided to the committee. The point is obvious. For $21 billion more, a new two bomber program is an attractive bargain and option.

These figures, however, should be subjected to detailed scrutiny since there is considerable disagreement over what is actually required in modification costs for the current B–52's.

In July 1981, I asked Gen. Richard Ellis, then SAC commander, to provide an analysis of what modifications of the B–52's would be necessary if this Nation opted to produce only the Stealth and to extend the B–52 force as needed. SAC's analysis was provided in writing and did not include a significant number of those modifications and costs which Dr. DeLauer includes in his list.

For example, Dr. DeLauer includes $6.3 billion for reengining the B–52 G's and H's. General Ellis did not. Is this $6.3 billion modification necessary or not? I know of no testimony supporting this requirement.

Dr. DeLauer includes a $4.3 billion requirement for modifications for the B–52D's. General Ellis did not. What is the justification for spending $4.3 billion on the B–52D's which all agree will be useless as a penetrator in the mid-1980's and which will not be modified to carry Cruise missiles. These planes were supposed to be phased out in 1987 even before the B–1 was revived. I know of no testimony to support this level of modification.

Dr. DeLauer includes $5.7 billion in operating and support costs for the B–52D's beyond 1986. General Ellis did not. What is the basis for this cost estimate? I know of no testimony supporting this position.

Dr. DeLauer includes $4.9 billion for electromagnetic pulse hardening work. General Ellis did not. General Ellis supports the January 1982 budget justification data as submitted by the Air Force in which the total costs of this program was stated to be $465 million. This esti-

mate was based on actual testing supported by the nuclear labs. Where is the testimony to support a tenfold increase in this program from January 1981 to November 1981?

The total in question in the "DeLauer Submission" at this point is over $21 billion as follows:

First, $6.3 billion for reengining the B–52 G's and H's.

Second, $4.3 billion for modifications of the B–52D's.

Third, $5.7 billion in operating cost for the B–52D's after 1986.

Fourth, $4.9 billion for electromagnetic pulse hardening work.

Both SAC and the Air Force conducted a considerable amount of detailed analysis as to what was needed to extend the B–52 force after former President Carter canceled the B–1 in 1977. This was done when there was no B–1 or Stealth on the horizon and the B–52's were actually being extended. Even when the Stealth was the only follow-on bomber option, these modifications to the B–52's were not included. None of Dr. DeLauer's questionable $21 billion add ons appeared until the promotional program began for the B–1.

It is interesting to note in a letter I just received from Senator GARN and other Senators supporting the two bomber approach that they state "the B–52 is not sufficiently hardened to withstand nuclear blast effects and it cannot be modified to do so." I believe the signers would be interested in learning that Dr. DeLauer thinks it can be and includes $4.9 billion in his current force projection for this hardening. This letter cites Dr. LeLauer's cost analysis on extending the B–52's as a major reason to support the B–1 and Stealth package.

It is clear that this package of costs for extending the B–52 was engineered to convince the Senate that it is cheaper to procure and operate two new bombers than procure only the Stealth and maintain the B–52 as needed.

Where are the facts and testimony supporting Dr. DeLauer's analysis?

If this over $21 billion in questionable costs for the B–52's is removed, then the total differential between extending the current force and procuring the planned two bomber program is significantly larger than the figures given to the Senate Appropriations Committee. The difference is $44 billion, and the $21 billion in unsupported add-on is coincidentally about the same as the constant dollar estimates for the B–1.

Mr. President, this analysis by Dr. DeLauer and the Air Force is clearly designed to make the B–1 option look like a bargain. In my mind, however, it raises more questions than it answers.

The issue of affordability also applies to the number of B–1's being procured. A great deal has been focused on the total costs of the B–1—from the $20.5 billion that Secretary Weinberger supports to the $25.2 billion GAO estimates. If DOD makes good on its promise to hold the costs to $20.5 billion, will they also make good on procuring 100 B–1's for that amount? If the costs increase as commonsense and history indicate, will the sacrifice occur with reduction in numbers? What number of planes, then, is affordable as the unit costs keep increasing and the numbers decrease? What number makes sense in terms of force size?

The final B–1 affordability issue relates to the Soviet budget.

Although it is difficult to quantify and assess precisely, the Soviets have already expended significant resources to counter and defend against low-altitude penetrators such as the B–52, the air-launched Cruise missile and B–1. Experts estimate these costs in excess of $100 billion. Determining the gap between expenditures to counter the B–1 and additional expenditures to counter the Stealth is even more difficult to make.

Testimony indicates that our own technical wizards have great difficulty in projecting a defense against the Stealth. This means the Soviets will probably have an even greater problem. It is reasonable to assume from the Soviet's historical emphasis on strategic defense that they will expend significant sums over a long period to deal with Stealth and will have to largely redo their current multibillion dollar-defense system.

The critical economic question then must be asked: Would Stealth cause the Soviets to divert and expend resources for defenses at far greater levels than currently planned?

If the Soviets choose to pose a serious defense to Stealth then their defense expenditures must undergo an enormous shift. If they do not make this "stealth air defense" effort, our long-term ability to penetrate is greatly enhanced. In either event, the Stealth, from both technical and economic perspectives, has a profound potential effect on the balance of power.

I urge my colleagues to support this effort.

Mr. WARNER. Will the Senator yield for a question?

Mr. NUNN. I will be glad to.

Mr. WARNER. Does the Senator believe that the $6.3 billion on B–52's was or was not included in the Air Force program for the ATB program?

Mr. NUNN. We are talking about the B–52 program.

Mr. WARNER. Relating to the $6.3 billion, the $6.3 billion reengining program for the B–52, was that or was that not included in the ATB only estimate?

Mr. NUNN. I do not have any idea whether it was in the ATB only estimate. What I am talking about is something different. I am talking about items that Dr. DeLauer said had to be done to the B–52 that General Ellis said did not have to be done to the B–52. That is what I am talking about.

Maybe I am not understanding the Senator's question.

Mr. WARNER. The answer is that it is not included in the program.

Mr. NUNN. In which program?

Mr. WARNER. The ATB only.

Mr. NUNN. I have not seen that.

Mr. WARNER. You are questioning the figures raised by the distinguished Senator from New Hampshire.

Mr. NUNN. I am talking about the list that Dr. DeLauer submitted as being necessary to modify the B–52 force if you did not have a B–1. What I am saying to the Senator from Virginia is that $6.3 billion was listed by General Ellis as not being required for the modification or reengining of B–52D's and H's. That was in July. Now in October we find that it is necessary. This was not in any of the program that was submitted after President Carter canceled the B–1. You would think that the Air Force or SAC would certainly be pushing very hard to do everything possible to beef up the B–52's since it was obvious under the Carter administration they were not going to get a B–1. There may be an explanation for this and if there is, I welcome it. But I do not understand why this item and these other items were not in the Ellis letter. General Ellis still takes the position that they were not needed and Dr. DeLauer concluded they were needed. I do not understand that.

Mr. WARNER. At that time they thought they would get the ATB, and $6.3 billion was in the B–52 only case, with the follow-on cruise missile.

Mr. NUNN. Is the Senator from Virginia saying that the $6.3 billion engine figure for reengining the B–52G's and H's was not in the DeLauer list?

Mr. WARNER. I was distracted momentarily by the distinguished Senator from Alaska. Will the Senator repeat the question?

Mr. NUNN. Is the Senator saying that the $6.3 billion for reengining the B–52G's and H's was not in the DeLauer list as the cost submitted to the Appropriations Committee?

Mr. STEVENS. If the Senator will yield, I put that into the RECORD on December 1. It is there. The modification is $8.3 billion for the B–52. That is there. It compares to a cost of $27.4 billion on the present force only concept through the year 2000.

Has the Senator looked at that which I put into the RECORD, the comparison of the B–2 and B–1 bomber plans and the cost in 1981 dollars?

Mr. NUNN. I will say to my friend from Alaska I have seen the list that Dr. DeLauer submitted to the Appropriations Committee. There were several copies floating around. I am not certain whether that is the same list.

Mr. WARNER. I suggest the Senator from Georgia look at that.

Mr. NUNN. Is this a different list? I worked off of a list. This whole analysis is based on the DeLauer submission to the Appropriations Committee in unclassified form.

Mr. STEVENS. That is what I put into the RECORD.

Mr. NUNN. I have seen that, yes.

Mr. STEVENS. It is in there, $6.3 billion. In my opinion, it does have a fair comparison of the cost between the present force extended and the B–1B only. That is the basis for my comment in the Senate previously today, that it is not necessary, in my opinion, to vote on the B–1B to have any of the classified information that was in the other letter. The comparison of the present force of B–52's is extended and the cost into the year 2000 as compared to the B–1B only. It would show that there is a comparison here that we can actually have the B–1B.

maintain the present B–52's so long as they are needed, and when we reach the year 2000 have a net asset value in the B–1B for a follow-on cruise missile carrier beyond the year 2000. That was the whole justification for the approach.

As a matter of fact, as I commented earlier, that was the thing that convinced me that it was cost effective to follow the approach that had been outlined, and it was the reason I urged the subcommittee to report to the full committee and now to the floor the B–1B/ATB proposal as before us now.

Mr. NUNN. All I am saying to my friend from Alaska and my friend from Virginia is I am not an expert on what needs to be done to the B–52's and I do not pretend to be. All I know is that the head of the Strategic Air Command, when he thought he was not going to get a B–1, said that certain items had to be done to the B–52. None of these items that I have just listed were in that Ellis comparison. He has since reexamined it and he still says that these items are not needed, in his judgment.

Now, it is a matter, again, of judgment, maybe. We are talking about $22 billion, though, and we are talking about a very important document that a lot of people made their decision on. I made my talk on this two days ago. I have gotten nothing at all from the Air Force. I have gotten nothing at all from the Department of Defense correcting any of this. If they think this is wrong, they ought to come forward and say so.

I believe they have an obligation to the Armed Services Committee, and I think the Senator from Alaska would agree that if we are going to vote, we all know this ought to be proved. I am not even saying it is a determining factor. Even if I am 100 percent correct, I think it is going to be a close decision. I said that earlier today on the B–1.

I do believe the credibility of the Department of Defense is in question when people place their judgment on a decision which has at least to this stage, preliminary, I think, included a $22 billion pad. That is a good bit of pumping up.

Mr. STEVENS. Mr. President, I see no pad. I invite the Senator's attention to it. It is on page 29245. We went through it item by item. I see no pad. The Senator has a right at a later time to inquire further, but I see no reason to get the Senate into any situation where we are saying that Dr. DeLauer's listing that he give us is padded. I do not think that the Senator, with due respect, has studied yet the summaries that Dr. DeLauer provided me at my request, which I provided to every Member of the Senate. I put it in the RECORD to make certain that every Member of the Senate had the same information that we did and relied on in order to get where we are now.

I say it is there, it is not padded. There is no padding.

As a matter of fact, Mr. President, there is a reference at one place to a new plane cost of some $20 to $25 billion, which is not included in the DeLauer figures. That is not there. The comparison is there.

Mr. NUNN. To get to that point, Mr. President, you have to assume that we are going to decide in the year 2000, after we have had 19 more years of technological progress, that we are going to have a new manned strategic bomber for the purpose of strategic defense. I would call that a rather specious assumption.

Mr. STEVENS. Mr. President, I say that is not in there. It is specifically noted that there would be at that point another cost if you went on the B–52 option only. We are not going that way.

Mr. NUNN. Mr. President, I recognize that is not there and I think there is good reason it is not in there and I think they are to be congratulated for not putting it in there.

I say to the Senator I have looked at that list, if that is the list that Dr. DeLauer submitted to the Appropriations Commitee. I not only looked at it. My staff has been over it very carefully and that is exactly what we crosswalked with Ellis later. That is what we asked Jim Ellis to crosswalk again and that is what he crosswalked again.

I have looked at that but if there is anything new in there that I have not seen, I welcome it and I would like to have clarification on this point. I shall pursue it in the Armed Services Committee, because we are talking about a good deal of money. These are very important submissions on which we base judgments. I do not think we are going to solve it tonight, but I would say to the Senator that I have looked at the submission Dr. DeLauer gave. That is the basis of my whole thrust.

I yield the floor.

B–1

Mr. DIXON. Mr. President, I rise to speak in opposition to the amendment by Senators LEVIN and HOLLINGS that would delete funds now in the defense appropriations bill for the B–1 bomber.

This matter involves a considerable sum of money—nearly $2 billion in this approriations bill, and more later, the total cost of the B–1 program is estimated at more than $22 billion.

In the past, I have held reservations about the B–1 bomber. I have agreed that we need a new long-range bomber to replace the B–52, but I have shared the concerns of many of my colleagues about whether the B–1 is the proper step in the progression that takes us, ultimately, to the advanced technology bomber (ATB) popularly known as the "Stealth."

Mr. President, my study of the matter has led me to conclude that the B–1 is, indeed, a necessary step, to forego it and to focus our attention solely on the Stealth would involve risks that we should be unwilling to take.

Our B–52 fleet is, as everyone knows, aging. I believe it is not realistic to expect that plane to carry a heavy defense load until the Stealth is ready for deployment. That time is just too far off.

There is no firm date for deployment of the ATB—perhaps the early 1990's. Past the mid-1980's. Secretary Weinberger has testified, and I am convinced, the B–52 will not be able to penetrate Soviet air defenses.

Indeed, the likelihood is not great that the B–52 could even get off the ground here in the event of a first strike attack. Its takeoff is relatively slow and it cannot withstand nuclear blast effects.

That leaves us with a long, dangerous period—possibly as long as a decade—during which we would have no manned bomber capable of penetrating Soviet defenses.

It has been testified to, and I believe, that the B–1 will be capable of penetrating Soviet defenses well into the 1990's Then, when the Stealth is ready, the B–1 can continue to perform an important function in both a conventional role and as a cruise missile carrier.

Mr. President, I do not decide quickly to spend an amount of money as large as the one we are talking about here.

But the period of time between the end of the B–52's usefulness as a penetrating bomber, and the availability of the Stealth bomber is too great to ignore.

I urge my colleagues to support the B–1 bomber and to vote against this amendment.

HOW THE B–1 FITS INTO THE STRATEGIC PICTURE

Mr. JEPSEN. Mr. President, we have heard a great deal of debate in the House of Representatives and the Senate on the most effective means of modernizing our strategic bombing force. There is almost universal recognition that the aging B–52 fleet must be replaced with a new bomber.

The B–52 dates from the late 1940's, and in fact the aircraft is now older than many of the pilots who fly them. The maintenance costs of the B–52 are rising steadily. In addition, the aircraft was not designed for the extremely low-level missions it is now flying, which aggravates the airframe fatigue that in turn is shortening the B–52's service life.

Furthermore, as the accuracy of the Soviet missiles improves and the warning times decrease, the vulnerability of the bombers on alert has risen dramatically. This further compromises our nuclear deterrent.

To underscore the gravity of this situation, I would like to clarify the role of the manned bomber in the strategic triad, as well as its importance in projecting conventional forces around the world.

We have heard that it would be imprudent to buy a bomber, which some intelligence estimates say would only be able to penetrate Soviet airspace until 1990. But there have been many conflicting intelligence reports on the prospective capabilities of the Soviet air defenses. The electronic countermeasures carried by the B–1 will be very effective, and we can certainly expect that the aircraft's penetrating capability will be enhanced as new technology is applied throughout its projected service life.

Even if we accept the questionable assumption that the B–1 will be unable to penetrate the Soviet air defenses after 1990, it will still provide a very survivable stand-off cruise missile platform through the year 2000.

The question of cost has been raised to scuttle the B–1 program. Discrepancies between the Air Force's figures and those supplied by GAO and CBO are pointed out. In truth, the Air Force program cost figure of $22.3 billion in fiscal year 1982 dollars includes all the mili-

tarily essential equipment as well as modifications on the original B–1 design.

In fact, if we compare costs, the realistic alternatives to the B–1/advanced technology bomber approach do not yield significant savings in the long run. None of the current alternatives offers the mission flexibility of the President's strategic bomber program.

We need an effective manned bomber in our strategic triad. Each leg of our triad has unique characteristics, but our strategic bomber force, which carries 50 percent of our strategic nuclear megatonnage, is the only element that can be launched prior to the decision to employ its weapons. The nature of a manned bomber permits its crew to make decisions and take actions that cannot always be anticipated. Finally, the nuclear weapons carried by a manned bomber can be delivered very accurately.

Our strategic bomber force also must have the capability to deliver large conventional bomb-loads anywhere in the world on short notice. Many times during the course of the modernization debate, we seem to lose sight of how vital this long-range conventional bombing capability really is. Despite the assumptions of some people, it is much more likely that we will be involved in a conventional war, rather than a nuclear one.

The administration's plan to first buy 100 B–1B long-range bombers, later followed by procurement of 100 of the so-called advanced technology bombers is a sound program that takes the needs of long-term operational flexibility into account. Naturally, many objections have been raised against this program; almost all of them deal with the decision to go ahead with the B–1.

Some critics have advocated foregoing the B–1 entirely and pushing the advanced technology bomber into production as soon as possible. However, the so-called "Stealth" bomber has not reached a stage of technological development where we can predict with any certainty its cost or initial operational capability date. Moreover, all present indications lead us to believe that it will not have the operational flexibility of the B–1 design to carry out conventional missions anywhere on the globe.

We must go forward with the deployment of the B–1. This aircraft has completed most of its research and development. While only two-thirds the size of the B–52, it will be able to carry out at least 22 cruise missiles, as opposed to 20 for the B–52. It will be able to carry as many as 128, 500-pound bombs on a typical conventional bombing mission. The B–52 can only carry 51 of the same bombs on conventional missions.

If we balance the need with considerations of cost and technology risk, the administration's program clearly represents a sound approach to the modernization of our strategic bomber forces. It combines the certainty of a proven design with the potential of advanced technologies.

(By request of Mr. BAKER the following statement was ordered to be printed in the RECORD:)

● Mr. HAYAKAWA. Mr. President, I rise in strong opposition to any efforts to reduce the funding for the B–1B bomber.

I know many of my colleagues here in this chamber today recall vividly former President Carter's decision in 1977 to cancel the B–1 program. At that time, I had refrained from taking a position until I studied it in great detail. I then came to the unqualified conclusion that the B–1 was needed, and said that the cancellation of the B–1 program would be interpreted around the world as a lack of decisiveness and direction U.S. defense policy.

I was delighted when President Reagan announced this past October that as a part of his defense package he planned to build and deploy 100 B–1B bombers.

The B–52s which the Air Force is currently using are just too old to keep flying much longer. In some cases, the planes are older than the pilots who are flying them. Also, many companies have stopped making spare parts which are needed to keep the planes flying, which means that the Air Force will soon have to go to the additional expense of custom-making these spare parts. Clearly, we need a new strategic bomber.

The B–1B will be a much more efficient and capable version of the original B–1. Some of the improvements result from the application of advanced "Stealth" techniques. And for this reason, I am confident that the B–1B will penetrate Soviet defenses throughout this decade and well into the 1990's.

Mr. President, certainly my support of the B–1B bomber in no way indicates that we should not proceed with the research and development of the Advanced Technology bomber. However, the Stealth bomber is in the very early stages of design and as such will probably not be flying until the 1990's—even with accelerated development. We simply cannot wait.

Furthermore, the B–1B will be able to perform some missions which the Stealth bomber will not. Specifically, the Stealth will not be able to carry enough bombs to serve as a conventional bomber, while the B–1B, even though it is smaller than the B–52, will be able to carry more bombs. Even after the Stealth bomber is flying, there will be a definite need for the B–1.

So, Mr. President, let us get on with it. We have, for far too long, been considered a paper tiger that need not be taken into account in a world of bears. In the past, our response to the challenges and disorders abroad has been a litany of things we will not do, interventions we will not contemplate, bases we will not seek, weapons we will not build. This attitude of indecisiveness—this Hamlet-like indecision, let us wait and see what is going to happen—is a nondecision of which other people have taken advantage. It is time that we reverse this image and restore international confidence in the United States of America.●

● Mr. DANFORTH. Mr. President, among the major elements of President Reagan's plan for the modernization of U.S. strategic forces, I have been most skeptical about the decision to deploy the B–1 bomber. After considerable study and consultation, I have decided to support the development of the B–1 as a supplement to the B–52 bomber force.

Our strategic capability depends on a triad—a three-part force consisting of land-based intercontinental ballistic missiles, submarines bearing sea-launched ballistic missiles, and the bomber fleet. Of the three legs of our nuclear triad, the bomber force has been the most neglected. Although I am reluctant to see us embark upon a new defense program of this magnitude, I am convinced that the B–1 is the most cost-effective means to keep the air-breathing leg of the strategic nuclear triad viable.

There is no doubt that the B–1 will be expensive. Estimates range from $28 billion to $39.8 billion in then-year dollars for a total fleet of 100 aircraft. However, the cost of extending the life of a B–52-only fleet to the year 2000 is estimated to be $93 billion. We would get very little bang for those B–52 bucks, but, by comparison, we get a bomber which will be able to penetrate Soviet defenses well into the 1990's and an effective launching platform for the new air-launched cruise missiles by purchasing the B–1.

There are some who argue that, rather than investing in the B–1, the United States should accelerate development of "Stealth," the advanced technology bomber. Certainly, work should go forward on Stealth as quickly as possible, but we cannot—and should not—rely on that technology being perfected before the capabilities of the B–52 fleet are severely reduced. The B–1 can incorporate the very best technology available today and can serve as the core of the U.S. bomber force until better technology is developed.

Mr. President, the United States is presently embarking upon negotiations with the Soviet Union, with the goal of securing a reduction of nuclear forces on both sides. This is certainly no time for Congress to tell the Soviets that we are unwilling as a Nation to do what is necessary to maintain our defensive posture, since a showing of our resolve will be necessary to secure the kind of arms agreement that will make the world safer from the threat of nuclear war.

For these reasons, Mr. President, I will support President Reagan's decision to build the B–1 bomber.●

Mr. MATTINGLY. Mr. President, the need for the immediate deployment of a new long-range bomber as the successor to the B–52 arises from several considerations:

First, it is necessary to maintain a Triad of capabilities that is both flexible in its potential use and diverse as to its basing mode.

Second, the changing environment in which we must provide for our security resulting from the vast Soviet efforts to increase both their military capabilities and to render such systems less vulnerable to attack by us has given rise to the need for our systems to obtain greater accuracy and payload capabilities.

Third, highly developed air defenses by our adversaries increase the need for a bomber with penetrating capabilities unless we are willing to use it solely to launch stand-off weapon systems such as cruise missiles.

Fourth, the possible scenarios that can be imagined for our involvement demand that the aircraft have substantial

range requirements, particularly for the projection of conventional power in regions where U.S. interests are vital.

Because of the premium that will be placed upon the rapidity with which U.S. power can be projected, the United States has essentially three options:

First, maintain access to bases and other facilities in, or adjacent to, the country or region of conflict;

Second, pre-position as great a portion of such capabilities as possible on naval vessels at sea in close proximity to the conflict zone, including forward based carrier aircraft; and

Third, develop a long-range combat aircraft capability that could be used in conjunction with combinations of capabilities already available in or near the affected country or region. None of these alternatives should be regarded as mutually exclusive.

I submit, Mr. President, that the B–1B addresses these needs. This is not to say that I do not favor the ATB. However, I find the concept of a mixed force of long-range strategic aircraft to be compatible with both the strategic military doctrine and the force deployment policies that this Nation has had for many years.

Mr. President, I wish that we could start production tomorrow on the ATB, but there is not one Senator who will rise in this Chamber and say that is possible. So the question arises: If the B–52 is inadequate, which I believe it to be, and the ATB is not available, what are we doing in the meantime to protect our shores, assure our allies, and—if need be—project the power of this Nation in other parts of the world?

I cannot in good faith tell the people of my State that I will defend them with a paper airplane. I cannot tour our military bases and look the men who are willing to give their lives for us in the eye and say "this is the best we can do."

The rationale for the B–1B is several fold. One reason is the restart capability to produce and deploy the aircraft. Another is the technology base which would need to be developed before a wholly new generation, long-range combat aircraft could readily be designed.

Finally, there is the nature of the evolving strategic environment and the critical need of the United States to marshal its resources to meet the challenge of the next few years during which the West will find itself in a position of strategic military vulnerability in relation to the Soviet Union.

Since the United States is scheduled to achieve an initial operating capability with the first ACLM B–52G squadron in December 1982, it would make more sense for the U.S. concentrate, in the near term, on development of the penetrator version of the B–1B. In this configuration, and incorporating advanced avionics and stealth technologies, the B–1B could enhance considerable the air leg of the triad, as well as provide the basis for development of a long-range, multirole bomber for the more distant future.

The rapid deployment of an interim long-range combat aircraft based upon B–1 technology, together with an active R. & D. program designed to produce a wholly new generation aircraft for the 1990's and beyond, will afford the United States the potential necessary for enhancing strategic force flexibility and survivability, while increasing power projection capabilities in the various regions of the world vital to U.S. security and giving to American decisionmakers to the political-diplomatic options inherent in a robust and versatile military force structure.

Mr. President, the B–1B is the best we have now. It can defend us now. Another paper airplane cannot.

Mr. THURMOND. Mr. President, on Wednesday, November 18, the President of the United States told the world that our country was ready to avoid "the dreaded threat of nuclear war" by negotiating with the Soviet Union meaningful and equal arms reduction agreements.

That same day I issued a press release announcing my support for the President's proposals, contingent, of course, on an equal and verifiable response from the Soviets.

STRATEGIC REDUCTIONS

While President Reagan's statement focused on the reduction of immediate range missiles in Europe, he also included in his statement the willingness of our Nation to seek true reductions in the area of strategic weapons systems.

President Reagan stated:

Let us see how far we can go in achieving truly substantial reductions in our strategic arsenals.

He declared further:

To symbolize this fundamental change in direction, we can call these negotiations START—Strategic Arms Reduction Talks.

Mr. President, it has only been a short time since the President made this historic statement. Yet now, here in the Senate, before the details of his program have hardly reached the corners of the world, we have a proposal to undercut the strength we need to negotiate these meaningful reductions in nuclear delivery systems.

MUST SHOW STRENGTH

The B–1B bomber and the MX missile are President Reagan's negotiating chips. They are needed to show our determination to have the systems to provide essential equivalence with the Soviet Union. We cannot expect the Soviets to reduce their arms unless we demonstrate our determination to regain a strategic balance with the Soviets.

Mr. President, we find ourselves today the victim of years of "re-ordering priorities" and embracing "détente" while the Soviets have conducted the most massive conventional and strategic arms buildup in the history of mankind. Those who cried out in the 1960's and 1970's to allow the Soviets to achieve parity in order to set the stage for arms reductions have been proven wrong. We now see that the Soviets not only seek, but are achieving a clear superiority in military power.

B–1B, MX NEEDED

In this critical period when everyone admits we have slipped into a stage of vulnerability, we must rebuild and modernize our conventional forces and our strategic triad. Despite warnings from the Congress and the people, the B–1 and the MX were debated in the 1970's but not built. Now, in a new decade, the 1980's, we must act. Failure to do so could result in the Soviets moving so far ahead that we would be left in a position of permanent and dangerous inferiority.

Modification and maintenance of the B–52's and the old FB–111 bombers would be roughly comparable in cost to building a mixed force of B–1B's and Stealth bombers. The B–52 bomber, a design of the early 1950's, has served us well but it is now 25 years old. It is vulnerable to Soviet submarine attack because of its slowness in getting aloft after warning of a Soviet missile launch. It is not hardened to withstand nuclear blasts. Its slow speed, structural integrity and its large visibility to defense radars greatly reduce its ability to penetrate Soviet defense.

HIGHLY IMPROVED B–1B

The B–1B, a highly improved version of the original B–1, can take off quickly, operate from shorter airfields and withstand some nuclear blast.

Further, and of critical importance, its visibility on enemy radar screens is one one-hundredth that of the old B–52, and one-tenth that of the original B–1.

Even in the 1990's, when the Soviets have improved their defenses, the B–1B would still be able to penetrate in some areas and would serve well as a conventional bomber or cruise missile carrier.

Opponents of the B–1B tell us to wait until the Stealth bomber is developed. They do not stress that the Stealth bomber is only a design on a piece of paper. It should have a careful development period as it is based upon revolutionary technology.

B–1B SUPPORT STRONG

Air Force Chief of Staff Lew Allen has testified that if we could have only the B–1B or the Stealth, he would take the B–1B. Air Force Secretary Vern Orr has declared the program to build the B–1B as "crucial" to our strategic defense. Defense Secretary Caspar Weinberger has declared that in this "dangerous—if not yet critical—situation we must modernize our aging bomber fleet." President Reagan summed up the need for the B–1B with one key point, "We can't afford to wait until the 1990's for a new bomber."

Mr. President, the key point for support of the B–1B is the need to produce a weapons system as soon as possible to reduce the time when we will be vulnerable to a Soviet first strike and power plays around the world.

B–1B CENTERPIECE

Mr. President, in my judgment the B–1B is the centerpiece of President Reagan's strategic program. This program includes not only the B–1, but production of the MX missile, improvements in strategic defenses, communications and control systems, and deployment of new submarine-launched missiles.

All of these elements are critical, but the B–1B is the symbolic centerpiece of our strategic modernization. It is visible. It can be on line in the mid-1980's.

The world would be dumbfounded, our allies thrown into turmoil, if within a short time after the President has called for mutual arms reductions we falter in rebuilding our strategic strength.

We must modernize our land-based missile forces as well as our bomber forces. We have spent years and billions in development of the MX for this purpose. We await only a viable basing method for this vital program.

Mr. President, I urge my colleagues to not only support the B–1B bomber program, but to give it solid support as was evidenced in the almost 2 to 1 vote in the House. The time is now, we must act with decisiveness. If we fail to do so, our opportunity to restore our strategic balance with the Soviets may be lost for many, many dangerous years ahead.

● Mr. SCHMITT. Mr. President, the B–1 issue has generated a great deal of controversy since 1977 when President Carter canceled the program. As I pointed out yesterday, on October 2, 1981, President Reagan announced the most comprehensive strategic program ever developed. The B–1B bomber is an integral part of that program. While I support the concept of developing the advanced technology bomber (ATB), the reality is that it is a future plane for which we lack sufficient information regarding cost, schedule and technological risk. We need a new bomber right now.

Let me begin my remarks with a quote from Aviation Week. It reads:

> No decision has been reached yet, but a proposal is circulating around USAF headquarters to eliminate all but a small part of the Boeing B–52 production program. Feeling in some USAF quarters is that the difference between B–47 and B–52 performance is not worth the cost of the latter program. Strategic Air Command also anticipates getting supersonic bombers soon enough to make the B–52 strictly a short interim measure.

The article appeared on January 5, 1953. The B–52 has served well as "strictly a short interim measure."

The issue has been debated principally on the basis of cost: Can we afford the B–1B? Let me submit that the proper question should be: Can we afford not to buy the B–1B? In dealing with defense and national security, the Congress must first debate the requirements and then the cost.

The fact is that the B–52 is an old plane, older than most of the pilots who are flying them. Old planes as old cars or old appliances wear out. There is metal fatigue to deal with as well as old equipment on the planes. While most of the equipment on the B–52 fleet can be updated, one must ask at what cost and is it worth it. The airframe is still subject to metal fatigue that comes with age.

In addition, the B–52 was built as a high altitude penetrating bomber. It was not built for the type of penetration needed today, namely low-level flying. The recent crash of a B–52D was most likely due, at least partially, to its age; either to the fatigue of the aircraft or the fatigue of the pilots because of the type of ride the B–52 provides in a low-level penetration mode.

The B–52 has served us well, not only as a penetrating strategic bomber but, more importantly, as a multirole bomber. It has performed in both strategic and conventional roles, in both nuclear and non-nuclear roles. What we need now is a new multirole bomber. The Congress last year mandated a new multirole bomber with an IOC of no later than 1986. The B–1B is the only bomber that can meet that congressionally mandated requirement.

Mr. President, let me briefly address the issue of cost. By not procuring the B–1B, we do not save any money. We will be required to modernize and update the B–52 force. In addition, the operations and maintenance of B–52's will have to be taken into account as well as fuel costs.

The total cost of maintaining our present B–52 fleet between now and the year 2000 will be between $85 and $100 billion according to Department of Defense figures. The total cost of procuring and maintaining the B–1B will be in the $86 to $106 billion range. The costs are about the same. However, the B–52 will never be a penetrating bomber which the B–1B will be. The B–52 will continue to age and will be over 40 years old by the year 2000 while the B–1B will only be about 15 years old with continued usefulness.

Mr. President, the issue is whether we are going to rely on an old bomber to provide for our national security or whether we are going to move ahead now with a replacement for the B–52. The reality is that by not proceeding now, we will incur the same costs for our bombers between now and the year 2000 but we will be mortgaging the future.

Mr. President, let me address just one last issue. A few months ago the Congress passed legislation to substantially increase military pay. The Congress admitted that this country is facing serious personnel problems in the military.

Morale has been low and pay has been allowed to fall behind the cost-of-living. Last year we began addressing some of the problems which have caused a decline in morale. The military pay bill is part of that effort.

Yet, all one has to do is visit military bases, whether active military or guard and reserve units, to find that one of the major causes of low morale is the lack of sufficient equipment or old equipment. We expect our military to fulfill its missions, yet we fail to provide them with the means to do so.

Talking to the pilots that must fly the B–52, one will hear what a great plane the B–52 is but the pilots agree a new replacement is needed and needed now. We cannot do more to boost morale in the military than to provide our men and women with the means and equipment to fulfill the missions we have placed on them. The B–1B is part of that solution.●

● Mr. PELL. Mr. President, I have decided to vote against funding for the B–1 bomber on the grounds of its short-term effectiveness and exhorbitant cost.

It is not clear to me why we should authorize construction and deployment of a new manned bomber which will only be able to perform its primary penetration mission for 3 to 5 years, which will be superseded by the advanced technology bomber, ATB or Stealth, by the early 1990's, and which will cost $300 million per plane. I can think of many other ways to spend such funds, and some of them would, in my view, do more to improve our national defense.

We need more and better trained troops; we need better maintenance for existing equipment; we need greater mobility and flexibility for our conventional forces; we need improved readiness throughout the world. And beyond the defense sector, we need to revitalize an economy which is mired in recession.

Extravagant spending on this new strategic weapons system will contribute little to our national defense, and even less for the economy.●

● Mr. DODD. Mr. President, I rise in support of the amendment offered by my distinguished colleague from South Carolina (Mr. HOLLINGS) and the distinguished Senator from Michigan (Mr. LEVIN).

Mr. President, I believe this amendment represents a sound, commonsense approach to defense procurement. This amendment will transfer funding from the B–1B penetrating bomber program to a variety of defense modernization and readiness needs.

I agree with the authors of this amendment that the $2.027 billion transferred by this amendment would be better spent on force readiness and modernization programs than on the highly controversial B–1B bomber.

This amendment recognizes the need to maintain the viability of the air-breathing leg of our strategic triad by allocating funds for the acceleration of the advanced technology bomber, the so-called Stealth program, and modernization and spares for our existing B–52D bomber force.

The amendment also provides for additional funding for the full amount of requested Navy steaming hours for our ships at sea, and increased funding for an additional attack submarine, greater support for the Trident submarine program, and additional ammunition for the Army among other needs.

However, the primary effect of this amendment will be to delete funding for the B–1B bomber. Over the past several years, the Congress has debated the B–1 program time and time again. The principal issues before us today, as they have been in the past, are the cost and military utility of the B–1 bomber.

First, let me address the issue of cost. When President Carter canceled the B–1 program in 1977, the cost of a single B–1 bomber was estimated to be $100 million; $100 million seemed like a lot of money back in 1977, and the high cost of the bomber was one reason the program was killed. Today, the cost of a single B–1 bomber has gone up, like everything else. What disturbs me, however, is the fact that no one can agree on how much a B–1B bomber will really cost.

The Air Force puts the cost at $210

million today, and at $280 million in inflated dollars by the time all 100 B–1B's are delivered. The Congressional Budget Office, however, puts the cost of a single B–1B at almost $400 million by the end of the decade.

Frankly, Mr. President, I have a difficult time supporting a defense program when there is so much uncertainty as to whether a single airplane will cost $280 or $400 million. If the B–1B program ends up costing more than the Air Force now estimates, will this mean we will buy fewer ships for the Navy, fewer tanks for the Army, and fewer fighters for the Air Force?

I believe there are legitimate fears that the accelerated cost of the B–1B program will eventually drain defense dollars for other needed programs, including the Stealth bomber.

Second, Mr. President, there are serious questions about the military effectiveness of the B–1B bomber. Ironically, the most serious questions have been raised by Secretary of Defense Weinberger himself. In testimony last month before the Senate Armed Services Committee, Secretary Weinberger said that the B–1B will not have the ability to penetrate Soviet air defenses after 1990.

In his testimony, Secretary Weinberger said:

> I think there is no question whatever that we will not be able to use the B–1 as a penetrator after 1990. If it goes to 1992, that will be a little extra dividend.

Considering the fact that the first B–1B bomber is scheduled to be deployed in 1986, Secretary Weinberger's testimony suggests that we will be paying between $280 million to $400 million for a plane which will not be able to perform its mission after 4 to 6 years of service.

We have also been told that the Stealth bomber might be available as early as 1989. If this is true then we would be spending enormous amounts of money to cover the 3-year gap between the first B–1B deployment in 1986 and 1989.

Either way, Mr. President, it is clear that the B–1B program is simply not worth the investment. We would do far better by spending the funds allocated to the B–1B on other, more pressing defense needs.

Not only has the Secretary of Defense cast doubt on the utility of the B–1B program, so has the Central Intelligence Agency. In testimony before the Senate Defense Appropriations Subcommittee, a CIA analyst is reported to have said that there would be practically no difference between the B–1 and B–52's armed with Cruise missiles in terms of their ability to penetrate Soviet air defenses.

Now, I realize that since Secretary Weinberger's and the CIA's testimony, we have received a letter cosigned by CIA Director Casey and Defense Secretary Weinberger. The letter states that:

> It is intended to clarify capabilities of the existing and planned U.S. bomber force to penetrate current and projected Soviet air defenses.

Not surprisingly, after having already shot themselves in the foot with their testimony, the letter affirms the ability of the B–1 to penetrate Soviet air defenses into the 1990's. Mr. President, it is hard to know who to believe: Secretary of Defense Weinberger on November 5 when he testified before the Armed Services Committee, or Secretary of Defense Weinberger on November 10 when he signed a letter with CIA Director Casey.

If both the Defense Department and the Central Intelligence Agency are so unsure of the actual ability of the B–1 to do its job, I would suggest that this program does not deserve the support of the Senate.

It is clear, however, that if the B–1 is to be effective after 1990, it will primarily be as a Cruise missile carrier. But the B–1B has been designed and built as a high speed, low altitude, penetrating bomber.

It simply makes no sense to use such a plane for the far less demanding task of carrying Cruise missiles within launch range of the Soviet Union. The B–52 bombers can perform the Cruise missile launching mission just as well.

I will admit that the B–1B bomber is a better airplane than the B–52, and at $280 to $400 million per copy, it better be. But the B–1's advantages over the B–52, especially in the Cruise missile role, are far too slight to justify its huge and ever-increasing costs.

Mr. President, the B–1B fails to pass muster on the two most important issues facing the program: Cost and military effectiveness. I urge my colleagues to support this amendment.●

Mr. DURENBERGER. Mr. President, whenever we debate a Defense appropriations bill, we do not simply weigh the pros and cons of narrow technical issues. We are not technicians. We are U.S. Senators, and our concern in any Defense appropriations debate deals with three dominant questions: Preservation of our economy, maintenance of our national security, and public understanding of and support for a program which relates the two.

We are called upon to exercise a broad overview. As President Eisenhower recognized years ago when he first assumed office, our national security is indivisible from our economic strength, and an excessive devotion to military budgets can cause us to spend ourselves into weakness and poverty.

We are dealing with finite and limited resources. We simply must set priorities. We cannot hope for a miracle of the loaves and fishes.

So if there is any overriding criticism that I have of the approach which we often take to Defense appropriations, it is that we too often fail to address the budgetary impact. Unlike appropriations for other Government functions, the Defense bill is not designed to balance the budget. We have taken a huge leap this year, increasing our appropriations by some $37 billion.

Yet, I am not satisfied that this appropriations bill, which sets aside $208 billion and which obligates us to further and more costly programs down the road, has given most Americans a feeling that we have answered the fundamental questions.

As has been noted in much of this debate, it has taken us years of neglect to reach the alarming state in which we find ourselves. And it will take time to restore our strength. So it is understandable that this bill will not magically improve our security all at once. This is the first in a long series of steps, and we need persistence and patience as much as we need money.

But by the same token, we are still forced to ask the questions which so many Americans asked last November: Are we safer? From whom? Under what conditions? And at what price?

In other words, we must ask how this bill, and its various elements, provides for the common defense while fitting into our larger plans for economic recovery.

There is a related set of questions, as well. We must decide upon the priorities which we choose to emphasize in our defense plans. We simply cannot do it all at once. And if I am concerned that the ravages of time may have eroded our strategic nuclear forces, I am genuinely alarmed about the condition into which our general purpose forces have fallen.

There is no established set of facts on which we can agree when discussing how best to deter a nuclear war, and we can all thank God for that lack of historical experience. But what this means, of course, is that each of us has a firm obligation to exercise his or her independent judgment when it comes time to fund some programs at the expense of others. And each of us has an equally firm obligation to do so with an eye on the economic conditions of this country.

If we could write blank checks, if we could overlook the impact on our economy, if we could ignore our duty to feed the hungry, house the homeless, clothe the naked, and minister to the sick, there would be little debate. We could support an MX missile program in exotic basing systems on the off chance that it is really needed in the real world of deterrence rather than the artificial world of theoretical calculations. We could proceed with a full-scale commitment to the B–1B bomber and a crash program on the advanced technology bomber.

But there are no blank checks, and we cannot ignore our other duties. Each of us must decide what is truly important, and what is only desirable, and each must cast his or her vote accordingly. That is why I voted today for the Pryor amendment on the MX missile. That is why later tonight I will be cosponsoring the Hatfield amendment to reduce research and procurement spending by 2 percent. And that is why I cannot support the Hollings amendment.

Senator LEVIN, whose position on this matter is clear, crystallized the real issue yesterday when he told us that it is not a matter of whether we develop a new bomber, but simply what that new bomber will be. There are few in this body who would claim that the B–52's can last indefinitely, even with increased funding for maintenance.

We need a new manned bomber in the near future, and the matter for our judgment is whether it is worth it to procure the B–1B now or to wait a few years

for an advanced technology bomber. Regardless, the bomber leg of our Triad is the leg which most demands attention.

The advanced technology bomber research program, as we have been reminded earlier, is a subject which we can discuss only with the greatest caution. But there is no question that the concept is a revolutionary advance in military aeronautics. That is precisely why it has attracted so much attention, and why the President has wisely chosen to explore it.

But this suggests the perils as well as the promises of the advanced technology bomber. Simply put, a decision to commit ourselves exclusively to the ATB—a decision implicit in the Hollings amendment—would create three major problems. It might not work. It might break our bank. And it will certainly limit us to one military mission, a mission which is the least likely to be performed.

Regardless of how much money we put into ATB research today, and regardless of the fate of the B–1B bomber, the ATB is at best a calculated risk. We often forget that nearly every time we have been promised a miracle program by the Defense Department or by technological hucksters, we have lived to regret it.

We often seem to forget that there are no panaceas, whether they take the form of magic number increases in defense spending or of exotic military hardware programs.

We have committed ourselves to revolutionary advances and miracle weapons before. The results have been only the familiar litany of cost overruns, schedule delays, and performance gaps.

Paper programs simply do not develop the way we hope they will. And radical innovations in the state of the art never seem to provide the weapons and the savings we hope for.

In defense as elsewhere, there is no free lunch and no tooth fairy. We cannot buy defense on the cheap, whether we seek it in an excessive devotion to strategic nuclear arms at the price of conventional forces, or whether we seek it in revolutionary weapons which are always over the horizon at the expense of known weapons which are available today.

Indeed, I am struck by the fact that many of those now promoting the advanced technology bomber as a safe and certain bet are people who have cogently criticized the Defense Department for its presumed fascination with a high-technology fix to each of our problems.

The advanced technology bomber merits investigation; if it lives up to only a portion of its promise, it will be a valuable asset. But until it is more than a gleam in some designer's eye, it does not merit an absolute commitment.

That leads me to my second point. The B–1B will not be inexpensive, either in terms of this year's budget or in terms of its overall program costs. But the advanced technology bomber is going to cost at least as much, and we will be forced in the interim to maintain an aging fleet of B–52's.

We may be able to save a little money this year. But we will pay the price later, and we will pay it in inflated dollars. New programs tend to increase in price over time, not decrease. And the prices being quoted for the advanced technology bomber are already high. The B–1B, by contrast, is a known and mature technology, and we can be somewhat more confident about its price.

Finally, let me note that the B–1B has the merit of flexibility, and the added quality of growth potential. It is not the same aircraft which Jimmy Carter mistakenly chose to cancel. It is better, cheaper, and more flexible. It can carry Cruise missiles and conventional ordnance. And it has incorporated some significant design changes which make it a capable penetrator for the foreseeable future.

The advanced technology bomber, by contrast, will be optimized solely for the mission of penetration of hostile airspace on a strategic nuclear mission. This is the last mission which it will perform, for such an event would occur only after we had launched our ICBM's and other weapons. Just as important, it is the least likely mission which any of our miiltary forces will be called upon to perform.

If we had unlimited resources, and if all of our military forces were in equally bad shape, it might be sensible to build a fleet of bombers devoted exclusively to the penetration mission. But we do not have unlimited resources, and we will not, even if we delete the funding for the B–1B or divert the money to our conventional forces.

It is therefore simply foolish to forgo a plane which is available sooner, a plane which is inherently flexible, and a plane which represents an incremental growth in the state of the art, for a plane which is available later, a plane which is devoted to one mission only, and a plane which is risky because it is revolutionary.

The real question is whether we pay now or pay later. But in either event, we shall pay, there is no mistaking that. In my judgment, it is better to pay now at a known price for a known commodity than to pay later for a pig in a poke.

● Mrs. HAWKINS. Mr. President, I support the funding of the new B–1 bomber because our aging B–52 bombers are in desperate need of replacement, since the first B–52's were deployed in 1956. Though the U.S. Air Force has worked to modernize these bombers to maintain their effectiveness, no one believes that they are still capable of penetrating the sophisticated air defense system of the Soviet Union. This weakness is a major cause of the "window of vulnerability."

There are several other reasons why I support funding the B–1B instead of other strategic options. One important reason is cost. The B–1B is cost effective. The Defense Department's research chief, Dr. Richard D. DeLauer, estimates that the cost of modernizing and maintaining our B–52 fleet and our smaller FB–111's through the end of the century is $93 billion. By comparison, Dr. DeLauer estimates that the cost to buy and operate a fleet of 200 B–1B's to the end of the century would be $92 billion.

If we compare the advanced technology bomber (ATB) with these calculations, we again find that the B–1B is the most cost-effective choice. The cost of equipping a fleet of B–52's and ATB's through the end of the century is $114 billion, while the cost of President Reagan's program of 100 B–1B's and 132 ATB's is $112 billion. The point is that we should purchase a fleet of B–1B's and ATB's for slightly less cost and much improved capability instead of continuing the B–52 fleet and then moving to the ATB.

Another important reason for moving ahead with the B–1B is that ATB technology is an unknown. When dealing with new and exotic technologies, timetables frequently must be thrown out the window. The funding and deployment of the B–1B would provide us with the time we need to be sure we get the plane we want from the ATB technology.

Finally, this country has been vacillating on its choice of future strategic systems for too long. If we delay or cancel again this program, we will send a message that we are unable to come together and develop a plan for our own defense. This would clearly be a sign of weakness. Consequently, Mr. President, I believe it is in the best interest of this country to maintain the funding of the B–1B.●

● Mr. HEFLIN. Mr. President, I rise in opposition to this amendment to delete funding in the defense appropriations bill for the B–1B bomber.

Of primary importance to all of us who have been elected to this body is the safeguarding, to the best of our ability, of the people of the United States. This primarily entails the charge upon the Congress to maintain and refine the freedom which our citizens proudly display to all the peoples of the world. We must actively defend against threats which indefinitely gnaw at the foundations of our freedom by maintaining the strength to keep them at bay.

One of the most ominous and ubiquitious forces at work against the United States is the vast Soviet machine. While the United States thrives on freedom, which is its lifeblood, the Soviet Union daily grows stronger by virtue of its burgeoning military strength. The powers in the Kremlin only watched with a growing mixture of boldness and relief as we allowed our defense to wither and decay over the last 10 to 15 years.

In my judgment, their goal is not peace. It is not freedom. The ultimate goal of the Soviet ideology is world domination. Areas such as the Persian Gulf might soon follow Afghanistan and become subservient satellites without the strong support of a formidable ally, and thus further augment the expanding Soviet stronghold. I believe that we must regain and maintain military superiority over the Soviet Union and any other nation which might challenge us in the difficult years ahead. Only through a position of unassailable strength can we nurture the peace and freedom which sustains us in our ideals.

In 1977, I vigorously opposed President Carter's decision to halt production of the B–1 bomber. I believed at that time, as I do now, that the United States must have an interim vehicle, one that serves

as an alternative to the outdated B–52 and can perform effectively until an advanced technology bomber is fully operational. America may have been at a position of rough equality with the Soviets at the time the decision on the B–1 was made.

There is no doubt, however, that we would be in a more secure position today if the decision had been to go ahead with the production of the B–1. Since that date, we have slipped at an alarming rate into a position of subordinance to the Soviet military forces. It is now up to the Congress to recognize the warning signals and make this Nation strong enough once again to reassume our position as a guardian of peace. This can only be accomplished by making the results of war absolutely devastating for the Soviets. We must rebuild our forces and show, through quiet might, that the muscles of the free world have not begun to grow lax and ineffective.

On October 2 of this year, President Reagan unveiled his administration's proposals for a five-point strategic program. This program included an answer to America's need for an effective manned strategic aircraft system to modernize and round out the "air-breathing" leg of our military triad. Under the administration's proposals, the United States will develop and deploy 100 B–1B bombers to bolster our strategic forces during the 1980's. The B–1B is a variant on the B–1 bomber. The administration's program also calls for a "vigorous research and development" program for an advanced technology bomber to be deployed in the 1990's that will be able to penetrate Soviet air defense into the next century. Because I believe this proposal will do much toward strengthening the U.S. strategic position, I support the administration's program.

The B–1B will be an interim bomber only, with a life span beyond the year 2000, that will allow the United States to concentrate on the development of an advanced technology bomber. Secretary Weinberger has testified on a number of occasions that the B–1B will penetrate Soviet air defense well into the 1990's and perform effectively as a criuse missile carrier and a bomber into the next century.

Furthermore, we are not abandoning the B–52, but instead these bombers will remain operational until the B–1B's are ready for combat. However, we must not continue to depend solely on the B–52 as a penetrating manned bomber for the strategic triad. Although the B–52 has served us well, its 1940's technology is ineffective to deal with the ever-increasing threat that we face.

The need is imperative for a bomber which functions as a manned, penetrating weapon system that can effectively and consistently in a war-time atmosphere, enter hostile air space, debilitate its target, and return safely. I believe the most effective and cost-efficient design for this mission is the B–1B. Besides having a nuclear delivery capability, the B–1B will be able to perform the conventional task which hopefully would allow us to avoid a nuclear confrontation. It will be able to cover expansive distances in abbreviated times in order to reach theater conflicts. It would also allow time for the United States to develop an advanced technology bomber that will be an effective aircraft when ultimately deployed. Most importantly, it will be an aircraft that the citizens of this country could confidently depend on in wartime to defend the United States, its people, and its institutions.●

Mr. STEVENS. Mr. President, the Senator from Vermont has called my attention to some language that is in the bill that was placed in at the time we were trying to compare our bill with the House bill as it was proceeding through the House. It is language that the Senator is correct in asking us to delete, because it did not survive in the House bill and it should not be in this bill.

I ask unanimous consent that this present amendment be set aside solely for the purpose of taking the technical amendment that will be offered by the Senator from Vermont. It should not take but a few minutes.

Mr. HOLLINGS. Reserving the right to object, Mr. President, how long will this take?

Mr. STEVENS. Two or 3 minutes.

Mr. HOLLINGS. I have no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 745

(Purpose: To strike out a provision relating to payments and arrangements made under section 6 of the Act of September 30, 1950 (Public Law 874, 81st Congress) as modified by section 505(c) of the Omnibus Budget Reconciliation Act of 1981)

Mr. STAFFORD. Mr. President, I have an unprinted amendment at the desk. I call it up and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Vermont (Mr. STAFFORD), for himself, Mr. ROTH, and Mr. PELL, proposes an unprinted amendment numbered 745.

On page 66, strike out lines 5 through 12.

Redesignate the succeeding sections in title VII accordingly.

Mr. STAFFORD. Mr. President, I offer this amendment to strike authorizing language from H.R. 4995, the Department of Defense appropriations bill. Briefly stated, Mr. President, the objectionable language in this legislation before us would transfer administrative authority over the so-called section 6 impact aid schools from the Department of Education, where they have been administered for so long, to the Department of Defense.

Before I detail my objections, allow me to remind my colleagues that these schools, established under the impact aid law, are operated on military bases where no public education services are available to the children of military personnel in nearby areas either through geographic or fiscal circumstances or because of legal prohibitions preventing public education from being provided these children.

The attempt to transfer authority over this program should be turned back for several reasons.

First, only a few months ago, Congress mandated continued Department of Education administration of these schools even though it approved transferring the budget for their operations to the Department of Defense under the Omnibus Budget Reconciliation Act.

Second, the Governmental Affairs Committee, which has primary jurisdiction over the structure of the Department of Education, has not held any hearings or discussed this issue. In fact, to my knowledge, the Appropriations Committee has not ever held hearings on this transfer.

Third, the Education, Arts and Humanities Subcommittee, which has jurisdiction over the impact aid program, has not examined this issue through hearings or any subcommittee consideration, except in its action in June to reaffirm that administrative jurisdiction over impact aid schools should remain within the Department of Education.

Mr. President, I urge my colleagues to support this amendment which simply deletes the authorizing language on this issue from this bill. The issue of the future of the Department of Education will be discussed by this body during the next session of Congress, and I would hope that we could take up the issue of which agency should administer impact aid schools at that time.

● Mr. ROTH. Mr. President, I rise in support of the amendment offered by the Senator from Vermont to strike authorizing language from H.R. 4995, the Department of Defense appropriation bill. I share the Senator's concerns over both the intent of this language in the appropriation bill and the way in which the proposal has been developed. It is my hope that the Senate will move expeditiously to remove the undesirable language.

After having listened to Senator STAFFORD's remarks, I must say that I concur with each of his points. Before the discussion proceeds any further, however, I would like to underscore several concerns.

The responsibility for the administration of the section 6 impact aid schools has rested for years with education officials at the Federal level. This arrangement is wholly appropriate because these are the officials with the background and expertise to properly carry out this administrative authority. The Congress recognized this fact when it chose last summer in the Omnibus Reconciliation Act to retain this relationship. I think it wholly inappropriate for the Congress to turn around only a few months later and to reverse this stance by allowing the current appropriation bill language to stand.

My concern is heightened by the fact that the Governmental Affairs Committee, which has jurisdiction over all such governmental reorganizations has not had the opportunity to hold hearings on the proposed change, and in fact was not consulted on the issue at any point in the process. I think a thorough and open review of this issue before the committees of jurisdiction is imperative before

the proposal advances any further. No such review has occurred to date.

Mr. President, I will conclude these brief remarks by requesting that my colleagues support this amendment to remove the specified language from the defense appropriations bill. To let it remain would represent both a hasty and unwise policy decision.●

Mr. STAFFORD. I ask my good friend, the manager of the bill, if he is prepared to accept this amendment.

Mr. STEVENS. Mr. President, I am prepared to accept the amendment.

Mr. STAFFORD. Mr. President, I move the adoption of the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment (UP No. 745) was agreed to.

Mr. STAFFORD. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. STEVENS. If the Senator will withhold that, we shall clear that as soon as we hear from the Senator from Mississippi.

UP AMENDMENT NO. 744

The PRESIDING OFFICER. The question recurs on the amendment of the Senator from South Carolina.

Mr. STEVENS. Mr. President, I say to the Senator from South Carolina that we have a group of people who wish to address this amendment of the Senator. The Senator from Kansas has been waiting.

Mr. HOLLINGS. If they will come to the floor, I shall be glad to yield to them but the hour is late. We have been waiting all afternoon.

The PRESIDING OFFICER. The Senator from Kansas is recognized.

Mr. DOLE. Mr. President, I have been arguing for a considerable time that, in a period of very severe budgetary restraint, defense programs must take their fair share of the cuts that have to be made in spending programs this year. After seeing so many difficult cutbacks we have had to make on the domestic side, and after thinking about more cuts we may have to consider in just a few weeks in these same domestic programs, I believe that we have to look very closely at any opportunities for savings on defense.

Because of my concern about defense costs, I have already opposed a number of proposed additions to the defense appropriations bill, even though some of these items—like the reactivation of the U.S.S. *Iowa*—might have been extremely cost-effective. It has also seemed to me that the very expensive, major programs—like the B–1 and the MX, especially the B–1—are programs where we should ask seriously whether we can possibly afford the enormous costs.

Those costs could be over $20 billion for the B–1—some estimates have said as much as $40 billion—and over $20 billion to deploy just the first 36 or 40 of the MX missiles. Together with the advanced technology bomber the administration has also requested, these programs might add up to over $100 billion.

It seems to me that, even though we have a responsibility to do everything necessary to insure an adequate defense for this country, we also have a responsibility to try to contain such huge costs if it is at all possible. After all, if our economy is damaged by the very programs that should give us greater security, it is hard to be sure that we have really come out ahead.

Two weeks ago, the President announced a comprehensive arms control program, including proposals for negotiations on strategic weapons as well as the talks in progress now at Geneva on intermediate-range nuclear weapons in Europe and efforts to cut back conventional forces there and to find ways to reduce the risks of miscalculation or surprise attack in the use of cataclysmic nuclear weapons.

These proposals, I believe, offer the first real hope we have had for a long time to make progress on arms control with the Soviet Union. The importance of this undertaking is so great, that I think we must do everything we possibly can to insure that these negotiations come to a successful conclusion, so that we need never use in war the weapons that are in our arsenal.

To back this administration as fully as we can in such a crucial arms control effort, Mr. President, we must send the signal that we are prepared to do whatever is necessary to maintain our military strength however negotiations may proceed. Only with such a clear sign of determination on our part, I believe, do we have a chance to persuade the Soviets to deal seriously—in other words, to achieve an outcome on our own terms and not just on Soviet terms.

So, in spite of the very great costs, Mr. President, I support going ahead with the B–1 and MX programs today—and I am opposing amendments to the defense appropriations bill that would cut funds for these programs—in the hope that, with serious progress in arms control, our military expenditures over the longer term can be reduced far more substantially than by abandoning these weapons now.

Mr. President, I commend all Senators on both sides, who are experts in this particular area of defense appropriations, $200 billion plus. I want just to speak as one who is not on the committee, but one who has some responsibilities in other committees, where we are scraping around trying to find a million here and a million there, and it adds up to $1 billion, $2 billion, $11 billion.

I must say at the outset that I think I probably would have voted against the amendment in any event, based on the President's speech 2 weeks ago, but I received a call from the President on this issue. I indicated to the President that it is becoming more and more difficult for those of us who have areas of responsibility—the Finance Committee, for example, and other committees—where we are asked to continue to look at entitlement programs and where we were able to reduce taxes rather substantially, far too great in the eyes of some—perhaps it is unfair to say that we have exempted the Pentagon from any budget scrutiny.

Perhaps it is unfair to say that we have exempted the Pentagon from all budget scrutiny; but there is that feeling and that perception by some of us who have responsibilities that are not directly related to the issue on the floor.

This Senator has been arguing for some time that in a period of very severe budgetary restraint, defense programs, notwithstanding the fact that we probably have fallen behind for a number of reasons, still must be scrutinized carefully and must accept some share of cuts that have to be made in spending programs in this fiscal year and beyond.

After seeing so many difficult cuts that have been made, and more must be made on the domestic side, I believe we have to look closely at every opportunity for savings on defense.

Because of that, this Senator is opposed to a number of additions to the defense appropriation bill, even though some of these, such as the reactivation of the *Iowa*, seem to have some merit and would be extremely cost effective.

The B–1 and the MX—especially the B–1—are programs in which we have to ask whether we can afford the enormous costs. I have heard the estimates on the floor the last couple of hours, and I have read the committee report. I am not certain what the exact cost finally will be. It probably will be larger than the projected cost, even with a 3-percent inflation figure added.

Two weeks ago, the President announced his comprehensive arms control program, including proposal for negotiations on strategic weapons, as well as talks in progress now at Geneva on intermediate-range nuclear weapons in Europe and efforts to cut back on conventional forces. The President, in my view, in that speech, made a difference not only to millions of people around the world but also to a few of us on the Senate floor who might have been going in another direction.

These proposals, in my view, offer the first real hope we have had in a long time to make some progress in arms control with the Soviet Union. The importance of this undertaking is so great that, in my view, we must make every effort to insure that negotiations can come to a successful conclusion and that they will be in our national interest. It is on that basis that I am opposing this amendment and supporting the administration in this program.

It seems to me that if we send conflicting signals to the Soviet Union, notwithstanding our budgetary problems, it will be the wrong way to proceed.

I believe we have a chance to persuade the Soviets to deal seriously—in other words, to achieve an outcome on our own terms and not just on Soviet terms.

So, in spite of the costs—and they are massive—I support going ahead with the B–1 and MX programs, and I am opposed to other amendments.

However, I say this to the distinguished members of the Armed Services Committee: The Senate Finance Committee has jurisdiction of about $400 billion of the budget. About $100 billion of that is interest. We are being asked, properly, to take a look at medicare, medicaid, AFDC, social security, and other programs. I know it might be like mixing oranges

and apples to discuss those programs in relation to defense appropriations which are vital to our security and perhaps our liberty.

However, it appears to me—and I have great confidence in Secretary Weinberger and members of the committee—that as we proceed later this fiscal year and in fiscal 1983, and as we are asked—as I am certain we will be asked—in January to make additional cuts in domestic programs, as we should in many cases, I think some of us will insist that we provide the same scrutiny of defense programs. I will support the administration.

Mr. KASTEN. Mr. President, I supported the B–1 program in the House of Representatives and deeply regretted President Carter's decision to cancel it. I believe that President Reagan's proposal to build the B–1B, while proceeding with development of the advanced technology bomber, is a sound one. I strongly support this portion of his strategic package.

The B–1B is a substantially different and more capable aircraft than the B–1 cancelled in 1977. We have received repeated testimony from Secretary Weinberger, Under Secretary for Research and Engineering Richard DeLauer and others that it will be capable of penetrating Soviet air defenses well into the next decade. There is no magic moment when any given aircraft loses this ability. Estimates of penetration capabilities depend on what assumptions are made about existing and future Soviet air defenses and conditions under which the manned bomber would be employed. I am convinced that the B–1B, with its reduced radar cross section and improved electronic countermeasures, will be able to perform its strategic mission beyond 1990.

The B–1B is not a one-mission, stopgap, interim aircraft, useful only until the production of some ultimate bomber. If this were the case it would be too expensive at any price. But the B–1B is a highly versatile, long-range combat aircraft. It is capable of performing not only as a strategic penetrator but also as a cruise missile carrier aircraft. Its flexibility and capabilities will allow it to perform well in conventional roles, supporting worldwide force projection, and in support of our theater nuclear forces. And it will continue to perform these missions long after the ATB is available.

The cost issue has received a great deal of attention. Estimates based on GAO, and CBO reports cite a total program cost of $40 billion. But this figure is based on a number of seriously flawed assumptions and arguments which have been refuted point by point. The Defense Department is on record with its commitment to keeping program costs at the $20.5 billion requested.

Mr. President, I think it is clear that a majority of this Senate strongly supports the need for a new manned penetrating bomber as part of our strategic triad. Given this fact, the most important question is what alternatives are available and what are the costs of these alternatives?

One option is to cancel the B–1 and maintain our current inventory of B–52's and FB–111's until the ATB is available. I do not find this acceptable for two reasons: First, the cost of maintaining our current force of bombers and, second, the uncertainties associated with development of the ATB.

Maintaining the current inventory of B–52's is an extremely expensive proposition. The Defense Department estimates that it would cost $93.4 billion through the year 2000. This is more than their estimate of $91.9 billion for building and maintaining a comparable force structure of 200 new B–1B's. And what would we have left in the year 2000 after investing this $93.4 billion in B–52's. We would have a fleet of aircraft whose structural life is over. Mr. President, we cannot afford to sink increasingly scarce dollars into an airplane that is rapidly reaching the end of its useful life. This is waste that the American taxpayer cannot and should not tolerate.

Waiting for the new advanced technology bomber is also an extremely risky approach to modernizing our strategic forces. The B–1B is essentially production ready. But the ATB is still largely a paper aircraft. By virtually all accounts, design, and production uncertainties make it unrealistic to expect the ATB to be available in this decade. Increased spending to accelerate the program will not solve this problem. The schedule is dependent on meeting engineering milestones, not on funding.

In fact, Secretary DeLauer testified that in order to meet a 1989 initial availability date we would have to approve full-scale development before we even know how the aircraft will be configured. I could not support such an approach to procurement of any weapon system, let alone one so vital to our national security. Decisions based on insufficient information increases the risk of rapidly escalating costs for a less capable aircraft.

Proceeding now with the B–1B will allow us to follow an aggressive but prudently paced ATB program without these risks. While the exact numbers are classified, the cost of a combined B–1B and ATB force is about the same as the ATB-only option.

The two-bomber approach will force the Soviet Union to immediately spend billions of dollars to defend against the near- and far-term threat. It will force them to divert funds that might otherwise be used for offensive systems or for new measures that would erode the current invisibility of "Stealth" technologies from existing means of detection. And the two-bomber approach will provide a cost competition between the B–1B and the ATB, insuring more efficient production and cost management.

Mr. President, I strongly support the B–1B program and urge my colleagues to vote in favor of President Reagan's proposal.

I yield the floor.

The PRESIDING OFFICER (Mr. LUGAR). The Senator from Vermont is recognized.

Mr. LEAHY. Mr. President, the Senate has debated the B–1 bomber many times over the past 6 years. There will be several more hours of debate during the consideration of this Defense appropriations bill.

We have debated the B–1 bomber many times over these past 6 years since I have been here. I notice that now the name has changed slightly. It is called now the B–1B. Some have suggested that this was done so that even though the plane has not really changed, many who have voted against the B–1 before could now turn around and vote for it saying they are voting for a different plane.

As I listen to this debate I am reminded of early attempts of inventors to build the first airplane.

Although today we remember almost only the efforts of the Wright brothers, many others were active. One of the most notable of these was Samuel Langley.

Samuel Langley invented several airplanes which he hoped would fly. Langley's efforts were especially interesting because he attempted to launch his airplanes off of houseboats on the Potomac—somewhere between where the Lincoln Memorial and the Pentagon are now.

Unfortunately, Mr. Langley failed. After much fanfare and the roar of the motor, the aircraft hit the water "like a handful of mortar"—in the words of a contemporary newspaper.

Ambrose Bierce, a contemporary satirist, included his observation of this event in a volume entitled "Fantastic Fables." He wrote:

> An ingenious Man who had built a flying-machine invited a great concourse of people to see it go up. At the appointed moment, everything being ready, he boarded the car and turned on the power. The machine immediately broke through the massive substructure on which it was builded, and sank out of sight into the earth, the aeronaut springing out barely in time to save himself.
>
> "Well," said he, "I have done enough to demonstrate the correctness of my details. The defects," he added, with a look at the ruined brickwork, "are merely basic and fundamental."
>
> On this assurance the people came forward with subscriptions to build a second machine.

Ambrose Bierce's discerning comments apply as aptly to the B–1 as they did to Langley's follies.

The thousands of words I have heard in defense of this bomber certainly demonstrate the correctness of the details. The defects of the B–1, however, are merely basic and fundamental.

The two fundamental defects of the B–1 bomber are, first, that it is not needed to preserve the peace and, second, that its huge expense will make it impossible for the Nation to achieve fiscal integrity in this decade.

There is a national consensus that the peace can best be preserved if our enemies are deterred from attacking us because of their fear that our counterattack would devastate their nations.

If the B–1 bomber is not built, will the Russians believe that, if they attack us, we will not be able to destroy their nation in retaliation?

Do you think they are going to have any more confidence in the survivability

of their nation following an attack on us with or without the B–1 bomber?

Over the years, our deterrence strategy has been on a strategic triad of manned bombers, intercontinental missiles, and submarine-launched missiles.

I do not accept the argument that the B–1 will be a more effective deterrent than the other bomber options—including the Stealth bomber, reconditioned B–52's, and air-launched cruise missiles.

But even if the B–1 is the only effective penetrating bomber for a few years in the late 1980's, history shows that the existence of this triad is not essential to deter our enemies. For many years, only manned bombers could deliver nuclear warheads. Today these warheads can be delivered by intercontinental missiles, submarine-launched missiles, and manned bombers.

The only justification for the B–1 bomber is that, for some short period between now and 1990, our existing B–52's probably will not be able to deliver nuclear weapons against the Soviet Union. Does that mean that during this period Russia need not fear attack? Hardly.

Even if, from 1985 through 1990, we have no manned penetrating bomber at all, we would still have a massive deterrent capability.

We will have 1,000 ICBM's which can carry 875 megatons. We have more than 50 submarines carrying 360 megatons of destructive power. If warheads from just a fraction of the missiles reach the Soviet Union, it will be enough firepower to destroy every city in the Soviet Union. If just 5 percent of these missiles reach their targets, they will deliver 4,000 times more destruction than the Hiroshima bomb.

So the B–1 bomber does not make us any more secure. It only makes us poorer.

The United States and the Soviet Union are like two men knee deep in a room full of gasoline. Is the man with a hundred matches more secure than the man with 99 matches?

My deepest concern is that this administration is more interested in counting the matches than it is in draining the gasoline.

Only a negotiated reduction in nuclear armament can make us—and our children—more secure.

Building the B–1 bomber will make us neither more nor less secure—it will only make us poorer.

And this brings me to the second fundamental flaw of the B–1 program—it is simply too expensive.

It has been observed that it must be easy to be a Republican. You only have to learn two arguments which you can use against any Democratic proposal. The two arguments are that they will cost too much and that they will not work.

These are fine arguments I say to my good friend from South Carolina. Those are the two best arguments against the B–1 bomber.

There is, in truth, no free lunch, no easy way to balance the budget, no simple step to fiscal integrity.

Before I examine the specific costs of the B–1 bomber, I believe it is essential that the overall economic impact of the defense budget must be examined.

The Reagan administration defense plan cannot be evaluated in military terms alone.

The 5-year, $1.5 trillion administration defense program, if adopted, will have far-reaching effects on the Nation's economy and on nondefense government services. It will place tremendous demands on our Nation's economic resources, effecting dramatic shifts in private-sector investment patterns. If approved in full, it will force a wholesale reordering of national budget priorities.

The national security implications of these secondary effects of the massive administration defense build-up cannot be ignored.

The $1.5 trillion Reagan administration defense plan was first proposed in March when hopes for "supply-side" economic miracles were running high. The President acknowledged from the outset that his defense plan would be costly—that it would be financed, at least in part, by shifting Government funds from domestic program areas to our national defense. The loss of domestic services was to be minimized, according to the President, by the dramatic growth in Federal tax revenues expected from his supply-side tax cuts and economic policies.

What has happened since March?

The administration forecast of 5.2 percent economic growth—real GNP—from 1982 has declined to 4.1 percent, then 2 percent, then 1 percent, and we are now mired in a deep recession with no recovery in sight.

The administration forecast of millions of new jobs and 7-percent unemployment has been abandoned as the unemployment rate has soared to 8 percent. More Americans find themselves jobless today than at any time since the great depression of the 1930's.

Although interest rates have eased in recent weeks as the recession has deepened, mortgage rates and other interest rates remain well above last year's levels and the single-digit levels forecast by the administration in March.

What are the implications of this dire economic news for the budget, and for our ability to afford the Reagan administration defense buildup? I believe they are critical, if not catastrophic. We are misleading the American public if we pretend we can afford this defense program given the many failings of current economic policy.

In March, the Reagan administration predicted budget deficits of $42.5 billion and $22.9 billion in fiscal years 1982 and 1983, and a budget surplus of $0.5 billion in 1984. These optimistic deficit projections were questioned by me and others who felt they could not be achieved given the administration's commitment to a $1.5 trillion defense budget and a $750 billion tax cut.

It is no surprise to me, then, that rising unemployment, high interest rates and the current recession have combined to produce dramatically higher Federal budget deficit estimates.

To be specific, the five leading private economic forecasters now believe a $90 billion deficit in fiscal year 1982 is more likely than the $42.5 billion deficit forecast by the administration in March. They predict a fiscal year 1983 deficit of $120 billion. And they believe the balanced budget the President has promised for 1984 will give way to a deficit of $130 billion or more.

Mr. President, without major change in the current administration economic policies, I submit that we cannot afford a $1.5 trillion defense program over the next 3 years.

The high interest rates and inflation that would result from deficit-financed defense spending of this magnitude would far outweigh the national security gains.

The declining American productivity and competitiveness in world economic markets which would result from the diversion of hundreds of billions of investment dollars into weapons stockpiles would undermine our economic strength and our national security.

The implications of a $1.5 trillion defense program, at a time of soaring budget deficits, for domestic government services are equally troubling.

In March, with rosy economic forecasts, the administration proposed an increase in the defense share of our national budget from 24 percent to 32 percent by 1986. The share of spending for the environment for education, training and employment, and for other nondefense needs would have been cut in half under the March budget proposals. As the economy has faltered and the deficit projections swelled, the pressure on the nondefense areas of the budget has intensified.

The President has not yet acknowledged the reality of the $300 billion deficit problem he has created. He has, however, time and again, refused to reconsider his $1.5 trillion defense plan or his $750 billion tax cut.

The implications of the President's current position are frightening. Either he must propose another $300 billion in domestic spending cuts—cuts which would literally dismantle the Government and break faith with the millions of Americans who depend upon Government retirement, health, housing, and food benefits. Or, he must accept huge deficits and the soaring interest rates and inflation that inevitably accompany such deficits. This is not a "zero sum game" we are playing, it is a negative sum game.

Mr. President, the ongoing battle between Congress and the President over 1982 funding levels illustrates the painful trade-offs between defense and domestic budget needs, in the face of growing budget deficits, which have been virtually assured by the Reagan economic policies.

Last week, the President vetoed the continuing appropriations resolution because it fell $2 billion short of his goal for 1982 spending cuts. The defense spending level recommended in the bill he vetoed was $196 billion. The defense appropriations bill before us today recommend $208.5 billion for defense—some $12.5 billion more than the bill the President vetoed, and nearly $8 billion above

his own September defense spending proposal.

Will the President veto this bill if we approve it in its present form?

Will he sign this bill and propose additional cuts of $8 billion, or $12.5 billion in domestic programs?

Or is the President willing to accept another $12.5 billion in budget deficits which result from defense spending, but not those which are covered by domestic spending needs?

Mr. President, I do not know the answers to these questions. I do know that we are facing budget deficits in excess of $300 billion over the next 3 years. I do know that cuts in domestic programs beyond the $131 billion already approved cannot be achieved easily or painlessly.

We must acknowledge these facts. We must acknowledge that soaring budget deficits and growing public and congressional opposition to further domestic budget cuts raise serious questions about our Nation's willingness and ability to support a $1.5 trillion defense budget over the next 5 years.

In 1982, faced with a deficit projection of $90 billion plus, can we afford a defense bill which is $8 billion above the President's request?

In 1986, when revenue loss from the Reagan administration tax cut reaches $225 billion a year, can we afford a defense budget of $350 billion?

I think not. We cannot overlook today's economic and budget realities. We must adopt a defense budget which is strong, and yet one which is affordable—one which will not bankrupt our economy and decimate Government services. We must avoid the tremendous waste that will follow if we ignore today's realities and embark upon a boom and bust cycle of defense expenditures.

The B–1 bomber, as I have shown earlier, is a very, very fast airplane. But even with its great speed, the B–1 bomber cannot begin to catch up with the accelerating estimate of the cost of the B–1 bomber.

Because of my particular concern about the budget impact of the B–1 bomber, I asked the Congressional Budget Office to prepare a realistic estimate of the costs of the B–1 in the mid-1980's.

This estimate shows that the costs of the B–1 program will be staggering. Between now and 1986, the B–1 will require budget authority of $40 billion and budget outlays of $24 billion.

In 1986, the budget outlays—not authority—outlays—will be $9.6 billion.

This huge sum is about twice the Federal Government's outlays for agriculture. It is a third more than all our science efforts—including the space program. This $9.6 billion is more than twice our Federal spending on the administration of justice.

It is a billion more than all our energy spending. It is a billion more than all our spending for community and regional development.

It is one-twentieth of our entire defense budget. And that is just 1986 budget outlays.

If we build this bomber there will be no question about a balanced Federal budget in 1984, 1985, or 1986. It will be simply impossible.

Even to achieve a defiicit in the $30 to $50 billion range, every other program—from defense readiness to public health protection—will have to be cut. These vital responsibilities of the Federal Government will be sacrificed to build a $40 billion flying Edsel.

No price is too great a price to pay to insure our national security—but $40 billion is $40 billion more than we should pay for a bomber that will not enhance our security but will certainly debase our fiscal integrity.

I support the amendment of the Senator from South Carolina.

I think his amendment makes good fiscal sense. I think that we have some significant unmet security needs. We will do more to increase our security by putting this money where it is needed—in the readiness increases proposed by this amendment.

I might say, Mr. President, that once not too long ago I visited a number of our military installations in Europe, and it was during the time there was a debate on the B–1 bomber a couple of Congresses ago. I talked to a number of Air Force people expecting to be lobbied on the B–1 bomber.

Commander after commander would take me aside and would say, "Have you taken a position on the B–1 bomber?" And I said I am against it, and they would say, "I am glad you are." I said "That is really not the party line." And they said, "We know, but the party line seems to come from the people who are just going to stay right there in Washington. We are the people who are taking our fighter planes and tearing them apart for spare parts for others," and they are the ones who took me out and told me how many fighter planes can actually fly. Although that number is classified, it is a rather discouraging figure.

They told me how they could not get spare parts or money for training. They could not prepare airplanes so that they were ready to fly or build shelters for those planes. They knew that something like a B–1 bomber would look nice at air shows, but it would not do much to protect our security.

Mr. President, I support the Senator from South Carolina and I yield to the Senator from Delaware.

The PRESIDING OFFICER. The Senator from Delaware.

Mr. ROTH. Mr. President, I rise today to support the funding of the President's B–1 bomber program. After considerable thought on my part, I have come to the conclusion that the B–1B is the best alternative available to the Congress if we are to maintain an adequate security posture throughout the world.

I would be the first to admit that this decision was not an easy one. Questions dealing with national security of the United States are extremely complex, particularly when you have to gaze into a budgetary and technological crystal ball in order to try to find the right answer.

The Carter administration, as my colleagues know, strongly opposed the B–1. Although I had doubts then about that decision, I nonetheless supported President Carter and voted against the consideration of the B–1 because I thought it made no sense to waste taxpayers' dollars on a program to which the administration was so opposed.

The Reagan administration has committed itself to the B–1 program, and thus, if the Congress does provide the funds for the airplane, I feel confident that this administration, unlike the Carter administration, will not seek to place any roadblocks in the path of the prompt deployment of the system.

In effect, the Senate is being offered two options.

One, seek to modernize our aging B–52 fleet—many of which are older than the pilots flying them—and hope that the Stealth technology will be developed rapidly, or two, move ahead with the B–1B.

If we choose the B–1 and the Stealth technology develops faster than most experts predict, the B–1 becomes less necessary. But if we gamble on the development of the Stealth and it takes longer than anticipated, then we may have put our country's security in jeopardy.

I simply do not want to play high stakes poker with the security of the country nor do I want to base the foundation of this security on the shifting technological sands that the Stealth seems to offer. Such would be an Alice in Wonderland approach to protecting this country, and I do not think we can afford that kind of course.

In reaching this conclusion, I have considered two basic questions: First, do we really need a manned bomber, and two, if so, what is the best approach?

To the first question I have come to the conclusion that the manned bomber continues to be an important asset to the United States. Strategically, the arguments for a triad of air, sea, and land based nuclear forces are well known, and I subscribe to them. But to me the most important reason for having a manned, penetrating bomber in our strategic arsenal is its recallability. In a faceoff with the Soviet Union, only a manned bomber gives the President of the United States an alternative to the doomsday choice of either launching our strategic missile force, or submitting to Soviet intimidation. In short, only the manned bomber is fail-safe.

Furthermore, the dramatic and relentless expansion of the Soviet military reach to regions far beyond its borders has made it imperative that we retain an effective capability to react flexibly to crises around the world. Only a large, modern bomber can react rapidly and flexibly over great distances.

Now to the question of what manned bomber?

Essentially, there are two principal and viable options. One alternative is to upgrade the B–52 fleet and accelerate development of Stealth technology. The second option is to buy the B–1 and continue Stealth technology at a slower rate. But after listening to the experts, I have

come to the conclusion that the B–52 upgrading approach would be akin to souping up a model-T at tremendous cost and asking it to race in the Indianapolis 500. Even if we took this course, we would still have to replace the B–52 in the 1990's. The B–52 has served as a vital part of our national defense for the past 30 years, but time has taken its toll. These airplanes are increasingly vulnerable because they cannot get off the ground fast enough under attack. Second, soon the B–52 will no longer present a threat of penetration to the Soviet Union. And third, although cost estimates relating to our strategic programs are guesstimates, upgrading and extension of the B–52 is a highly expensive process which in any case still leaves us with a very old plane. Many experts have testified that even a modified B–52 will not be able to perform beyond the 1990's, which may well be before the Stealth plane becomes available. My greatest concern is that by following the upgraded B–52 approach, our country runs the risk of having no manned bomber for a period of years. I do not believe we can afford to have such a gap in our defense posture.

The Stealth system has enjoyed a great prominence in the press recently and has been built up as the great invulnerable weapon of the future. But, despite all the press hoopla surrounding it, the plain fact of the matter is that the Stealth is a high risk technological solution that will not be available until at least the 1990's. Even then, there are questions about its vulnerability and about the kinds of detection systems the Soviets may then have. Furthermore, there is no guarantee that Stealth will have the payload or multirole capabilities of the B–1.

Right now the Stealth is an excellent concept—but concepts cannot protect America. The question could well come down to having something or having nothing. I do not think our country can run this risk.

Thus, I have come to the conclusion that the B–1 offers the best alternative to protect our security in the 1980's and 1990's.

But I cannot take this position without letting the Senate know of my reservations about the huge costs of these weapon systems, as well as the penchant for the actual costs to go way beyond initial estimates. As I have said in hearings before my own Governmental Affairs Committee, I think the Defense Department must find ways to avoid gold plating weapon systems, or else we simply will not have the capability to provide the necessary funds for sufficient numbers of any system.

The Senate today is being asked to play catchup ball. This country has allowed its strategic forces to slide downward over the last decade. We have not upgraded or maintained strategic capability for almost 30 years. The B–1B is a proven aircraft that best meets our Nation's strategic needs for the near future and will serve as a conventional system for much longer. We need to continue our program to develop the Stealth technology but it would be foolish to rely on early development of the Stealth.

Prudence dictates that we move ahead with the B–1 now.

Mr. MITCHELL. Mr. President, I share the view of every other Senator that we must maintain an adequate defense. For that reason, it is of course imperative that the defense appropriation bill be enacted, and I shall vote for it.

But the bill, as reported to the Senate by the Appropriations Committee, is deficient in several important respects. We should correct those deficiencies before we act finally on the bill.

The principal deficiency in the bill is the misordering of priorities.

This bill, while providing much more money for defense than has ever previously been provided, allocates too much to strategic nuclear force programs and too little to conventional force needs. This bill calls for a reduction in the sizes of our Army and Air Force; and a reduction in steaming hours for our fleet in the Persian Gulf. It calls for inadequate expenditures for the basic equipment—such as tanks, trucks, and ammunition—needed by our forces in Western Europe.

In other words, this bill calls for less than we need in those areas where we are already behind the Soviet Union and where conflict is most likely to occur, while at the same time it calls for more than we can afford in those areas where conflict is least likely to occur.

It is a classic case of wrong priorities. The B–1B bomber illustrates this point.

I will oppose funding for the B–1B aircraft. An analysis of three major factors leads me to this conclusion.

First. The first and most important factor involves the mission of the aircraft. The B–1B is a long range penetrating bomber. It is designed to enter enemy airspace at very low altitudes and to deliver nuclear warheads to predetermined military, industrial, and population targets.

Such entry is only possible as long as the Soviet Union, our probable adversary, does not possess an in-the-air radar which can look down, distinguish enemy aircraft from ground clutter, and direct a coordinated attack against the intruder.

The United States possesses look-down, shoot-down radars. They are, for instance, deployed in the AWACS. The Soviet Union possesses no such system, but is working diligently toward developing one. This development effort, we are told, will reach fruition late in this decade. Once this milestone is reached, no manned bomber, except the deceptive advanced technology bomber (Stealth), will be able to enter Soviet air space and be confident of returning again.

The Secretary of Defense, Mr. Weinberger, in congressional testimony, has confirmed that the B–1B will not be able to penetrate Soviet air space after 1990.

On November 5, before the Senate Committee on Armed Services, the Secretary stated:

> The simple fact is that the information I have, the Department has, on which the decision was based, was that it would be no longer safe to utilize the B–1 as a penetrating bomber after approximately that year (1990) if the Soviet rate of development does continue at the rate we think it will.
>
> If their radars do not solve problems that we think they can solve within that time, we may have another year. I don't know. I think there is no question whatever that we will not be able to use the B–1 as a penetrator after 1990.

Although Secretary Weinberger sought subsequently to push this date further into the future, the fact remains that since the B–1B will not be deployed until 1987, it will have a very short life as a penetrator.

The administration argues that the United States should add the B–1B to its inventory because the B–52, its existing strategic bomber, is very old. Pentagon officials argue that the B–52's design is of late-1940's vintage, and that the most recent B–52's in our fleet came off the production line in 1962.

In my judgment, our discussions should not focus on the age of our present manned bomber, but on its capabilities and the degree to which it can meet the challenges for which the United States must be prepared.

We should be looking ahead, not behind. We should ask ourselves what capabilities the B–1B gives us which we do not already possess. We should calculate whether the benefits provided by the new aircraft are worth its costs—especially in light of other effective weapons which are known to exist.

The administration has done everything it can to deemphasize the fact that the B–1B's life as a penetrator will last only 2 or 3 years. It does not point out that this past June the Secretary of the Air Force provided the Secretary of Defense with information establishing that the B–1B's capability to penetrate begins to degrade well before the Air Force and DOD now are claiming.

To strengthen its case for the B–1B, the administration deemphasizes the fact that B–52G's and B–52H's, when armed with cruise missiles, will be able to shoot and penetrate well into the next decade.

Furthermore, in order to bolster its case for B–1B, the administration has decided to juggle previously established cost estimates and program schedules for related systems.

Take, for instance, the date by which the Stealth aircraft is supposed to be initially available for deployment. Last year, the Air Force said the date was 1990. This year, the Department of Defense tells us that it will be considerably later and that, as a consequence, the B–1B is even more necessary as an interim solution to our strategic bomber problem. When one notes that the Northrop Corp. claims it can produce a first Stealth by 1987, DOD's present timetable and motives are certainly suspect.

Administration spokesmen go so far as to suggest that the B–1B should serve as a conventional bomber when its ability to penetrate lapses. This point does not enhance their case; it diminishes it. If the B–1B is to function for the greater part of its service life in a conventional role, should we not consider other, less expensive aircraft which perform conventional tasks? We must not forget that the United States can purchase seven F–15 fighters or 14 F–16 fighters for the $205 million which the administra-

tion claims each B–1B will cost. Should we not evaluate whether existing aircraft costing less might not suffice? Do we not have a responsibility to compare the capabilities of such aircraft with the B–1B?

The B–1B may be a great aircraft, but it does not meet America's needs at this time. Its enormous cost simply cannot be justified by its short-lived role as a penetrating manned bomber.

Second. The program's cost is the second major factor which the Senate must take into account. Earlier this year, administration officials suggested that a B–1B production program could be undertaken for less than $10 billion. The Secretary of Defense now cites a price tag of $21 billion for the fleet of 100 B–1B's which the Air Force desires to have "combat-ready" by 1987. This figure does not reflect the probable inflation which will occur over the next 6 years. When inflation is reflected, the official estimate climbs to $28 billion.

The Congressional Budget Office, in a report released on November 9, says that even the Pentagon's highest figures may understate by $12 billion the actual cost of the weapons system. According to CBO, $39.8 billion is a more realistic estimate. This figure includes inflation during the production period, the cost of the bomber itself, and the amount which would be required to give the aircraft a cruise missile carrying capability, and necessary communications equipment.

For fiscal year 1982, the Congress is being asked to fund the B–1B program at a level of $2.4 billion. Of this amount, approximately one-half billion will finance research and development efforts, and the remainder will be dedicated to procurement.

How can we, in good conscience, pay so much for so little in return? I support a strong national defense, and increased spending to achieve this objective, but I cannot defend spending precious defense dollars on strategic systems which provide only marginal benefits while our conventional force readiness declines.

Our conventional force deficiencies are many. We have a responsibility to rectify these deficiencies, and to do so soon. To ignore them while we spend billions of dollars on the production of new sophisticated strategic weaponry is to invite further problems, to endanger our national security, and to undermine the confidence which our allies have in us.

I am concerned about the broad scope of our conventional problems. These problems range from underfunding for support activities necessary to insure that we get the full benefit of new weaponry, to cutbacks in so-called steaming-time for U.S. naval vessels in the Indian Ocean. Accordingly, during consideration of this bill I have supported funding levels above those recommended by the Committee on Appropriations for:

The purchase of four KC–10A tanker aircraft which will help rectify the present Air Force tanker shortfall. This shortfall threatens to seriously hinder U.S. force projection in the Persian Gulf and Indian Ocean. An addition of $220 million.

More hours in "steaming" time for our Navy. An addition of $73 million. Both President Reagan and former President Carter emphasized the importance of the Persian Gulf area's oil supplies. The value of this resource was voiced repeatedly during the Senate debate on AWACS. We are told that friendly states in this area are in danger. And yet the President's budget and this bill fails to provide the funds necessary for Navy carrier force task groups to carry out their missions there.

If the security of the Persian Gulf/Indian Ocean region is in jeopardy, we should depend on the U.S. Navy, not the Saudi Arabian Air Force, to keep the peace and promote stability. The Navy cannot do its job without the funds it requires to operate its vessels.

The purchase of ammunition which our Armed Forces personnel require if they are to be both adequately trained and sufficiently ready for all possible defense contingencies. An addition of $148 million.

Maintaining present Air Force and Army personnel levels. An addition of $77 million. The committee's bill would force a reduction in personnel.

Army force modernization which will let us get our full money's worth from new weapons entering our inventory. An addition of $60 million.

Just last week, President Reagan vetoed a continuing resolution approved by the Congress. He subsequently ordered the entire Federal Government to cease operations. He did all this because the continuing resolution was about $2 billion greater than he desired. In light of this recent executive branch action, and the continuing pressure to restrict spending and to devote attention to the deficit, I do not see how we can rationalize committing ourselves to an aircraft program which will cost close to $40 billion, especially when the planes involved will be used only a few years in the primary role for which they were designed.

Third. The third and final factor which the Senate must consider involves possible alternatives to building and deploying this expensive system. One alternative is to continue to upgrade the B–52. According to structural engineers who have tested the B–52 at Boeing Aerospace Corp., the fuselage of the aircraft remains strong, and will retain its durability for many more years—perhaps even into the next century. In the early 1990's, when, by Secretary of Defense's own admission, penetration of Soviet air space will be impossible. B–52's will be able to serve as stand-off launchers for cruise missiles (ALCM's). According to Air Force Chief of Staff, Gen. Lew Allen, on February 6, before the Senate Armed Services Committee:

> The Air Force position remains that B–52's will provide us with an effective cruise missile carriage capability well into the 1990's.

Over 3,000 of these cruise missiles will be ready for deployment by the time Soviet radar technology renders vulnerable the manned bomber in a penetrating role.

With adequate funding and sufficient Pentagon attention, a Stealth bomber may be ready for deployment by 1989 or 1990. This new generation of aircraft, by using advanced electronics, certain structural shapes, and new materials, should be able to evade radar detection. The Reagan administration has acknowledged its desirability. Indeed, the administration's present strategy calls for an accelerated development of Stealth, as well as the conversion of 150 B–52's to cruise missile carriers between now and 1988. For this development and conversion, the cost will be $62 billion in constant 1982 dollars. The total cost of the Stealth program is now estimated to be in the $30 to $40 billion range.

I favor an even further acceleration of the advanced technology bomber. That is why I supported Senator BYRD's amendment to increase funding for the Stealth development program. Moreover, I believe that Members should heed the concern expressed by Strategic Air Command (SAC) Chief, Gen. Richard Ellis, who last year in a letter said:

> Opting for the B–1 at this time could preclude procuring a more advanced aircraft available by 1990. What makes this a legitimate concern is the B–1 technology is representative of the late 1960's or maybe 1970, and that aircraft could become obsolete in the nineties as a strategic penetrator.

When all the acronyms and all the differing cost estimates are put aside, the B–1B issue comes down to a single question: Will the B-1B provide the United States between 1987 and 1989 with an increment of security sufficient to justify its large price tag?

The answer, in my judgment, is that it will not.

For the next 3 or 4 years, we can rely on the B–52 as a penetrating aircraft. As it becomes obsolete in this role, we can convert it into a launcher for low-cost, but highly effective, cruise missiles. Concurrently, we can accelerate the development of the Stealth, which will give our country the opportunity to resume for many years our capability to strike strategic targets in the Soviet Union with a manned bomber.

This combination, along with improvements in our conventional force readiness, will give us the most efficient defense capability possible.

Mr. STEVENS addressed the Chair.

Mr. HOLLINGS addressed the Chair.

The PRESIDING OFFICER. The Senator from Alaska is recognized.

Mr. STEVENS. Did the Senator from South Carolina want to speak?

Mr. HOLLINGS. I want to put some things in the RECORD here.

Mr. STEVENS. I yield the floor.

Mr. HOLLINGS. Mr. President, maybe we ought to get the yeas and nays on the amendment, I ask the Senator from Alaska. Does that suit him? I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. HOLLINGS. Mr. President, I ask unanimous consent that the distinguished Senator from Maine (Mr. MITCHELL) be included as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HOLLINGS. Mr. President, the

distinguished Senator from Georgia was talking earlier about his fears relative to the cost and how they may be inflated in the outyears.

Let us look at the Office of Management and Budget composite and purchase inflators, that are used by the DOD in cost estimate and let us look at the CBO inflation. I also have had some defense deflations developed based on economic projections compiled by the Senate Budget Committee minority economist.

I ask unanimous consent that a table identifying these inflators be included in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

DEFENSE INFLATORS—HOLLINGS, CBO AND OMB

	1981	1982	1983	1984	1985	1986
OMB purchase:						
Budget authority	9.2	7.2	6.2	5.6	5.0	4.7
Outlays	9.8	8.4	7.0	6.4	5.4	5.0
OMB composite:						
Budget authority	11.2	8.7	6.7	6.0	5.3	5.0
Outlays	11.4	9.6	7.3	6.6	5.7	5.3
CBO purchase:						
Budget authority	10.6	8.7	8.2	7.9	7.6	7.5
Outlays	11.2	9.1	8.4	8.2	7.8	7.5
CBO composite:						
Budget authority	12.0	9.7	7.9	7.6	7.2	7.0
Outlays	12.3	10.1	8.1	7.8	7.3	7.0
Hollings purchase:						
Budget authority	10.8	9.2	9.3	9.0	8.9	8.6
Outlays	11.2	9.3	9.6	9.0	9.3	8.6
Hollings composite:						
Budget authority	12.1	10.0	8.7	8.3	8.0	7.7
Outlays	12.3	10.2	8.9	8.3	8.3	7.7

Mr. HOLLINGS. Mr. President, the purchase inflators used by OMB for 1982 7.2 percent and by 1985 they calculate just 5-percent inflation. That would be a happy day—a delightful situation. Can you imagine that, a 5-percent inflation rate by 1985? That is the way you get to cost overruns. You start the program, based on overly optimistic inflation and by hard, bitter experience there again goes the commencement of a cost overrun. Why? Because we have taken a very, very expensive weapons system and projected its costs into outyears, and what do we use? A totally unrealistic inflation figure.

I want to include these inflations so that my colleagues can see and know at the time of the vote exactly what they were doing. They are building up a cost overrun.

Now, Mr. President, with respect to the CBO estimates of the B–1, they have been referred to as overinflating the B–1 costs.

I ask unanimous consent that a letter dated November 6, 1981 to the distinguished ranking minority member, the Senator from Wisconsin (Mr. PROXMIRE) from Dr. Alice M. Rivlin be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CONGRESSIONAL BUDGET OFFICE,
Washington, D.C., November 6, 1981.

Senator WILLIAM PROXMIRE,
Senate Appropriations Committee,
Dirksen Senate Office Building.

DEAR SENATOR PROXMIRE: In response to your request the Congressional Budget Office (CBO) has reviewed the investment (procurement and research development) costs of the B–1 bomber and assessed the impact of potential inflation on the program. Our estimate includes the total acquisition costs of the baseline bomber; the four major additional items that the Air Force has requested the contractor to examine; and, as you requested, the items GAO has indicated should also be included in the cost of the B–1.

The baseline costs of the 100 bomber program as provided by the Air Force are, $19.7 billion (in constant 1981 dollars). In addition, the Air Force requested the prime contractor to examine four major items that may be included in the final contract. These four items are rear bomb bay enlargement, permissive action link/command disable system, air-launch cruise missile (ALCM) carriage, and ALCM avionics. The Air Force estimates that these additions to the program would cost $1 billion (in constant 1981 dollars).

As you requested, we have also analyzed the major investment items that the General Accounting Office (GAO) has indicated should be included in any cost estimates of the B–1. The GAO identified these items under three broad classifications: (a) questionable reductions, (b) expenses in other program elements, and (c) potential additions. These items are shown in Attachment 1.

The identified cost for all GAO items is $5.5 billion (in constant 1981 dollars). For several of these items, including operational and electromagnetic pulse testing, conventional weapons certification, a fuel tank inerting system, low and very low frequency communications, and improvements to offensive and defensive systems—the GAO was unable to obtain basic cost estimates.

We have therefore, not included estimates for these items in this assessment. Also, in estimating contractor support and nuclear weapons certification, the GAO anticipated a range of $1 billion to $2.8 billion; in this assessment we have used the mid-point of the GAO range for these two items.

After applying CBO's inflation rate assumptions to the full range of program costs discussed above, we estimate that B–1 investment costs will be $39.8 billion in then-year, or budget, dollars. With the Administration's inflation rate assumptions, the comparable cost would be $35.4 billion.

Attachments 2 through 5 provide year-by-year estimates of budget authority, using both CBO and Administration economic assumptions, for the baseline bomber (Attachment 2), the four options for which the Air Force requested contractor proposals (Attachment 3), the various items the GAO has indicated as being appropriate for any B–1 cost estimate (Attachment 4), and a summary of the total program costs (Attachment 5). Attachment 6 provides a year-by-year comparison of estimated budget authority and outlays for the total program.

These estimates, it should be noted, are for investment costs only; they are not life-cycle costs. They do not reflect the costs of operating the B–1 once it is in the Air Force inventory. Nor do they reflect the possible costs of other weapon systems to enhance the capability of the B–1 such as a new short range attack missile or a new tanker for aerial refueling.

I am sending an identical letter to Senator Leahy and a copy to Chairman Hatfield. If your staff should have any questions concerning these estimates or the attachments they can contact Mr. Patrick Renehan of our Defense Cost Unit at 226–2840.

Sincerely,

ALICE M. RIVLIN,
Director.

ATTACHMENT 1: ADDITIONAL ITEMS IDENTIFIED BY GAO

(*In millions of constant 1981 dollars*)

(Subject, cost)

Questionable Reductions:
Engineering change order budget, $440.
Change in avionics learning curve, $100.
Change in airframe learning curve, $500.
Reduction in avionics production estimate, $86.
Consideration for multiyear procurement, $800.
Transfer of engine component engineering development to component improvement account, $40.
Deferral of air vehicle depot support development, $300.
Expenses in other program elements:
Operational test and evaluation, no estimate.
Engine component improvement program, $115.
Conventional weapons certification, no estimate.
Interim contractor support, $500–$2,000.
Production facilities improvement, $71.
Manufacturing technology enhancement, $170.
Base facility improvement, $173.
Nuclear weapons certification, $500–$750.
Potential Additions:
Second inertial navigation system, $220.
Forward looking infrared sensor, $125.
Simulator development and procurement, $337.
Full scale fuselage fatigue testing, $140.
Fuel tank inerting system, no estimate.
Electro-magnetic pulse testing, no estimate.
Low frequency/very low frequency communications, no estimate.
Hardware, testing, electronics and support for additional weapons, no estimate.
Future improvements to avionics, no estimate.

The tables are printed earlier in today's RECORD.

Mr. HOLLINGS. Mr. President, anyone can quickly see from this document what it included. Let me quote:

As you requested, we have also analyzed the major investment items that the General Accounting Office (GAO) has indicated should be included in any cost estimates of the B–1. The GAO identified these items under three broad classifications: (a) questionable reductions, (b) expenses in other program elements, and (c) potential additions. These items are shown in Attachment 1. The identified cost for all GAO items is $5.5 billion (in constant 1981 dollars). For several of these items, including operational and electromagnetic pulse testing, conventional weapons certification, a fuel tank inerting system, low and very low frequency communications, and improvements to offensive and defensive systems—the GAO was unable to obtain basic cost estimates. We have therefore, not included estimates for these items in this assessment.

I state that this is not an inflated CBO estimate.

Reading further:

These estimates, it should be noted, are for investment costs only; they are not life-cycle costs. They do not reflect the costs of operating the B–1 once it is in the Air Force inventory. Nor do they reflect the possible costs of other weapon systems to enhance the capability of the B–1 such as a new short range attack missile or a new tanker for aerial refueling.

So this is not just one of those big add-ons by the Congressional Budget Office, as it was earlier referred to. And let me state the reason why this CBO estimate was made. Incidentally, it was the distinguished President of the United States who referred to Alice Rivlin in his speech on September 24 and while he cited her as splendid authority in the latter part of September, she suddenly became an inflated authority by November 6 when the CBO B–1 estimate was published.

The fact of the matter is she has done the best objective job that the Congressional Budget Office can perform.

Mr. STEVENS. Mr. President, will the Senator yield at that point?

Mr. HOLLINGS. Yes.

Mr. STEVENS. It ought to be clarified to put this CBO program in perspective. Those estimates were based upon General Accounting Office numbers. The General Accounting Office by its own definition was using preliminary numbers. When we asked them to come and testify before our committee to defend their numbers they had provided the CBO, they said they did not wish to do so because they had only used preliminary estimates. The Department of Defense had pointed out that many of the GAO estimates assume weapons systems or modifications not actually planned by the Air Force.

The DOD's $20.5 billion estimates include a cruise missile tarriage, one of the costs counted as an add-on by GAO, for instance. It is just not possible to be fair in comparing the GAO original numbers, which were preliminary estimates, and the CBO report based upon that preliminary estimate and the Department of Defense's estimate, which is a firm figure based upon the items that are actually in the B–1B package.

I have been one of those who have defended Miss Rivlin, defended CBO as a function of the Congress. But, in this instance, the estimates were made upon GAO estimates that were prepared in an admittedly preliminary fashion. And when we asked them to come and defend them, the GAO did not want to do so because they had pointed out to us that they were preliminary estimates. They were also estimates that did not take into account the same items that the Department of Defense has included in the firm figures that had been given to us that led to the $20.5 billion that is the 1981 cost for the B–1B.

Mr. HOLLINGS. Mr. President, the distinguished Senator from Alaska has made his statement, but that is not necessarily the case. The GAO may not want to testify, but we have taken the tables and we have reviewed these same factual figures. We have checked it with staff familiar with these things.

The difference between CBO, GAO, and DOD really is what is to be included on the bomber. There are certain things in the estimate that CBO included that the DOD says would not be included. Well, my experts think they will be. We did not include them all.

I was speaking to the objectivity of the estimate. I will use another quote from the letter.

> In estimating contractor support and nuclear weapons certification, the GAO anticipated a range of $1 billion to $2.8 billion; in this assessment, we have used the midpoint of the GAO range for these two items.

CBO tried to be as objective as they can. They know any time they send us a report that it is going to be picked apart, so there is no casual, indefensible kind of estimate made by the Congressional Budget Office. On the contrary, I think it is right on target. And we will all come around and watch it go up, up, up, and away.

My friend from Alaska and my friend from New Hampshire talk about the B–52 costs. They continually and naggingly again and again come and give B–52 costs for operations between 1990 all the way up to the year 2000. But no one contends that scenario. No one contends that the B–52 will be the only bomber until 2000 or forever.

Now, the B–52, Mr. President, is a very capable plane. We have never contended it beyond the mid-nineties.

Dr. Perry said it is good for 10 to 15 years, minimum. That was not maximum. Good for 10 to 15 years minimum.

I ask unanimous consent that the testimony of Dr. Perry before the Armed Services Committee in early November be printed in the RECORD so there be no misunderstanding of the facts regarding the bomber issue.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF DR. WILLIAM J. PERRY, FORMER UNDER SECRETARY OF DEFENSE FOR RESEARCH AND ENGINEERING

Dr. PERRY. Thank you. After that introduction, I think what I am going to say will be an anticlimax.

I am here today not to criticize the Administration's defense program. I must say in all candor that there are many aspects of this defense program that I am strongly supportive of. In particular, I applaud the increased emphasis on defense which has come with this Fiscal 1982 Budget.

Nor am I here to defend the programs proposed by the last Administration. Even though I helped formulate them and believed in them, I did not defend and do not now believe they were unique solutions to problems facing the country. They were reasonable but not unique solutions.

What I will try to do is give an objective assessment of specific programs in the President's proposal. What I proposed to do is, just as quickly as I can, cover each of the five major programs and give you a brief summary assessment and then go back and talk as much as you would like about any one of them, or two of them, in which you have special interest. Any one of these five programs is worthy of an hour or two of discussion. I will try to give a minute or two to each of them and then we can go back to them.

COMMAND, COMMUNICATIONS AND CONTROL, C3

First and I think in some ways the most noteworthy in the proposal was the so-called C3 guidance programs. That is often put at the bottom of the list. I would like to bring it up to the top and say that that is a fine proposal. I hope that the Senate will support that proposal. It will give us increased confidence in our ability to transmit an emergency action message if necessary, and it will give us a decreased probability of being put in a position where we may be subjected to a false alarm.

Both of those, I think, are very important to the country's, indeed the world's, security. So I applaud that program and I urge the Senate to support that program. I will put two caveats on it, though:

First of all, I think you would be mistaken if you believed that that program, even at its full level, would put this country in a position where we could confidently go on a launch-under-attack posture. I do not believe that program or any program we could conceive of would put us in a position where being dependent on launch under attack is a safe position to be in.

Secondly, I believe you would be misled if you believed that that program would give you what is sometimes referred to as enduring warfighting capability in the presence of nuclear detonations. I do not believe the program would have that kind of capability. So I do want to applaud that program and recommend support for it, but I would think it is important not to be misled about what it can or cannot do.

TRIDENT II MISSILE PROGRAM

Thirdly, on the Trident II programs, also I think it is a program well worth your support, for two reasons—and sometimes these reasons get mixed up:

First of all, it is a very cost effective measure; that is, given the tremendous expense of building and operating Trident submarines it is foolish not to put the full capability of weapons in those submarines and, depending on what is actually achieved in the Trident program, we can get probably a 75 percent, on the order of 75 percent, increase in capability per Trident submarine by having Trident II missiles instead of Trident I missiles in it. So that is one very obvious benefit. I think the program can pay for itself just on that basis.

There is a second point as well, and that is, we can alternatively deploy the reentry vehicles in Trident II to have an improved performance capability. Instead of building lots of warheads equivalent to those on the present Trident I missile, we could put a fewer number of warheads equivalent to those now on the Minuteman III. Effectively then, we could make the Trident II into a missile where each of those warheads would have a Minuteman III capability in terms of nuclear yield and accuracy, but which would have perhaps twice as many warheads as the Minuteman III. So it could give to our most survivable components of our strategic forces a capability equivalent to what we now have in the Minuteman III force. That, in itself, is a capability which I think would be worth achieving.

I will go from the Trident II program to the MX.

MX MISSILE

I am sure it is no surprise to this committee when I say that I was disappointed at the solution that is proposed to the MX basing problem. I believe—and I testified to this committee many times—that the Minuteman vulnerability problem is real. I submit to you that the solution is unacceptable, in my judgment. I have read several reports describing why that is a good solution. The burden of the argument is that by superhardening the silos you make the problem of destroying them harder for the Soviets, you require them to develop a new guidance system and therefore you are buying time.

I submit that is simply not correct, that the Soviets presently have missiles which are capable of destroying those silos. All they have to do is make their large, single RV warheads with the accuracy that they have presently demonstrated on the Missiles, and they have a superhard silo-buster.

I make that statement irrespective of how hard we make the silos. The technical issue of whether they can be made harder, 3,000, 5,000 or 10,000 psi, is an interesting technical issue but it is irrelevant. The Soviets now have the capability where they can deliver the missiles with sufficient yield and sufficient accuracy so that the silo will be encompassed within the crater of the fireball, in which case hardness is quite irrelevant.

So, I believe that the superhard silos is not a solution to the problem. At most, it requires the Soviets to target those relatively few silos with single RV missiles rather than multiple RV missiles. Superhardening could increase the cost to the Soviets attacking our silos if we did it with many, many silos, if we did it with thousands of them, but not doing it with 36 or 50 or 100. It is a negligible impact on the Soviet war-planner.

I made a strong statement about that be-

cause I believe that is an accurate assessment of the problem.

My recommendation to the Congress is simple, which is, that you reject that proposal.

CRUISE MISSILES

To go from the MX to the so-called air-breathing fleet, the cruise missile program is proposed to be continued. It won't surprise you to know that I endorse that and urge you indeed to continue that program.

B-52 MODERNIZATION

I was disappointed to see the B-52 improvements being dropped. I think that is poor economy. I think that is poor economy whether or not you proceed with the B-1. I would like to make a little plug for the B-52 while I am sitting here, because sometimes in our interest in getting a replacement airplane we have not given the B-52 sufficient credit. It has an outstanding range capability which is one of the major ways you can measure the effectiveness of the bomber.

It also has, according to the best information that was available to me when I was in the Defense Department, probably a useful life of another 10 or 15 years minimum, based on the Air Force's follow-the-fleet program of estimating. We think of it as an old airplane, but we forget about the fact that it does not get flown very often; while it is an old airplane, it does not have many miles on it, so to speak, and it still has a long, useful life.

But to really get operational utility out of the airplane, one has the replacement of the old, unreliable electronics in it. That is what the B-52 improvement is, so whether or not you proceed with the B-1 program, the B-52 has very fine capability and it should be maintained, and whether it is maintained in the strategic forces or the conventional forces can be determined, but in terms of its range, payload, capability, it has it; it has it better than any other airplane that is in the force today, and it will maintain that capability for another 10 or 15 years if it is properly maintained.

B-1 BOMBER

Relative to the B-1, I have mixed feelings on the subject, and I will not give you a clear, unequivocal recommendation. When the program was cancelled in 1977, the reasons which dominated our thinking at that time were that a look-down/shoot-down missile capability was evolving in the Soviet Union and that the B-1 would not be capable of penetrating against that kind of defense. We also believed that a cruise missile was an adequate solution to that problem and we even had Stealth as a gleam in our eyes at that time, but not much more than that.

Where do we stand today vis-a-vis that estimate in 1977?

First of all, the look-down/shoot-down capability which we were projecting in 1977 has, in fact, materialized and at about the rate that we estimated.

Secondly, the cruise missile program which we believed would be a successful program has turned out to be a successful program and, in fact, has demonstrated its ability to penetrate the kind of systems that I projected to you.

Third, the gleam in our eye has solidified into something more impressive, so one might argue that the basis for the decision in 1977 is even stronger in 1981.

I would submit, however, that the B-1 that is being proposed in this budget, the so-called B-1B, is a different airplane than we were considering in 1981, and it does require different consideration.

The two factors that are most significant is that there will be some modest reduction in radar cross-section, which is a plus in terms of ability to penetrate; and, secondly, there will be a new and improved ECM system designed for the airplane.

Let me comment that if the B-1 program goes ahead, I think it is mandatory that those two changes be made in it, because those are the only two that give it any capability of dealing with modern air defenses, in my judgment.

Now, one should not be misled into thinking that the improvement in cross-section with the B-1 will be sufficient to allow it to defeat the look-down/shoot-down missile which we see as a threat; it just makes that job somewhat more difficult.

Without quoting specific numbers that are being projected, let me hypothesize numbers, namely, that if we could achieve a tenfold reduction in cross-section or a ten decibel number as electronic engineers say, if you could get approximately a two-to-one reduction in range of the missile system, you have just made the defensive system that much more difficult if his engagement envelope is reduced by a factor of two. That is what a reduction in radar cross-section can do for that airplane.

In addition to that, an ECM system is being postulated which is believed to be capable of dealing with the Soviet radar. I will be happy if you would care to discuss this in more detail in closed session.

All I will say in open session is that any countermeasure system, any electronic countermeasure system, does not provide an absolute high confidence defense and is subject to counter-countermeasures; therefore, while I just spent a fair amount of my career in the analysis and design of electronic countermeasure systems, I would not want to ever suggest that the confidence of the success of a weapon system should rest entirely on ECM. We may be dangerously close to leaning on that lead almost exclusively.

Now, having said that, let me now further argue that however the ECM counter-countermeasure struggle comes out, the B-1B will be extremely useful as a cruise-missile carrier, certainly not optimum but as a future cruise-missile carrier. Second, it will be useful, maybe close to optimum, in a nonnuclear engagement in a conventional war. In many ways, that is the way the airplane ought to be considered, as to what contribution it can make to our conventional warfighting ability.

In summary, on the B-1B I do not take the position that some of its detractors have taken, that the B-1B is a "turkey", which is a cliche which has been used. I think it is a fine airplane and I think it has real capability in conventional warfare, but I do not believe we should delude ourselves into thinking it is a high confidence penetrator of sophisticated, modern air defenses that will be in the Soviet Union in the late 1980s and 1990s.

I would not care to engage in a guessing game as to what is the year at which the B-1B will no longer be effective. No one can say that with any confidence in this country or in the Soviet Union. It depends on the vigor and skill with which the Soviets pursue counter measures five, six, seven, eight years from now. That is an extremely difficult issue to project. I have heard figures that its lifetime would probably last until 1990. I would not argue with that figure, but I could make a case a few years earlier or few years later, depending on how optimistic or pessimistic I want to be about Soviet reactions. It does depend on the countercountermeasure reaction.

I would sum up my views on the B-1B by saying that at the time of the spring budget submission I was reasonably sanguine about it, that I thought within the size of that budget it was a reasonable judgment of priorities.

When I look at the fall budget, with reductions that have been made in the fall budget since then, I take a different view on it. All I am doing is giving you my own subjective view of priorities. I would have not placed this program on as high a priority for readiness when it was cut out in the spring and fall budgets. I would not place it at as high a priority as the Roland missile which was cut out.

Given a choice, I would have bought more tactical airplanes, more F-15s and F-16s. So, to me, it is not a black and white issue; it is a priority judgment issue.

My priority judgment would be to put more emphasis on tactical forces, more emphasis on readiness in lieu of that; but that is a judgment call.

BALLISTIC MISSILE DEFENSE, BDM

I think a final statement that I would make would be on the ballistic missile defense. That was not a major part of the President's proposal, but he mentioned almost parenthetically that one would be looking at BMD as a possible defense for either presumably the superhardened silos or perhaps Minuteman.

LOAD SYSTEM

Just a brief comment on the status of LOAD system. The last time I made a careful evaluation of it, I believe that it was or could be designed to be capable of extracting a two-to-one or perhaps a three-to-one cost from the Soviets wanting to attack our silos, that is, we could require them to expend two or three RVs instead of one RV to have any confidence they could defeat the silo.

I have never seen the evidence which would suggest that we could with confidence extract any higher cost, four or five or six to one cost; therefore, the question on BMD, the question of LOAD system, in my judgment, is not whether it works or does not work. I have reasonably high confidence you could shoot down the first RV and maybe the second. The question is, will it work in the defense of a thinly deployed system? Will it do you any good in defending 36 silos or 50 silos or 100 silos? In my judgment, the answer to that is no.

That is a different question than asking whether LOAD would be useful in defending 4,000 or 5,000 silos. Now, you drive the cost up to unacceptable levels in trying to mount an attacking system, so I suggest if we are thinking of BMD, until or unless someone can present a way of a BMD system operating in a nuclear environment, whether three or four or five or six interceptors being engaged within a short period of time, the way to think about it then is simply what kind of cost to extract, and my best estimate now is that there is no reason to be optimistic it can extract any more than three to one cost in RVs if we have to look at how many silos are being defended before you can assess whether that is a negligible or important improvement in survivability.

In a sense then, the BMD issue is like the superhard silos: What it does is extract somewhat higher cost from the offense; it does not defeat it. The cost is proportional to how many silos are being built. In a thinly deployed system of 36, 50, 100, you are hardly likely to get benefits from those systems once you consider superhardening of BMD systems in the context of major deployment of several thousand.

Senator Warner, that summarizes my views on these issues. I will be happy to entertain questions on any points I have made.

Senator WARNER. I will proceed quickly to ask a few questions, and then defer to my colleagues.

Recently in the Armed Services Committee, we have sought and pretty well received now a clarification of the alternatives to be considered in 1984 on the basing alternatives. That clarification now provides the Administration will look at deceptive basing in combination with BMD. I am not sure you are aware of that fact.

Dr. PERRY. Yes, I have heard that was being considered.

Senator WARNER. Does that alter in any way your most recent comments here?

Dr. PERRY. No. I would rephrase it in a different way, namely, that the effectiveness of the BMD system will probably be three times the number of apparent targets. I think that covers both the single-silo deployment and the deceptive-silo deployment. Therefore, the advantage of deceptive basing is simply to give you a leverage, a number qualified by this three, without necessarily building any more missiles.

That is one of the reasons we entertain it is a reasonable consideration as part of a multiple protective shelter system, because here the number we were multiplying was 4,600. You multiply that number by three and you get a very different result.

I am not suggesting that it is not possible to design or build an ABM system that would give you a higher multiple factor of three.

Senator WARNER. The Stealth program, the rate at which it can be brought in, at the present the Administration is representing that the milestones, the R&D milestones, engineering development milestones, will be the criteria and not budgetary considerations. Do you agree that that is a proper way to pace the development of the advanced technology bomber?

Dr. PERRY. The program, all the time I was associated with it, was paced by engineering milestones—I guess that is a way of putting it—not by budgetary considerations. My own belief was that the program gives a high enough leverage capability to our military forces, and that is the way it ought to be structured.

I would think, again, it would be poor economy to be slowing down that program on the basis of budget. You can still have—even if you decide you are going to pace it on engineering milestones—you can still have honest disagreements among the technical people about which is the most prudent way of pacing those milestones.

Senator WARNER. Within that framework?

Dr. PERRY. Within that framework.

Senator WARNER. Have you had an opportunity to examine the funding profile for the ATB through Fiscal Year 1982–1983 and is it sufficient, in your judgment?

Dr. PERRY. I have not, Senator Warner.

Senator WARNER. If you have that opportunity, if you can make that information available, because I would very much want to have your views on that——

Dr. PERRY. Yes, I will.

(The information follows:)

Committee insert.

Senator WARNER. You opened up with comments on the C3 system, yet I gained the clear impression that you felt that the program as announced by the President, which in a sense was an augmentation of an earlier enhancement this subcommittee had initiated in the 1982 cycle, that that program will not have an enduring characteristic and certainly not a launch under warning.

Is it possible to design such a system to meet those two goals?

Dr. PERRY. No, I think the program is as fine a program as is possible to design. What I am expressing more is the generic reservation that an intelligence system, a warning system, by its very nature, has to operate within line of sight of its targets. In the case of a system that is warning of missile launch from the Soviet Union, it has to have line of sight to the Soviet Union, which means, conversely, the Soviet Union has line of sight to our warning system.

Our communications system by its very nature, when it is operating, cannot be in deep holes in the ground, cannot be covered with concrete. You can put antennas in deep submerged silos but they are not operating, so for the purpose of an emergency action message, for the purpose of having communications and warning against surprise attack, an important part of your communications system has to be exposed in order to function. That means they are going to be susceptible to attack.

For those technical reasons, one should be leery about the long-term survivability of the elements of your warning system and communications system.

About the only way of achieving that kind of survivability is by deceptive basing. Since you cannot harden them effectively, and since you have to expose them, you can try to be deceptive about how they are based, and that gives you some margin of safety there.

The other factor is one which is very difficult to quantify. Nobody really has a very good assessment of how the human factors, human links, in this communications and warning system will operate the second day, the fifth day or the tenth day of a prolonged nuclear war, what the psychological reaction of people may be, how well the command system would operate if the top six layers of the command were missing.

Those are largely imponderable issues. For those technical reasons, and I guess you can say psychological uncertainties, I only suggest that it is not possible to have any real certainty as to how your command and control intelligence system operates one week or two weeks into a prolonged nuclear exchange. One should not expect too much out of it in that regard.

Senator WARNER. Thank you very much, Dr. Perry.

Senator Nunn?

Senator NUNN. Dr. Perry, you are unequivocal in your expression of opposition to the funding of a hardening of the silos for a place to deploy MX; is that correct?

Dr. PERRY. That is correct.

Senator NUNN. President Reagan seems to be equally unequivocal in his opposition to the MPS basing mode, so if we take those two givens, that the President's new program simply will not do the job, as you put it, and that he is not going to go back to the MPS system, and if you were faced then with those two givens, would you vote to fund the MX missile and bet on the probability of discovering some new basing mode that would be adequate?

Dr. PERRY. I am happy that I am not going to be confronted with that decision.

Senator NUNN. That is the very decision we are going to have to vote on next week——

Dr. PERRY. I don't have any confidence——

Senator NUNN. Or two weeks.

Dr. PERRY. I don't have any confidence that any of the three longer-term basing systems that are being studied will produce anything that will be any better, so I guess that would lead me to the conclusion then that would make me skeptical about spending the money to build the missile if I did not believe I could get a satisfactory way of basing it.

If I felt that way, which is my inclination, that would certainly motivate me to put the maximum resources and the maximum priority in the Trident II program and to include in the Trident II program, in addition to the Trident I type of warhead, a larger, highly accurate warhead option, so that you would have ICBM-type capabilities onboard a submarine force.

Even proceeding with the Trident II program, you have, first of all, an option on how much emphasis you put on it and what kind of schedules you get out of it; and, secondly, you have the option of whether you continue it in the Trident I mode with relatively small and relatively less effective warheads, or whether you specifically plan for a high-yield, highly-accurate warhead option.

Certainly my judgment, if I were not proceeding with an MX program, there is no doubt in my mind as to how I would proceed on Trident II. I would go all out in that effort.

You know from earlier testimony I preferred an MX solution, but my preference for the MX solution was contingent on its being in a survivable basing. I have no enthusiasm for an MX system which is not in a survivable basing.

Senator NUNN. If you put MX in a nonsurvivable mode, whether it is an open silo or hardened silo, do you believe that the strong implication would be going out to the Soviet Union that we were embarking on a strategy that would have to inevitably lead to launch under attack?

Dr. PERRY. I would not put it that strongly, Senator Nunn. We would be doing, in effect, nothing different from what they have already done, which is putting a big, high-yield, accurate missile in a relatively unprotected silo.

It would seem to me they can't conclude anything about our motives any different from what we might conclude about theirs. There would be symmetry in the situation. My concern with that though is that if we had this very accurate, very threatening missile in unprotected silos, and if they do not go to a survivable system themselves, I don't know what they are going to do, but if they do not go to one themselves, then that simply increases the hair trigger.

Senator NUNN. On both sides?

Dr. PERRY. On both sides. I am more worried about their side, because that now means that if there is a situation in the world and a state of high tension where there is some ambiguous message that gets into that warning center and they feel they are going to lose what to them is more than three-fourths of their strategic forces in an attack, then that puts a hair trigger, and I don't know how good their warning system is; I don't know how good their assessment system is. I don't have that much confidence in our own from the point of view of occasional false alarms.

I have lived through some false alarms in our system and in each case we had the luxury of being able to ride out the false alarm because we knew our system, first of all, our ICBMs were not susceptible to attack; and, secondly, even if they were, we still had the bulk of our forces in submarines and bombers. So, we are able to ride out the false alarms in our system.

I am very concerned about putting them in a position where they will feel they don't have that luxury, when I don't know how good their warning system is, I don't know how reliable their computers are, how susceptible they will be to sending out false alarms.

Senator NUNN. If we don't find any kind of deceptive or mobile basing mode, or both, for the MX, and we deploy that MX in the existing silos, and if the Soviets don't go to some mobile or deceptive system so that their ICBMs could survive, would we not have evolved in both countries into a situation where we had rather significantly lowered the nuclear threshold?

Dr. PERRY. I believe so. I don't believe from a point of view of premeditated attack, Senator Nunn, to me it raises the danger of an accidental war.

Senator NUNN. Or third country trigger?

Dr. PERRY. An accidental war or war by miscalculation. It does not necessarily lower the threshold in terms of a premeditated attack.

Senator NUNN. I share that apprehension, I must say.

Dr. Perry, there are some questions I have for the closed session.

What do you think of the argument on the B–1, that you need the B–1 because it greatly reduces the vulnerability of the bombers to an SLBM attack because of its fast escape capabilities?

Dr. PERRY. I do not believe that the Soviets would launch an SLBM attack on our bomber bases without also attacking our ICBM silos.

If one looks at the time lines involved in these two different attacks, one of them is incompatible with the other; that is, they really have to choose whether they want to make a surprise attack on our bomber bases or a surprise attack on our silos. They can't do them both at once.

An attack on one of them is the trigger to use for getting the other ones away, so I think our primary safety, our primary security, today against an SLBM attack on our bomber bases is the fact that that would inevitably trigger an ICBM launch from the United States, which is an even more serious threat to the Soviet Union.

So, I don't see that as a serious problem for that reason, as long as we maintain a substantial ICBM capability, such as we have today.

Senator NUNN. Without getting into classified matters, how do you rate the ATB in terms of its potential, how do you compare it to the B–1?

Dr. PERRY. I believe the ATB will be capable of penetrating any Soviet air defense that we know of now or can reasonably project for the rest of the century. Beyond that, I don't say simply because I lose my ability to project much beyond that point.

Senator NUNN. Do you have any ballpark estimates as to the differences in funding the Soviets would have to expend in order to counter the ATB compared to the air defenses they would be providing for defense against the B–1?

Dr. PERRY. I don't have figures on that, Senator Nunn. I can give you a few qualitative statements.

Basically, the look-down/shoot-down system that they are now developing and just entering in deployment is designed for bomber defense, is more or less optimized for bomber defense and is a powerful defense against the original B–1.

If we put in an effective ECM system against that specific defense, then we drive them, as I say, to a counter-countermeasure system. That is a modification of the system they are already starting to build.

On the other hand, our comeback to that defense, Stealth comeback, simply nullifies that defense and requires them to start over again. There is nothing they can do in fine-tuning or modifying or adjusting that defensive system to deal with it, so it means a new defensive system from the ground up.

Senator NUNN. So that the ATB would require the Soviets to really almost totally rebuild their air defense system?

Dr. PERRY. I believe it would, yes.

Senator NUNN. You are talking about at least hundreds of billions of dollars, are you not, somewhere in that range?

Dr. PERRY. If they can do it at all, yes. Their present air defense system cost well over $100 billion.

Senator NUNN. I assume then, as Senator Warner developed with you, that you would accelerate the Stealth technology in every way possible?

Dr. PERRY. Consistent with prudent engineering judgment, yes. I think that was the thrust of the question that he was asking.

I am not trying to second guess the engineering judgment of the people who are running the program now. I am only saying that the criterion I would put on the program is prudent engineering judgment. I would want to be convinced that it was that and not budgetary constraints that was pacing the schedule.

Senator NUNN. Dr. Perry, have you concluded that the MX, as we did in the questioning a few minutes ago, that the MX is not survivable in the mode that President Reagan proposed, and he is not likely to go back to the MPS system or some other form of relatively invulnerable basing mode, and you then decided you are going to vote against the MX, and then if you further decided the B–1 was squeezing out so many programs in the conventional area, and also perhaps delaying some of the development on the Stealth technology, what then would you do if you were going to come down negatively on both of those programs, what then would you do to give a forward thrust to our overall strategic deterrent?

Dr. PERRY. I would accelerate Trident II. I would ensure that Trident II had a hard target kill capability. I would accelerate the cruise missile program.

Senator NUNN. Keep the B–52s?

Dr. PERRY. I would restore and perhaps accelerate the modification, the replacement of the electronics, on the B–52. I would certainly consider other basings of the cruise missile besides the ALCM basing.

I haven't thought that through in detail, so I don't want to make a specific recommendation there.

Senator WARNER. Senator Cohen?

Dr. PERRY. I might also say, I would maintain a high rate of R&D in the BMD program. Notwithstanding the apprehension I give to the BMD, I do believe that a vigorous R&D program is appropriate and would be even more appropriate in the circumstances you have described.

Senator WARNER. Senator Cohen?

Senator COHEN. Dr. Perry, I would like to follow up on the line Senator Nunn was questioning you, about the kind of decision we have to make in the next few weeks. He asked you what would you do if the Administration is adamantly opposed to any kind of mobile basing, land basing for the MX. Assuming that the Administration through 1984 remains adamant in its opposition, where do you go?

You suggested Trident II. I think Harold Brown in today's paper indicated, even assuming you put more emphasis on your Trident II, you have a problem in terms of numbers, that you free up immediately some 9,000 RVs for the Soviets to play with in targeting on your submarine capability, you give them a great incentive to enhance their R. & D. and ASW research and development. So that presents you with an unpalatable choice, even though you go to a hard target kill capability with enhanced Trident II.

I assume you have to increase your numbers as well, not just the missile capability but you have to get bigger numbers, and more Tridents in order to offset the 9,000 RVs in your submarine force.

In your deliberations when you were with the DOD, did, in your opinion, political considerations enter into your deliberations as to whether you would go to land basing or not? Was that a factor in your mind?

Dr. PERRY. Was it a factor originally when the MX decision was made?

Senator COHEN. Let me put it this way, without being too hypothetical about it: A lot of us have grave apprehensions about the direction we are going in terms of a hardened silo capability. The other reality is such that a number of us realize that the Europeans are looking at the United States to see whether we are going to put our MX in a land-based mode.

Notwithstanding that our land is currently at risk with Minuteman IIs and IIIs and Titans, a good many Europeans, even the most conservative CDU members, would indicate that unless we are willing to put our land at risk with our MX, you cannot expect them to go forward with TNF and put Pershing Is on their soil. You have them saying, "We don't like the mobile MPS but we have something in between which will still preserve the option; in the meantime, we are going forward with a land-based MX system.

Would that be a factor in your considerations, assuming you had to make a decision today?

Dr. PERRY. I would worry about that. It would seem to me that the logic of the situation, which probably does not cut much ice, would not support that view, because we are still maintaining 1,000 Minutemen silos which are becoming more vulnerable every day.

If they would like us to demonstrate we have a vulnerable target in the Continental United States, we have it in spades; but they want a new vulnerable target, not an old vulnerable target.

Senator COHEN. I agree with you, but I am asking you a serious question: Did you not take it into account?

Dr. PERRY. I would take it into account. I would say notwithstanding the impeccable logic I just gave to you, I would think there is a reasonable probability that the TNF would become unraveled with this decision. I think there is a reasonable probability it will become unraveled anyway, so we are now comparing a somewhat higher probability.

Senator COHEN. I will rephrase it: Would it be a legitimate factor, assuming I agree with your synicism about the potential for TNF in the future, in any event would it be a legitimate factor for us to take into account?

Dr. PERRY. Yes, If I were in your position, I would take it into account.

Senator COHEN. To go forward on a limited basis until we decide exactly what we are going to do?

Dr. PERRY. Yes. I would not make that decision, but I would take that into account. After taking it into account, I would decide not to do it, anyway.

Senator COHEN. Fair enough.

Let me come back to the B–1. You indicated it might be useful for a cruise-missile carrier in a non-nuclear capability. The question I have is, if that is the case, unlike your former superior, Harold Brown, who indicates it is way overpriced as a cruise-missile carrier or for conventional mode, would that then dictate, in your mind, that we should eliminate the effort made to reduce the radar cross-section for cost factors and, number two, we should not put that much money into ECM? In other words, if you think it is a good air-launch cruise-missile carrier and a good conventional weapon system, now we have a problem, we have estimates going from $20 billion up to $39 billion, at the $30 billion scale we have some problems here in view of the ATB.

If it is down around $20 or $25 billion, it is an easier question.

Now, I raise the issue as to whether or not, if in fact the principal mission of the B–1, in your judgment, from the mid-1980s to the mid-1990s, would be air-launched cruise-missile carriers and conventional bombers, would you recommend we reduce or eliminate efforts to reduce radar cross-section, and to go forward with ECM?

Dr. PERRY. No, I would still incorporate those efforts, because I believe that even in a limited war application in the 1990s we will be facing relatively sophisticated air defense systems.

The Soviet air defense systems today which might be in some other country in the late 1980s or 1990s pose some problems in themselves which I think I don't want to discuss in an open session.

Senator COHEN. Let me ask it another way:

What does penetration give you that an enhanced cruise missile capability does not? In other words, if you were to put the money into advanced air-launched cruise missile technology, what is the difference in terms of military capability with a penetrator that can get through these sophisticated air defense systems, if, in fact, you have a bomber with advanced cruise missile technology?

Dr. PERRY. I think if you do the best you can on penetration, reduce the cross-section as much as it can be reduced, put in the

best ECM, then you have a fairly good prospect of having a machine that is reasonably effective in a tactical, limited war environment in the 1990s. You have to do all those things, even to give you the confidence of that. But I would have very little confidence with that same machine being able to operate in an extremely dense, extremely sophisticated environment, the Soviet ground-air defense system, in the 1990s.

Senator COHEN. You did not mention the "big bird" as an option for strategic systems. Would you categorically dismiss that?

Dr. PERRY. Quite honestly, I haven't studied that carefully enough to come to a considered judgment on it. I spent four or five months of my life, about half time, looking at an airborne MX system, considering different airplanes than the big bird. My reasons for finally being persuaded not to proceed with the airborne MX were not uniquely tied to the airplane. Probably they would apply equally well to the big bird.

One of those reasons is that by the late 1980s or the 1990s it will be possible for us or the Soviets to have systems that can detect airplanes in flight. If we proceed on a program that offers that sort of incentive, then that might be a possible comeback to it. Therefore, the point I would simply make is, that quite aside from the issue of how expensive it would be to build the airplane and the problems of maintaining a continuous air patrol and the operational maintenance cost of maintaining continuous air patrol, there is what I consider to be a fatal flaw in a continuous air patrol airplane carrying ICBMs, and that is, in the time period we are talking about it could be detected and it could be targeted not by other airplanes but by barraging nuclear missiles on it.

I would be concerned about that, irrespective of the design of the airplane. I have to say I have not looked at the design of the big bird.

Senator COHEN. As I understand it, you would put the B–1 in terms of priority over a hardened silo MX?

Dr. PERRY. Yes. I was categorical about my views on the superhardened MX. I was a little wishy-washy about the B–1.

Senator COHEN. Thank you, Mr. Chairman.

Senator WARNER. Senator Exon?

Senator EXON. Thank you, Mr. Chairman.

Doctor, I welcome you back again. I am delighted to have you back, with your freshness and your directness and the attitude that I think all of my colleagues have always appreciated.

Dr. PERRY. Thank you, Senator.

Senator EXON. With regard to hardening of these silos, I suspect that we eventually will recommend against doing that, because we don't seem to find any support for it outside of the immediate people close to the President.

One of the things that came up in recent testimony that intrigued me somewhat was the suggestion was made that if we did indeed harden these as protection for the MX, they would certainly give some degree of protection from Soviet SLBM's. Do you have any information to believe that the Soviets are so advanced in their technology that SLBM's would be a threat to our present holes? Are they anywhere near accurate enough that they could be counted on?

Dr. PERRY. I cannot conceive of why the Soviets would want to target our silos with SLBM's. As I understand their present capability, and as I would project their capabilities in the next decade or so, I don't believe that would be a serious threat to our silos, hardened, superhardened or not.

Senator EXON. You question whether or not we should maybe even go ahead with the MX if we were not going to put it in an MPS system of some type; is that right?

Dr. PERRY. I agonized over that and said on balance I would not go ahead with that because I don't believe we will come up with a survivable basing mode that is acceptable. I am opposed to basing that——

Senator EXON. Mr. Chairman, I am having a little difficulty hearing the witness.

Senator WARNER. We beg your pardon, Senator. It is our fault.

Dr. PERRY. Since I am pessimistic that we will get a basing mode that is both survivable and acceptable, I am opposed to putting a weapon that lethal in an unsurvivable mode, for reasons I have described in terms of hair-triggering the alert.

I would instead pour my resources into other directions I described to Senator Nunn, the possibility of where they would go.

Senator EXON. Moving on to the Stealth technology, in your view—I think I know what your answer is but I would like to have you state it again for the record—in your view, if we went all out with the Stealth bomber purchase, when do you think the IOC would be?

Dr. PERRY. Senator Exon, I do not think I am the best witness on that question. My detailed information is about seven months out of date, eight months out of date on that question. As of that time, I would have estimated that 1989 was a reasonable possibility, but I would not have bet my life on it, or even my reputation.

Senator EXON. What about all these options that we are considering today? Remind me again what your attitude was on using the FB–111 as an interim to the B–1 in our talk about leapfrogging from the B–52 to Stealth technology; have you ever studied that?

Dr. PERRY. The FB–111?

Senator EXON. Yes. You originally said we could fill that gap in between with the FB–111. If I remember the figure, it was somewhere between $5 and $7 billion of improvements in the FB–111?

Dr. PERRY. I was not very enthusiastic about that. For one thing, I was very skeptical about those figures. I thought it would cost substantially more than that, and it was an opportunity cost in subtracting those airplanes from the actual forces. I have no great enthusiasm for doing that. I don't think that they really provided an attractive solution to the problem and it was posed.

The problem, presumably was developed because our ICBMs were vulnerable to attack and if we were going to go for non-ICBM solutions, for offsetting that, then it seemed to me we had better programs that were already underway, namely, in the cruise missile, that could be accelerated instead.

We had then and we still have the option of converting not only the B–52Gs as cruise-missile carriers but also the B–52Hs as well, that would take you from a 2,000 cruise missile force to a 5,000 cruise missile force. That would be a pretty powerful response.

I also felt then and still feel now that we had the Trident II option and that option is really being pursued, I think, independently of the other considerations we are having.

Senator EXON. If we were not locked into what the Administration is now proposing, I suspect then that you would say that you felt that the interest of the United States overall security would best be served by proceeding as quickly as possible with the development of the MX missile in an MPS system, and go all out on the Stealth bomber; is that a fair assessment?

Dr. PERRY. I haven't advocated the MX and MPS system at this hearing because I have come to my own assessment that it is politically dead. I don't care to pursue—I haven't been trying to provide—the artificial respiration that might be necessary to bring it back to life. I might be wrong, but my assessment is that that would be an extremely difficult task. I have instead tried to concentrate, if it is dead, on what are the alternatives open to us.

Senator EXON. If it is dead—that is the basis for a follow-up question—if it is dead, and I respect very much the attitude that you have expressed by not playing sour grapes on some decisions that I think you and others had made, let me ask this question: Have you ever heard of the phrase, "window of vulnerability"?

Dr. PERRY. Yes, I have, once or twice.

Senator EXON. In your opinion, from what you know of the defense plans that were laid when you were there and from what you know of the defense plans that have since been announced with regard to our strategic capability, is it your opinion that the window of vulnerability is being closed or thrown open wider with the recent changes?

Dr. PERRY. I am having a difficult time answering that question, Senator Exon, because I had defined that phrase differently than is implicitly defined in the President's definition of the problem.

To me, the window of vulnerability applied to that time period after our Minuteman became vulnerable, before a survivable ICBM was deployed. That is how I understood the phrase.

Senator EXON. I think you were wrong on that. You are not wrong very often, but I think that was not the perception of Americans in general.

Dr. PERRY. I think it came to be regarded as a general deficiency of our strategic forces relative to those of the Soviet Union. I had always believed that original phrase was conceived to be related strictly to the vulnerability of the ICBMs. Relative to any assessment of that problem, I think that any assessment that our strategic forces are deficient and inferior to those of the Soviet Union must rest on comparing our ICBM forces, observing, first of all, that they have perhaps three times as many warheads in their ICBM forces as we have; but in any consideration of the bomber forces and submarine forces, ours is clearly superior by any objective evaluation.

To the extent that the window of vulnerability means our strategic forces are inferior to theirs, I think it is miscast. I simply don't agree.

Senator EXON. You think what?

Dr. PERRY. I think it has been miscast. I do not agree there is a window of vulnerability as so defined. I do agree there is a period of time that our ICBM's will be vulnerable before we can do anything about it. That is why I say it depends on what the definition is. I believed then, and I believe now, that the superior strength of our bomber forces, our cruise-missile forces which will be coming on line, and our submarine forces, over the equivalent forces in the Soviet Union is a reasonable offset to the Soviet ICBM force. That is why I don't accept the fact that our forces are inferior.

Senator EXON. My time is up. I want to say you are a scholar and a gentleman. Thank you for coming.

Dr. PERRY. Thank you, Senator.

Senator WARNER. One question before I turn to Senator Quayle.

You have undoubtedly studied the Administration's theory that fractionation would eliminate the MPS system as a viable option.

What is your rebuttal to that theory?

Dr. PERRY. I thought that the best way of solving that problem was trying to persuade the Soviets not to do it, and to a certain extent you try to do that. Fundamentally, you try to make it unattractive for them to do it by having a response. When we talk about the response of adding more shelters, response of going to BMD/MPS, it was the idea that that is not something that one ought to do, but you ought to have the option of doing it and clearly explaining to the Soviets you have the option to do it, so that they could see that fractionation was not an inviting alternative.

Now, given that it was equally clear to us and to the Soviets that that fractionation—

BMD race was not attractive to either party, then it probably would be possible to codify that view in some sort of treaty. I worded that in a roundabout way because I say in my judgment it never depended strictly on having a treaty; it depended on being able to create the conditions that were not attractive to the Soviets to fractionate.

If you had those conditions, you would probably get them incorporated in a treaty.

Senator WARNER. Senator Quayle?

Senator QUAYLE. Thank you, Mr. Chairman.

I would like to echo the sentiments of the Senators. This is the first time I have had the opportunity to meet you. You are a very outstanding expert as we qualify our witnesses these days and I have certainly enjoyed your testimony.

Dr. PERRY. Thank you.

Senator QUAYLE. You have stated that the B–1B would not be optimum for cruise missiles but would probably be the optimum in a non-nuclear conventional mode. If we didn't go ahead with the B–1B, what would our alternatives be on a conventional bomber in the non-nuclear mode you referred to?

Dr. PERRY. I had not come, myself, to a clear judgment on what the best approach to that problem would be. The clear alternative was between building a multipurpose airplane like the B–1B, which was both capable of doing the tactical war-fighting job, and as a cruise missile carrier, you end up with a compromise design and that is what the B–1B is. That is as opposed to building two separate airplanes, one is optimized to be a truck, a big bus, which carries the cruise missiles, and the other is optimized to be a fighting airplane.

I am not sure which of those two approaches is better, but whichever one, my feeling was that the need date for the airplane was not probably until the 1990s, rather than the mid-1980s. It has to do not so much with my judgment about airplane design as my feeling about this window of vulnerability question. My feeling is that the best thing we could do to strengthen our forces in the interim was pour on the coals on the cruise-missile program, that the Trident deployment, which is already underway, will maintain our forces adequately for the rest of the decade.

By that time, presuming that the ATB/Stealth bomber were available, then it would be the clear candidate for the fighting airplane, penetrating airplane, and in all probability I think you would look to an eventual replacement for the B–52 as a cruise-missile carrier, which is optimized to do that job. But the need date for an airplane just as a cruise-missile carrier is probably not until the mid-1990s.

The B–52, in my judgment, will be a perfectly adequate cruise-missile carrier at least until the mid-1990s.

Senator QUAYLE. Wouldn't you at some time have to have the Stealth bomber to fill the non-nuclear void problem after the B–52s? Would we need another airplane besides Stealth?

Dr. PERRY. I think you need one other airplane which you could optimize around the cruise-missile carrier, one other airplane besides Stealth. You might be able to get some further benefit out of that airplane as a hardened command and control airplane.

You are looking at it basically as a transport-type airplane.

Senator QUAYLE. For the cruise-missile carrier?

Dr. PERRY. Yes, but that has hardened features in it; it has to be designed from the ground up. We did consider several years ago adapting a transport airplane to this purpose and that turned out to be a loser. If you design an airplane and optimized it for a cruise-missile carrier with subsidiary role of a command and control airplane, it would look like a transport airplane that had some special features like the nuclear hardening.

Senator QUAYLE. Under the present strategic proposal that the cruise-missile carrier is basically the B–52 and the B–1B, you are saying if we would not go for the B–1B—and that is sort of a hypothetical that I think a number of us are trying to think through—if we don't get it, where will we be going? I raise the question, what will be the follow-on tactical bomber, assuming we have Stealth as a strategic, would we go to a much lesser plane than the B–1B as a follow-on to the B–52, and is the B–1B too much, the way it is proposed, to basically serve in that non-nuclear force?

Dr. PERRY. That is pushing me a little farther than I was prepared to go in judgment a year ago when I was working the problem intensely. My estimate at that time was that the appropriate solution would be to bring the ATB or Stealth bomber on as a bomber which could serve both the strategic penetrating and the tactical bomber roles ,and to go to a second airplane which was optimized around a cruise-missile carrier and possibly have command and control features, the first airplane, the Stealth bomber, coming on line about 1990, and the second airplane, which is the transport-like airplane, coming on line about the mid-1990s.

I thought that was suitable for the need date for the airplane and it has a further advantage of not bunching together the development costs so that they all fall in the same period.

Senator QUAYLE. Would Stealth then be an optimum non-nuclear bomber?

Dr. PERRY. Yes, I think so.

Getting back to the comment I made earlier to Senator Nunn, I think that in the 1990s, even in a limited war environment, we are going to have difficult air defense problems. One will be happy to have an airplane which is difficult for an air defense system to handle.

Senator QUAYLE. There have been arguments in favor of B–1B that we need a two-bomber force, we need two contractors for competition; is that a valid argument? Would there be a concern if we didn't have a two-bomber competition as opposed to the B–1B/Stealth competition?

Dr. PERRY. Yes. I have tended to be a strong supporter of competition. In the cruise missile program we sponsored two competitive contractors right up to the production decision on the missile. One could do the same thing with the ATB or Stealth. One has that option of doing it. It is expensive. Or you could get the competition by having two different contractors building two different airplanes.

The problem with the second one is that it leads you to more difficult logistics on supply and unit cost of the airplane. You lose the advantage of a learning curve; you have the problem of two separate logistics on supplies to keep.

I think you want to have a pretty good argument beyond competition for doing that. You have to be able to convince yourself that the two different airplanes have the distinguishing features you want it to have.

Senator QUAYLE. Do you think it is a factor that should be considered? There is a lot of talk in Congress and the public about cost overruns. If we go with one contractor and one bomber, which apparently we would do if we go with the Stealth, then there would be this so-called competition argument that is raised, and it has been raised a couple of times. Your successor brought it up.

Dr. PERRY. I feel competition is very important. There are various ways of achieving it. We did it one way in the cruise missile program. That cost the Government several million to run two contractors in parallel. I believe today that was a good investment. It gave us a better program and ultimately—I can't ever prove this but I believe the total program cost turned out to be less.

We considered in the cruise missile program maintaining two contractors in the missile production base. We debated that back and forth.

Senator QUAYLE. Could you do it with Stealth?

Dr. PERRY. We could do it with Stealth if we wanted to.

Senator QUAYLE. It would be very expensive?

Dr. PERRY. It is more expensive on an airplane than a missile, because for an airplane the development cost is a higher percentage of the total program cost than in the case of the missile.

Senator QUAYLE. Is there any good second option on MX? You have gone through this with other Senators here. Is there any good second option, in your opinion?

Dr. PERRY. I don't know of any and I have wasted a good many years of my life studying that problem. More importantly, there have been a lot of good people that have spent a good many years looking at alternative ways of survivable basing of ICBMs. I don't believe there will be anything new under the sun.

Senator QUAYLE. Do you think there will be any shift in the strategic balance of any significance if, in fact, we basically discard MX and obviously maintain the Minutemen and Titans that we have and accelerate Trident II and the cruise missile program and make the determination dependent on how fast we get an ATB? Would there be any shift?

Dr. PERRY. I don't think the MX as proposed adds that much to our military capability, even if you imagine it would survive. We are looking at 6,000 warheads in the Soviet ICBM force and 2,000 in ours. After deploying MX, we are looking at 6,000 and 2,000. Instead of two to one, we are looking at three to one.

Senator QUAYLE. Basically, we would be emphasizing the diad, so to speak, rather than the triad. We would still have the land-based missile but not in any kind of modernization mode?

Dr. PERRY. The Minuteman is a formidable force, the Minuteman III in particular. It probably will be into the 1990s before you have to start worrying about deterioration of the rockets and you have to start replacing rockets or replacing with a new missile.

Senator WARNER. Senator Quayle, your time is up. I think the Senators would like to have one more question.

There will be a good deal of debate on the possibility of the road-mobile system which, as I understand it, would involve the design of another missile that we don't have in inventory or on the drawing board now.

Do you think that is a viable option that we should spend much time considering?

Dr. PERRY. I would like to differentiate between two different kinds of road-mobile missiles. One is a system where you keep it at its base and then on an alert you scramble it, much as we do with the B–52s today.

Senator WARNER. And as done with the Pershing?

Dr. PERRY. That system, I think, would be ineffective, because of the time it takes——

Senator WARNER. I missed that.

Dr. PERRY. It would be ineffective. It takes too long for the trucks to drive away and the trucks are too soft. If you take the combination of the slow speed of the trucks and the relatively softness of the trucks, no matter how hard you try to make them, you end up with requiring several hours of alert, which means, in effect, you have no capability against a surprise attack.

So, I tend to rule out the road-mobile system which is contained at the base because it does not provide protection against attack.

On the same basis, the Pershing system

and the GLCM system, INF, do not either. We never had any illusions that they would do that.

The alternative for a road-mobile system is like continuous airborne patrol, but this would be a continuous highway patrol where you have trucks driving the missiles up and down your interstate highways continuously. Every time that proposal has come to me, I have turned it down and I would not recommend that program, because I think sooner or later you are going to have an accident with one of those trucks. That is not going to cause a nuclear explosion—I don't want to overdramatize it—but the rocket itself is a high explosive and the possibility of that rocket exploding would be very high and the probability then of splattering nuclear material over the countryside becomes very high.

So, what you have a potential of is a Titan-type accident on the public highways, and not just one of them but the possibility of several of them.

For that same reason, we don't fly B-52's on airborne patrol with nuclear bombs in them as a matter of routine. We simply want to avoid the possibility of that kind of accident. I think that possibility is relative; it is not a remote possibility. I would not recommend such a system.

I will say on the other side of that, that of all of the systems we looked at, it is one of the cheapest systems you can envision. The cost per warhead is low because you are not putting a lot of money into basing.

Senator QUAYLE. The next qnestion is a tough one and you can politely say, "Mr. Chairman, I decline." I have spent a modest amount of time in the defense community, as you have. There is a fraternity of thoughtful people who are not influenced by political decisions or parties or anything else. They simply try to make decisions on defense based on fact and what is best for the country.

I put you squarely in that category as I have come to know you for over three years. Nevertheless, today you have probably more effectively than any other witness discounted the MX basing options which have been enumerated in the President's proposal and have straightforwardly indicated that you feel that if we go ahead with that option, with the interim hardened site and so forth, it would add very little to our overall deterrent capability.

Having stood back now in your present position in private life and examined that decision and undoubtedly talked to a number of your colleagues—and I would presume having had some access to the Townes report analysis, the question is simply, how in good conscience could men arrive at that decision based on facts? You characterize it as being a political one. I do not know whether you intended to indicate it is your feeling it was guided by political considerations, as opposed to factual. Is there a segment within your fraternity of scientific advisers who can be supportive of any one of these options?

Dr. PERRY. I think the arguments for that decision are not technical but that does not make them invalid. Calling it a political decision is not a derogatory term either. Political means accommodating diverse sets of views.

Senator WARNER. You mean political in terms of states' interests and geographic interests?

Dr. PERRY. Let me state what I think are arguments I could adduce in favor. One of them, Senator Cohen has already hinted at, that we might believe it is important to do this so as to minimize the probability of unraveling the TNF decision in Europe. I think that is a reason which ought to be considered. How much weight you want to give to it is the issue. It is a substantial consideration.

A second argument is a perception argument. We have made much over the last few years of the vulnerability of Minuteman and do we want it to look like we are just walking away from that problem. This has to do with international political perceptions; it is not domestic political; it is geopolitical considerations.

The third argument you can give for it is that notwithstanding my gloomy assessment, maybe we will, in fact, a year or two or three from now, come up with a basing mode which has eluded everybody so far, which is both survivable and acceptable.

Those are the only three reasons I can adduce for doing the program, and I think they are substantial reasons which ought to be weighed.

Senator NUNN. What do you think of the fourth reason which has been given, perhaps not directly and at least in conversation, that, look, if we in effect put a hard target kill capability on land, even though it is vulnerable, it would threaten the Soviets' ICBM force to the extent that they would be more likely to come to the negotiating table and make significant reductions? In other words, it is sort of the Reagan Administration argument that would go along the line that you are arguing, that you are creating the conditions under which you would probably bring about some form of codification of an agreement?

Dr. PERRY. I would not mind that argument as a bluff, but I would hate to follow through on the bluff, for the reasons that it accents this hair trigger which I described earlier. If you threaten to do it and not have to do it and get some political benefit out of it, get some quid pro quo out of it, I think that is a pretty outside chance, but I guess you could make a case for that.

Senator NUNN. In other words, if it is going to work, it ought to work quickly, so that we get some codification quickly and be able to back away from the hair trigger?

Dr. PERRY. Yes. I don't really have any great hopes that would be an effective tactic. I cannot deny the possibility of its being an effective tactic.

Senator COHEN. One thought occurs to me: In addition to forcing, possibly forcing the Soviets to the bargaining table, I suppose you could argue that the Soviets being as equally concerned as we are about the possibility of a nuclear attack, might be encouraged to go to a submarine-launched program. I suppose you could stretch that out one step further and say they not only would go to the bargaining table but they also might get away from a land-based system. I suppose that could be a logical assumption.

Dr. PERRY. It seemed to be the argument for putting a hard target, substantial hard target kill capability in the MPS silos, is that you wanted to push the Soviets in the direction of a survivable system and push them to the negotiating table.

I have less enthusiasm for that logic when the missile is vulnerable.

Senator COHEN. Whatever is done on the MX and the B-1, I think you advocated that we go forward as quickly as possible to an advanced BMD program; is that correct?

Dr. PERRY. Yes.

Senator COHEN. As I recall, during the Carter Administration, in addition to the MPS system, you also left open the possibility—because of the fragmentation problem which may or may not have been solved by SALT II—of having MPS in conjunction with BMD sometime in the future?

Dr. PERRY. Yes.

Senator COHEN. I would ask you, would it not be equally possible to argue that if this Administration is permitted to go forward now with BMD and if this Congress is going to insist that we leave open the option of deceptive basing mode for the MX, couldn't you, in fact, come to the very same ultimate conclusion that the Carter Administration wanted, only in an inverse way? You were going to go MPS plus BMD. It may be that we go BMD plus MPS and end up in the same exact situation.

I know you are cynical about that possibility, but if there is enough incentive and impetus coming from this side of the debate, saying we don't like a static or fixed based silo for the MX, what we are saying is we are prepared to give you the BMD, accelerate it, and we are also insisting that you have MPS and not foreclose that option, don't you ultimately come out in the same place?

Dr. PERRY. No. The sequence is different. It leads you perhaps to different reactions from the Soviets. I was never in favor of deploying a BMD system. I was in favor of having the capability so that we could use that capability to persuade the Soviets not to fractionate, not to challenge, our MPS system.

To me, the BMD system is something which you have maintained a vigorous R&D, you have it in your pocket, you threaten to use it. If you do that in reverse sequence, it follows that strategy.

I would hope that we could avoid deploying a BMD system that, it seems to me, is going to trigger a series of reactions from the Soviet Union, certainly among others, the deploying of a BMD system, acceleration of the whole BMD activity.

It is not clear to me that in that chain reaction which is set off that we are any better off.

Senator COHEN. I am not sure whether you call it BMD or air defense system, what the Soviets are going to do. I think they are advancing a very widescale, sophisticated air defense system, where we have very little, if any, in that regard. I am not sure that that is a legitimate concern, that if we go to BMD they are going to go too. I think they are headed there, whether you call it BMD or air defense system. They are far advanced with any system than we are undertaking. If we go BMD plus option for the deceptive basing mode, not the most ideal, not something I would advocate, but faced with the choice of cancelling it or leaving open the option, don't you still have two possible consequences: Number one, they may decide this is the time to start negotiating, as you would like to see; it may force them into a deceptive basing mode other than their current SS-18 system?

Dr. PERRY. Yes.

Senator WARNER. Senator Exon, do you have one question?

Senator EXON. Yes, I have two questions, Mr. Chairman.

Senator WARNER. You are petitioning for two questions? Go ahead.

Senator EXON. Doctor, would you give the committee your evaluation as to the pros and cons of the B-52 versus the B-1B as a cruise-missile carrier, as an effective cruise-missile carrier? What are the strong and weak points of the two, and how much difference is there between those two bombers as far as the cruise-missile carrier efficiency up to, let me say, 1995, to choose a date?

Dr. PERRY. I think that in 1995 either of them will be quite adequate as a cruise-missile carrier. The primary advantage that the B-1B would have over the B-52 would be a superior escape capability, the ability to escape from its base; therefore, if you were worried about an SLBM attack on the bomber bases, you would weight that as being an important capability.

As I indicated earlier, I don't believe that is a significant worry and therefore I have tended not to weight that very high in my judgment. I think that would be a major difference between the two.

Senator EXON. One last question: I keep getting back to the MX basing mode because the change in the basing mode of the MX missile—

Dr. PERRY. Excuse me, Senator. I should make one other point: If we are going on as late as 1995, we might imagine that the Soviets would try to reach out with an air defense and attack the carrier airplane instead of the missiles.

Senator EXON. In that case, the B–1B would be superior?

Dr. PERRY. In that case the B–52 really has only one good alternative, which is backing farther away, which means you now have the burden of making the cruise missile longer range, which we can do. Whereas, with the B–1B you would have two options: either make the cruise missile longer range or fight it out, so to speak.

Senator EXON. Or allow it to go in closer to the target?

Dr. PERRY. Yes.

Senator EXON. Now, the Chairman, I think, said something to the effect that he assumed that you had seen the Townes report. Have you seen the Townes report?

Dr. PERRY. I have not seen the full and complete version of the Townes report, no. I think I know the essence of what is in it.

Senator EXON. I am trying to find out. Can you tell me?

Dr. PERRY. As I say, not having read the report, I don't think I am really a good witness on that.

Senator EXON. I took it from the question that possibly the Chairman had seen the Townes report. Has the Chairman seen the Townes report?

Senator WARNER. The Chair has not.

Senator EXON. I would hope that we keep pressing for that, because if we make these rather important decisions that we are asked to make in the next two weeks, if we merely close the door on the MPS system, as the good soldier has just testified he is assuming here today, I still think that that is a very critical decision and affects possibly whether we should or should not go to this whole series of weapon systems, including the B–1.

Thank you.

And thank you, Mr. Chairman.

Senator WARNER. Thank you.

Senator Quayle?

Senator QUAYLE. I have one question: If we go ahead with the two bombers, the B–1B and the ATB, what kind of risk would we incur by sliding the IOC and FOC of the ATB by going forward with both and not accelerating our efforts on the ATB?

Dr. PERRY. I am not sure I understand the question.

Senator QUAYLE. Do we run a risk of deferring any kind of implementation of IOC of the ATB by going with two bombers, the B–1B and the ATB, rather than cancelling the B–1B and jumping to the ATB? Would we run the risk of sliding?

Dr. PERRY. I don't think you are running a technical risk in that. The things which cause one program to slip are independent to a certain extent that cause another to slip. I think we have an adequate industrial base to do both of them at once.

I think you run into one problem, and you can assess that problem much better than I, which is competition for funds. The issue is as simple as that.

Senator QUAYLE. You don't see any technological problems?

Dr. PERRY. No.

Senator WARNER. We will now go into a brief closed session.

(Whereupon, at 5:22 p.m., the subcommittee proceeded in executive session, under separate transcript.)

Mr. HOLLINGS. Now, we saw the B–52 plane fly all the way from North Dakota to Egypt, drop its simulated bombload and come back. A very good plane.

Dr. Perry says:

I was disappointed to see the B–52 improvement being dropped. I think that is poor economy whether or not you proceed with the B–1.

Going further into Dr. Perry's testimony he says:

It also has, according to the best information that was available to me when I was in the Defense Department, probably a useful life of another 10 or 15 years minimum, based on the Air Force's follow-the-fleet program of estimating. We think of it as an old airplane, but we forget about the fact that it does not get flown very often; while it is an old airplane, it does not have many miles on it, so to speak, and it still has a long, useful life.

But to really get operational utility out of the airplane, one has the replacement of the old, unreliable electronics in it. That is what the B–52 improvement is.

You see, it is not totally the airframe and the other parts. It has older electronics in it and you need a new electronics package.

That is what the B–52 improvement is, so whether or not you proceed with the B–1 program, the B–52 has very fine capability and it should be maintained, and whether it is maintained in the strategic forces or the conventional forces can be determined, but in terms of its range, payload, capability, it has it; it has it better than any other airplane that is in the force today, and it will maintain that capability for another 10 or 15 years if it is properly maintained.

Now back to the CIA judgment which started this particular debate, quoting my distinguished chairman from Alaska. There was no difference between now and 1990 with respect to the penetration capability of the B–1 or the B–52. Now that is ground one. So you do not have to jump up and say we have to level with the people and level with your own conscience.

Nobody contemplates the B–52 as a penetration bomber after 1990. So there we are with that particular record. I think that should be included there.

We are trying to draw the debate to a close. I think the distinguished Senator from Massachusetts wishes to speak. If there are other Senators that wish to be heard, I wish they would please join us so that we can get to a final vote and perhaps pass this Defense appropriations bill this evening.

I say to the Senator from Alaska, the chairman of the committee, that we are waiting for the Senator from Massachusetts momentarily. That is the last speaker I know of on this side. I am saying this so other Senators may hear.

Does the Senator have any other speakers on his side?

Mr. STEVENS. I say to the Senator that we are awaiting the distinguished Senator from Mississippi, who has been at dinner and who does want to make a statement. The Senator from California (Mr. CRANSTON) was also waiting.

Mr. HOLLINGS. Let me yield to the Senator from California.

The PRESIDING OFFICER. The Senator from California.

Mr. CRANSTON. I thank my friend from South Carolina.

Mr. President, I think my colleagues are well aware of my strong and continuing support for a manned bomber program. My most recent initiative to insure that we have an effective, modern, manned bomber was last year when I, with Senator GLENN, sponsored an amendment instructing the Department of Defense to proceed with a strategic, multirole bomber. I was very pleased that the Senate passed this amendment and that it became part of the defense procurement authorization bill for fiscal year 1981.

This year we are considering the proposals that are the result of this amendment—the President's proposal to proceed with the B–1B bomber and concomitantly to develop the advanced technology bomber (ATB). I support this program. While we have considered the issue of a new manned bomber program in the Senate many times in recent years, I would like to reiterate why I support it.

Manned bombers continue to play an essential role in our strategic triad: Land-based ICBM missiles, submarine-launched missiles, and cruise missile and bomb-carrying aircraft. The manned bomber is a vital part of this package. Only a manned bomber can be recalled once it takes off on its mission; a missile cannot. Once a missile is launched—even if by accident or miscalculation—the die is cast forever. In the nuclear age that is a terrifying rigidity. Because manned bombers are slow compared to missiles, they cannot serve as first-strike weapons. Their production is, therefore, far less threatening and less potentially destabilizing to United States-Soviet relations. It is also a weapon system that is easily verifiable with respect to arms control agreements.

As part of his strategic package, President Reagan has proposed to modernize the air-breathing leg of the triad. I strongly support the President's plan. President Reagan proposes that we proceed immediately with the production of the B–1B bomber—a derivative of the B–1 which was canceled in 1977—in order that we have a strategic, multirole bomber by mid-decade.

The initial operating capability (IOC) of the B–1B will be 1986. The B–1B will be a significant addition to our strategic defenses. The B–1B plane is a much better plane than the one that was canceled in 1977. The B–1B has a vastly improved radar cross section compared to the B–52—only one-hundredth of the cross section of the B–52 and only one-tenth of the cross section of the first B–1 model. The reduced cross section makes detection by enemy radar much more difficult. The new B–1B also has the "state of the art" technology with respect to avionics so that the electronic countermeasures should enable the B–1B to penetrate Soviet air defenses well into the 1990's. The much vaunted "look down, shoot down" technology may not be as great as some experts have anticipated. And, even if it is eventually perfected, the development time may be very long and, meanwhile, new countermeasure may frustrate it.

The B–1B has much better prelaunch survivability because it can take off

faster than the B–52's. It also can take off on shorter runways which means that it can be dispersed to more bases throughout the United States than the B–52 which requires special long, heavy-duty runways. Thus, the B–1B will be less vulnerable to a surprise Soviet attack. The B–1B will also have a nuclear hardness capability—a capability which the B–52 does not have. Compared to the aging B–52's, there is no question that B–1B significantly improves our triad.

The President has proposed that while we proceed immediately with the B–1B we also proceed with development of the advanced technology bomber (ATB). Some question why we need the B–1B if we are also going to have the ATB—the so-called Stealth plane.

We do not know when we will have Stealth. The B–1B, which we will have beginning in 1986, will perform the task of our manned penetrating bomber until and when the ATB is ready. Presuming that we eventually do produce Stealth, the B–1B will then complement the ATB by performing the role of a cruise missile platform and a conventional bomber.

The real problem is that the ATB is in many respects still an unknown quantity. I do not believe that we should entrust our national security to an unknown quantity. We do not know what problems we will encounter with the ATB since it is still a paper airplane. Pushing the ATB program too fast will be both costly and risky. Dr. Richard DeLauer, Under Secretary of Defense for Research and Development, stated before the Senate Armed Services Committee this fall:

> The (ATB) technologies involved are exciting and promising but because of the quantum leap in technology and the consequent uncertainties involved, there would be a high degree of program risk in concentrating solely on an ATB. Under these conditions I cannot have the same confidence in ATB cost and schedule objectives as I do with the B–1 and I believe that there would be substantial risk in attempting to accelerate the program. In my judgment, the cost and schedule risks associated with the ATB would be about twice that of the B–1.

Time and again we have complained about other weapon systems where there has been inadequate testing which drives up the costs and where we end up with a system that we do not want. Yet, if we push too hard on the ATB now that is exactly what we will get—a costly plane which may not meet our needs. We are proceeding with the ATB as fast as is prudent. To go faster will jeopardize the program and will be inefficient and unnecessary. We also risk not having a manned penetrating bomber.

Given the history of weapon systems, it is inevitable that we will experience delays and setbacks with the ATB. But there is a clear need for a manned bomber now. And with the problems that we are experiencing with our efforts to modernize the land-based leg of the triad—finding an acceptable basing mode for the MX—it is even more important to move ahead with the modernization of the bomber force now.

General Ellis, the recently retired head of the Strategic Air Command, testified to this effect before the Senate Armed Services Committee. He went on to say that "given the other elements of the President's program there would be a significant shift against the United States in the strategic balance in the latter part of the 1980's if we did not go ahead with the B–1B."

The B–1B is the only major part of the President's strategic program that we will have by the middle of this decade. The B–1B's IOC is 1986. The D–5 missile for the Trident submarine has an IOC of 1989. The ATB is projected to be ready sometime in the early 1990's. The MX missile may be ready by 1986 but we will at best have an interim basing mode for it.

The issue then is not whether we should have two bombers simultaneously. We will not. The B–1B will be the penetrating bomber for the mid-1980's and beyond until the ATB is ready. With the B–1B, we can proceed in an orderly and efficient manner with the ATB until that time. With the B–1B we will not have to depend on such an uncertainty as "early 1990's." When and if the ATB come on board, the B–1B will then become the complement to the ATB as a cruise missile platform and as a conventional bomber. We must have these capabilities and the B–1B will be an excellent weapon system for these purposes.

With both the ATB and the B–1B we will have a strategic combination which will present serious problems for Soviet air defenses and will force the Soviets to expend considerable resources to defend against this combination. And it is important to remember that it is the combination which requires the Soviet Union to build defenses for both rather than being able to concentrate on one or the other.

I would like to address the two points for which the B–1B is being criticized. First, the B–1B's critics claim that it will not be able to penetrate long enough to make it a useful weapon system. The Secretary of Defense, the head of the CIA, the Air Force Chief of Staff have all stated that the B–1B will have a penetrating capability well into the 1990's. The mid-1980's to the mid-1990's is when we will need the B–1B as a penetrating bomber since the B–52's will not be able to fulfill the role and the ATB will not be ready. The B–1B will be able to penetrate when we need to have that potential capacity. Thereafter it will fulfill the roles I have already outlined.

The second criticism is that the B–1 is not worth the cost and we should wait for the ATB. On the surface this seems to be a very tempting argument. But as I have indicated, we do not really know when we will have the ATB. This argument also neglects the important fact that if we do not have the B–1B we will have to have something else. Whatever that "something else" is, it will also cost money. For instance, if we maintain the B–52's and the FB–111's, that will be costly. The administration estimates that it will cost almost as much as a new bomber program. Or if we proceed only with the ATB we will have to buy more of them. The point is that it will cost money, a great deal of money, to upgrade our strategic forces. To pretend that if we do not spend the money on the B–1, we can save all of it, is simply not true.

The administration has taken extraordinary steps to control the cost of the B–1B. The Deputy Secretary of Defense and the Undersecretary of Defense for Research and Development have established controls to insure that the program does not exceed its $20.5-billion budget, in constant fiscal year 1981 dollars. No change to the presently planned B–1B acquisition program and no major changes in the configuration will be made without the approval of the Deputy Secretary of Defense. In addition, particular attention will be paid to limiting the cost growth in areas such as the airframe, support equipment, initial spares, and avionics.

Weighing the cost on balance with what we gain, I believe that the B–1B is worth the price. Proceeding with it will insure that we will have a manned strategic bomber that will be capable of performing multiple roles, and that we will have it before this decade is over. It will have a useful life well into the next century. It will provide an essential complement to our air-breathing leg of the triad.

Mr. President, I believe that the program proposed by the administration makes sense. We need to move immediately with the B–1B while we develop the ATB. I will support this program and I urge my colleagues to do likewise.

Mr. KENNEDY addressed the Chair.

The PRESIDING OFFICER. The Senator from Massachusetts.

THE B–1 ISSUE AND AN EFFECTIVE STRATEGIC DETERRENT

Mr. KENNEDY. Mr. President, I oppose the B–1 bomber. America's national defense requires more than a $40 million exercise in voodoo aeronautics.

Throughout this debate we have considered the vital issues of world peace and national security. In each action we take and each decision we make, we must constantly keep in mind these fundamental questions we face: Are we strengthening our defense capabilities in the areas of greatest need? Are we increasing the prospects for international stability and reducing the risks of war? Are we spending tax dollars wisely in light of both our military priorities and our domestic needs?

Advocates of the B–1 bomber have failed to answer any of these questions. How can it possibly be worth up to $40 billion to build and deploy a plane which will be obsolete the day it leaves the assembly line? The proponents have not made a credible case that the B–1 will ever penetrate Soviet air defenses, let alone reduce the risks of war with the Soviet Union or any other major adversary. They have not explained why we should squander billions on a dubious new bomber, when our Armed Forces lack the necessary training, ammunition, and equipment to fight effectively, whenever and wherever they are needed in the world.

In fact, advocates of the B–1 are weakening the consensus which our country needs for a prudent and effective nation-

al defense. By wasting billions of dollars on a weapons system we do not need, they raise doubts about our priorities and commitment to our defense program as a whole.

This is why I am proud to cosponsor the amendment, offered by Senator HOLLINGS and Senator LEVIN, to transfer funds from the B–1 to a variety of defense programs important to the readiness and modernization of our military forces. A vote for this amendment is a prudent and effective national defense. It is a vote against military waste and for military strength. It will enhance the readiness of our military forces by restoring funding for Navy steaming days, by providing funds for ammunition for the Army and by restoring the proposed reduction in Air Force and Army manpower levels. It will also provide funding for acceleration of the Stealth bomber and other important modernization programs.

I believe these programs represent a much better use of the funds in this bill than those allocated to building the B–1 bomber. At this time of necessary budget restraint and important national security requirements, production of the B–1 bomber will divert valuable defense resources from other, more critical programs, including the development of the Stealth bomber and the strengthening of our conventional military forces.

Mr. President, I am committed to a strong nuclear deterrent, but a resurrected B–1 is the wrong bomber at the wrong time. Production of air-launched cruise missiles for our B–52 bomber force provides a far more effective means to strengthen the air leg of our strategic deterrent until the Stealth technology comes on line in the early 1990's.

Proponents of the B–1 ask us to spend up to $40 billion on a bomber which is unlikely to penetrate Soviet defenses beyond this decade. As former Defense Secretary Harold Brown stated in his fiscal year 1982 annual report, "Our B–52 aircraft equipped with air-launched cruise missiles will be effective well into the 1990's. By this time, the Stealth bomber will be available."

In its haste to gain congressional approval of the B–1 bomber, the administration has contradicted itself repeatedly and has left important questions unresolved.

First, the true cost of the B–1 program remains unknown. On Ocotber 5, Secretary of Defense Weinberger stated, "The B–1 would cost $19.7 billion." Then his Undersecretary of Defense for Research and Acquisitions testified that, "The B–1 would not cost more than $20.5 billion. At the end of October, Secretary Weinberger learned from his cost analysis improvement group that the B–1 program would cost up to $28 billion. And, on November 6, the Congressional Budget Office reported that the B–1 program would cost $39.8 billion.

Mr. President, the American people expect us to control Government spending and to use their hard-earned tax dollars wisely and effectively. They expect us to pay for real military strength, not for military white elephants. How, then, can Congress justify paying for an obsolescent bomber program, whose cost estimates have already doubled and whose true cost remains unknown?

Second, we have no assurance that even the advanced version of the B–1 will be able to penetrate the increasingly sophisticated and extensive Soviet air defenses. The administration claims that the B–1 would be able to do so well into the 1990's. Yet, there is ample reason to doubt that the B–1 could serve effectively beyond this decade.

For example, Mr. President, the Soviets are developing new missiles which pose a threat to the B–1 and which are expected to be deployed by the mid-1990's. These missiles could make the B–1 obsolete before it got off the production line. As Dr. William Perry, then Under Secretary of Defense for Research and Development, explained in 1979:

> The B–1 depended for its penetration on high speed and low altitude operation. In my judgment, the air defense system that is now being developed in the Soviet Union, which includes look-down shoot-down interceptors, would render that operation very hazardous.

In light of the serious uncertainty surrounding the B–1 program, the alternative of B–52's equipped with air-launched cruise missiles and vigorous development of Stealth offers a clearly superior means to insure we deploy an effective bomber force.

It is true, Mr. President, that our B–52 aircraft are aging and that they no longer are dependable for penetrating Soviet airspace. But our B–52's can be deployed outside the Warsaw Pact, and launch their thousands of cruise missiles reliably and effectively against Soviet targets. With their small radar cross-section and capability to fly close to the ground, these missiles can fulfill their missions much more cost-effectively than the B–1 bomber. As former Secretary Brown has recently written, "ALCM's will be able to penetrate the same defense with much more confidence than the B–1."

By December 1982, we will have 15 B–52's carrying 12 ALCM's apiece. By 1989, we will have 151 B–52's equipped with cruise missiles, amounting to over 3,000 highly accurate and nearly invulnerable warheads capable of striking targets within the Soviet Union.

Finally, the development of Stealth technology holds out the promise of a truly effective penetrating bomber by the late 1980's or early 1990's. Instead of squandering valuable defense resources on the B–1 and running the risk of underfunding Stealth, we should concentrate on develvoping a technologically innovative and combat-capable Stealth bomber.

In sum, Mr. President, it is a serious mistake to revive the discredited and extravagant B–1. As Congress continues to face the challenging task of controlling the Federal budget, we cannot afford to waste the scarce resources the B–1 will consume. And we cannot afford to shortchange the other pressing conventional and strategic military needs of our Nation.

Today the Senate is faced with a clear choice over the future direction of American defense policy. Are we going to build a bomber which will be effective in its primary mission for only a few years. Or, are we going to assure that our conventional forces are combat ready; that programs important to the mobility of U.S. military forces, such as the KC–10 air refueling tanker, are deployed; and that programs which are important to the future effectiveness of the U.S. nuclear deterrent, such as the Stealth bomber, receive adequate funds?

Mr. President, I believe the choice is clear. If Senators want to send a clear and convincing message to the Soviet Union and to all nations that America is serious about strengthening its military forces, then they will vote to transfer the funds designated for the B–1 into programs that will truly enhance our national defense.

Mr. President, I urge my colleagues to support that amendment.

The PRESIDING OFFICER. The Senator from Mississippi.

Mr. STENNIS. Mr. President and Members of the Senate, I certainly shall not detain the body but a few minutes.

We really had an excellent debate on a very intricate and difficult question, Mr. President, the subject matter of which is of amazing importance. If we accept the fact that there is value in our deterrent strength with reference to the possibility of having intercontinental ballistic missiles fired at us and our homeland—if we accept that fact just for a deterrent effect, then we cannot afford to take the chance of tying us down on money affairs. We cannot afford to take the chance of letting an old bomber play out before we have completed its ultimate successor; that is, the successor aircraft for the last part of this century.

When we get down to counting the years under consideration, no one can say with accuracy how long it is going to take to perfect and deploy this new bomber that we have referred to by various names, but it is the new advanced technology bomber. Who can say, be careful, do not ever try to count even the years that it will take, the stops and starts, the steps that fail and have to go back and find another way that goes with the building of these intricate aircraft?

You might predict the time that the first form of a model will be completed, but you are a long, long way then from getting these intricate high-pressure, high-powered, amazing pieces of machinery, I call them, ready for use in the field and development and use in the hands of our men to carry out their ultimate purposes.

It does not worry me much, Mr. President, whether the Secretary of Defense is right on the mark or off by 2 or 3 years about how long it is going to be before the new bomber can come in or how many years the B–1B can be of practical service. I have heard the testimony all these years and I know no one can be accurate. It is just a matter on which we have to play as safe as we possibly can.

Those are the points that led me, Mr. President—I did not want to have to reach this conclusion. I did not want the B–1 bomber stopped back when it was. I remember very definitely the very minute we took it out of the bill, but left the money in there for research and de-

velopment and it has gone on for these 4 years—1977 to 1981. And we got the benefit of that R. & D. But I do not have any doubt now that we have to play safe with that and go back.

Furthermore, Mr. President, we certainly do want definite, major parts of a plan that had been devised by the President getting ready to go first through negotiations and then finally, the meeting place itself to try to get an effective agreement that can be put under surveillance so each side can tell whether the other is obeying it.

I have reference to the control and the reduction and the limitations upon these deadly weapons that can now, no doubt about it, be enough to blow up the world, so to speak, and destroy half or more of our population.

I do not want any doubt, any doubt whatsoever, or uncertainty, nothing less than the positive position that Congress is behind him, the people are behind him, and even though the cost is exorbitant, terriffic, more than we like to bear, that we are going to do whatever is needed to back up that position.

I believe with confidence in it. This debate has been, I say again, a tremendous contribution to the understanding of the membership, the understanding of our people, the understanding of our allies as well as our adversaries. I am very proud that we had this debate on this bill.

I yield the floor, Mr. President.

The PRESIDING OFFICER. The Senator from Colorado.

Mr. HART. Mr. President, I strongly support the amendment offered by the Senators from South Carolina and Michigan.

Mr. President, there are two basic aspects to the B–1 issue: The B–1 itself and the opportunity costs associated with its production.

If we look at the B–1 itself, we see an aircraft which reflects an incorrect approach to combat effectiveness. The essence of success in war is not throwing strength against strength, but throwing strength against weakness. The B–1 throws strength against strength. It must fly head-on against one of the strongest elements of the Soviet military: Soviet defenses. Air defense is so important to the Soviet Union that they have a separate service, the PVO–Strany, dedicated to the air defense mission. That "service" has 550,000 men in it—about the same number in the entire U.S. Air Force.

The B–1 must throw itself directly into the teeth of the PVO–Strany. It attacks the Soviet air defense radar with electronic countermeasures in the same general way bomber offenses have attacked bomber defenses for decades. The Soviets have been preparing themselves to counter it for many years. By the time the B–1 is in service, the Soviet defenses will be ready and waiting. An attack by the planned B–1 force against those defenses will be an aerial equivalent of Pickett's charge at Gettysburg.

It is not surprising, in the face of this situation, that the Secretary of Defense testified the B–1 might only be able to penetrate Soviet air defenses for a few years. Indeed, the Secretary stated it might not be able to penetrate those defenses after 1989 or 1990. Since the B–1 will not actually enter operational service until 1987, it might be viable, in view of the Secretary's words, for as little as 2 years.

Can the Senate visualize itself buying new tanks for the Army, at a cost of, say, $3 million each, after a Secretary of Defense testified the tank would be viable for only 2 or 3 years? Can it even see itself approving funds for a new rifle after testimony to the same effect? I doubt it. But the Senate is now being asked to approve 100 bombers—bombers which may cost $300 million each once the final sums are reckoned—after precisely such testimony.

Of course, once the Secretary had let the cat out of the bag, great efforts were made to stuff it back in, and to assure us that somehow 1989 or 1990 minus 1987 does not equal two or three. The Pentagon attempted to apply the same miraculous mathematics to the dates that it has applied all along to the cost estimates. It has even attempted to justify the aircraft because, after its very brief career as a strategic bomber, it could still be used as a conventional bomber. The Air Force should at least blush at requesting $300 million airplanes for a mission where a $30 million price tag is usually considered steep.

Some proponents of the B–1, yielding at least in part to the obvious, admit to the aircraft's shortcomings, but then argue either:

First, without it we have a "bomber gap" between the B–52 and the Stealth, or

Second, if we do not build the B–1 the Soviets can stop investing in air defense and spend that money in other ways.

Neither argument will wash. The answer to the first is the air-launched cruise missile, or ALCM. The ALCM changes the B–52 from a penetrating bomber into a stand-off Cruise missile carrier, a role in which it remains viable for the foreseeable future. The ALCM itself promises to be a highly effective penetrator. It is really the first generation of Stealth technology—an ALCM shows up as about the size of a seagull on Soviet radar. By the time they know it is a missile, it is too late. Second generation ALCM technology, now in development, promises to reduce the radar signature down to the size of a ping-pong ball. No one makes such claims for the B–1, which will show up on radar looking very much like a B–1.

Were the cancellation of the B–1 also the termination of our bomber program, the Soviet Union might be able to shift resources away from air defense—if they could ignore the bomber threat from other nations and from our forward-based systems, and if they could overcome their own bureaucracy. But, of course, this amendment does not end the U.S. bomber program; it strengthens it. It confronts the Soviets with a far more effective new bomber than the B–1—the Stealth. Not only does Stealth require the Soviet Union to continue investing in air defense, it demands an increased level of investment, for many current deteticon and interception systems will not be fully effective against the Stealth bomber. On the other hand, most of them should work just fine against the B–1.

The Stealth, like the Cruise missile, will use advanced technologies that make it practically undetectable by radar and thereby renders the Soviet air defenses, present and future, obsolete. Deployed in a mix with air-launched cruise missiles (ALCM's), the Stealth would put the United States in a position of outthinking—not just outspending—the Soviets. The end result would be a problem too great for the Soviets to solve, and thus a strong deterrent to nuclear war.

Discussing the Stealth bomber brings us to the second element in the B–1 question, the matter of opportunity costs. The B–1 program promises to be expensive—somewhere between $20 and $40 billion, depending on who plays with the abacus. That means $20 to $40 billion we cannot spend on other defense needs.

What is likely to suffer? First, of course, the Stealth bomber. We cannot afford to build two new bombers, and any attempt to do so is likely to founder in budget cutbacks and program stretches, with Stealth as the primary victim. Second, our conventional forces—the forces we are far more likely to be called upon to use. And within the conventional force category, a prime target for cuts is likely to be operations and maintenance, which is the heart and soul of combat readiness. It is a pattern we have often seen before, and have seen again in the administration cuts of this past September, half of which came out of readiness.

Mr. President, this amendment is intended to deal precisely with the problem of opportunity costs. Not only does it shelve the B–1, it redirects most of the funds saved into areas which will profit us far more militarily. First of all, it provides an additional $300 million to accelerate development of the Stealth bomber. Then, it restores needed readiness funds: Funds for Navy steaming hours, funds for ammunition, funds for spare parts for the B–52 force. Finally, it puts some money where the administration's mouth has been, into naval shipbuilding, in the form of an additional attack submarine.

Ultimately, these matters of substance count far more than the symbol of the B–1. For that is what this aircraft really is: A symbol, a symbol that unfortunately means far more to our Air Force than to the Soviet Union.

It is a symbol uncomfortably reminiscent of one of our warships encountered some 15 decades ago, when we first ventured into the coastal waters of the Chinese empire. That symbol was the war junk. The war junk was quite impressive to those who owned it. It carried many fearsome banners. It was outfitted with loud gongs and with fireworks to terrify the enemy. It had been highly effective in the past against Japanese pirates, who invariably fled at its approach.

Unfortunately, the war junk was only a symbol. It had no effective armament. When it came down the rivers to scare off the Western warships, banging its

gongs and setting off its firecrackers, they replied with a broadside of 24 pounders that blew it out of the water.

Today's 24 pounders are Soviet SA–5's, 6's, 10's and so on. But the effect is likely to be the same. And the value of the investment will also have proven the same—nothing.

I urge my colleagues to join me in support of the amendment.

Mr. President, the unacceptable cost of this weapons system, the money that this weapons system will divert from very much needed conventional force modernization, particularly our shipbuilding program, and the fact that any benefits to be derived from this weapons system will be very temporary at best, all lead to the conclusion that we should not go forward with its production. The decision which the U.S. Senate made in 1977 was the correct decision. I think history will not reward the U.S. Senate or deal with us kindly if we reverse that decision. I strongly urge my colleagues to vote for this amendment and against this weapons system.

Mr. STEVENS. Mr. President, I think the cloakroom should notify absent Senators that we are near a vote and I expect to vote in a very few minutes. The Senator from South Carolina, of course, will make a closing statement. It is his amendment.

We shall not make a motion to table this. We have no agreement to vote but I assume we will vote in a very few minutes.

Let me make a statement here because I think it is a significant vote that is coming up, Mr. President. I am delighted to have had the opportunity to serve with my good friend from Mississippi. I was pointing out today that there are two of us—the Senator from Texas as chairman of the Committee on Armed Services, and I in my capacity here as chairman of the Defense Appropriations Subcommittee—who have taken the lead from our good friend. In past sessions of Congress, he had the duties that we have and he has taught us well and we are honored to be able still to serve with him.

I think it is important to note that the two of us, though, represent a new generation. We are the first two Members of the Senate in these positions whose first military experience was in World War II. All of those who have preceded us in these jobs as chairman of the Armed Services Committee and the Appropriations Subcommittee have had dealings with the military prior to World War II.

I keep in mind the question I kept asking myself as I came back from World War II, having spent 3 years of my life involved in that war, as to why we had to get involved in it. The conclusion I came to then, and it is still my conclusion, is that we get involved in wars when we are not prepared to defend ourselves.

Personally, I am very proud to be able to support the program of the President, which is a program we all have been behind, of strategic modernization.

What we are doing today is asking the Senate, really, to act upon the total strategic modernization program in this fiscal 1982 defense appropriations bill. The strategic modernization program contains five complementary elements, each of which is vitually important to the maintenance of nuclear deterrence and strategic stability. These five elements include:

I. ICBM MODERNIZATION

The development of the MX missile, deployment of the missile in an interim basing mode and research and development on three alternative permanent MX basing options;

II. SLBM MODERNIZATION

The development of the hard-target, counterforce D–5 SLBM;

III. BOMBER FORCE MODERNIZATION

The initiation of a two-bomber program (B–1B and Stealth), to replace our aging B–52 bomber fleet;

IV. STRATEGIC DEFENSE

Increased research and development on ballistic missile defense and space defense, with improvements to our air defense capabilities; and

V. STRATEGIC C^3

The initiation of a program to upgrade U.S. strategic command, communications and control capabilities, which would include improvements in missile attack warning, an extremely low frequency communications system for U.S. strategic nuclear submarines, and other vitally important command and control improvements.

No one element of this strategic modernization program is expendable. Rather each element is complementary, and is designed to enhance strategic deterrence and stability across the broad spectrum of potential nuclear conflict scenarios. To successfully maintain deterrence and provide the President with the strongest possible bargaining position in the forthcoming START negotiations it is essential that the entire strategic modernization program of President Reagan be initiated in fiscal year 1982.

If the B–1B bomber program is denied in this appropriations bill, the entire strategic modernization program of the Reagan administration will be rejected. All of the efforts to strengthen nuclear deterrence and the President's START negotiating position will be defeated.

I urge the Senate to defeat this amendment. In doing so, we will be voting not only for the B–1B bomber but also for the strategic force modernization program articulated by the President. I believe it is supported by the country, and I hope the Senate will demonstrate that tonight.

Mr. President, the last remark I make to my good friend from South Carolina with respect to the amendment before us—and I hope the Senate will listen to this—is that some Members of the Senate voted for the Cohen-Nunn amendment on MX basing. That was accepted, as well as several other amendments: an amendment to increase emergency expenses for defense agencies, the amendment correcting the limitation on the National Board for Promotion of Rifle Practice. All the amendments that have been adopted to date on the floor of the Senate in debate during 4 full days, but one, and that was the *Iowa* amendment, have been deleted by the amendment of the Senator from South Carolina. I would not want to see an amendment adopted that would delete 4 day of work in one fell swoop.

Mr. President, I yield to the Senator from Illinois.

Mr. PERCY. Mr. President, I oppose the amendment offered by the distinguished Senator from South Carolina.

President Reagan's decision to go ahead with the deployment of 100 B–1 bombers while continuing research and development on an advanced technology bomber that can virtually evade radar detection, known as Stealth, strikes me as the most prudent and sensible course which he could possibly have followed. Our existing B–52 bombers were built in the 1950's and 1960's and are becoming increasingly costly and difficult to maintain.

Estimates recently developed by the Air Force show that it is costing us $12,000 for each hour that we keep one of our current B–52 bombers in the air. Indeed, the Air Force projects that it would be less expensive to procure, maintain, and operate a fleet of 100 new B–1 bombers through the year 2000 than it would be to keep our existing force of aging B–52's in operation till the end of the century.

We simply cannot wait any longer to decide on a proper replacement for these aircraft. The issue, then, is whether we should go now with the B–1, followed in time by the Stealth bomber, or try to leapfrog directly to Stealth, skipping the B–1 altogether.

The problem with the latter course is that the Stealth bomber is still just a design and the first test aircraft will not fly for at least another 3 years. While the basic concept shows considerable promise, many technological and design uncertainties remain. History has repeatedly shown that programs which are rushed through on a crash basis result in cost overruns and suboptimal performance. The Stealth program is too important to be pursued imprudently. By going with the B–1 now, we will gain the time needed to get the Stealth program right while at the same time capitalizing on the $6 billion already invested in developing the B–1 bomber. If the Stealth bomber should become available sooner than we think, we can always shift funding from the B–1 to the Stealth.

Some critics have charged that in the event of war the B–1 would not be able to penetrate Soviet air defenses and thus should not be built. In my view, this argument is based on unrealistic assumptions regarding likely combat scenarios. If, in World War II, the United States had decided that it would build no B–17's or B–29's unless they were invulnerable to German or Japanese defenses, we would have built no bombers and may well have lost the war. Then, as now, the success of a bomber attack depended

more on tactics and mass than on the invulnerability of a single bomber in a strictly technological sense.

B–1 bombers on nuclear retaliation missions would reach Soviet airspace several hours into all-out nuclear war and encounter an air defense network left in shambles by prior U.S. missile strikes on key Soviet airfields, radars, and command and control facilities. Moreover, the bombers could launch supersonic, nuclear-tipped short range attack missiles to take out whatever air defense installations remained in the designated penetration corridors and employ very low level flight and newly upgraded electronic countermeasures to evade defenses in the immediate target area.

In a letter of November 10, 1981, Secretary of Defense Weinberger and CIA Director Casey affirmed that the B–1B will have the capability to penetrate anticipated Soviet air defenses well into the 1990's. I believe that Soviet military leaders must also conclude that a considerable portion of the attacking force would deliver bombs on target. This knowledge—the certainty of nuclear devastation—is the essence of credible strategic deterrence. And a credible strategic deterrent has been the heart of our efforts to prevent nuclear war for the last three decades.

I would also point out that the B–1 and Stealth are more complementary than competitive in design. Once the Stealth is deployed in the mid-1990's, it would assume principal responsibility for the manned penetrator role. Nonetheless, the B–1 will remain fully capable of serving as a standoff Cruise missile launcher or as a conventional bomber in support of nonnuclear military operations, such as a U.S. military deployment in defense of the Persian Gulf oil fields. The advanced technology bomber, which will be optimized for speed and stealth, will not be nearly as effective in performing these missions.

Last, I believe it is essential to recognize that deployment of the B–1 is not only fully consistent with existing strategic arms limitation agreements, which this administration has pledged to respect as long as the Soviets reciprocate, but also that the B–1 will provide a strong underpinning to our negotiating position in the upcoming START talks. As Secretary Haig advised the Foreign Relations Committee during a November 4 hearing on the strategic package:

> More than any other elements of the plan, B–1 and MX, and the degree of Congress support for them, will make or break an attempt to negotiate a reasonable arms control agreement.

The PRESIDING OFFICER. The Senator from South Carolina.

Mr. HOLLINGS. Mr. President, the question is not just any plane, as it was referred to. The fact is that we do have 345 B–52's and some 63 FB–111's. We will have 1,366 F–18's, 1,383 F–16's, 160-plus F–15E's, and hundreds of A–6's and A–7's.

I ask unanimous conser.t that the list of planes be printed in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

Strategic and tactical bombers
(current and projected)

Strategic bombers:	
B–52, C, F and D models	78
B–52, G and H models	267
FB–111A	63
Tactical bombers:	
F–18	1,366
A–6	160
A–7	600
AV–8B	336
F–16	1,388
F–15E	160+

Source: Department of Defense.

Mr. HOLLINGS. Mr. President, what we are looking at, as everyone has agreed, is that between now and 1990, we are home free. We do not have to worry about nuclear war. We are not going to start one. We have a sufficient capability to not have an open window. But they are wrong. We have an open window; it can be seen through. Our conventional forces are in trouble.

But with our Trident, as many have testified, with our B–52's, with the Minuteman III's—we now have nearly a thousand in silos—there is no chance of their getting away with a nuclear strike. So there will not be any nuclear war, and we have a good preventive to make certain that it will not start.

What we are looking for after 1990 is a manned penetrating bomber. After that particular time if you remember proponents try to sell the plane type of attack, on the basis that you can recall the plane, and recall the decision.

The distinguished Senator from Alaska says that he does not want to waste 4 or 5 days. I do not want to waste the next decade. We will not be able to recall this decision. When the next Congress comes in, having made a decision tonight, it will be in both bills.

They can talk about waste, fraud, and abuse, but the national defense budget will go up $5.7 billion next year. When the next Congress comes in right after that in 1984, it will be $8.9 billion—$9 billion. That is the hidden cost of B–1 as shown in the CBO estimate—based on real inflation rates.

You can cut the cost, but when you do, you stretch out delivery of the plane and you are back then to a 1988 IOC and you have a penetrating plane for only 2 years. Looking further, in 1985, you are committing yourselves to $11.3 billion; in 1986, $10.5 billion. That is the commitment.

You are not concerned now about nuclear superiority but conventional adequacy. You have condemned yourself to a conventional inferiority. For what? Well, the Senator from Georgia says that we might not be able to guarantee a Stealth bomber. But with this crowding out of a rapid deployment force, the 600-ship Navy, the Army, National Guard, and Reserve Forces, the Tactical Air Command's needs, of predispositioning ships for the marines, and on down the list, we have guaranteed ourselves a stealthy Marine Corps, a stealthy Army, and a stealthy Navy.

Clausewitz says we will fight the war we are prepared to fight. We are not prepared to fight in the Indian Ocean, so we will not fight there or in the Persian Gulf. We are not prepared to fight the conventional battle at the NATO front in Western Europe, so we will not fight in Western Europe. We are prepared to fight a nuclear engagement. So tonight what we do is take that $40 billion, where we are already prepared, and over-prepare us for nuclear and under-prepare us for conventional.

As Winston Churchill said, thinking as a commander in chief, knowing that you will never use a B–1B for its mission as a penetrating bomber until perhaps you have used your ICBM's or your SLBM's or your Pershing II's or your air launched or your sea launched cruise missile and so forth, about the sixth option is to have a manned penetrating bomber to bomb Moscow—in reality, as Churchill said, you are just spending $40 billion to bounce the rubble and guarantee yourself conventional inferiority.

SEVERAL SENATORS. Vote. Vote.

The PRESIDING OFFICER. The question is on agreeing to the amendment. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Alabama (Mr. DENTON), the Senator from Arizona (Mr. GOLDWATER), the Senator from California (Mr. HAYAKAWA), the Senator from Pennsylvania (Mr. HEINZ), and the Senator from Wyoming (Mr. WALLOP) are necessarily absent.

I further announce that, if present and voting, the Senator from Arizona (Mr. GOLDWATER), the Senator from Pennsylvania (Mr. HEINZ), and the Senator from Wyoming (Mr. WALLOP) would each vote "nay."

Mr. CRANSTON. I announce that the Senator from Arizona (Mr. DECONCINI) is necessarily absent.

I further announce that, if present and voting, the Senator from Arizona (Mr. DECONCINI) would vote "nay."

The PRESIDING OFFICER (Mr. HATCH). Is there any other Senator who needs to vote?

The result was announced—yeas 28, nays 66, as follows:

[Rollcall Vote No. 448 Leg.]

YEAS—28

Baucus	Hatfield	Pell
Biden	Hollings	Pressler
Bradley	Kassebaum	Proxmire
Bumpers	Kennedy	Pryor
Byrd, Robert C.	Leahy	Riegle
Chafee	Levin	Sarbanes
Dodd	Mathias	Tsongas
Eagleton	Matsunaga	Williams
Ford	Mitchell	
Hart	Nunn	

NAYS—66

Abdnor	Cochran	Glenn
Andrews	Cohen	Gorton
Armstrong	Cranston	Grassley
Baker	D'Amato	Hatch
Bentsen	Danforth	Hawkins
Boren	Dixon	Heflin
Boschwitz	Dole	Helms
Burdick	Domenici	Huddleston
Byrd, Harry F., Jr.	Durenberger	Humphrey
Cannon	East	Inouye
Chiles	Exon	Jackson
	Garn	Jepsen

Johnston	Nickles	Stafford
Kasten	Packwood	Stennis
Laxalt	Percy	Stevens
Long	Quayle	Symms
Lugar	Randolph	Thurmond
Mattingly	Roth	Tower
McClure	Rudman	Warner
Melcher	Sasser	Weicker
Metzenbaum	Schmitt	Zorinsky
Moynihan	Simpson	
Murkowski	Specter	

NOT VOTING—6

DeConcini	Goldwater	Heinz
Denton	Hayakawa	Wallop

So Mr. HOLLINGS' amendment (UP No. 744) was rejected.

Mr. TOWER. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. THURMOND. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. BAKER. Mr. President, if I could have order, I wish to explain the situation to the Senate.

The PRESIDING OFFICER. The Senate will be in order.

Senators will resume their seats.

Mr. BAKER. Mr. President, I thank the Chair.

Mr. President, I wish to inquire, if I may, of the distinguished manager of the bill and the minority manager of the bill or the minority leader if they can favor me with information on how many amendments are yet to be disposed of and how long it may take to deal with them.

Mr. STEVENS. Mr. President, I respond to the majority leader by saying it is my understanding that the Senator from Oregon has an amendment. He discussed that with me and was talking about somewhere around 20 minutes.

The Senator from Washington (Mr. JACKSON) has an amendment that we are prepared to accept after a very short discussion.

And I believe that the Senator from Wisconsin (Mr. PROXMIRE) has an amendment. We have not discussed how long that will be.

The Senator from Georgia (Mr. NUNN) has an amendment which will be very, very short and will require a vote but there will be at most 4 or 5 minutes discussion on it.

Mr. BAKER. Mr. President, I will judge from the list, then, that with those amendments and debate on them we can finish within less than an hour.

Mr. STEVENS. That is correct.

We anticipate three votes out of that; at least 1½ hours.

Mr. BAKER. I see the minority leader has his list before him. I wonder if he could give me some insight as to the situation on his side.

Mr. ROBERT C. BYRD. Mr. President, I see, inclusive of the amendments that have been enumerated by the distinguished majority whip, a total of at least eight amendments.

Mr. BAKER. So, that would be eight, altogether, including the three that were listed by the Senator from Alaska?

Mr. ROBERT C. BYRD. I am prepared to suggest a time agreement on each.

Mr. BAKER. I wonder if the Senator will do that at this time.

Mr. ROBERT C. BYRD. I am prepared to suggest that there be, on an amendment by Mr. LEVIN with respect to the B–52's, 30 minutes, equally divided; on an amendment by Mr. LEVIN and Mr. GLENN, which has to do with the steaming hours, et cetera, 30 minutes, equally divided; an amendment by Mr. EXON with respect to ammunition, 30 minutes, equally divided; an amendment by Mr. METZENBAUM, a sense of the Senate resolution on a program for the elderly, 20 minutes, equally divided; two amendments which I will have, each of which I will be agreeable to 40 minutes, equally divided.

Mr. BAKER. Will the Senator from West Virginia give me some idea of what they are?

Mr. ROBERT C. BYRD. Yes; one deals with an add-on on Stealth; the other would be an add-on for a number of items which were included in the amendment by Mr. HOLLINGS. There is an amendment by Mr. PROXMIRE, in which there would be 40 minutes, equally divided.

Mr. PROXMIRE. If the Senator will yield, make that 30 minutes, equally divided.

Mr. ROBERT C. BYRD. All right, 30 minutes, equally divided. Then the amendment by Mr. HATFIELD, on which the distinguished majority whip says it would be 20 minutes equally divided, was it?

Mr. STEVENS. The Senator wants 20 minutes.

Mr. BAKER. Thirty minutes, equally divided?

Mr. HATFIELD. Yes.

Mr. ROBERT C. BYRD. Then there would be an amendment by Mr. NUNN, which Mr. STEVENS has already addressed his remarks to, but which would require a rollcall vote, 10 minutes equally divided.

So, I would say to the majority leader that there is also to be contemplated something like eight rollcall votes, in addition to final passage.

Mr. BAKER. Mr. President, that is a lot of work yet to do. I think we ought to do as much of that tonight as we can.

Let me inquire of the minority leader if he is in a position now to consider a time certain for final passage of this bill?

Mr. ROBERT C. BYRD. Yes; I would propose, if the majority leader would like to go over—I am offering two alternatives—if the majority leader went over now, I would say no later than 4 o'clock p.m. tomorrow. If he wishes to go, let us say, a little while longer and take a couple of these amendments with the rollcall votes, we could cut that to no later than, say, 3 o'clock tomorrow.

Mr. BAKER. Mr. President, I need to consult with Members on this side. Perhaps the minority leader may have other Senators he wishes to consult with.

At the moment, I suggest the absence of a quorum.

Mr. BUMPERS. Mr. President, will the majority leader withhold that request for just a second?

Mr. BAKER. Yes.

Mr. BUMPERS. Would the majority leader entertain the idea of asking unanimous consent right now that all future rollcalls tonight be 10 minutes? We might save a little time, anyway.

Mr. BAKER. Mr. President, I wish I could do that. The problem I have, frankly, at this hour, because of other commitments Senators have, it is more difficult to get them back, ordinarily. Some carry beepers with them and some can be reached by telephone. I would like to do that, but I must say to the Senator from Arkansas that I cannot at this moment.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. GRASSLEY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GRASSLEY. Mr. President, in conversations with Iowans I have often expressed my wish to inhabit a world where it would not be necessary to spend a single penny on defense. Unfortunately, we do not live in such a world; therefore, we must maintain a defense posture that enables us to defend ourselves and our allies. Our very existence as a nation is dependent upon our willingness to maintain our Armed Forces on a par with our potential enemies.

I do not believe an America that is weak vis-a-vis the Soviet Union serves the cause of world peace. This week's Economist carried an interesting article on the prospects for the negotiations in Geneva, which I think illustrates my point well. Reporting on the private Soviet reaction to President Reagan's zero option proposal, the article stated:

> Mr. Reagan's proposal would have to be studied, diplomats were told . . . it was a rather brief proposal, more details, please . . . then we'll analyse . . . our president wants "very substantial cuts", yours is calling for liquidation . . . hmmm, that, surely is a negotiable gap. How different a reaction this has been so far from that in March, 1977, when Russia's foreign minister, Mr. Gromyko, strode before the waiting press to read a statement scribbled in his own hand brutally rejecting the cuts in big long-range missiles just proposed to him by Mr. Cyrus Vance.

Yes, Mr. President, what a contrast. And what a contrast there has been in the postures of Mr. Carter's and Mr. Reagan's administrations. President Carter came into office believing that the Soviet Union really did not pose a threat to international stability, that it was essentially a nonaggressive, status quo-oriented state; that we had an inordinate fear of the Soviet Union. He did not have the will or the inclination to take the steps that were necessary to maintain our strategic position vis-a-vis the Soviet Union. His offer to reduce strategic arms was not honored because he gave the Soviet Union no reason to honor it. By the time the Soviet invasion of Afghanistan taught President Carter a hard lesson about Soviet diplomacy, it was too late.

President Reagan, on the other hand, harbors no illusions about the Soviet Union. From the time he entered office, he has not ceased to try to impress the American people with the necessity of a strong defense to counter Soviet imperialism. More importantly, he has displayed the will to increase the strength of our defense. When President Reagan proposes arms liquidation the Soviet Union is forced to listen.

Mr. President, I think everyone in the United States shares the commitment that our arms should be used only for our protection and the protection of our allies. This year's defense budget demonstrates an important commitment to protect and maintain our freedom and our ability to work to bring about a just and lasting peace.

UP AMENDMENT NO. 746

(Purpose: To reduce by 2 percent, appropriations for titles IV and V Procurement and Research and Development—for Department of Defense appropriations bill)

Mr. HATFIELD. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Oregon (Mr. HATFIELD) proposes an unprinted amendment numbered 746.

Mr. HATFIELD. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the end of the bill, add the following new section: Section notwithstanding any other provision of this Act, the total budget authority appropriated or otherwise made available by titles IV and V of this Act is hereby reduced by 2 per centum: *Provided*, That except as may be permitted by Section 733 as by reprogramming; no account, program, or activity shall be reduced in excess of 5 per centum.

Mr. HATFIELD. Mr. President, I ask unanimous consent that Senators ROTH and DURENBERGER be added as cosponsors to the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HATFIELD. Mr. President, this amendment proposes a 2-percent reduction in titles IV and V—procurement and research and development—from the defense appropriations bill as reported to the Senate. Only in extreme circumstances would I advocate such an across-the-board reduction, and I choose only two of the titles in order to apply this particular amendment. Mr. President, in my view, the situation as far as defense appropriations is concerned, is indeed extreme. For the defense bill, unlike any other bill considered by the committee this year, has not been cut. It has not suffered any reductions.

In fact, the Senate-reported bill recommends Defense Department funding at $208.5 billion, some $7.64 billion over the President's September budget request, and $11.8 billion over the House.

Moreover, Mr. President, I would like to correct what seems to be a predominant impression, that the defense bill has been subject to real decline over the past 5 years. That is far from the truth. The Congressional Budget Office has informed me only today that defense had a real growth increase of 26 percent from 1975 to 1981. And from 1981 to 1982, the President's program recommends a real growth of 10 percent. In effect then, over the past 6 years, the growth in defense spending—exclusive of inflation—has been 36 percent.

As chairman of the Appropriations Committee which is responsible for recommending sound, fiscally responsible funding legislation to the Senate, I am deeply disturbed at the spending levels proposed to us here today for the Department of Defense. In my view, the proposal is neither sound nor fiscally responsible. I regret to use such harsh words against a proposal on which I know my distinguished colleague and good friend Senator STEVENS has worked diligently. In no way do my remarks cast reflections upon his efforts or those of the staff of the subcommittee.

However, the stakes are too high, particularly during the budget decisions necessary this fiscal year, to be less than forthright. The impact of approving a bloated budget, in any area of spending, can be devastating to the charge of the committee and to the economic renewal so desperately needed by this country.

I believe it is important to point out the following facts about the proposed defense funding mark:

First. If the Senate approves the recommendation as reported, almost three-fourths (74 percent) of the often painful cuts we have made in domestic programs this year, will be sucked up by this single defense add-on to the President's budget. The Senate has carefully and methodically reduced domestic programs in 10 other appropriations bills by some $9.9 billion from the administration's March budget request. And in a single bill we nearly obliterate that record, by adding to that request some $7.6 billion.

Second. The President's veto of the continuing resolution 2 weeks ago makes abundantly clear his dissatisfaction with congressional efforts to reduce domestic spending. It is ironic that the total spending level in excess of the President's September request for 10 nondefense appropriations bills is nearly doubled with defense at the recommended level of $208 billion. The average increase above the President's September request for the 10 nondefense appropriations is under a billion dollars. The proposed defense add-on is seven times that figure. Will the congressional and Presidential scrutiny be applied to such excess in the military spending bill? Clearly not.

Third. Even if the Senate was to reduce the reported bill and adopt the President's proposed reduction in military spending—some $8 billion in budget authority from his March request—defense spending will increase by 45 percent from what was spent in fiscal year 1980. If, however, the reported level is adopted, defense spending will increase by an even more significant 50 percent over the amount spent in fiscal year 1980. Over that same period of time, all other appropriations accounts—nondefense—will decrease by 13 percent.

Under the President's budget proposal for 1981 through 1986, we will spend $1.4 trillion for the military. Despite that almost incomprehensible sum, we do not have a plan as to how and where that money will be spent. I am talking about a major blueprint.

Mr. President, on June 4—6 months ago—I stood before this body in reporting the 1981 supplemental/rescission bill, and said:

(This bill) begins a defense buildup guided at this point by little in the way of overall strategy.

I regret to say—in fact, I am embarrassed to say—that this is still the case. While the administration has submitted its 5-year defense budget which projects a more than doubling of military expenditures, from $177 billion in 1981 to $366 billion in 1986, we still have huge programmatic gaps as to how that money will be spent.

I have requested the Congressional Budget Office to prepare a projection into the out-years of the administration's fiscal year 1982 defense budget. That office cannot accommodate my request because the Department of Defense has made few decisions on what programs it will recommend beyond 1982. More than $50 billion remains undefined in the next 5 years. Mr. President, DOD has in effect said, "give us the 1982 money, and we'll tell you later what we'll do in '83." In fact, the administration has failed to supply budget justifications for the two of the most expensive items in fiscal year 1982—the MX missile and B–1 bomber.

It is elementary and imperative that when we spend billions of dollars on research for new weapons systems to add to the 200 systems already in the pipeline, we must know the program plan into which these weapon systems fit. How many of each does DOD plan to procure in the out-years? What is the anticipated mix of weaponry? These questions must be answered if Congress is to make rational and intelligent decisions.

I shudder to think, Mr. President, about the implications of this lack of information: There is no long-term policy or conceptual framework involved in this, the largest military peacetime budget in U.S. history. In its haste to draw up a defense budget, the administration failed to sort out priorities. It simply asked the Services: "What do you want?" This is surely management without specific objective.

Mr. President, it mystifies and saddens me that we in Congress, without consciousness of our responsibility for these actions, are ready to appropriate billions of dollars for a defense policy which has not yet been formulated; for a long-term strategy which has not yet been developed. We continue to throw these precious dollars at a problem, without a plan of how we are to solve it. In the meantime, quickly and somewhat casually, we deprive hundreds of thousands of poor Americans of their own security, for food, for housing, for a proper educa-

tion. We in Congress must take responsibility for that action, as well.

We can no longer afford to fool ourselves, and we are surely not fooling the American public: That same Federal dollar which is deprived from the human services programs, is used instead to feed the voracious appetite of the military. I use the example which I have mentioned before to my colleagues on the committee, because no more clear example of this phenomenon can be cited than what occurred several weeks ago when the full committee considered the Labor/HHS/Education bill. The committee struggled desperately to find $300 million in additional cuts in programs aiding the handicapped, unemployed, low-income students, elderly poor Americans in ill health.

I point out that the Labor/HHS/Education Subcommittee had already reduced the President's March request by some $3 billion in order to accommodate the administration's new budget mark. During the very next hour, that $300 million was quickly consumed by the nuclear weapons program, with a floor amendment to the energy and water appropriations bill, voted 49 to 43. I might add that the nuclear weapons program, under the committee recommendation, had already received a $1 billion increase over appropriations for fiscal year 1981.

I remind my colleagues that constituencies around the country are alert to the irresponsibility of cutting human services so that more nuclear weapons can be built, so that the war machine can ramble on unobstructed. We are certain to approach a public backlash against a military buildup that appears to be reckless spending on the backs of vital domestic programs.

It is of great concern to me, as a Senator from Oregon and as chairman of the Appropriations Committee, that the "Russians are coming" mentality has tended to supersede all sensibilities. That cry has allowed us to simply throw money at a problem without critical analysis, to deny the same cost-effective standards and criteria for funding defense programs as we require of domestic ones; to participate in the hypocrisy of believing that our strength against enemies resides only in planes and fighting ships.

I regret that little was accomplished in the most critical area of defense spending, that of procurement. Termination of ineffective, marginal programs which are costly and replacement with effective, less costly weapons systems is mandatory. Make no mistake: It will be impossible to fund all of the 200-odd weapons systems we now have in the pipeline to completion. Even Deputy Defense Secretary Carlucci insists that we have too many weapon systems for the amount of money we have budgeted. But neither the Department of Defense nor the subcommittee has been willing to make those necessary, politically difficult decisions.

Mr. President, I have little problem with increasing funds for our readiness accounts—for military personnel, for operations and maintenance. But these important facets of our defense have gotten shrift over the years, compared with the skyrocketing growth of new weapons procurement. How much has been spent on improving conventional forces rather than on boosting U.S. arsenal? How much for improving the combat readiness of equipment already in the field, instead of buying new hardware?

According to CBO, the revised budget submitted last month shows funding for new weapons, including the procurement, military construction, and research and development accounts, growing from $68 billion in budget authority in fiscal year 1981 to $89 billion in 1982 and $175 billion in 1986. This growth in the funding of new weapon systems represents a real increase of 95 percent between 1981 and 1986 compared to a real growth for the defense budget as a whole of 52 percent over the same period.

The thrust of this amendment is toward a moderate—2 percent—decrease in the procurement and research and development accounts.

My amendment, should it be agreed to, will not come at the sacrifice of readiness of forces in the field. But at the expense of overly complex, unnecessary, cost-inflated weapon systems which are fully funded in this bill.

Title IV—procurement—and title V—research and development—are reported in the bill at $86.121 billion. The cost impact of my proposed 2-percent reduction would be $1.722 billion.

Under the conditions of my amendment, the Secretary is directed to reduce these accounts up to 5 percent. Of course, as specified in the amendment, this does not preclude transfer of funds in excess of 5 percent, where the Secretary determines such authority is needed to provide for higher priority defense needs. This authority is clearly set forth in section 733 of the bill.

It is hoped that this limited discretion would aid the Secretary in buying smart, or not buying at all. The contrary practice, as recommended by this and previous administrations, has been simply to defer spending authority, shuffle money, stretch out buys, all of which increase the long-term cost of weapon systems. The Secretary can, with this transfer authority, instead move to cancel a militarily ineffective weapon system, just as Mr. Carlucci has suggested needs to be done.

According to CBO, the 1982 budget revisions submitted in September proposed a number of stretch-outs which may result in substantial cost-growth. For example, the original March request proposed to buy 60 A–10 aircraft for $9.1 million each. The October revision proposes to buy 20 A–10's for $13.4 million each—a 47-percent increase in the cost of each aircraft due primarily to the less efficient buy size.

Other examples of higher costs resulting from slipping the scheduled delivery of weapon systems or stretching out programs can be seen in the December 1980 SAR, which showed increased program costs of $673 million—14 percent—for the AH–64 helicopter, $856 million—21 percent—for the DIVAD gun, $907 million—4 percent—for the F/A–18 aircraft, and $1,063 million—8 percent—for the F–16 fighter aircraft—all of them due to schedule changes.

Let us not attempt to overstate the impact of this proposed amendment, Mr. President. A reduction of $1.7 billion in the context of hundreds of multimillion dollar weapons systems will in fact do very little. But it is a step toward responsibly curbing the wasteful expenditure on weapons which do not have high priority, which squeeze out the funding of other less costly, more effective systems.

Even if the Senate adopts my amendment, this bill will remain $5.9 billion in budget authority over the President's request. That amount is nearly six times greater than any one of the 12 other appropriations bills reported to the Senate, and one and one-half times larger than the total overage of the nondefense appropriations bills for 1982, as reported by the continuing resolution, which was vetoed by the President.

Mr. President, it is distressing that all other subcommittees have been willing to face up to budgetary realities and painful costcutting decisions. Yet, when it comes to defense, we are unable to even apply measures of cost-effectiveness to the largest sum ever included in one bill for military purposes in the history of the country.

I regret that I cannot in good conscience endorse the proposal presented today. I know and I want to underscore that Senator STEVENS, and all the members of that committee and especially the ranking minority member (Mr. STENNIS), have worked feverishly, under the most difficult of circumstances, to produce a proposal within tight time constraints and after numerous alterations in their budget by the administration. However, in my view, the defense bill, which is $42.46 billion over the fiscal year 1981 regular defense appropriation bill, and $7.64 billion over the President's defense program, is excessive.

Gene R. Laroque, retired rear admiral, sums it up well when he claims that in contrast to popular perceptions, the military budget, as now formulated, is not an effective measure of our real defense capability. It is merely a symbol, and not a very good one at that.

Too many extensive programs are competing in the military arena, and even the budget increases contemplated by the Reagan administration cannot accommodate all of them. We cannot simultaneously acquire a vast new arsenal of nuclear weapons, expand costly forces for defending countries in Europe and Asia, add to substantial equipment and manpower for rapid intervention everywhere in the world, enlarge a very expensive Navy for deployment on all the world's oceans, develop new weapons that are always better than Soviet weapons, and keep existing forces at a high level of readiness and training.

We must begin to set priorities in our defense spending, Mr. President. These obsessions with combating every extremely remote scenario with a unique weapon system is a fairytale escapade. And it prevents us from taking the necessary steps to assure a strong, effective defense force.

Mr. President, I urge my colleagues to support this amendment. It represents a small but important move toward ration-

ality and the critical setting of priorities in our defense program.

Mr. STEVENS. Mr. President, I shall be brief. Does the Senator wish the yeas and nays on his amendment?

Mr. HATFIELD. I would like them, yes, Mr. President.

Mr. STEVENS. Mr. President, I ask for the yeas and nays on the Senator's amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. STEVENS. Mr. President, I am not being facetious when I say that I never realized when I became chairman of this subcommittee that I would become somewhat interested in birdwatching and in entomology. We have in the other body one group called the Boll Weevils and another group called the Gypsy Moths. Ornithologist is the word my friend tells me I am becoming in terms of watching the peregrinations of some of our people on the other side.

I just want to point out to my good friend from Oregon, and I hope the Senate will listen, at the time we considered the continuing resolution, the defense bill was not an issue because, if you look at the low amount in the House bill and and the low amount in the Senate bill, this bill is less than the President's budget by more than $4 billion.

It is over in the Senate because we have reduced items in the Senate that the House put up high, and we have added items that the House did not contain.

For example, $4.8 billion is for the pay raise that passed both Houses, became law and must be funded. That is not over the budget in the 1982 framework. It should not be considered a budget buster. In the continuing resolution conference, it was not considered to be one of the items that was over the budget.

So the effect of the Senator's amendment would be to cut 2 percent, or $1.73 billion, which means a $414 million cut in research and development, a $1.32 billion cut in procurement.

It is a cut which, in my opinion, would tie the hands of those of us who must go and negotiate with our colleagues in the House, in conference, and try to bring in a bill.

I have dedicated our committee to bring in a bill somewhere as close as possible to the September mark that was listed in the President's budget. It was approximately $200 billion so far as the nonpay items are concerned in this bill.

We are not talking about the $4.8 billion military pay increase that was brought about by the act of Congress which was passed since the President's budget came in. It is not part of the budget process. It is not fair to say that we are that far over. I know it is nice to talk about big numbers, and we have some items that are over budget. One is the inflation item, which we will discuss later, along with the 3 percent cost overrun figure. Those are two legitimate items that are above the House.

In the supplemental, we took the inflation item to the House. The House would not listen to us when we pointed out that inflation and procurement consistently run ahead of the cost of the rest of the economy, and it is wrong to understate a military budget to the extent we do.

This time, to make sure we had conferenceable items in addition to the inflation item, we added a cost overrun item which deals with basically the MX and B–1. Senator PROXMIRE will discuss that in a moment.

Right now, I urge the Senate and my good friend from Oregon, respectfully, as chairman of our full committee, to remember that we have to be able to negotiate, to represent the priorities of the Senate.

If you cut out the money now across the board, you limit our complete flexibility to deal with the priorities that Senators have come to our committee and talked about throughout this whole year, as well as the priorities in here that the Senate has as opposed to the House.

I point out that the proof of that is that when we dealt with the continuing resolution, we were dealing with a figure under the budget—under the President's September mark—because of the action of both Houses in reducing items that we know the other House puts a priority on. That is what makes the defense conference such an important conference to work out those priorities so far as the weapons systems are concerned.

Senators should not be misguided. Those are not major weapons systems. There is no difference between the House and the Senate on major weapons systems. The differences are in the procurement items, which are substantial in amount, because of the myriad number of those items. But the major weapons systems in the President's program are not in dispute in amount or in basic approach, so far as the House and the Senate are concerned.

This amendment, unfortunately, would cut that item of agreement. This amendment, unfortunately, would cut the B–1, it would cut the MX, and it would change the effect of the Cohen-Nunn amendment. It would change the effect of the amendments we have already adopted here relative to other items of procurement.

Unfortunately, I am in the position of asking the Senate to reject the amendment of my good friend from Oregon. It is not a good amendment to cut across the board at this time, before we go to conference, and I urge that it not be done.

Mr. HATFIELD. Mr. President, I should like to correct one misunderstanding that I think the distinguished manager of the bill has concerning my amendment.

This does not require the Secretary of Defense to cut those specific items. It gives flexibility for him to apply cuts where he may decide and to set his own priorities. So it does not necessarily include those specific reductions that have been enumerated by the Senator from Alaska.

Second, I wish to point out one simple thing: Last year, over and above the inflation rate, in 37 of the 47 weapons systems, we had a cost overrun of over $4 billion. I repeat, a cost overrun of over $4 billion in weapons systems procurement over and above inflation. My amendment would barely be one-fourth of that cost overrun.

In cranking in a so-called 3 percent growth factor for a couple of weapons systems, that is an invitation for cost overruns. That is speaking against what the Secretary of Defense testified before our committee, that he was going to get control over the cost overruns. He had a 31-point program.

The Senator from Mississippi said, "I can remember when Secretary McNamara came before our committee and told us he had a program to get control of the cost overruns. When are we going to get control of the cost overruns?"

Not only have we failed to get control of the cost overruns, but also, we now have said, in effect, that we are going to crank them in as an invitation at the beginning of the budget year by a so-called growth factor.

This amendment would reduce by only one-quarter the total cost overruns in the last year, over and above inflation.

Mr. STEVENS. Mr. President, if I knew of a way to legislate cost overruns, I would join the Senator from Oregon.

As a matter of fact, if we cut $1.73 billion out of this bill now, when it comes back next year it will be $2.5 billion. That is what we proved before.

Every time we underfund a weapons system, when the cost comes in the next time, it is with handling costs, all the administrative overhead, the cost of keeping lines open, production lines waiting, subcontractors not paid, and it mounts up until it pyramids.

What we are trying to say is this: Let us have a fully funded budget. If we fund these matters in advance, there will not be cost overruns. The cost overruns take place because of underfunding. I do not know how to get the Senate to understand that.

It costs more to keep a production line open when you are going to pay for something over 2 years or 18 months that could have been done in a year. But if you put up only part of the money to keep it running part way during the year, it will run 18 months or 2 years, and the cost overrun is cranked into the system by virtue of this kind of amendment.

Mr. HATFIELD. Does the Senator really believe that the cost overruns are caused by underfunding or because we fail to take the action we should, and that is to give multiyear authority to contractors for procurement purposes?

Mr. STEVENS. In some instances, we could save money by multiyear funding, and the authorization committee has told us that that is their function—to authorize multiple-year funding—and we have not done that.

However, in terms of the areas where there are changes that are sought, where they would add moneys to procurement—small amounts, but go beyond line items we have earmarked, to take a gun, a gunsight, or whatever it might

be—if the contract comes in over the bid, they must come back and get an additional amount of money. Meanwhile, they enter into a contract for less than the full amount.

That is exactly what happened with the F–18's. We ordered 60 of them. The contract was let, and as a result of the contract, 52 were delivered, and we had to come back and ask Congress for money to fund the eight. Many people thought we were buying eight more planes. The Senator from Mississippi will recall that. They asked, "What are we doing? We only agreed to buy 60."

As a matter of fact, the delivery on that line was 52, and they had to keep the line open to produce the other 8 for which we had already contracted, but we underfunded. Had we put up the money in the beginning and given them just a little cushion in case the contract came in over the estimate—remember, those items are just estimates, and they are just human.

Experience shows that the average cost growth is 3 percent a year. I say give them the margin of 3 percent and it will cost us less. The F–18's proved that, because when we ended up, we paid for 60 aircraft, but we paid as though we had bought two separate lines of aircraft. It really cost us considerably more for the last eight than it should have if we had funded them all to begin with. That is all we are saying.

By this amendment, it would take away the negotiating position on the procurement accounts for at least $1.32 billion. That acquisition already has been authorized. It is approved by this bill. The money is just not here.

So in the supplemental they will come in and ask for more money, and I would be willing to bet, as a matter of fact, I would stake my life on the fact that if we cut out $1.32 billion by the time it came in the supplemental it would far exceed that amount. It would be $2 to $3 billion.

We proved that in the supplemental. I had the figures to prove in each instance where one of these cuts went through what happened the next year in the supplemental.

I urge the Senate to defeat this amendment.

Mr. HATFIELD. Mr. President, I have only one additional comment.

What the Senator is saying really to me is we have no way to control military spending. There is just no way to control it. We just have to add, add, and add and escalate, escalate, and escalate.

I wish we would have the same kind of cost caring about the development of water projects, reforestation of our national lands, and some of these other things where we apply a certain restriction and where contracts have to be kept within means or the programs are canceled.

Let me remind the Senator from Alaska that the Secretary still has the authority to cancel programs in order to achieve savings. So, consequently, I wish to see the same applied to the procurement of milk for school milk programs.

But any time we seek cost overruns there or inflated costs, we always take the attitude there must be a lot of bums getting into the public trough.

I think we should apply the same cost-care scrutiny and the same cost analysis and the same demands for fiscal responsibility in military procurement that we demand in any other procurement programs of the U.S. Government.

We are not going to change votes. I am ready to vote on this. But I just do feel this is but a very small percentage reduction.

The Senator knows the agony that we have gone through in reducing all these nondefense programs in our bill to get a Presidential signature on a continuing resolution. It is not unreasonable to ask for a 2-percent reduction in two sections of this bill that have been the greatest growth parts of the entire defense program. Other programs are taking 5, 10, and 12 percent reductions.

It will be difficult to go back to our constituents and tell them we made an equitable distribution of the reductions of fiscal year 1981. Not one penny was cut from Defense in the rescission package and we cut $14 billion in the nondefense programs. Not one penny was cut from Defense in reconciliation and $25 billion was cut from the nondefense programs.

Let me say from President Carter's last full year defense program in 1980 to Mr. Reagan's full defense program of 1982, it will go up 49 percent. In those same nondefense areas they will have been diminished, decreased, and reduced by 12 percent.

Mr. STEVENS. I cannot leave that there because my good friend from Oregon is wrong. The authorization committee did cut, and we have been committed to live with that limit of the September readjustment of the President of $2 billion reduction in outlays. But we have agreed to fund the military pay raise.

Every Senator whom I can see here voted for that pay raise. Somehow or other we seem to be getting whipped over the back because we put $4.8 billion up to pay for it.

That is not a cost overrun as far as this budget is concerned. We are still going to be under the President's September mark when we come back from conference.

Mr. HATFIELD. Is the Senator saying the President gave us a phony budget?

Mr. STEVENS. No, the President did not give us a phony budget. Congress gave the President a pay raise after the budget came up. It is not phony at all. The payment started on that pay raise on October 1.

But again do not cut the defense bill this way on a 2-percent across the board. It makes no sense. It will cost more money in the long run.

Mr. ROTH. Mr. President, I support the amendment offered by the distinguished Senator from Oregon to reduce by 2 percent the amounts allocated to procurement, and to research and development. I believe that this amendment will provide an additional measure of discipline in the defense budget without damaging the basic objectives of the President's defense rebuilding program. In fact, the $1.7 billion that this amendment represents will still leave the Senate appropriation for defense in fiscal year 1982 $6.1 billion over the President's request.

Mr. President, as a strong supporter of reversing the downward trend in our defense capabilities, I have been uneasy over what sometimes appears to be an open checkbook approach to defense. A decade of neglect cannot be reversed overnight. In trying to do so, we may not only end up with less defense than we need, we may also damage the economic base for a sustained and effective defense effort.

We have many and complicated defense needs. We need to have an ability to respond rapidly to crises far from our shores. We need to improve the readiness of our Armed Forces. We have personnel shortages, and there is no question that we have to increase the amounts available to procure and develop new weapons systems to meet the enormous growth in Soviet military strength.

I am sure that the Defense Appropriations Subcommittee has done a thorough and responsible job of scrutinizing the priorities, costs, and effectiveness of the various procurement and R. & D. proposals submitted to it by the administration.

But let us be candid. The prevailing mood has been one of the "more is better" when it comes to defense hardware. The pressure has largely been off to do the kind of painful prioritizing that has been applied to social welfare programs.

I think that it is incumbent on the Senate to send a signal to our defense planners, and to the country, that we have defense spending under control.

If we do not send such a signal—and I must say, $1.7 billion out of more than $200 billion is minimal—I fear that the public confidence so essential to putting this country's economy back on the right track will be undercut. This country has taken some bitter, but necessary medicine in reducing the budget in social welfare areas to restore our economy to health. I think it would be a grave mistake to vitiate the beneficial effects of that medicine by indulging in open-ended defense spending.

Furthermore, there is considerable doubt among expert opinion as to the ability of our industrial base to absorb the massive and rapid increases in defense procurement being proposed. The immediate effect may well be simply higher prices, rather than larger quantities or better quality. I know from hearings that we have held in my own Governmental Affairs Committee that defense procurement procedures could be greatly improved, resulting in large savings for the taxpayer.

Over the longer term, I am also concerned that too many of our best engineering, managerial and scientific talents may be drawn into defense industries to the detriment of our international economic competitiveness. The way to avoid this unfortunate outcome, it seems to me, is to engage in a prudently prioritized rebuilding program. And the only effective way to get careful

prioritizing out of any bureaucracy is to keep its budget under strict control.

For these reasons, then, I support the amendment.

Mr. LEVIN. Mr. President, I agree with so much of what the Senator from Oregon has had to say about the bloated nature of this budget and the contrast between the increases we are making for defense and the decreases we are imposing on equally essential social programs, that I am strongly tempted to vote for his amendment.

But I long ago concluded that across-the-board cuts and transfer amendments are an unacceptable way of reallocating expenditures. I have reached that conclusion for two reasons. First, it is an abdication of congressional responsibility. For example, I think we could easily achieve the savings contemplated by the amendment by making reductions in the B–1 and MX research and development programs and increasing competition in defense procurement programs. But this amendment leaves the decision about where to cut to the Department of Defense and it would be their priorities which would determine the cuts rather than the Congress.

Consequently we might be faced with cuts in the very programs I have fought to strengthen over the past few weeks—programs designed to increase our conventional strength. In fact, given the Department's support for the B–1 and MX basing mode and their opposition to the amendments that have been offered to increase spending in conventional areas, I suspect that is precisely what they would do. I cannot support either that outcome or the process which would allow it to take place.

Second, I have always believed that if those of us who support social programs want to have any hope of preventing across-the-board cuts in those areas, then we have to be able to argue from a consistent base. If we vote for across-the-board cuts in defense, how can we legitimately argue that proponents of sundry cuts should identify where precisely they would make them in social programs?

Accordingly, Mr. President, while I am sympathetic to the arguments made by Senator HATFIELD, while I certainly share his goals, I cannot agree with his method and accordingly, I must reluctantly vote against it.

SEVERAL SENATORS. Vote!

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Oregon.

On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Mississippi (Mr. COCHRAN), the Senator from Alabama (Mr. DENTON), the Senator from Arizona (Mr. GOLDWATER), the Senator from California (Mr. HAYAKAWA), the Senator from Pennsylvania (Mr. HEINZ), and the Senator from Wyoming (Mr. WALLOP) are necessarily absent.

Mr. CRANSTON. I announce that the Senator from Arizona (Mr. DECONCINI) is necessarily absent.

I further announce that, if present and voting, the Senator from Arizona (Mr. DECONCINI) would vote "nay."

The PRESIDENT pro tempore. Is there any other Senator wishing to vote?

The result was announced—yeas 36, nays 57, as follows:

[Rollcall Vote No. 449 Leg.]

YEAS—36

Abdnor	Kassebaum	Pryor
Andrews	Kasten	Quayle
Burdick	Kennedy	Randolph
Byrd, Harry F., Jr.	Mathias	Riegle
	Matsunaga	Roth
Chafee	Mattingly	Simpson
Danforth	Metzenbaum	Specter

Dodd	Laxalt	Tower
Domenici	Leahy	Warner
East	Levin	Zorinsky

NOT VOTING—7

Cochran	Goldwater	Wallop
DeConcini	Hayakawa	
Denton	Heinz	

So Mr. HATFIELD's amendment (UP No. 746) was rejected.

Mr. JACKSON addressed the Chair.

The PRESIDENT pro tempore. The Senator from Washington.

UP AMENDMENT NO. 747

Mr. JACKSON. Mr. President, on behalf of the junior Senator from Virginia (Mr. WARNER) and myself, I call up an unprinted amendment which is at the desk.

The PRESIDENT pro tempore. The clerk will state the amendment.

The bill clerk read as follows:

The Senator from Washington (Mr. JACKSON), for himself and Mr. WARNER proposes an unprinted amendment numbered 747.

On page 71, after line 3, insert the following:

"SEC. . Of the funds appropriated by this Act for strategic programs, the Secretary of Defense shall provide funds for the Advanced Technology Bomber program at a level at least equal to the amount provided by the committee of conference on this bill in order to maintain priority emphasis on this program."

Mr. WARNER. Mr. President, may we have order, please?

The PRESIDENT pro tempore. Order in the Senate.

Mr. JACKSON addressed the Chair.

The PRESIDENT pro tempore. The Senator from Washington.

Mr. JACKSON. Mr. President, I am offering an amendment to this appropriations act which is intended to maintain a priority emphasis on the advanced technology bomber program. While the effect of this amendment will only be for 1 year, I am offering it to send a clear signal to the administration that they should continue to maintain a high priority on the ATB program so that the earliest practical date for its initial operational capability can be achieved.

This amendment does nothing more than commit the Pentagon officials to what they have already said is their objective. Specifically, this amendment prohibits the transfer of funds out of the ATB program, but permits the transfer of additional funds into this program if the Secretary of Defense determines that they are needed. Secretary Weinberger has publicly stated the administration's policy is to avoid delay in the development of the advanced technology bomber. In meetings with other high-ranking officials of the Department of Defense, I have been given further assurances of their commitment to the early deployment of the advanced technology bomber.

However, given the cost of the B–1B which will be about $30 billion under the general estimates of the administration, one of my concerns is the possibility of a negative budgetary impact on the advanced technology bomber program. A delay in the availability of the advanced technology bomber could impair our strategic forces in the 1990's. We must make sure that the commitment to building the B–1B bomber does not damage the strength of the national resolve to also fund the ATB. Moreover, after the first 100 B–1B aircraft have been committed to, there will be some pressure to continue production of the B–1B based solely on the argument of lower unit cost per aircraft for a larger production run allowing wider amortization of the research and development and early production costs. When that time comes, we will have to resist such pressures if the ATB program is to be pursued to the actual deployment in our strategic forces. The only reason that I could envisage for diverting funds from the ATB program to further B–1B production would be if the advanced technology bomber program is not successful in meeting its technical objectives.

Mr. President, I believe that this amendment will protect the ATB program from diversion of funds during fiscal year 1982 to other defense programs. I hope the administration will submit budget requests in future years for the ATB program which are consistent with the spirit of an aggressive program which they have expressed as their intent.

I yield to the Senator from Virginia.

The PRESIDING OFFICER (Mr. HATCH). The Senator from Virginia.

Mr. WARNER. Mr. President, the subcommittee, of which Mr. JACKSON and I are the chairman and ranking minority member, respectively, carefully laid in the hearings the foundation in this amendment and established by all the witnesses that appeared that this was the intention of the Department of Defense. Nevertheless, it is our desire to have a little insurance policy. I think it meets the legitimate concern raised by

our colleague from Georgia earlier today and our colleague from Maine. I urge its adoption. I understand the managers are prepared to accept it.

Mr. GLENN. Mr. President, I think I am for this. I just want to ask a question of the distinguished floor manager of the bill. As a member of the Appropriations Committee, what is the usual procedure for the Pentagon if they want to transfer funds out of one fund or account into another account?

Mr. STEVENS. They would have to reprogram it if it was an amount in excess of the stated amount in our report. But they would have to come in with a reprograming.

Mr. GLENN. Come in for congressional action or just committee approval?

Mr. STEVENS. It would be committee approval for reprograming in excess of the stated limited amount that would be necessary in a category like this. We would not look with favor upon reprograming.

Mr. GLENN. I know they need some flexibility in funding. What is the amount that they have; does the Senator recall? I do not plan to make a long issue of this tonight. I am just curious about it.

Mr. STEVENS. On the report, we have increased the amount that can be reprogramed from $5 million to $12 million as the threshold for increases to existing procurement programs. There is a percentage involved, too, but the maximum would be $12 million.

This amendment would, in effect, state that could not be done except by an act of Congress.

Mr. GLENN. Even that minimum?

Mr. STEVENS. I think the minimum amount could be changed around up to the $12 million.

Mr. GLENN. I thank the Senator.

Mr. STEVENS. Mr. President, the Senator from Washington has discussed this with us. We know that he has discussed the language with the Senator from Virginia (Mr. WARNER) and with Dr. DeLauer, the Under Secretary of Defense. It is an amendment which has been discussed at length with us and we have had some impact on it in terms of the application of this money for strategic programs. I am informed, and I am able to state to the Senate, that it is entirely acceptable to the Secretary of Defense and to the administration. I urge its adoption.

Mr. JACKSON. Vote.

The PRESIDING OFFICER. Is there further debate? If not, the question is on agreeing to the amendment of the Senator from Washington (Mr. JACKSON).

The amendment (UP No. 747) was agreed to.

Mr. JACKSON. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. WARNER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The Senator from Alaska.

Mr. STEVENS. The bill is open to amendment, Mr. President. If there are no amendments, I will ask for third reading.

Mr. CANNON. Third reading.

Mr. NUNN. Mr. President, I have an amendment ready. I have been requested by Senator HOLLINGS to hold off until he has a chance to get back. He left for a few minutes.

Mr. PROXMIRE. I have an amendment. I can get mine ready now if you are willing to discuss it.

The PRESIDING OFFICER. The Senator from Wisconsin.

UP AMENDMENT NO. 748

Mr. PROXMIRE. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will state the amendment.

The bill clerk read as follows:

The Senator from Wisconsin (Mr. PROXMIRE), for himself, Mr. PRYOR, and Mr. RANDOLPH proposes an unprinted amendment numbered 748.

On page 24, line 20, strike "$14,044,298,000," and insert "$13,987,298,000,".

On page 28, line 18, strike "$9,076,906,000," and insert "$9,018,400,000,".

Mr. PROXMIRE. Mr. President, I am happy to agree to a time limitation if the manager of the bill would prefer that, or I can just proceed. I do not think it will take very long in either event. But if he wants an agreement on 15 minutes on a side, I am happy to agree to that, if that would serve the interests of the manager.

Mr. STEVENS. Mr. President, I would be more than happy to agree with that.

Mr. PROXMIRE. That is fine.

Mr. STEVENS. Mr. President, I ask unanimous consent that time on the amendment not exceed 15 minutes to a side.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PROXMIRE. Mr. President, the committee has incorporated a special line item in this bill which anticipates and pays for in advance the cost growth in the B–1 and MX programs. Using an arbitrary figure of 3 percent, a total of $57 million is added on for the B–1B procurement and advance procurement and $58.5 million is added on for MX research, development, test, and engineering. Now, that is a total of $115 million in anticipated overruns—virtually unprecedented.

I was told in the Appropriations Committee that this had been done before, but for the life of us we cannot discover any precedent for this. I have discussed this with a number of staff members on both sides of the aisle. They cannot recall this. I have discussed this with Pentagon personnel. They cannot remember it.

So this is giving this, not for inflation, Mr. President, not for inflation, this is for sheer overruns, overruns that have not yet occurred, have not been requested by the Defense Department, and are above and beyond the increase for inflation already built into the bill.

This point must be clearly understood. The committee has increased the allotment for inflation in this bill. This increase for inflation applies to both the MX and the B–1B programs. But on top of this increase for inflation above the estimates of the Department of Defense, on top of this inflationary add-on there is another increase for mismanagement. We are putting money in this bill above inflation for classic cost growth—waste, fraud, abuse, mismanagement, underestimating, buy-ins, and bail-outs.

My amendment would eliminate the arbitrary 3-percent add-on and save the taxpayers over $115 million. The committee is arguing that the taxpayers are being asked to pay taxes for mismanagement. I say that is outrageous and should never be done in advance.

Mr. President, including advance cost overruns for the B–1 and MX programs establishes a precedent which will imperil the Federal budget. Far more important than the amount of money is the precedent involved. The rationale that we should program for expected but not yet occurring cost overruns in a prior year budget would mean that every appropriations bill would be artificially expanded by mammoth amounts. In the last year, the Comptroller General has informed the Congress that major civil and military acquisitions—programs now ongoing but not yet completed, have experienced a cost overrun of $170 billion. Only half of this can be attributed to inflation.

Therefore if we were to follow the precedent of the MX and B–1 cost overrun add-on in this defense bill, we would have to add $85 billion annually to the appropriations process. There is no greater risk to the budget process than the initiation of advance programing for cost overruns.

Planning for, anticipating, and budgeting for cost overruns is a budget manager's dream. No longer will our procurement specialists have to worry about coming to Congress with an overrun story. We are telling them that the Congress expects an overrun—so go ahead and overrun if you want. We expect it, we know it is coming, we are budgeting for it, so why should the manager make any great effort to avoid cost growth? I can tell you today that if this precedent is established, every program manager will simply plan for the cost overrun—maybe even welcome it.

Mr. President, if you want to bury cost overrun problems and keep them out of sight, what would be the best way to accomplish this? If you wanted to gut the provisions of the Nunn amendment, which we adopted unanimously, which highlights cost growth in defense programs and provides automatic devices to curtail overruns, then what would be a good strategy to do this? Now, Mr. President, I am not saying this is the intent of the 3-percent provision, I am arguing that it is the practical result of it. And that result would be to incorporate cost overruns in the regular appropriations process. From this point on cost overruns will have a new measuring base. There will be real cost overruns and budgeted cost overruns. We will have overruns in and out of the budget.

Anticipating cost overruns poses another hazard. What happens, for example, if the program is well managed, and to use the B–1 as a case in point, the

Secretary of Defense is right and there will be no cost growth in that program. Then what happens to the 3-percent extra we have given them? Does anyone believe that the Air Force is going to give that money back? Will the Treasury ever see a dime of that 3 percent again even if there is no cost growth? I think not. Somehow a use will be found for that money. If you were a program manager and had an extra $50 million lying around waiting for a cost overrun to happen, there would be a terrible temptation to put those dollars to use even if a cost overrun had to be invented.

Mr. President, the manager of the bill very graciously gave me aircraft unit cost estimates for some of our fighter planes, F–14's, F–18's, F–15's, F–16's, and so forth. What this sheet shows is that with inflation taken out, the cost overrun on the F–14 was 3 percent and the F–18 was 1.4 percent.

The F–15 was 2.5 percent; the F–16, 2.1 percent, and then 3.3 percent on the UH–60, 3.0 percent on the A–10. In half the cases it was below 3 percent. So what we are doing in this case is providing for an anticipated overrun and there is a good chance that they will not reach it. The Secretary of Defense is very firm in saying that he thinks his cost estimates can be met. In this bill we are giving an additional allowance for inflation above what the House provides and above what the administration requested.

Mr. NUNN. Will the Senator yield for a question?

Mr. PROXMIRE. I am happy to yield.

Mr. NUNN. This amendment leaves the committee inflation increase intact. It does not touch that inflation increase. The Senator is saying that he agrees with that increase?

Mr. PROXMIRE. The Senator is correct.

Mr. NUNN. The Senator is going further in saying that his amendment would remove the additional 3 percent the committee has put in on two major programs which are identified as anticipated cost overruns, is that correct?

Mr. PROXMIRE. That is exactly right.

Mr. NUNN. I sponsored an amendment in the past, earlier this year, which has become law now, which was designed to bring about some accountability in this overrun system. I think it is threatening the very national security of our country because I think we are disarming by procurement overruns, inadvertently. What that amendment is supposed to do is to bring to bear some pressure on the program planners and, in turn, on those who do the estimating to first of all have correct estimates so we can make meaningful comparisons when we choose between weapons systems, and, second, for the program planners to plan the program in a way that minimizes cost overruns. It is an accountability amendment because the program manager has to be identified.

Does the Senator from Wisconsin see that the committee provision for cost overruns is inconsistent with that approach?

Mr. PROXMIRE. Absolutely. The Senator's amendment, which was unanimously approved earlier this year, is an amendment which I enthusiastically supported. Highlight the cost overrun, expose it.

This would contradict it by providing in advance for an anticipated cost overrun.

Mr. NUNN. I think the Senator has made a good point here.

Mr. PROXMIRE. I thank my good friend from Georgia. I appreciate his support.

Mr. President, I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. PROXMIRE. Mr. President, providing advance cost overruns also threatens the check and balance responsibilities of the Congress. It is the duty of the Congress not only to fund programs but to check on them from time to time to see that they are being carried out in an efficient manner. We owe that to the taxpayers. By budgeting for cost overruns in advance we give up the opportunity to enforce discipline on the program managers when they overspend. Instead we tell them "Go ahead and spend, spend, spend. We will cover you with automatic cost overrun insurance." That is what this program is—insurance against being hauled before Congress to answer embarrassing questions. Freedom to exploit the 3-percent free money at will.

No proposal in recent memory runs more counter to good business sense than the automatic cost overrun appropriation. Can you imagine what would happen in the board room of any major corporation if you stood up and said, "Now that we have fully budgeted for inflation, let us now budget for mismanagement. Let us accept mismanagement as a normal price of doing business. Let us expect to have cost overruns, not related to inflation, and budget for them in advance."

That is not how business works. Business enforces discipline on its workers and on its management team. If there is mismanagement, they do not simply budget for it; they find out the cause and fix it. Believe me, they would not tolerate a permanent form of mismanagement built into their budget cycle at a fixed rate every year. Where the ledger is the key to success or failure, discipline and profit are the enforcing mechanisms—not automatic planning for mismanagement.

Far from being an example of truth in budgeting, the automatic 3-percent cost overrun proposal actually is the acceptance of mismanagement in the Federal Government. It is telling the taxpayers of this country that we can do nothing about cost overruns except pay for them in advance. This is not truth in budgeting; this is wholesale abdication, a throwing in the towel, an admission of failure which makes a mockery out of the budget process. We might as well start putting in line items for waste, fraud, and abuse because we all know that occurs. So why not put it in the budget? We know there is a certain amount of inefficiency in the federal system, so why not budget for it in advance?

We should all recognize that this innovative concept of budgeting cost overruns in advance has not been requested by the Department of Defense. It has not been approved by the Office of Management and Budget. Can you imagine what OMB might say if we were to add $85 billion to the budget every year from now on based on this concept. We would have to put off balancing the budget into the next century if this proposal gets a life of its own. It is a sure fire way to increase spending at an enormous rate. Those who support this concept will be contributing to the biggest potential raid on the Federal Treasury in a decade. Talk about big spenders. We now have a concept which not only endorses the size of planned budgets but would automatically increase these budgets by 3 percent annually.

In sum the President has not asked for this. The Secretary of Defense has not asked for this. The Joint Chiefs of Staff have not asked for this. The Secretary of the Air Force has not asked for this. The Chief of Staff of the Air Force has not asked for this. OMB has not asked for it. But the defense contractors will absolutely love it. It means they can just go ahead and budget for cost overruns because the Congress has given them the green light.

This is just not the camel's nose under the tent. He has all four feet in, his hump is sticking out the ceiling, and his nose is in the food bucket. This is a budget-busting concept if there ever was one. It is an automatic spending device that could eventually break the budget if it gets a start here today.

I reserve the remainder of my time.

Mr. STEVENS. I would like the Senator to turn to page 21 of the bill. I invite the attention of every Senator to page 21, line 18, just to demonstrate my position on this. I must say we had a full discussion in the subcommittee and the full committee. I hope the Senate will back us up on this because I feel very strongly that this may be the turning point of trying to deal with budgets of the size we are talking about.

If you look at that, $808 million is provided for cost growth and other expenses on prior year programs. That applies only to the shipbuilding and conversion account of the U.S. Navy.

Contrary to what the Senator says, every single item we have here in this bill has a catch-up account for past cost growth and postappropriation cost incurred because we do not act like we are in a board room.

Let me just address the Senator from Wisconsin about a project that I know something about. We just passed the waiver for the Alaska gas pipeline. That pipeline is going to cost $8.7 billion in 1981 costs. By the time the company, as required by the FERC procedure, figures out its costs, do you know what its costs are on the estimate we just approved? Thirty-one billion dollars. Do you know

why? There is a cost overrun pool, there is an inflation pool, there is a pool for contingencies, and the people in the Government who manage the approval of a pipeline of that size say you cannot build that project in terms of as-spent dollars for less than $31 billion.

Here we are as the Senate. We are starting a project of $20.5 billion in terms of the B–1. I have been criticized because I said I agree in the long run that is going to cost about $40 billion. Do you know why? It is going to cost $40 billion because we do not budget the way a business, a sound business concern, would do it. They would figure in what the cost growth is going to be. They would figure in a realistic projection of inflation. Then they would give a top figure. Then do you know what they do? They give an incentive to management to come in under it.

As a matter of fact, that is exactly what FERC did to the Alaska gas pipeline. There is an incentive rate of return if they bring in a gas pipeline for less than $30 billion.

All this does is for the first time on two items, the two new ones in the bill, the MX and B–1, that in the past on such weapons systems there has been an average cost growth—an average, Mr. President—of 3 percent per year. This is per year, Mr. President. The longer it stretches out, the more that 3 percent adds up to.

So we are saying to the Department of Defense, "We are going to put the money up front, 3 percent more on these two projects. You come to us before you spend that. But it is there to spend if in the first year you can save money by contracting within the amount rather than waiting a year and coming back next year and asking for more money."

I see heads shaking, but believe me, look at that one account. A total of $808 million is in the shipbuilding account alone in this bill for costs incurred on prior year programs already approved by the Congress.

The final statement I am going to make is this, Mr. President. We are trying to develop a new relationship in our negotiations with the other body. We tried to get the other body to understand the problem of the inflation account, on which the Senator from Wisconsin does agree with me. I think the Senate has expressed itself twice now that inflation should not be understated because that is understating the impact of a program and really misleads the country as far as the cost of these weapons systems. The House refused to go along with that.

This time we are taking back to them the inflation account and this cost growth item in the hopes that perhaps the House might agree that at least one of these items has some merit.

If you want to take away our bargaining position, follow the Senator from Wisconsin and, in effect, take us into conference as we were in the supplemental, which is one item to talk about, not several.

We have several items in this bill to talk about, and we all have pledged that we are coming back to the Senate from conference with a bill which is nearer the September mark, which means $2 billion in outlays must be cut from the March request of the President. That means we are going to get this bill down, not counting pay. That is another item, because I think it is improper to charge that against this budget. We are going to get this bill down to where it approaches $200 billion. If we are not successful, we will have the continuing resolution, which will take it down to $197 billion, anyway.

So our real area to negotiate here is roughly $3 billion, and I hope the Senate does not take away our negotiating strength so far as the remainder of this bill is concerned. It is a bill that gives us flexibility to negotiate, to represent the Senate's position in terms of priorities.

Again I point out that that is $808.5 million for the shipbuilding and conversion of the Navy account alone. We have added only 3 percent for the B–1 and MX, and as the Senator has pointed out, our 3 percent does not approach that.

So if the Senator from Wisconsin wants to attack the cost growth, the main item in the bill is $808.5 million for the Navy alone in terms of cost growth and other expenses, costs that were incurred by the Navy since last year. We have to have some leeway to deal with these problems.

When we have to deal with a bill that has $808.5 million in cost growth and other increases because of an improper approach, I think we should try a new tack, and that is what this 3 percent is. It applies to only two items, the B–1 and MX.

Mr. PROXMIRE. It is indeed a new tack which was not considered by the authorizing committee. It is a new tack which has not been considered by the House. It is a new tack which has not been testified about by the administration, by the Defense Department. They have not asked for it.

Mr. President, the item referred to by the Senator from Alaska on page 21 is for prior year overruns.

Mr. STEVENS. That is right.

Mr. PROXMIRE. The Senator is correct—$808 million. But it is a prior year. Then we bring them in and ask them to account for it.

We have in the Nunn amendment, which we adopted this year, the basis for accountability, the basis for discipline, and the basis, if we wish to do so, to cancel a program.

Mr. STEVENS. We do not get any accountability for that $808.5 million. It is already spent. For this 3 percent, we get accountability in advance. We put the money up and say, "You can spend it, but tell us what you are going to spend it for." It is entirely consistent with the Nunn approach.

Mr. PROXMIRE. The Senator from Georgia is the expert on the Nunn approach. He said it was not, and I agree with him.

Mr. STEVENS. The Senator from Georgia has to see this experiment tried, too.

It does not say, "Come to us before you run up additional costs." It says, "Come to us if you have."

Mr. PROXMIRE. The Senator is saying that we will determine this in advance, but he is giving it now. He is saying, "Here is the money. Spend it."

Mr. STEVENS. No. I am saying, "Here it is. Justify it."

In the Navy case, we put up $808.5 million without blinking an eye because it was already spent. We were not consulted on that at all. It was just done.

This is the way to get control and have them say, "We have spent money"—rather than come back next year—"Can we use part of the 3 percent?" We will say, "Yes, if it is justified." It will cost less money.

Mr. PROXMIRE. Is the Senator saying that we will have a debate on the floor as to whether they can use this $115 million?

Mr. STEVENS. On this 3 percent money, if there is a dispute in our committee between the Senator from Mississippi and me, it will come to the floor, yes.

Mr. PROXMIRE. Where is the provision for that in the bill?

Mr. STEVENS. It is tradition in our committee.

Mr. PROXMIRE. We give them $115 million. We appropriate it. The money is there.

Mr. STEVENS. The money is there, but they would have to come to the committee to use it. That is the practice, and they could not get around that. It has been a good practice.

Mr. PROXMIRE. Why does not the Senator add it on the bill?

Mr. STEVENS. We do not have to. They understand that they cannot use that money without our approval.

Mr. PROXMIRE. This is the first time we have ever done that. How can it be a practice?

Mr. STEVENS. We establish this practice in similar finding reviews such as reprogramings. Reprograming procedures are outlined in the report, not the bill.

Mr. PROXMIRE. Where we have given advance money for an overrun?

Mr. STEVENS. No. Where they have to come to us for approval to shift funds.

Mr. PROXMIRE. It is not written in the statute, and it is not in the committee report.

Mr. STEVENS. That is established practice in this account. I have no objection to writing it in. We do not have to write it in, because they know it.

SEVERAL SENATORS. Vote! Vote!

The PRESIDING OFFICER. The question is on agreeing to the amendment. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Alabama (Mr. DENTON), the Senator from Arizona (Mr. GOLDWATER), the Senator from California (Mr. HAYAKAWA), the Senator from Pennsylvania (Mr. HEINZ), and the Senator from Wyoming (Mr. WALLOP), are necessarily absent.

Mr. CRANSTON. I announce that the Senator from Arizona (Mr. DECONCINI), and the Senator from South Carolina (Mr. HOLLINGS), are necessarily absent.

The PRESIDING OFFICER. Is there any other Senator who needs to vote?

The result was announced—yeas 46, nays 47, as follows:

[Rollcall Vote No. 450 Leg.]

YEAS—46

Baucus	Ford	Melcher
Bentsen	Glenn	Metzenbaum
Biden	Hart	Mitchell
Boren	Hatfield	Moynihan
Bradley	Heflin	Nunn
Bumpers	Huddleston	Pell
Burdick	Inouye	Proxmire
Byrd, Harry F., Jr.	Jackson	Pryor
	Johnston	Randolph
Byrd, Robert C.	Kassebaum	Riegle
Cannon	Kennedy	Sarbanes
Cranston	Leahy	Sasser
Dixon	Levin	Tsongas
Dodd	Long	Williams
Eagleton	Mathias	Zorinsky
Exon	Matsunaga	

NAYS—47

Abdnor	Gorton	Pressler
Andrews	Grassley	Quayle
Armstrong	Hatch	Roth
Baker	Hawkins	Rudman
Boschwitz	Helms	Schmitt
Chafee	Humphrey	Simpson
Chiles	Jepsen	Specter
Cochran	Kasten	Stafford
Cohen	Laxalt	Stennis
D'Amato	Lugar	Stevens
Danforth	Mattingly	Symms
Dole	McClure	Thurmond
Domenici	Murkowski	Tower
Durenberger	Nickles	Warner
East	Packwood	Weicker
Garn	Percy	

NOT VOTING—7

DeConcini	Hayakawa	Wallop
Denton	Heinz	
Goldwater	Hollings	

So Mr. PROXMIRE's amendment (UP No. 748) was rejected.

Mr. BAKER. Mr. President, if I could have the attention of the Senate, I would like to once again explore the possibility of an arrangement for the——

Mr. RANDOLPH. Mr. President, let us have order in the Senate.

The PRESIDING OFFICER. The Senator makes a good point. The majority leader has the floor.

Mr. BAKER. Mr. President, according to the list I have compiled in cooperation with the minority leader, the following amendments are yet to be disposed of. Incidentally, on one here that will not require a rollcall vote I have not yet apprised the minority leader, but it will not cause him any problem, an amendment offered by the Senator from Ohio (Mr. METZENBAUM) which will, perhaps, be the first amendment to be dealt with when we reconvene tomorrow.

There is a suggestion on the amendments I am about to list that we try to get a 20-minute time agreement to be equally divided.

In addition to the Metzenbaum amendment, an amendment by Mr. LEVIN dealing with the B–52; a second amendment by Mr. LEVIN dealing with steaming times; an amendment by Mr. EXON dealing with ammunition; an amendment by Mr. ROBERT C. BYRD——

Mr. ROBERT C. BYRD. The second one, if the distinguished Senator will yield——

Mr. BAKER. Yes.

Mr. ROBERT C. BYRD (continuing). Is a sense-of-the-Senate resolution that would provide that the Secretary of Defense comply with the requirements of submitting a 5-year shipbuilding program annually when the President submits his budget message.

Mr. BAKER. And finally, an amendment by the Senator from Texas (Mr. TOWER) on a multiyear contract amendment.

Mr. STEVENS. It is a modification of a provision in the bill.

Mr. BAKER. A modification of an existing provision in the bill. On that a 5-minute time limitation equally divided.

Mr. President, to reiterate, I would propose, and I now ask unanimous consent that on tomorrow—and an amendment by Mr. MATHIAS with a time limitation of 10 minutes equally divided on sea-launched cruise missiles.

Mr. President, there is already an order for the Senate to convene at 10 tomorrow. Could I inquire—on tomorrow I have special order requests as follows—let me put this entire unanimous-consent request.

PROPOSED PROCEDURE FOR FRIDAY

Mr. BAKER. Mr. President, I ask unanimous consent that when the Senate completes its business tonight it stand in recess until the hour of 9:30 a.m. tomorrow.

After the recognition of the two leaders under the standing order, that the Senators from Alabama (Mr. HEFLIN) and (Mr. DENTON) be recognized jointly for not to exceed 15 minutes on special order; that the Senator from Texas (Mr. BENTSEN) then be recognized for 5 minutes on special order; the Senator from Mississippi (Mr. COCHRAN) for not to exceed 15 minutes on special order; that after the expiration of the time for Senators' recognition under special orders there be 5 minutes for the transaction of routine morning business in which Senators may speak for not more than 1 minute each; that at the expiration of the time for the transaction of routine morning business the Senate resume consideration of the Department of Defense appropriation bill, H.R. 4995.

At that time the Chair will recognize the Senator from Ohio (Mr. METZENBAUM) to offer an amendment which is at the desk and dealing with aging; that thereafter only the following amendments would be in order and the time limitations apply in the following manner: an amendment by Mr. LEVIN on the B–52, 20 minutes to be equally divided; an amendment by Mr. LEVIN dealing with steaming hours, 20 minutes to be equally divided; an amendment by Mr. EXON dealing with ammunition, 20 minutes equally divided; 20 minutes on the Metzenbaum amendment heretofore referred to; on an amendment by Mr. ROBERT C. BYRD on Stealth, 20 minutes equally divided; and by Mr. ROBERT C. BYRD, as he indicated in the record a moment ago, in respect to the shipbuilding program, 20 minutes equally divided; 5 minutes on the Tower amendment dealing with multiyear contracting relating to a provision already in the bill; and 10 minutes on an amendment by the Senator from Maryland (Mr. MATHIAS) dealing with sea-launched cruise missiles; and, Mr. President, that a vote occur on these amendments at not later than the time allocated in this order, and that a vote occur on final passage of this bill at not later than 2 p.m. on tomorrow.

Mr. NUNN. Reserving the right to object, if I may have the attention of the majority leader——

Mr. BAKER. If the Chair will bear with me for just a moment.

Mr. STEVENS. Mr. President, I need to inquire if there is any provision for amendments. Since we have been through all of these amendments once before and they are being amended, I assume they will not be subject to amendment.

Mr. BAKER. I believe I include in the request that no other amendment would be in order, and that would include any second-degree, perfecting amendment or substitutes.

The PRESIDING OFFICER. The Senator is correct.

Mr. BAKER. Mr. President, I change the request for the convening of the Senate.

I ask unanimous consent that the convening of the Senate be changed to 9:15 a.m., and I include in the request that paragraph 4 of rule XII be waived.

Mr. NUNN. Mr. President, reserving the right to object, and I shall not object, if the majority leader would agree that the amendment I propose will come up tonight.

Mr. BAKER. Yes. The list I have just given applies to tomorrow. I do understand the Senator from Georgia (Mr. NUNN) will offer an amendment tonight which will be in order and on which I understand he is willing to have very short debate and will require a rollcall vote.

Mr. NUNN. That is correct.

Mr. DOLE. Mr. President, reserving the right to object, the amendment by the distinguished Senator from Ohio (Mr. METZENBAUM) deals with the White House Conference on Aging. I wonder if we could not consider that separately? I think we can work out an agreeable amendment and bring it up separate and apart from the Defense bill. Otherwise I would be constrained to object to a 20-minute time limit and waiving my motion to table and waiving the right to amend this advertisement.

Mr. METZENBAUM. I would like to say to the Senator from Kansas that the amendment we have has been worked out with a number of Members on the opposite side of the aisle. I think it is not controversial as presently drafted. I do not particularly care whether it goes on this bill or whether it goes separately, but I am concerned about the time element and I am afraid if it does not go on this bill it will not be timely.

So I would really prefer to put it on this bill. It will not be the only matter that reflects a sense of the Senate. The Senator from Pennsylvania last night was proposing one having to do with railroad retirement benefits. So it is not——

Mr. STEVENS. That is not in the bill.

Mr. BAKER. Mr. President, I would point out that I would not presume to tell the Senator from Ohio what to do, but I will make an offer. If we can resolve this issue and he wishes to offer a freestanding resolution I will make every effort, and I am sure the minority leader will cooperate, at seeing that he had an opportunity to present that to the Senate for consideration separately.

Mr. METZENBAUM. When would the Senator be disposed to permit the amendment to come in as a freestanding amendment, early in the morning prior to action on this measure, that you would make a window for it?

Mr. BAKER. Mr. President, I would propose to do it immediately after final passage of this bill tomorrow.

Mr. METZENBAUM. I would like to be cooperative with the majority leader. But realistically speaking, when 2 o'clock on Friday arrives it is pretty had to keep a quorum present, and I am afraid there will not be a quorum present at that time.

Mr. BAKER. I can assure the Senator there will be a quorum.

Mr. President, after we finish this bill tomorrow, it is the intention of the leadership to ask the Senate to turn to the consideration of the small business bill. There will be rollcall votes on that bill during the day tomorrow and after 2 o'clock tomorrow.

Mr. METZENBAUM. I would like to sleep on the suggestion overnight. I may very well accede to it in the morning, but I would like to sleep on it.

Mr. STEVENS. Mr. President, on that basis, I object to the agreement.

Mr. BAKER. Mr. President, if the Senator will withhold his objection.

Mr. STEVENS. No, the Senator will not. The Senator has been managing this bill for 4 days and will be again tomorrow. There is no reason for an amendment like this in the bill. If we cannot get it over now, we might just as well go home tonight and come back tomorrow. We will work our way with this bill. I must quarrel with the concept that we have to go through amendments again that we have argued at length just so there will be a rollcall, because I tried to get a time agreement time and time again and could not get it and finally tabled the amendment. Now we are going to have another debate and have to keep everybody here tomorrow going through those same amendments. We are going to discuss those amendments again from now until the bill is passed, with the exception of the amendments of Senator LEVIN and Senator NUNN.

Under the circumstances, I get a little tired. I think everybody gets a little tired. I do not see any reason to be harassed by amendments that do not belong in the bill.

Mr. BAKER. I do not see any reason for the Senator to object and I hope the Senator will withhold his objection.

Mr. STEVENS. I will withhold it if the Senator will withdraw the amendment.

Mr. BAKER. Mr. President, under these circumstances, I was about to suggest, and I now suggest that, instead of providing for a vote on the amendment, we preserve the right of the Senator from Kansas to table the amendment, if he wishes to do so, and overnight let us see if we can work that out so it can be offered as a separate freestanding amendment.

Mr. DOLE. Will the Senator yield?

Mr. BAKER. Yes.

Mr. DOLE. I just received it 5 minutes ago. Most of the things that the Senator suggests here comes to the Finance Committee. We may not be able to act on these tomorrow and provide more units for the elderly and provide for more for the elderly. Maybe we could work out some satisfactory mutually all-inclusive admiration society and commend the delegates and all those things and then introduce it together tomorrow as a free-standing amendment, with the Senator's name first.

[Laughter.]

Mr. METZENBAUM. I will not worry about the name first. But at this moment the Senator from Ohio will just sit back and look to his rights. I have stepped aside in order that other things might come up this evening. When the majority leader asked me not to press to bring the amendment up this evening, I said that would be all right. But do not test my patience, because I have a perfect right under the rules to bring up this amendment on this bill and if forced to do so I will be happy to do so. If one wishes to raise the issue of germaneness, I will be prepared to meet that issue.

But I am attempting to be cooperative and I am finding less than that same degree of cooperation and reciprocity at this point from the other side of the aisle, notwithstanding the efforts of the majority leader to achieve that end.

Mr. BAKER. I do not know where that leaves me.

Mr. President, I really hope that we can arrive at a time certain to finish this bill. Otherwise, we are going to have to keep going tonight and we are going to have to try to work our way through these amendments and come in tomorrow and slog our way through again. Maybe that is what the Senate wants to do, but I doubt it.

I think what we ought to do is to try to regularize this and get a time certain to finish and provide a limitation on amendments which this provides for and a very short time for further debate.

If the Senate is not yet ready to do that, I am perfectly willing to withdraw the request and see what else we can do. But it is about 11:30 at night. I would hope, then, that perhaps the Senator from Ohio would consider withholding his request and that we will simply provide that tomorrow we can take another look at his amendment on whether or not he wishes to offer it as a free standing resolution or as an amendment to this bill. But I would really hope that it does not interfere with the setting up of the framework of disposing of this measure at this time.

Would the Senator from Ohio agree to withholding this amendment to this bill and offer it as a free standing amendment tomorrow as the first order of business after final passage?

Mr. METZENBAUM. Mr. President, I want to cooperate. The majority leader is well aware of the fact that if I offer this as a free standing amendment that, under the rules of the Senate, it would be laid over under the rules and referred to committee. Obviously, the Senator from Ohio desires to bring the matter to issue on the floor.

The Senator from Ohio has gone out of his way to accommodate the Senator from Pennsylvania and the Senator from Maine and other Senators on that side of the aisle to modify the proposal and has not brought it up earlier in the day in order to be accommodating.

Frankly, I do not see that there is any reason to expect me to be any further accommodating than I have been. This procedure I am using is absolutely not one whit different than that which was used by the Senator from Pennsylvania last night in connection with a railroad retirement pension and nobody raised the same issue that it did not belong on the defense appropriation bill.

Mr. STEVENS. Mr. President, that is not so. That was an amendment to an amendment and the Senator did, in fact, allow me to set it aside. It has not been called up and it is not part of the bill.

Mr. METZENBAUM. I understand that. But, up until that point, it was going to be, and the reason it was not called up was because Mr. Stockman acquiesced and changed the rules of the game and said he would go along and said the amendment was not needed.

Mr. STEVENS. That is not true. I had notified the Senator from Pennsylvania that I would not support that amendment and would table it if it was raised again.

Mr. BAKER. Mr. President, I think the best thing to do is, there is one more amendment we can dispose of tonight. I understand Senator NUNN's amendment would require only about 10 minutes debate and a rollcall. This could go on endlessly. So I withdraw my request at this time and ask the Senator from Georgia to offer his amendment.

Mr. ROBERT C. BYRD. Will the distinguished majority leader yield?

Mr. BAKER. Yes.

Mr. ROBERT C. BYRD. Mr. President, I wonder if the majority leader would care to pursue the request to this extent: That the amendments that he enumerated earlier, with the exception of the amendment by Mr. METZENBAUM, be entered into with the times allotted by him, with the understanding that they would be up or down votes and also that there would be no further amendments, other than possibly the one by Mr. METZENBAUM if he cares to pursue it. So that the leader would have at least time agreements on those amendments and would be assured there would be no other amendments.

Mr. BAKER. Mr. President, let me puzzle on that suggestion for a moment. I withdraw my request and I yield the floor.

The PRESIDING OFFICER. The Senator from Georgia.

UP AMENDMENT NO. 749

Mr. NUNN. Mr. President, I send an amendment to the desk and ask for its

immediate consideration. This amendment is offered on behalf of myself, Mr. JACKSON, Mr. GLENN, Mr. HOLLINGS, Mr. ROBERT C. BYRD, Mr. EXON, Mr. JOHNSTON, Mr. LEVIN, and Mr. BUMPERS.

Mr. STEVENS. Mr. President, may we have order? On this amendment, I think the Senate will be very interested in this. It is something that is quite sensitive and I hope that the Senate will allow the Senator from Georgia to present his amendment.

The PRESIDING OFFICER. The clerk will state the amendment.

The legislative clerk read as follows:

The Senator from Georgia (Mr. NUNN), for himself, Mr. JACKSON, Mr. GLENN, Mr. HOLLINGS, Mr. ROBERT C. BYRD, Mr. EXON, Mr. JOHNSTON, Mr. LEVIN, and Mr. BUMPERS, proposes an unprinted amendment numbered 749.

On page 28, line 18, strike "9,076,906,000" and insert "9,264,406,000."

Mr. NUNN. Mr. President, I ask unanimous consent that Mr. CANNON be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NUNN. Mr. President, this is an amendment that adds $187.5 million to the category known as the Air Force R. & D.

First of all, I can say to my colleagues that this is a classified program. Second, this is the level of the expenditure in this program that has been authorized by the conference committee and the Armed Services Committee and it is now in the final authorization bill. I believe that bill has been signed into law.

I will also say that this is one of the programs that was in the Hollings-Levin amendment. Beyond that, Mr. President, that is all that I am able to say at this point in time.

I would say that I think it is a very important program, otherwise I would not be urging its support at this stage.

Mr. President, I know Senator TOWER is very familiar with this program and I yield to the Senator from Texas.

The PRESIDING OFFICER. The Senator from Texas.

Mr. TOWER. Mr. President, it is unfortunate that this program cannot be discussed, because I think it is of extremely great merit. I am certain that if my colleagues could be further enlightened on it, they would support it.

I might say that I hope they will take this amendment on faith. It is enormously important. I do support the amendment offered by the Senator from Georgia. It is consistent with what we have done in the authorizing committee as a result of a great deal of compromise, I might say, with the House and the authorizing committee. I urge its adoption.

Mr. GLENN addressed the Chair.

The PRESIDING OFFICER. The Senator from Ohio.

Mr. GLENN. Mr. President, I am delighted to be associated with the Senator from Georgia and the Senator from Texas in support of this amendment. I agree completely with it. I think it is extremely important.

I urge everyone to vote for the amendment. That is about all anyone can say about it at this point. Bu it is a very important amendment.

Mr. LEVIN addressed the Chair.

The PRESIDING OFFICER. The Senator from Michigan.

Mr. LEVIN. Mr. President, I am familiar with this program, also. I simply want to add my voice in support of it. There is nothing one can say about it, other than that we had somebody in room S-407 the other day for many, many hours available to answer questions. Many of us were able to get up there and talk to him about it.

Beyond that, I hope that the Senate will support this program. There is no more important program that I know about.

Mr. STEVENS addressed the Chair.

The PRESIDING OFFICER. The Senator from Alaska.

Mr. STEVENS. Mr. President, this shows what happens late at night. I cannot talk about this program, but I can tell you what happened.

The House has a figure that is similar to this in a program that is highly classified. After the House bill was passed, the managers of that program came to our staff, on a bipartisan basis, not to me, and told us they felt a mistake had been made in connection with that program by the authorizing committee and that they felt that this money should be rearranged. We have rearranged the money in the bill. I cannot discuss with you where that money was placed. I have discussed it at length with the Senator from Georgia.

I am surprised at my friend from Texas that he has taken the position he has taken. He had offered, as I did, here on the floor before, to have a discussion in room 407 with the authorizing committee on the House and the Senate and the Appropriations Committee in the House and the Senate that are familiar with this program to determine whether the managers were right.

I can only tell you that on the basis of the presentations that were made first to the staff and then to me, we concluded, I concluded, that the managers of the program were right. The effect of this amendment will be to reverse that, to follow a decision which was made in the authorization committee, which the managers of the program now say is wrong. It is very difficult to discuss it. The only thing I can tell you is that if we adopt this amendment, there will not be competition in this area for the balance of the program. This will become a sole source, black box acquisition program with no further control by the Senate.

I move to table the amendment.

The PRESIDING OFFICER. The question is on agreeing to the motion.

Mr. DOMENICI. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

Mr. NUNN. I ask unanimous consent that the Senator from Virginia be recognized for 1 minute. The Senator is head of the Strategic and Theater Nuclear Forces Subcommittee.

Mr. STEVENS. I will withhold the motion to table. It does strain one's patience to try to work something out with people. I am very strained to say something that the Senator from Georgia does not wish me to say.

Mr. WARNER. I will yield back instead of making a statement.

Mr. STEVENS. It has gone so far there is no reason not to go further.

Mr. WARNER. Mr. President, I was delegated by the chairman of the Senate Armed Services Committee in my capacity as chairman of the strategic subcommittee to work out a resolution of the matter. This was carefully considered by both Members of the House and Members of the Senate.

The Senator from Georgia represented the need, in his judgment, for the restoration to the authorization limits tonight. I concur in that. It is regrettable that we cannot discuss it, but I believe the Senator from Georgia acted in good faith during the conference and he comes before his colleagues tonight acting in good faith. I regret that this is a problem with the managers of the bill, but I urge my colleagues to support the amendment of the Senator from Georgia.

Mr. NUNN. Does the Senator from Alaska——

Mr. STEVENS. Mr. President, the patience of the Senator from Alaska is sorely, sorely strained on this one because of the way it has been raised and the judgment that is going to be made by the Senate which it has no knowledge of at all, which could have been straightened out.

I move to table the amendment. If the tabling motion does not carry we can voice vote it.

As a practical matter this should not have been raised in this way. In the whole time I have been on the Appropriations Committee dealing with matters such as this it has never been raised this way. The persistence of it is something, again, which was raised a little bit before. It is not right to deal with a program like this in this manner, and it should not be. I urge the Senate to table the amendment. I do move to table it.

The PRESIDING OFFICER. The motion has been made to table the amendment.

The yeas and nays have been requested. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table the amendment of the Senator from Georgia. The yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Alabama (Mr. DENTON), the Senator from Arizona (Mr. GOLDWATER), the Senator from California (Mr. HAYAKAWA), the Senator from Pennsylvania (Mr. HEINZ), and the Senator from Wyoming (Mr. WALLOP) are necessarily absent.

Mr. CRANSTON. I announce that the Senator from Arizona (Mr. DECONCINI), the Senator from Louisiana (Mr. JOHNSTON), the Senator from Louisiana (Mr.

LONG), the Senator from Rhode Island (Mr. PELL), and the Senator from Mississippi (Mr. STENNIS) are necessarily absent.

The PRESIDING OFFICER. Are there any other Senators in the Chamber who desire to vote?

The result was announced—yeas 49, nays 41, as follows:

[Rollcall Vote No. 451 Leg.]

YEAS—49

Abdnor	Gorton	Percy
Andrews	Grassley	Pressler
Armstrong	Hatch	Proxmire
Baker	Hatfield	Randolph
Boschwitz	Hawkins	Roth
Burdick	Helms	Rudman
Chafee	Humphrey	Schmitt
Cochran	Jepsen	Simpson
Cohen	Kassebaum	Specter
D'Amato	Kasten	Stafford
Danforth	Laxalt	Stevens
Dixon	Lugar	Symms
Dole	Mathias	Thurmond
Domenici	McClure	Weicker
Durenberger	Murkowski	Zorinsky
East	Nickles	
Garn	Packwood	

NAYS—41

Baucus	Exon	Melcher
Bentsen	Ford	Metzenbaum
Biden	Glenn	Mitchell
Boren	Hart	Moynihan
Bradley	Heflin	Nunn
Bumpers	Hollings	Pryor
Byrd, Harry F., Jr.	Huddleston	Quayle
	Inouye	Riegle
Byrd, Robert C.	Jackson	Sarbanes
Cannon	Kennedy	Sasser
Chiles	Leahy	Tower
Cranston	Levin	Tsongas
Dodd	Matsunaga	Warner
Eagleton	Mattingly	Williams

NOT VOTING—10

DeConcini	Heinz	Stennis
Denton	Johnston	Wallop
Goldwater	Long	
Hayakawa	Pell	

So the motion to table Mr. NUNN's amendment (UP No. 749) was agreed to.

Mr. BAKER. Mr. President, there will be no more votes tonight.

● Mr. ROTH. Mr. President, the Senate has been debating the Department of Defense appropriations bill for 1982. This legislation may be one of the more important issues facing Senate consideration because of the huge amount of money involved, the diversity of policies and programs involved, the significance of national defense policy to the American public, our allies and to the citizens of the entire free world.

The huge amount of money involved in the Defense appropriations bill demands that we do everything possible to insure that this money is spent efficiently and effectively.

The Committee on Governmental Affairs has been working for some time on legislation to create a statutory Inspector General in the Defense Department to act as a watchdog on our defense dollars. The committee remains vitally concerned that legislation creating an Inspector General at the Department of Defense be reviewed and a bill prepared for Senate consideration early next year. I have had concerns expressed to me by my colleagues that while we are appropriating large dollar amounts for our national defense there is no statutory Inspector General in place at the Department to monitor, audit, evaluate and review the most massive defense appropriation in our history.

I can assure these Senators, the administration and the public that this very important legislation will be a top priority item of the Governmental Affairs Committee next year. I fully recognize that we must continue to measure the effects and management of this appropriation after consideration of this bill has ended and that legislation to create a statutory Inspector General at Defense will go far to assure the Congress, the administration and the American public that our defense dollars are being spent wisely.

I encourage my colleagues to join with me and the Governmental Affairs Committee next year in moving this important legislation through to passage.●

(By request of Mr. ROBERT C. BYRD the following statement was ordered to be printed in the RECORD:)

● Mr. DECONCINI. Mr. President, although unable to be present for the final vote on the Cohen-Nunn amendment to the MX portion of the Defense appropriations bill, I appreciate the opportunity to voice my support of the compromise language.

President Reagan has taken a number of important steps toward improving this Nation's strategic position vis-a-vis the Soviet Union. He should be commended for these. But he has also, it seems to me, allowed extraneous considerations to obscure what has otherwise been a sharp and undistorted view of strategic issues when it comes to the MX basing mode question.

The future stability of the nuclear balance is related intimately to the development and deployment of the MX. At present, we have allowed the Soviet Union to gain an edge in ballistic missiles which makes the United States potentially vulnerable to preemptive attack. This situation is intolerable and must not be allowed to endure.

MX is a superb weapon, quite equal to the task of defending this Nation. However, the absolutely essential element in that equation is its basing mode. If the missile is not capable of surviving a first strike, then it cannot deter a first strike. That is as obvious a strategic principle as this Senator can imagine.

The President is clearly committed to going forward with the rapid deployment of MX. I support and commend that decision. However, the President has not been able to decide upon a basing mode for the missile among the many which have already been studied and, indeed, approved during the previous administration. Because he feels he cannot yet commit to a permanent basing mode, the President has requested funds to study in detail the basing of the MX in existing Titan and Minuteman silos. He would add additional concrete and steel to these vulnerable structures, making them more expensive and almost equally as vulnerable.

By placing our most advanced strategic weapon—the MX—in silos which belong to an earlier era of nuclear technology, the President has reduced—perhaps even eliminated—the usefulness of the MX. Hardened existing silos would make a nice target for Soviet planners; it might even encourage them to contemplate a preemptive attack because the payoff—America's MX missile—would be so attractive.

The Cohen-Nunn amendment correctly puts the Senate on record as opposing this decision. It does not tie the administration's hands, but it clearly expresses to the Department of Defense our concern that they develop some alternative to the existing silo alternative, and that they do it quickly. I am hopeful that the administration hears this message. Because I am quite sure that many Senators would be unwilling to actually approve the construction of such a short-sighted and strategically useless—and perhaps even dangerous—basing mode.

I greatly regretted being unable to be present for the vote on this important issue. I was, however, participating in a conference against the growing menace of pornography, an issue that involves the fundamental moral and spiritual well-being of our Nation's youth.●

ALTERNATIVE FIGHTER ENGINE

● Mr. SCHMITT. Mr. President, I wish to briefly address an Air Force program known as the alternative fighter engine. The program was developed to provide the Defense Department with an alternative fighter engine for the F100 should one be required. The F100 engine is used in the F–14, F–15, and F–16. It did not make a great deal of sense to rely on only one engine and one manufacturer for all these planes, especially since the F100 engine encountered a number of problems early in its development. While most of the problems have been solved, we are not totally out of the woods yet and do not know of what problems may develop in the future.

The purpose of the alternative fighter engine program was to provide an alternative and provide competition. The F101–DFE (derivative fighter engine) is a derivative of the B–1 engine. The Air Force requested $35 million in fiscal year 1982 for this program.

This amount has been authorized by each body. The House Appropriations Committee provided the full budget request but earmarked $20 million of the F101–DFE and $15 million for development work on increasing the thrust of the F100 engine.

Although our committee has approved the $35 million as requested and as shown on page 119 of the committee report, it has expressed concern over the possibility of a higher thrust requirement. We have testimony from the Air Force that there is no requirement for additional thrust, but rather a need for improved reliability and maintainability. The flight tests completed in the F–16 fighter show the current F100 and the F101–DEF engines to be similar in performance characteristics.

The tests in the F–16 are to be completed in fiscal year 1983 and are to be based on reliability, maintainability, and durability without regard to thrust differentials between the two engines. It

is important that these tests be completed. At the same time, should a requirement for a higher thrust engine develop, the committee expects the Air Force to inform the committee of such a requirement and to structure a competitive program for a higher thrust engine.

Hopefully, when the conferees meet, the differences between the two bills can be resolved to provide for fair competition and an alternative engine should a need for another engine arise.●

TAX DISCLOSURE AND SUMMONS AMENDMENTS

Mr. ROTH. Mr. President, over the past several weeks, the Senate Permanent Subcommittee on Investigations has heard repeated testimony from Federal law enforcement officials concerning the need to amend our tax laws to insure that major criminal offenders are not the beneficiaries of tax law provisions otherwise properly conceived to protect taxpayers in general.

In subcommittee hearings during October and November of this year, we have clearly seen how the current tax laws continue to frustrate the effective enforcement of Federal criminal statutes aimed at organized crime and narcotics trafficking. This testimony is similar to that heard in prior subcommittee hearings. Members of the Permanent Subcommittee on Investigations have led the effort in the past to correct these shortcomings.

Under the able direction of our ranking minority member, SAM NUNN, a set of amendments passed the Senate earlier this year as part of the Economic Recovery Tax Act of 1981 but were not agreed to in conference although the conferees agreed that congressional attention in this area was warranted. I have supported Senator NUNN in his efforts and have cosponsored his proposed legislation in this area, S. 732.

Due in large part, I believe, to the past work of Senator NUNN and the recent efforts of the subcommittee, the administration has finally responded with its own legislative recommendations on this matter. The administration's proposals have marked similarities with S. 732 and is in general accord on the objectives to be sought. The differences between the administration proposal and S. 732 are, in my opinion, matters which can be quickly and effectively resolved. To insure an expeditious resolution between these proposals, I consider it appropriate for me, as chairman of the Permanent Subcommittee on Investigations, and one who is vitally interested in developing and refining Federal responses to crime in America to introduce S. 1891, the "Tax Disclosure and Summons Amendments" to title 26. This bill has the enthusiastic support of many law enforcement officials. I ask unanimous consent that the section-by-section analysis of the bill be entered into the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

SECTION-BY-SECTION ANALYSIS OF S. 1891, TAX DISCLOSURE AND SUMMONS AMENDMENTS

Because of the substantial number of changes which this proposal would make in existing law, the various provisions of the proposal and their effect upon existing law will be discussed in the order in which they appear in the draft bill.

DEFINITIONS OF PROTECTION INFORMATION

[26 U.S.C. 6103(b)(3)]

Existing law uses a perplexing series of four terms to describe information held by the Internal Revenue Service (IRS), i.e., "returns," "return information," "taxpayer return information," and "return information other than taxpayer return information." The Administration proposal would improve the law as it applies to information sought for use in nontax criminal cases by adopting a workable two-part definitional structure.

In essence, federal prosecutors seeking access to tax information for use in a nontax criminal case would only be concerned with the two new definitions added at § 6103(b)(3).* The first new category of protected tax information, "investigative return information," includes (i) returns of all taxpayers and (ii) underlying records and information submitted by or on behalf of "individual taxpayers," such as during an IRS audit of a return. The second category of information held by IRS, "investigative nonreturn information," is defined to encompass all information held by IRS not covered by the definition of "investigative return information," primarily underlying books and records submitted by or on behalf of corporate taxpayers and information obtained from third parties during IRS investigations of taxpayers. The proposal defines the term "individual taxpayer" as a natural person or a legal entity with no more than two shareholders or partners, such as a husband-and-wife corporation or a two-person partnership.

Taken together, these definitions simplify the law as it applies to nontax criminal investigations and prosecutions by reducing the number of categories of crime-related information from four to two. Moreover, the two new categories of information conform to the methods of obtaining access: "investigative return information" requires a court order (§ 6103(i)(1)) while "investigative nonreturn information" may be obtained pursuant to a formal law enforcement request (§ 6103(a)(2)) or pursuant to a report of crime by IRS (§ 6103(i)(3)).

The only substantive change made by the revised definitional structure is that information (primarily books and records) furnished by or on behalf of legal entities, such as corporations, are made available pursuant to law enforcement request or IRS reports of crime; they are now available only pursuant to court order. Again, all returns and supporting schedules continue to be available only pursuant to court order.

The rationale for the distinction between books and records of individuals as contrasted with those of corporations is that natural persons have greater privacy rights than do corporations or other legal entities. A similar distinction is made in the Privacy Act of 1974 (5 U.S.C. 552a) and the Financial Privacy Act of 1978 (12 U.S.C. 3401–3422), neither of which applies to corporate records. Moreover, records of corporations and other entitiss are normally subject to inspection by shareholders and others with an interest in the entity, as well as by federal, state and local authorities; individual books and records are not. Furthermore, books and records of legal entities are normally maintained for purposes other than tax requirements; individual books and records are frequently maintained solely to comply with tax laws. Finally, the Fifth Amendment privilege against self-incrimination does not extend to legal entities.

For these reasons, this proposal accords a higher degree of protection to underlying books and records of individuals than to those legal entities. Because legal entities comprised of only one or two persons are usually the alter ego of an individual or married couple, they are treated as individuals.**

DISCLOSURE PURSUANT TO COURT ORDER

[26 U.S.C. 6103(i)(1)]

The revised § 6103(i)(1) preserves the structure of the existing court order provision. The modifications are intended primarily to clarify existing law and to make the literal terms of the statute comply with actual practice. For example, the standards in existing (i)(1), if read literally, require a factual showing that cannot be made unless the prosecutor seeking access is already in possession of the information sought.

Courts have interpreted this language in a practical fashion to require proof only of those facts a federal prosecutor can realistically be expected to demonstrate: that there is reasonable cause to believe a specific federal crime has occurred, is occurring, or will occur, that there is reasonable cause to believe tax data is relevant to that offense, and that the information will be used exclusively for investigation and prosecution of that offense.

This proposal would substitute these standards for those of existing law. No change is made in the statutory standard of proof required to obtain a court order—"reasonable cause to believe"—which has been interpreted in a commonsense manner as requiring an objective showing of reasonableness less demanding than "probable cause." It is the intent in proposing reenactment of this standard that the courts continue to construe the term "reasonable cause to believe" as being the equivalent of reasonable suspicion. The revised (i)(1) also makes clear that investigative return information may be sought where such information may assist in the location of a fugitive for whom a judicial arrest warrant has been issued.

Because these modifications codify present practice, they have no practical effect on taxpayer privacy or tax administration. They do, however, reduce the potential for widely varying judicial results and the chilling effect that the unrealistic language of current law has on federal prosecutors who need tax information for legitimate law enforcement purposes.

The new paragraph (i)(1) modifies the class of federal officials who may authorize an application for a court order. Existing law requires all such applications to be routed through Washington for approval before being presented to the court, a requirement which results in substantial delay and paperwork. The draft bill would permit United States Attorneys and Attorneys-in-Charge of Organized Crime Strike Forces in the field to present applications directly to the appropriate federal court for consideration.

The proposed revision would also delete the authority currently possessed by all heads of federal agencies to approve (i)(1) applications, thereby centralizing applica-

*Existing definitions of "return" (§ 6103(b)(1)) and "return information" (§ 6103(b)(2)) are preserved intact to avoid any unnecessary impact upon other provisions of § 6103; the new definitions apply only to subsection (i) governing access to tax information for use in nontax criminal cases.

**The new definitions replace the existing definition of "taxpayer return information" at § 6103(b)(3); that definition is no longer needed by virtue of the new two-part definitional structure.

tion authority in a single agency, the Depart of Justice, where it can be more effectively coordinated. Since 1976, only five applications for (i)(1) orders have been signed by non-Justice Department entities; this change will not, therefore, adversely affect federal agencies.

The revised (i)(1)(D) also clarifies existing law by explicitly providing that redisclosure can be made to those support personnel necessary to prepare for a criminal prosecution. This would not change existing practice.

Finally, the new (i)(1) provides that court orders may be granted by U.S. Magistrates as well as U.S. District Judges. Magistrates are now authorized to act on analogous applications such as those for search and arrest warrants.

DISCLOSURE PURSUANT TO FORMAL LAW ENFORCEMENT REQUEST

[26 U.S.C. 6103(i)(2)]

The revised § 6103(i)(2) clarifies existing law governing requests for nonreturn information. As amended, (i)(2) would permit requests to be made by those officials authorized to apply for an (i)(1) court order, a supervisory-level attorney for the government designated by the Attorney General, heads of agencies, and statutory Inspectors General.

The new (i)(2)(C) also authorizes these federal law enforcement officials to inquire whether a taxpayer filed a return for a given year and whether there is or has been a criminal investigation of the taxpayer. This will help avoid the waste of resources which has occurred where a court order is sought and obtained only to find that the taxpayer did not file a return for the year in question.

Finally, the revised (i)(2) would modify the factual showing required to support a disclosure of nonreturn information by substituting "the allegation of criminal conduct giving rise to the proceeding or investigation" for "the specific reason or reasons why such disclosure is or may be material to the proceeding or investigation." Like the (i)(1) court order requirement, a prosecutor cannot show the materiality of tax information to a case without access to the information sought.

IRS-INITIATED DISCLOSURES

[26 U.S.C. 6103(i)(2)]

The draft bill proposes two improvements to the procedure by which IRS initiates reports of nontax crime to law enforcement authorities. First, the new § 6103(i)(3) would make such reports mandatory rather than discretionary. Second, the new (i)(3)(B) provides that when the IRS refers a tax case to the Department of Justice, it must also refer any evidence it has of nontax crimes committed by the taxpayer. The purpose of the non-disclosure rule is to encourage taxpayers to report their incomes fully and honestly; taxpayers who evade taxes should not benefit from a policy enacted to encourage honest reporting. These changes, together with related amendments, will expand the number of IRS referrals of nontax criminal cases.

ADMISSIBILITY OF TAX INFORMATION

[26 U.S.C. 6103(i)(4)]

The new (i)(4) provides that tax information is admissible in judicial and administrative proceedings like other evidence rather than pursuant to special rules. The bill, in (i)(1)(A) and (i)(4), also clarifies that tax information can be disclosed for and is admissible in proceedings "ancillary" to criminal proceedings, i.e., those arising from the same course of conduct and involving the same parties. Proceedings ancillary to criminal proceedings include civil forfeiture or damage actions which may be pursued in addition to or in lieu of criminal prosecution, as well as probation and parole revocation hearings and criminal fine collection proceedings.

The amendments to (i)(4) also clarify that tax information may be disclosed to a defendant pursuant to the Jencks Act and discovery provisions of the Federal Rules of Criminal Procedure or other discovery requirements. This explicitly protects a defendant's Due Process rights and is consistent with current practice.

EMERGENCY DISCLOSURE

[Proposed 26 U.S.C. 6103(i)(5)]

The new paragraph (i)(5) would direct the IRS to report to the appropriate federal agency any circumstances involving an imminent danger of physical injury to any person, serious property damage or flight from prosecution. This authority for disclosure in rare emergency situations is patterned on the similar provisions of the Financial Privacy Act of 1978 (12 U.S.C. 3414(b)) and, like the Financial Privacy Act, requires that all such disclosures be reported promptly to the appropriate federal district court. Although not anticipated to be used frequently, this provision will permit notification of appropriate officials in true emergency situations.

JOINT INVESTIGATIONS

[Proposed 26 U.S.C. 6103(i)(6)]

The new (i)(6) merely states that § 6103 does not preclude or prevent IRS from assisting or working jointly with federal law enforcement agencies in the investigation of nontax crimes which may involve violations of federal tax laws. This does not change current law but will encourage cooperation between the IRS and the Department of Justice by expressly approving joint investigations.

DISCLOSURE TO STATE AND LOCAL AUTHORITIES

[Proposed 26 U.S.C. 6103(i)(7)]

The draft bill also proposes a new (i)(7) authorizing carefully limited redisclosure of tax information to state and local law enforcement authorities. This limited redisclosure would be permitted only as to information already obtained by federal law enforcement officials for a federal nontax criminal investigation. If such information reflects a state felony violation, the federal official obtaining access would be authorized to go back to court and seek an order authorizing redisclosure to the appropriate state attorney general or district attorney exclusively for use in the investigation or prosecution of that state felony violation. Like other persons receiving tax information, the state attorneys general and district attorneys receiving tax information under (i)(7) would be subject to civil and criminal sanctions for any unauthorized use.

DISCLOSURE PURSUANT TO MUTUAL ASSISTANCE TREATIES

[Proposed 26 U.S.C. 6103(i)(8)]

The proposed new (i)(8) would permit disclosures of tax information to foreign governments pursuant to mutual assistance treaties for use in nontax criminal matters such as narcotics trafficking, thereby making it possible for federal officials to obtain reciprocal disclosure of foreign tax information. Such treaties, of course, must be ratified by the Senate. To further regulate this foreign access to tax information, the amended (i)(8) would require entry of an order by a U.S. district court, similar to that required by § 6103(i)(1), before a disclosure could be made.

Paragraph (k)(4) of § 6103 presently authorizes similar disclosures to foreign governments for tax use pursuant to international tax conventions. This analogous provision for nontax criminal purposes would enhance prospects for improved international cooperation in support of law enforcement efforts to curb narcotics trafficking and other crimes that involve travel across international borders.

FOREIGN INTELLIGENCE ACCESS

[Proposed 26 U.S.C. 6103(i)(9)]

The new (i)(9) would authorize disclosure of investigative return and nonreturn information to the Attorney General of the United States where there is reasonable cause to believe such information is needed in connection with foreign intelligence collection or a foreign counter-intelligence investigation related to specified activities by foreign powers. Such disclosures would require the personal certification of the Attorney General (or Acting Attorney General in the event there is a temporary vacancy in that Office) and any disclosures and redisclosures pursuant to the subparagraph would be reported annually to the House and Senate Intelligence Committees. An analogous provision for intelligence access to information was enacted by the Congress in the Right to Financial Privacy Act of 1978 (12 U.S.C. 3414(a)).

TECHNICAL CONFORMING AMENDMENT

[26 U.S.C. 6103 (a) and (p)]

Technical amendments are made to conform subsections (a) and (p) of section 6103 to the revised definitional structure set out above.

CRIMINAL LIABILITY

[26 U.S.C. 7213]

The amended section 7213 creates an affirmative defense to prosecution where the disclosure of tax information was made pursuant to a good faith but erroneous interpretation of the law. This would make it clear to federal employees that they need not fear criminal prosecution if they proceed reasonably and in good faith. Actually, this makes no practical change in existing law which requires a "willful" violation to sustain a conviction. It would, however, reduce the chilling effect which present law has on legitimate disclosures.

CIVIL LIABILITY

[26 U.S.C. 7217]

The amendments to section 7217 make federal agencies, rather than individual federal employees the defendants in civil suits alleging unauthorized disclosures of tax information. This change would conform § 7217 to the Privacy Act of 1974, the Right To Financial Privacy Act of 1978 and the Privacy Protection Act of 1980, all of which make federal agencies rather than individual federal employees civilly liable for any statutory violation.

In support of this amendment, it seems unduly harsh to place federal employees who work with tax information regularly in the position of risking financial ruin daily for any mistaken disclosure. Of course, federal employees would continue to be subject to administrative sanctions, including dismissal, for any negligent disclosure as well as criminal prosecution for any willful, corrupt or malicious abuse of tax information.

SUMMONSES IN CRIMINAL TAX INVESTIGATIONS

[26 U.S.C. 7602]

In *United States* v. *LaSalle National Bank*, 437 U.S. 298 (1978), the Supreme Court held that the IRS may not issue a summons under section 7602 of the Internal Revenue Code after the Service has recommended prosecution to the Department of Justice or after the Service has made an institutional commitment to refer the case for prosecution. The Court acknowledged that use of a summons for a criminal purpose prior to referral of a case to the Department of Justice would be impermissible on only rare occasions. The LaSalle National Bank decision has been criticized both as a matter of statutory construction and on policy grounds. *De-*

velopments in the Law: Corporate Crime, 92 Harv. L. Rev. 1227, 1320–33 (1979).

The practical effect of LaSalle National Bank is that, while the summonses will inevitably be enforced, a person under investigation for a criminal tax violation may be able to obtain information concerning the Service's conduct of the investigation through cross examination of an agent at an enforcement hearing, ostensibly directed at determining the institutional posture of the Service. The criminal purpose issue also contributes to delays in enforcement.

The amendment to section 7602 would expressly authorize the IRS to issue a summons for the sole purpose of conducting a criminal tax investigation and, thus, would eliminate unnecessary litigation and attendant delay in obtaining summoned materials. Examples of comparable authority for issuance of administrative process in connection with criminal matters include the summons powers of the Securities and Exchange Commission (15 U.S.C. § 77t(b)); the authority of the Department of Justice to issue civil investigative demands in connection with antitrust investigations (15 U.S.C. § 1313(d)) and in connection with racketeering investigations (18 U.S.C. § 1968); and the subpoena powers of the Inspectors General (5 U.S.C. App. § 6(a)(4)).

Under the amendment, the IRS would be empowered to issue a summons for the investigation of criminal offenses involving the administration or enforcement of the internal revenue laws at any time prior to indictment. Thus, in the event that the Department of Justice believes that a supplemental investigation should be conducted by the Service administratively, a summons could be utilized in the investigation. The amendment would not infringe on the rights of taxpayers because a taxpayer has a greater opportunity to protect his interest when the investigation is conducted administratively in light of the notice and challenge provisions of section 7609. Since summonses cannot presently be used for a supplemental investigation requested by the Department of Justice because of the LaSalle National Bank decision, the amendment would permit some cases to be prosecuted which would now be declined where the Department of Justice determines that because of resource problems or for other reasons completion of the investigation by a grand jury would be impractical.

A second proposed amendment to section 7602 is intended to avoid situations which have occurred wherein IRS agents, working as agents of a federal grand jury, have devoted many hours toward investigation of a taxpayer only to be deprived of the use of the information so developed if no indictment is returned by the grand jury. Often in such situations the taxpayer, although determined not to be criminally liable, will be civilly liable and the IRS, upon entry of a court order under Rule 6(e)(3)(C)(i) of the Federal Rules of Criminal Procedure, should have access to information developed by the grand jury to assist in preparation for a civil tax proceeding.

In addition, grand juries frequently uncover evidence of bribes or other illegal forms of income that has not, or likely has not, been reported for tax purposes. The IRS has an obvious interest in such information and the Justice Department's interest is similar—to assure that appropriate taxes are paid on the illegal income. Thus, it is proper for the Department to seek release of grand jury information to the IRS in such circumstances.

Some courts, however, have held that IRS access to grand jury information is not "preliminary to a judicial proceeding" within the meaning of Rule 6(e). This provision would avoid such a result. Moreover, the importance of tax collection, and the obvious relevance of such grand jury information to a determination of tax liability, establish the compelling need of the IRS for such information.

SPECIAL PROVISIONS FOR THIRD-PARTY SUMMONS

[26 U.S.C. 7609]

PERSON ENTITLED TO NOTICE OF IRS SUMMONSES

[Proposed 26 U.S.C. 7609(a)(3)(B)]

The draft bill would enact a new section 7609(a)(3)(B) which would define "person entitled to notice" as an individual or a partnership of five or fewer individuals. Thus, the scope of the interests protected by Section 7609 would be similar to those protected by the Right To Financial Privacy Act (12 U.S.C. 3401(5)).

PROCEDURES FOR CHALLENGING IRS SUMMONSES

[26 U.S.C. 7609(b)]

Under existing law, a person entitled to notice can stay compliance with a summons merely by serving on the third-party recordkeeper a notice not to comply and providing a copy of that notice to the IRS. This stay of compliance procedure was intended by the Congress to afford a person entitled to notice the opportunity to challenge the summons by intervening in the ensuing summons enforcement proceeding. The experience of the IRS is that the procedure has been abused and misused as a means of obstructing and delaying IRS investigations. When an enforcement action is commenced, many persons fail to assert their rights in court.

As a result, the stay of compliance procedure adopted in the Tax Reform Act of 1976 frequently serves not only to delay the investigation, but also to waste the not unlimited resources of the IRS, the Department of Justice, and the courts.

The Administration proposal would modify the stay of compliance procedure to place on the person entitled to notice the burden of commencing the summons litigation. Thus, any challenge by such a person to the summons would be made by filing a motion to quash in the United States district court. The motion to quash must be filed within 14 days, the same time limitation for such motions provided in the Right To Financial Privacy Act (12 U.S.C. § 3410). The reasons for objecting to compliance with the summons must be contained in the motion. The court can deny the motion if it fails to meet the statutory requirements. If the motion complies with the terms of the statute, the court can direct the United States to file a response within 20 days.

Section 7609(b) would also require that in the event a motion to quash is filed, the third-party recordkeeper must intervene in the motion-to-quash proceeding in order to assert any objections that it may have to enforcement of the summons.

In conformity with the Right To Financial Privacy Act, the legislation would impose time limits on the judges and magistrates for hearing and deciding motions to quash. A person summoned may avoid an appearance before the court by depositing the summoned records with the court in accordance with regulations issued by the Secretary. The challenge procedures of section 7609 would be the sole judicial remedy available to a person entitled to notice. Thus, the only means for challenging a section 7609 summons is by filing a motion to quash.

STATUTE OF LIMITATIONS

[26 U.S.C. 7609(e)]

Under the proposed amendment to section 7609(e), as amended, the suspension of the statute of limitations would terminate only when any production order of the court is fully satisfied.

EXCEPTION TO NOTICE

[26 U.S.C. 7609(g)]

Section 7609(g) permits the court to grant special exceptions to the general requirements that notice be given to the person to whom the records pertain and that such a person can stay compliance by filing a motion to quash. The amendment would clarify the fact that the court has the authority to enter an injunction against the recordkeeper to prevent the recordkeeper from disclosing to the taxpayer that the IRS has obtained or has requested the summoned material.

DUTIES OF RECORD CUSTODIAN

[Proposed 26 U.S.C. 7609(i)]

Section 7609(i) is new. It would require the third-party recordkeeper to assemble the records and be prepared to produce the records requested on the date specified in the summons or, in the event a motion to quash is filed, within ten days after the court's decision. The Secretary is authorized to issue a certificate to the third-party recordkeeper that a motion to quash has not been filed within the prescribed time. The third-party recordkeeper must then comply with the summons unless it notifies the Secretary in writing of any objections that it may have to compliance. A third-part recordkeeper, its agents or employees could not be held liable to any customer or other person for production of records in good faith reliance on a certificate of the IRS that a motion to quash has not been filed in a timely fashion or in reliance on a court order requiring production of the records.

EFFECT OF DENIAL OF MOTION TO QUASH

[Proposed 26 U.S.C. 7609(j)]

Section 7609(j) would provide than an order denying a motion to quash would have the same effect as an order enforcing a summons.

APPEALS

[Proposed 26 U.S.C. 7609(k)]

Under present law, a district court order enforcing a summons can be appealed in the event that the person objecting to compliance can obtain a stay of enforcement from the district court or the court of appeals. Immediate appeal of a summons matter can create a substantial delay in production of the summoned documents, and the problem is particularly serious in jurisdictions where the court of appeals has a severe backlog. As a result, investigations have been discontinued solely because of the delay factor. In some instances, the investigations could be completed only by referral of the case to the Department of Justice with a recommendation that a grand jury investigation be instituted.

The Right To Financial Privacy Act sought to deal with the problem of delay resulting from protracted appeals by providing for deferral of appeal. Deferral of appeal was also recommended by the Privacy Protection Study Commission as a means of dealing with bottlenecks generated by immediate appeals. Personal Privacy in an Information Society, p. 372.

The bill provides, in a new subsection (k), that an order denying a motion to quash a summons is an interlocutory order and that an appeal from denial of a motion to quash can be taken only on a deferred basis. Objections to the determination of the district court will be preserved and may be asserted by the taxpayer as an evidentiary question on appeal of a subsequent tax case which arises out of or is based upon the summoned records.

AUTHORITY OF MAGISTRATES

[Proposed 26 U.S.C. 7609(l)]

At the present time, many summons enforcement proceedings are referred to magistrates by district judges for a hearing and recommended decision, after the district judge has determined that a hearing is necessary and has entered an order to show cause. This procedure is desirable in that it results in expedited consideration of summons cases. The bill would affirm the desirability of as-

signing summons matters to magistrates by providing that magistrates may exercise the jurisdiction of the district court in connection with the new motion-to-quash procedure. Thus, for example, a magistrate may be assigned to conduct a review of a motion to quash and may direct the United States to file a response. The legislation would also authorize magistrates to issue final orders in ex parte proceedings under section 7609 (g).

TECHNICAL AND CONFORMING AMENDMENTS

The legislation would make technical and conforming changes to subsections (a)(1), (d) and (e) of section 7609.

ANDREI SAKHAROV

Mr. WALLOP. Mr. President, this morning I sent a letter to President Reagan asking that he take steps to ease the plight of Andrei Sakharov. Dr. Sakharov's life is in the balance. This noble and decent man, whose lonely fight for human dignity and freedom has touched us all, is deserving of our support and our prayers. I ask unanimous consent that the text of my letter to the President be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., December 3, 1981.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: I write to call your attention to the possibility that Andrei Sakharov may die soon of his hunger strike, and to ask you to exert whatever influence you can to save his life.

Never have I met a nobler man than Andrei Sakharov. In January 1979, against the wishes of the U.S. Ambassador in Moscow, Sam Hayakawa and I visited Dr. Sakharov in his two-room flat. The Soviet government had stripped him of every comfort and honor. Knowing that the place was bugged, I was anxious to say and elicit nothing which would cause this man further trouble. But Sakharov put us to ease—and to shame—by showing his determination to talk and live like a free man in spite of his circumstances and of the sure knowledge that the Soviet government would punish him for this. The grace that he and his wife exuded made the terrible circumstances in which he had been placed appear quite irrelevant.

Only a few months after that visit, Sakharov was exiled. When I left Sakharov he asked me to take some of his books as presents to his stepdaughter in the United States. The Soviet government had already cut him off from communication with his family abroad. Now they have refused permission for other members of his family to immigrate and of course they have cut him off from communication with everyone except his wife. Clearly the man now has only his very life left with which to fight. Hence the hunger strike.

Sakharov told me that the only weapon of the Soviet civil rights movement is the pressure it can generate from abroad. He is putting his life on the line in order to remind us once again of what sort of regime the Soviet Union is, and to ask us to make the effort and pay the costs to bring pressure.

You have any number of means available to you. It matters less which you choose than that you commit real assets of the United States—be they diplomatic or economic—to bringing pressure. Not even success is necessary. It would be unseemly, however, to deal with the Soviet Union on a regular basis as if it were not the regime which is causing the death of Andrei Sakharov.

I urge you to follow your heart and to direct the United States in this matter in a way worthy of the man whose life isat stake. Time is of the essence.

Sincerely,

MALCOLM WALLOP,
U.S. Senator.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. STAFFORD, from the Committee on Environment and Public Works, without amendment:

S. 657. A bill to designate the Department of Commerce Building in Washington, D.C., as the "Herbert Clark Hoover Department of Commerce Building" (Rept. No. 97-286).

By Mr. THURMOND, from the Committee on the Judiciary, without amendment:

S.J. Res. 122. Joint resolution to authorize and request the President to designate the week of February 28, 1982, through March 6, 1982, as "National Construction Industry Week"; and

S.J. Res. 123. Joint resolution authorizing and requesting the President to proclaim "National Disabled Veterans Week."

By Mr. DOLE, from the Committee on Finance, with amendments:

S. 1249. A bill to increase the efficiency of Government-wide efforts to collect debts owed the United States, to require the Office of Management and Budget to establish regulations for reporting on debts owed the United States, and to provide additional procedures for the collection of debts owed the United States (Rept. No. 97-287).

By Mr. JEPSEN, from the Committee on Armed Services, without amendment:

S. 1906. An original bill to eliminate general and flag officer grade requirements from certain statutory positions in the Armed Forces, to delay the effective date of the ceiling on the number of general and flag officers serving on active duty, and for other purposes (Rept. No. 97-288).

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mr. HEINZ:

S. 1900. A bill for the relief of Sin Fong Chang and Sau Wah Chang, husband and wife, and their children, Tung Fu Chang and Tung Yan Chang; to the Committee on the Judiciary.

By Mr. LEVIN (for himself, Mr. COHEN, Mr. PRYOR, Mr. ROTH, and Mr. EXON):

S. 1901. A bill to amend chapter 137 of title 10, United States Code, to impose certain requirements on the awarding of sole-source contracts by the military departments; to the Committee on Armed Services.

By Mr. DANFORTH (for himself and Mr. SYMMS):

S. 1902. A bill to extend for 2 additional years the residual authority to negotiate duties under the Trade Act of 1974; to the Committee on Finance.

By Mr. BENTSEN:

S. 1903. A bill to require the President to determine what activities now performed by the Federal Government could more efficiently be conducted by small business, and to prepare a schedule for transferring those activities to the private sector; to the Committee on Governmental Affairs.

By Mr. MITCHELL:

S. 1904. A bill to amend the Internal Revenue Code of 1954 to provide targeted rate schedules to replace the across-the-board tax cuts enacted by the Economic Recovery Act of 1981; to the Committee on Finance.

By Mr. MITCHELL:

S. 1905. To require certain reductions in the windfall profit tax contained in the Economic Recovery Tax Act of 1981; to the Committee on Finance.

By Mr. JEPSEN, from the Committee on Armed Services:

S. 1906. An original bill to eliminate general and flag officer grade requirements from certain statutory positions in the Armed Forces, to delay the effective date of the ceiling on the number of general and flag officers serving on active duty, and for other purposes; placed on the calendar.

By Mr. ROTH (for himself, Mr. RUDMAN, Mr. COHEN, Mr. NUNN, and Mr. CHILES):

S. 1907. A bill to amend the Currency and Foreign Transactions Reporting Act and section 1961(1) of title 18, United States Code, to improve enforcement, and for other purposes; to the Committee on the Judiciary.

By Mr. NICKLES (for himself and Mr. BOREN):

S. 1908. A bill to provide for the reinstatement and validation of U.S. oil and gas lease NM-A26947 (Oklahoma); to the Committee on Energy and Natural Resources.

By Mr. NICKLES (for himself and Mr. BOREN):

S. 1909. A bill to provide for the reinstatement and validation of U.S. oil and gas lease No. W-24153; to the Committee on Energy and Natural Resources.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. LEVIN (for himself, Mr. COHEN, Mr. PRYOR, Mr. ROTH, and Mr. EXON):

S. 1901. A bill to amend chapter 137 of title 10, United States Code, to impose certain requirements on the awarding of sole-source contracts by the military departments; to the Committee on Armed Services.

REDUCTION OF NONCOMPETITIVE CONTRACTING

● Mr. LEVIN. Mr. President, during the last few weeks we have tossed budget-cutting numbers back and forth. The figures change so constantly that they are making us dizzy. How much to cut the Federal budget here, how much there.

But, Mr. President, we can all agree that this body should embrace proposals that will generate savings to the Government without bringing undue hardship to necessary Government programs. In short, we should seek out and support ways to save money without excessive spending cuts to critical programs.

That is why it is especially disconcerting to me to have a proposal rejected when it would change the way in which the Government spends its money in order to bring about savings without cutting the budget.

What I am speaking of is an amendment that recently was defeated in the House-Senate conference on the fiscal

year 1982 defense authorization bill. It was defeated because of heavy lobbying against the measure by the Department of Defense (DOD) and because of lack of support by the Office of Management and Budget (OMB). It was a provision that would have served to increase competition in defense spending, thereby bringing about approximately 25 percent in savings for contracts being competed rather than awarded noncompetitively. What I am speaking of is DOD's refusal to recognize the beneficial nature of the very market forces which President Reagan has endorsed in so many other places. What I am speaking of is the deterioration and shrinkage of our defense industrial base due in part to the failure of DOD to adhere to sound contracting principles. And what I am speaking of is the continuing tendency of DOD to contract with the private sector using contracting procedures that run counter to statutory intent.

Recent history concerning Federal procurement procedures has demonstrated the value of competition for inducing savings into Federal acquisitions. The Office of Federal Procurement Policy (OFPP), in recently submitting a draft proposal to Congress for a uniform Federal procurement system, stated that—

> Vigorous competition among suppliers has long been a procurement goal, but many producers become so frustrated with the maze of regulations, erratic funding and planning, . . . that they either limit their business with the Government or leave the Government market to those who are willing to accept these frustrations. The departing firms are sometimes the more competent ones. Of particular concern is the shrinking base of suppliers, both at prime and subcontractor levels.

In no one area of Federal procurement is this loss of suppliers more evident than in defense procurement. We are acutely aware of the shrinking defense industrial base, and its effects on our national defense posture. A House panel recently summarized the state of the defense industrial base as shocking, citing a loss of suppliers at both the prime and subcontractor levels as detrimental to national security.

One major cause of the loss of suppliers to the defense establishment is DOD's continued refusal to recognize the value of competition. The Department's tendency to award contracts on a sole-source, noncompetitive basis more often than competing contracts between a number of viable firms only serves to knock businesses out of the defense supply picture, and further increases procurement costs to the Government.

The Department chose to go the noncompetitive, or sole-source route, during fiscal year 1980 on 60.3 percent of its contract actions. In a field of over 11 million contracts, that is choosing to use one supplier rather than testing the marketplace in almost 7 million contract actions. From a dollar standpoint, DOD awarded $45 billion, or 64.3 percent of its $70.5 billion procurement budget through sole-source contracts.

There are two fundamental reasons why it is unconscionable that DOD continue to use sole-source contracting to such a great extent: First, the Federal procurement statute governing defense spending requires that DOD award contracts through a formal advertising, competitive procedure. The statute allows some 17 exceptions to that procedure however, and it now appears that the tail is wagging the dog—the Department awards through negotiation oftentimes without competition more often than awarding through formal advertising. In fact, 94.5 percent of its procurements followed procedures other than formal advertising in fiscal year 1980. Second, it has been estimated that 10 to 50 percent can be saved through competing contracts rather than awarding them noncompetitively. The Defense Department itself has estimated 10 to 25 percent savings in numerous studies. Why, then, do we continue to see such excessive use of sole-source contracting?

DOD seems to treat competition in procurement as an afterthought. In April of this year, Deputy Defense Secretary Frank Carlucci authorized 31 initiatives in DOD to improve procurement. Increased use of competition was not one of those initiatives. Instead, after considerable criticism and pressure from Congress, DOD added a 32d initiative: Increasing the use of competition. Even then, the initiative was stated very generally and did not carry with it any requirement that the services establish numerical goals for reducing noncompetitive contracting, contrary to several recommendations by the General Accounting Office (GAO) and the Congress.

This has got to stop. We are at an impasse. DOD is not really committed to the use of competition, as evidenced by their strong opposition to a small procompetition amendment that was rejected in conference. The amendment was defeated because of DOD opposition, OMB opposition and very heavy defense lobbying against the provision. Well, we cannot stop there. Legislation must be enacted. There is no other way to insure that DOD changes its ways.

It is for this reason that I offer legislation today that will force the Department to consider competition in procurements as the first rather than the last resort, for procurement actions over $100,000. Senators COHEN, PRYOR, ROTH, and EXON have joined me in this legislative effort, and I urge my other colleagues to offer their support as well.

The provisions of the bill require that the Department publish its intent to enter negotiations with a sole-source contractor at least 30 days prior to those negotiations, so that alternative bidders might be able to submit a proposal to compete for the contract. This 30-day waiting period merely extends an existing 10-day waiting period under existing regulations, and is consistent with current OFPP directives to the agencies to institute greater use of advanced procurement planning. The 10-day period has simply proven inadequate. The new 30-day waiting period would only apply to contracts over $100,000, less than 3 percent of DOD's yearly contract actions.

The bill also would provide for adequate description of contract requirements, so that potential competitors could submit a proposal to the Department to be considered for the procurement in lieu of the sole-source contractor. Finally, the bill allows exceptions for legitimate instances in which it would not be possible for the Department to seek competition.

It is my conservative estimate that following the provisions of this legislation would reduce noncompetitive contracting at DOD by at least 20 percent and, as a result, would bring about savings of from $1 billion to $5 billion each year.

This legislation is a modest step designed to improve defense procurement procedures and to afford the taxpayer more return for each defense dollar. I urge all of my colleagues to give the measure their full support.●

By Mr. DANFORTH (for himself and Mr. SYMMS):

S. 1902. A bill to extend for 2 additional years the residual authority to negotiate duties under the Trade Act of 1974; to the Committee on Finance.

EXTENSION OF RESIDUAL TARIFF NEGOTIATING AUTHORITY

● Mr. DANFORTH. Mr. President, the President's residual tariff negotiating authority under section 124 of the Trade Act of 1974 is scheduled to expire on January 3, 1982. With the expiration of this authority, the President would retain only the limited compensation authority of section 123 of the act.

Therefore, today I am introducing legislation which would extend the President's authority under section 124 for an additional 2-year period.

The primary purpose of extending 124 authority is to alleviate, through negotiated reciprocal tariff reductions, disparities resulting from instances where foreign tariffs are higher than U.S. tariffs on the same product, thereby enhancing export opportunities for American producers.

The most recent example of the use of 124 authority by the administration resulted in an agreement with the Japanese on semiconductors which accelerated the staging of duty reductions in the Tokyo round of multilateral trade negotiations (MTN), bringing Japanese semiconductor tariffs into conformity with U.S. levels.

I am assured by U.S. Trade Representative (USTR) Bill Brock, in the administration's request for extension of this authority, that current limitations and procedural requirements of section 124 authority safeguard sufficiently those industries concerned about injurious import competition. Under these restrictions, tariffs on items that were cut by 60 percent in MTN are not eligible for further cuts and there is a maximum 20-percent cut subject to section 101 of the Trade Act of 1974. Second, advice from

the International Trade Commission (ITC) is required before any authority is used, and as part of the process of deciding whether to use 124, the interagency Trade Policy Staff Committee (TPSC) and the ITC hold hearings soliciting comments from private industry.

Finally, section 124 authority can only be used in any given year on products accounting for no more than 2 percent value of total U.S. imports.

Mr. President, I believe extension of the President's tariff negotiating authority under section 124 for an additional 2-year period will provide an opportunity for our negotiators to lower foreign barriers to exports of American-made goods, without threatening those industries concerned about injurious import competition.●

By Mr. BENTSEN:

S. 1903. A bill to require the President to determine what activities now performed by the Federal Government could more efficiently be conducted by small business, and to prepare a schedule for transferring those activities to the private sector; to the Committee on Governmental Affairs.

GOVERNMENT ACTIVITY REDUCTION ACT

● Mr. BENTSEN. Mr. President, I must confess my continuing astonishment with the focus of economic issues from Washington. The major product of our Capital City and indeed of our Nation used to be ideas—principles so sound and enduring that we set the tone and tenor for much of the world.

Well, the tone and tenor of Washington occasionally goes off-key, as it has in recent years, when both Congress and the administration have neglected small business. In its rush to please this or that portion of our economy, the Federal Government has all but ignored our most important sector—small business. Our 12 million small business firms employ 63 percent of all working men and women in the United States. They create 87 percent of the new jobs and, according to OMB, account for fully one-half of all innovations. They produce 43 percent of our GNP and are truly the heart of our productive economic system.

America is small business. This country was founded on the principle that free enterprise coupled with only a modicum of government was the surest path to individual freedom and to a robust and growing standard of living. That principle nurtured the growth of small business which became the foundation that sustained our growing Nation as it gained its independence and has sparked its growth during the seven generations since.

GOVERNMENT COMPETITION WITH SMALL BUSINESS

Gradually and then not so gradually, Washington chipped away at that foundation as our Nation's free enterprise principles became blurred. The initial, crystal-clear message from Washington became more and more out of focus as Government increasingly began to perform activities in direct competition with small business.

Competition, of course, is not quite the right word, for it implies some balance or equilibrium between competitors. In reality, Government activities performed in competition with small business are conducted by a unique set of rules which bear no relationship to the real world. Costs are irrelevant. Productivity is a boring abstract. Quality is something people write about for the suggestion box.

Activities performed by Government in competition with small business have surged over the past half century. The list of competing activities has grown and grown to become virtually endless now, ranging from art reproduction to the management by local government of zoos.

These commercial and industrial activities are unfair competition to small business. They rob the private sector of jobs, slow investment, reduce profits, boost taxes, hamper productivity growth, and restrict the ability of our key small business sector to thrive and prosper.

The perverse character of this competition is felt most keenly now when millions of small businesses are threatened by the dual dangers of excessive interest costs and declining demand. Our Founding Fathers would be aghast to learn that the Federal Government is conducting tens of billions of dollars worth of activities today which hard-pressed small business could do better and cheaper.

GOVERNMENT COMPETITION IS WASTEFUL

When I first started talking about productivity and our capital formation problems in 1973, I received the same thundering silence then which greets the subject of Government competition today in Washington.

Most listeners politely nod their heads when I say that Government competition with small business violates both commonsense and the precepts of free enterprise. But they generally shrug their shoulders, saying the problem is too unmanageable. For too many years, that attitude has prevailed.

Since 1955, for example, each President has reaffirmed the concept that Government competition be minimized—that Federal agencies should contract out as much work as possible to the private sector. Those admonishments were rarely honored, however. Not until 1976 did the General Accounting Office and, later the Defense Department begin to seriously evaluate the cost savings attainable by either relying on the private sector to perform work instead of bureaucrats, or requiring agencies to utilize private-sector practices.

The results of these evaluations were astounding.

The GAO identified over $4 billion in uncollected debts owed the Government which were collectible using private credit agency practices.

The GAO identified $11.7 million which annually could be saved at Federal hydroelectric projects by adopting the automation practices of private utilities.

DOD found it could cut its employment rolls by 11,000 and save $90 million annually by transferring 264 activities to private contractors.

The GAO found that up to $300 million could be saved by adopting private sector day care standards for HEW.

The GAO found that the General Services Administration could cut its custodian costs by one-third or almost $30 million in 1980 alone by contracting for such services through the private sector.

OMB testified before the Joint Economic Committee on October 28, 1981, that:

> The Government currently operates thousands of commercial or industrial activities with an annual operating cost in excess of $20 billion and with a similar amount of capital investment. The vast majority of these activities have never been subject to competition.
>
> If these activities were subject to the cost comparison studies required by A–76, we estimate that 154,000 personnel spaces could be converted to contract operations with a 5-year cumulative savings between fiscal year 1982 and 1987 in excess of $3 billion. These savings will continue to accrue thereafter.

A–76 refers to an OMB circular first promulgated in 1966 and revised in 1979 which requires Federal agencies to utilize private sector contractors whenever economically justified.

These investigations are more than mere straws in the wind. They clearly point to the need for a thorough overhaul of the way our Federal Government goes about its work. These investigations reveal that the Federal Government can raise productivity, cut costs, reduce taxes, and give a badly needed boost to small business by slashing activities done in competition with the private sector and relying far more on private sector contractors.

STEPS TO ELIMINATE GOVERNMENT COMPETITION

The 1979 revisions to the OMB Circular A–76 set forth an explicit Government policy on private contracting: It is to be used whenever economically justified. However, there is a large gap today between that policy and the practice of most Federal agencies.

The next step to reduce Government competition must be to identify in a standard, uniform fashion across our Government those areas where economic sense dictates the use of private firms—and here I mean small business ones specifically—in place of bureaucrats. Why small business? Because it faces a much tougher road than larger firms do in generating income and profits, and in meeting the mandates of Federal regulations and redtape.

The challenge is to close the present information gap by accelerating agency efforts under A–76 to conduct economic assessments of all their activities, while insuring that these assessments are conducted uniformly. This is a major challenge. It is easy to underestimate both the size of this information gap and the difficulties in obtaining uniform economic evaluations from all Federal agencies. The lack of solid information on Government spending is striking. For example, while OMB knows how much Federal agencies spend on private con-

tract work, they have no data on the spending split between goods and services.

EXPLANATION OF LEGISLATION

We have a long way to go in moving the Government out of activities which can more efficiently be performed by small business and the private sector. My bill is designed to start us on that road by requiring the President to establish a uniform data base—a base that identifies Government activities which could better be done by small business.

The Government Activity Reduction Act requires the President to report annually to Congress on such activities, and determine the potential cost savings to taxpayers should those activities be conducted by small business. In addition, the President's report must include a schedule for transferring such activities to the private sector where economically warranted.

This bill is a measured, realistic step toward reducing the scope of Government competition with small business. To my mind, it is a long overdue one, as well, and I encourage my colleagues to join me in making up for that lost time.

It is time for the entire Federal Government to play the same tune—one designed to aid small business in this trying period while improving the cost effectiveness of the Federal Government and reducing its deficit, as well.

Mr. President, I ask unanimous consent that the Government Activity Reduction Act be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1903

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Government Activity Reduction Act."

SEC. 2. FINDINGS AND PURPOSE.

(a) The Congress finds that:

(1) small business is the economic heart of the United States, creating 87 percent of all new jobs, employing 63 percent of all workers, and responsible for a majority of all innovative activity, and almost one-half of the Gross National Product;

(2) small business is bearing the brunt of tight money policies which have pushed interest rates to an excessive level, thereby creating a recession and extraordinary hardship among small business owners and unemployment among small business workers;

(3) the Federal Government is exacerbating these hardships by performing many activities in direct competition with small business;

(4) the General Accounting Office and other Federal entities have documented numerous instances where activities being performed by the Federal Government could more efficiently be performed by the private sector; and

(5) permitting small business to more efficiently perform activities now conducted by the Federal Government will reduce the cost of government, reduce taxes, and improve the economic condition of our crucial small business sector.

(6) the purpose of this Act is to reduce Federal spending by encouraging the transfer of those Federal agency activities to small business which can more efficiently be performed by the private sector.

SEC. 3. ANNUAL EVALUATION AND REPORT.

By January 31 of each year, the President shall submit a report to the Congress. The report shall contain:

(a) a description of activities performed in the previous calendar year by the Federal Government which could be more efficiently performed by small business; and

(b) an estimate of the potential cost savings to the government and taxpayers of conducting such activities under contract with small business.

SEC. 4. TRANSFER OF GOVERNMENT ACTIVITIES TO THE PRIVATE SECTOR.

The President shall include in the report required pursuant to section (3), a schedule for transferring those activities identified in section 3(a) to the private sector, with an emphasis on contracting for the performance of such activities with small business firms.●

By Mr. MITCHELL:

S. 1904. A bill to amend the Internal Revenue Code of 1954 to provide targeted rate schedules to replace the across-the-board tax cuts enacted by the Economic Recovery Tax Act of 1981; to the Committee on Finance.

S. 1905. A bill to repeal certain reductions in the windfall profit tax contained in the Economic Recovery Tax Act of 1981; to the Committee on Finance.

LEGISLATION TO CHANGE CERTAIN PROVISIONS OF THE ECONOMIC RECOVERY TAX ACT OF 1981

● Mr. MITCHELL. Mr. President, today I am introducing two bills that will correct what I consider to be the major mistakes that Congress made in its passage of the Economic Recovery Tax Act of 1981.

The first bill would redirect the individual income tax cut to moderate-income taxpayers.

The second would repeal the oil industry tax breaks granted in the tax bill.

Events since the enactment of the administration's budget and tax cut proposals have revealed many weaknesses in the social and economic philosophies that provided the underpinnings for the administration's policies. It is now clear that the policies of the administration favor the wealthy over the vast majority of working men and women.

Furthermore, record-high interest rates, surging unemployment, and declining economic output have signaled the end of the high expectations for the economy generated by the administration earlier in the year.

Throughout the economic policy debate, I sought to enact changes in the budget and tax plans that would have made Government policy more equitable and would have resulted in a more reasonable budget and fiscal policy. Now we find ourselves having to restore faith in the Government and the economy.

Several steps must be taken. New and imaginative approaches to social and economic policies must be adopted. Yet our first step should be to acknowledge our earlier mistakes and correct them.

Throughout the tax cut debate, many Members of Congress seemed wedded to the notion that an across-the-board tax cut was a fair tax cut. Yet this simplistic analysis ignored the off-setting effect of inflation and social security tax increases. Because those increases fell disproportionately on moderate- and low-income taxpayers, the across-the-board tax reductions approved earlier this year actually leave low- and moderate-income taxpayers with a greater share of the total tax burden.

A few statistics illustrate the point. The tax increases for the taxpayers in the $5,000 to $20,000 income class actually outweigh the income tax cut in 1982.

In other words, this group faces a net tax increase next year. Taxpayers earning $20,000 to $50,000 pay 52 percent of total individual and social security taxes, but will receive only 42 percent of the next tax cut.

In contrast, individuals making over $50,000 will receive 62 percent of the net tax cut even though they pay only 28 percent of total taxes.

The proponents of the Kemp-Roth tax cut tried to persuade the rest of us that their tax cut was "fair." But the statistics reveal that the result is actually to redistribute income toward the wealthy.

The bill I am introducing is identical to an amendment offered by Senator BRADLEY and myself in the Finance Committee and on the floor of the Senate during debate on the tax bill. This will leave the 3-year tax cut in effect but makes more of it available to individuals making less than $50,000 per year. There would be no changes in the revenue loss. My bill will result in a far more equitable tax cut, as this marginal tax rate reductions are skewed toward lower and middle income households.

The second bill I am introducing would repeal the major windfall profit tax breaks included in the Economic Recovery Tax Act. These are the exemption from the tax of oil from stripper wells run by independent producers, the lower tax on new oil, and the expanded tax benefits for royalty owners. Combined, these provisions will cost the Treasury $11.6 billion in revenues through 1986.

These tax benefits have been challenged repeatedly, both during the debate on the tax bill and in subsequent Senate action. During the Senate's consideration of the tax bill, it was clear that windfall profit tax reductions did not have significant support.

Although the Senate-passed bill contained $6.5 billion worth of windfall tax benefits over 5 years, proposals that would have added another $25 billion were rejected.

The final combination of oil tax breaks was due to a compromise with the House bill, which was the product of an unfortunate bidding war for the votes of oil State representatives. That bill contained roughly $16 billion in windfall profit tax breaks over 5 years.

I opposed all oil tax breaks at every stage of the tax writing process. I voted against the tax relief in the Finance Committee, opposed the additional re-

ductions offered on the Senate floor, and sought to have the conference report sent back to the conference committee. The reason for opposing these oil tax breaks are as valid now as they were earlier.

Whether tested on budget policy or energy policy grounds, the tax reductions are unwise. As the administration and the congressional leadership search for options to deal with the pending budget crisis, repeal of the windfall profit tax breaks should be at the top of everyone's list. Better uses for the revenues devoted to those provisions are easy to devise.

One obvious use is simply to reduce projected Federal deficits, thereby easing pressure on interest rates. Repeal of these tax breaks would be a strong signal to the financial markets, which are indicating serious concerns over the size of the impending budget deficits.

These tax breaks should also be compared to the budget cuts that have been proposed or enacted. With the proposed social security reductions and the cuts already enacted in the school lunch program, medicare, medicaid, and other social programs, can anyone seriously argue that tax breaks for oil producers deserve a high claim on scarce Government revenues?

Perhaps this argument could be made if these tax provisions served some legitimate purpose in our energy policy. Yet the windfall tax provisions fail on these grounds as well. The administration has advocated a market-based energy policy, on the presumption that this would provide oil producers with sufficient incentive to drill for oil.

Indeed, the administration's early decontrol move provided the oil industry with as much as $7.6 billion in unexpected revenues this year.

This action was taken in spite of evidence that the phased-decontrol plan was already inducing record-drilling activity in the United States. On top of what has been termed an "overheated" search for oil, the new oil tax benefits will not add significantly to domestic oil supplies. One estimate shows that drilling activity in the United States is likely to be only 1.2 percent higher in 1985 as a result of the tax bill provisions.

A closer look at the oil industry tax breaks reveals the weak case in favor of these provisions. For example, the tax bill provided an exemption for oil from independent producers' stripper wells.

The Windfall Profit Tax Act of 1980 acknowledged the special difficulties facing independent producers by taxing independents at only 30 percent, as low a rate as any producer or type of oil is taxed. Furthermore, independents still qualify for the percentage depletion allowance, a tax benefit that major oil companies cannot take.

Similarly, the phased-in reduction in the tax rate on newly discovered oil cannot be justified. The original windfall profit tax set a low levy on new oil. Furthermore, the record levels of exploration and drilling activity indicate the adequacy of existing incentives for oil production.

Finally, the tax bill expanded the tax benefits available for royalty owners. The combination of the higher credit and the two-barrel-per day exemption will exclude 80 percent of all royalty owners from the windfall profit tax.

This generosity toward royalty owners is somewhat surprising, given that they are not involved in the production of oil.

Although many will argue that royalty owners, independent producers, and producers of new oil deserve tax relief over and above what they receive from the rest of the tax bill, those arguments pale in comparison to the hardship created by the budget cuts enacted earlier this year.

To the general public, the windfall profit tax breaks symbolize the triumph of special interests over the public interest. Repealing these provisions would signal to the public that all segments of society will share equally in the sacrifices Americans have been asked to make in the name of fiscal responsibility.●

By Mr. ROTH (for himself, Mr. RUDMAN, Mr. COHEN, Mr. NUNN, and Mr. CHILES):

S. 1907. A bill to amend the Currency and Foreign Transactions Reporting Act and section 1961(1) of title 18, United States Code, to improve enforcement, and for other purposes; to the Committee on Finance.

AMENDMENT OF CURRENCY AND FOREIGN TRANSACTIONS REPORTING ACT

Mr. ROTH. Mr. President I am pleased to introduce today, on behalf of myself and Senators RUDMAN, COHEN, NUNN, and CHILES, a bill to amend certain provisions of the Currency and Foreign Transactions Reporting Act and the Racketeer Influenced and Corrupt Organizations Act in order to improve their applicability to international narcotics trafficking.

In early November, the Permanent Subcommittee on Investigation (PSI) conducted an extensive series of hearings on drug trafficking. These hearings have demonstrated that, despite decades of concerned law enforcement efforts against drugs, the flow of illicit narcotics in the United States remains substantially unchecked. These hearings have amplified and substantiated the warnings contained in previous studies of this subject.

In his report to the Congress, dated October 5, 1979, the Comptroller General observed that despite some positive results in controlling the illegal drug problem, drug trafficking and abuse still flourish in the United States. The 1-vear return on drug trafficking in the United States has been estimated at upward of $80 billion. Regardless of the value one wants to attach, the drug trafficking problem in the United States is massive.

During the last few years, several hearings have been held on this topic before numerous congressional committees, further underlining the critical need for decisive legislative action to control this problem.

The testimony which has been received during the Permanent Subcommittee on Investigation's hearings indicates that one of the most effective methods of combating the drug problem is to monitor and curtail the international flow of currency connected with the illegal drug trafficking industry.

Testimony presented before PSI on innovative prosecutions such as Operation Gateway, Project Greenback, and Project Bancoshares has shown that, in order to achieve positive results in the war against illicit drugs, it is imperative to investigate and monitor the international cash flow. Obviously, trafficking is, of necessity, a cash flow business.

At our recent hearings on international narcotics trafficking and money laundering, Deputy Assistant Secretary of the Treasury Robert E. Powis noted that the highly successful Operation Greenback in Florida is based on two enforcement concepts:

First, the attack on drug trafficking and other illegal activity should be made through the vulnerability of the financial operations of the violators through income tax law and the Bank Secrecy Act reporting requirements; and second, the integration of the criminal investigations should be achieved through the grand jury process with special prosecutors coordinating all of the related investigations, including those involving Customs, IRS, DEA, BATF, FBI, or Secret Service violations.

At a hearing before the Subcommittee on Criminal Justice on July 23 and 24, 1980, entitled "Forfeitures of Narcotics Proceeds," Richard J. Davis, Assistant Secretary of the Treasury, stated that to attack the narcotics industry as well as other parts of organized crime, it is necessary to try to develop strategies to deal with the movement of cash.

Developing an understanding of cash flow connected with drug trafficking is important for two reasons.

First, actual curtailment of the movement of vast amounts of cash to the drug producing countries will disrupt the mechanics of illicit narcotics transactions.

Second, knowledge of the location and movement of the cash flow is a tremendous aid in the investigation of the major drug figures.

One of the most effective tools available to assist in monitoring and curtailing the vast flow of the illegal drug profits out of the country is the Bank Secrecy Act (31 U.S.C. 1051). The Bank Secrecy Act, formally entitled the Currency and Foreign Transactions Reporting Act, was intended to provide law enforcement agencies with recordkeeping and reporting tools to investigate the financial resources connected with illegal activities, including drug trafficking.

Yet various loopholes which have been found in the act greatly dilute its usefulness in achieving this intended purpose. It is imperative to close these loopholes which hinder the ability of law enforcement authorities to stop the il-

legal movement of currency out of the United States.

During PSI's hearings, the Treasury Department and the Drug Enforcement Administration stressed the urgent need to close these loopholes.

Unless these loopholes are closed, the hands of the law enforcement authorities are virtually tied, as the major drug traffickers move millions of dollars out of the country without fear of detection or penalty.

In order to answer the needs which these law enforcement agencies have identified, it is necessary to amend the Currency and Foreign Transactions Reporting Act to correct deficiencies in its current enforcement and to enhance criminal penalties under the act.

One of the most devastating loopholes in the act concerns the absence of an "attempts" provision in connection with failing to file a report when taking over $5,000 out of the United States. Currently, since there is no "attempts" provision, many courts have held that the person must actually leave the country with the unreported money, before they violate the law.

For all intents and purposes, the crime is not completed until the person is out of the jurisdiction of the United States. Clearly, this ties the hands of Customs agents, as they must helplessly watch as drug traffickers leave with the unreported money.

Our amendments to title 31 would make it illegal to attempt to violate the reporting requirement, thereby allowing for apprehension prior to departure from the United States. This would greatly improve our detection and interdiction of the illegal flow of money out of the United States.

The proposed amendments would also raise the dollar amount at which a report must be filed. from $5 000 to $10.000. Due to the inflation of the dollar, and the high costs of traveling abroad. it is necessary to limit the requirements of the act to those transactions where large amounts of cash are involved.

The intent of the act is to facilitate the investigation of illegal cash flow, not to hinder legitimate international business or travel.

A practical problem arises over the appropriateness of searching individuals, containers and vehicles upon entering and departing the United States. A reasonable cause standard has always been applied in connection with warrantless border searches. and section 1(e) of the amendment does not change existing law; it merely clarifies it with respect to the authority of Customs agents regarding searches upon departure from the United States.

Section 1(f) allows Treasury officials to pay a reward to informants for information which leads to a recovery of a fine, civil penalty or forfeiture under the act, whenever the amount of recovery or penalty exceeds $50,000. The amount is limited to 25 percent of the net amount of the recovery fine, penalty or forfeiture, or $250,000, whichever is less.

This provision is a critical tool in combating drug trafficking. It is important to remember that we are dealing with a multi-billion-dollar industry. Law enforcement authorities need some tool to combat the great financial attraction that remains in the drug trafficking industry.

The majority of the vital investigations into major drug rings stem from informant tips—these tips are crucial to further investigations.

Additionally, the amount paid to the informant will be minimal in comparison to the amount gained in fines, civil penalties and forfeitures. Without the tip there may not have been any investigation and recovery—at all.

Furthermore, the bill appropriately increases the penalties and fines for failing to file the necessary currency reports. The proposed penalties and fines are much more realistic in comparison with the huge profits realized by trafficking in illicit narcotics. The bill will also clarify the area of civil forfeiture by requiring the establishment of a knowing failure to file before the forfeiture provisions of the act will apply.

Finally, the bill recognizes that currency transaction violations are inherently part of all major drug racketeering schemes. These activities adversely affect international trade, domestic health and safety, and Federal, State, and local law enforcement. As such it is appropriate that such activity should also be subjected to the enhanced penalties of the Racketeer Influenced and Corrupt Organizations Act (RICO) (18 U.S.C. 1961). Our bill will also amend RICO to bring criminal violations of the Bank Secrecy Act within the categories of criminal acts which are defined as "racketeering activities."

This legislation is drastically needed to carry out the purpose of the Currency and Financial Transactions Reporting Act—that of assisting law enforcement officials in obtaining better information and intelligence to seriously impede illegal drug trafficking. We want to make it as tough as we can for traffickers to pay for their contraband.

In conclusion, I would also like to note that at the conclusion of PSI's hearings, Senators RUDMAN, COHEN, NUNN, CHILES, and I issued a list of 10 recommendations that were intended to clearly define the need for a new commitment against international narcotics trafficking.

One of these recommendations called for the amendment of title 31 in a manner which this bill is designed to accomplish. We also recommended that the administration must develop a clear and cohesive policy regarding narcotics trafficking which will encompass both domestic and foreign policy.

We specifically called for the expenditure of additional funds to help domestic law enforcement agencies such as the Drug Enforcement Agency and the Customs Service expand their current efforts. We also called for the increased utilization of the IRS, Department of Defense and the Coast Guard in these efforts.

Mr. President, I ask for unanimous consent to have the text of the bill and a brief section-by-section analysis printed in the RECORD. I also ask that our 10 recommendations be printed as well.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1907

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 207(a) of the Currency and Foreign Transactions Reporting Act (31 U.S.C. 1056 (a)) is amended by striking out "a civil penalty not exceeding $1,000" and inserting in lieu thereof "a civil penalty not exceeding $10,000".

(b) Section 209 of such Act (31 U.S.C. 1058) is amended by striking out "$1,000, or imprisonment not more than one year, or both" and inserting in lieu thereof "$50,000, or imprisonment not more than five years, or both".

(c) Section 231(a) of such Act (31 U.S.C. 1101(c)) is amended—

(1) by inserting ", or attempts to transport or cause to be transported," after "transports or causes to be transported" in paragraph (1); and

(2) by striking out "in an amount exceeding $5,000" and inserting in lieu thereof "in an amount exceeding $10,000".

(d) Section 232(a) of such Act (31 U.S.C. 1102(a)) is amended by inserting before the period at the end thereof the following: ", except that in the case of a failure to file a required report, this subsection shall apply only if the person required to file the report knowingly fails to file the report".

(e) Section 235 of such Act (31 U.S.C. 1105) is amended—

(1) by redesignating subsection (b) as subsection (c); and

(2) by inserting the following new subsection after subsection (a):

"(b) A customs officer may stop and search, without a search warrant, a vehicle, vessel, aircraft, or other conveyance, envelope or other container, or person entering or departing from the United States, on which or whom the officer has reasonable cause to believe there is being transported a monetary instrument for which a report is required under section 231.".

(f)(1) Chapter 1 of such Act is amended by adding the following new section at the end thereof:

"§ 214. Rewards for informants

"(a) The Secretary may pay a reward to an individual who provides original information which leads to a recovery of a criminal fine, civil penalty, or forfeiture, which exceeds $50,000, for a violation of this title.

"(b) The Secretary shall determine the amount of a reward under this section. The Secretary may not award more than 25 per centum of the net amount of the fine, penalty, or forfeiture collected or $250,000, whichever is less.

"(c) An officer or employee of the United States, a State, or a local government who provides information described in subsection (a) in the performance of official duties is not eligible for a reward under this section.

"(d) There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this section.".

(2) The table of contents of such chapter is amended by adding the following new item after the item relating to section 213: "214. Rewards for informants.".

SEC. 2. Section 1961 (1) of title 18, United States Code, is amended—

(1) by striking out "or" after "(relating to embezzlement from union funds),"; and

(2) by inserting before the semicolon at the end thereof the following: ", or (E) any act which is indictable under the Currency and Foreign Transactions Reporting Act".

SECTION-BY-SECTION ANALYSIS

Section 1(a) amends section 207(a) of the Act (31 U.S.C. 1056(a)) by increasing the criminal penalty for a violation of the Act from $1,000 to $10,000.

Section 1(b) amends section 209 of the Act (31 U.S.C. section 1058) by increasing the penalty for a violation of the Act from a $1,000 fine and a maximum prison term of one year or both, to a $50,000 fine and a maximum imprisonment of five years or both.

Section 1(c) currently section 231(a)(1) of the Act (31 U.S.C. 1101(a)(1)) requires a person to file a report whenever currency or monetary instruments exceeding $5,000 are transported or caused to be transported outside of the United States. Section 3 will amend this provision by raising the dollar amount to $10,000 and by also requiring such a report to be filed whenever a person attempts to transport the amount outside of the United States.

Section 1(d) clarifies the intent which must be proven to effectuate the civil forfeiture provision of the Act. Section 232(a) (31 U.S.C. 1102(a)) is amended to apply only to a knowing failure to file the required report.

Section 1(e) is designed to clarify the existing warrantless search authority of Customs officials. It will provide authority for searches of individuals, containers and vehicles, upon entering and departing the United States, based upon reasonable cause.

Section 1(f) amends Chapter 1 of the Act by adding a new section 214. This section is designed to create a mechanism whereby Treasury officials will be able to pay a reward to informants for information which leads to a recovery of a fine, civil penalty or forfeiture under the Act, whenever the amount of the recovery or penalty exceeds $50,000. The amount of the reward, which will be determined by the Secretary, cannot exceed the lesser of 25 percent of the net amount of the fine, penalty or forfeiture, or $250,000.

Section 2 would bring criminal violations of the Act within the definition of racketeering activities, as set forth in 18 U.S.C. section 1961(1), and would bring a criminal violation of the Act within the purview of the Racketeer Influenced and Corrupt Organizations Act.

RECOMMENDATIONS

1. The United States must develop a clear and cohesive policy regarding narcotics trafficking. Past policies have been fragmented. The recommended policy must encompass foreign and domestic efforts and strike a realistic balance between resources allocated for both supply and demand. The Administration must announce and then implement an unequivocal commitment to combat narcotics and then clearly evidence this commitment in our foreign policy.

It should be expressed as an essential element in our dealings with the drug producing nations in South America and Southeast Asia. It should also be evidenced in our relations with our allies and other so called "demand nations," so that the United States does not stand alone in our international efforts to halt the flow of illicit narcotics.

On a domestic level, the Administration must develop a comprehensive effort against drugs. Obviously this will involve traditional law enforcement agencies such as DEA and the FBI but increased use of Customs investigators is also a necessity. Moreover, expanded utilization of the IRS, Coast Guard and the Department of Defense will be required. These efforts clearly imply the dedication of additional resources and the expenditure of additional funds.

2. Narcotics efforts at the source of production are critical to our success in the war against drugs. The United States should assist producer nations in developing safe and effective means of drug eradication within the context of those nations' individual problems. Moreover, the United States itself should seek to develop and employ safe and effective eradication of domestically produced drug crops.

3. The Department of Justice and the Department of State should develop closer ties in the establishment of a unified narcotics policy and, in conjunction with the CIA, should develop a clear statement of responsibilities regarding the collection and dissemination of narcotics intelligence.

The Department of Justice and the Department of State should make a priority the development of additional international agreements regarding the extradition of international drug traffickers and the creation of mutual assistance treaties to enable federal law enforcement agencies to operate more effectively on an international level.

4. A lasting solution to the drug problem must include efforts on both the demand and supply sides of the narcotics market. The United States, in its effort to solve the problem of narcotics demand within this country, should closely examine and consider the efforts and experience of other drug-affected nations in the areas of registration, rehabilitation, and preventive drug education.

5. The administration should encourage the activities of parent community organizations, such as the National Federation of Parents for a Drug Free Youth and Texans War on Drugs and other voluntary groups in their efforts to educate the public and create a drug free home environment.

6. Foreign nations often confront the narcotics problem without the benefit of many proven law enforcement tools. The State Department and DEA should make available to those nations information and training in legislative and operational techniques which have been successfully employed in U.S. narcotics enforcement.

7. American credibility in the war against drugs has suffered from a foreign conception that the American criminal justice system is unreasonably lenient in dealing with drug offenders. We must reevaluate and reform our domestic policies on bail, sentencing, and parole to clearly reflect a strong American commitment to effective narcotics law enforcement.

8. The international narcotics industry in part flourishes through the relatively free trade of precursor chemicals needed in narcotics production. The State Department should seek international agreements with affected countries for restraints in the production and distribution of those precursor chemicals.

9. The Congress should consider new legislative initiatives which confront emerging methods of international narcotics trade and thereby provide federal law enforcement agencies with improved techniques to combat this traffic. These legislative initiatives should include:

a. Amendment of the Currency and Foreign Transactions Reporting Act to provide for enhanced penalties and increased law enforcement authority.

b. Restatement of drug forfeiture laws which are currently confusing in concept and cumbersome in enforcement. This results in the inadequate usage of criminal and civil forfeitures as an effective mechanism of deterrence. Current forfeiture statutes should be clarified and forfeiture procedures simplified to ensure the swift and total forfeiture of all the proceeds, vehicles, and vessels related to narcotics trafficing.

c. New laws which will place criminal penalties upon the illicit conversion and investment of drug proceeds to legitimate uses. Current criminal statutes do not adequately address the utilization of illegal drug proceeds.

d. Amendment of the Tax Reform Act to allow and encourage the more active participation of IRS in criminal investigations of the narcotics trade.

10. Federal regulations should be amended to improve the enforcement of the Currency and Foreign Transactions Reporting Act.

a. The Department of Treasury should review its regulations which exempt certain businesses from the necessity of filing currency transaction reports required by 31 USC S 1055. The current exemption list is too broad and allows for many exceptions to the filing requirements.

b. The Customs Service, in cooperation with the Federal Aviation Administration and Civil Aeronautics Board, should develop regulations and procedures which will enforce existing laws by ensuring that all international travelers departing the United States with $5,000 receive prior notice of the currency transaction report filing requirements of 31 USC S 1101, and the opportunity to acquire the required form. If the requirements of the Act are to provide law enforcement officials with a paper trail of the international flow of monetary instruments, all international travelers must be informed of and required to comply with the Act upon departure from the United States.

By Mr. NICKLES (for himself and Mr. BOREN):

S. 1908. A bill to provide for the reinstatement and validation of U.S. oil and gas lease NM-A26947 (Oklahoma); to the Committee on Energy and Natural Resources.

S. 1909. A bill to provide for the reinstatement and validation of U.S. oil and grass lease numbered W-24153; to the Committee on Energy and Natural Resources.

REINSTATEMENT AND VALIDATION OF CERTAIN OIL AND GAS LEASES

● Mr. NICKLES. Mr. President, today, I am introducing legislation along with the cosponsorship of my distinguished colleague, Senator BOREN, to reinstate certain Federal mineral leases in Oklahoma and Wyoming. These leases were lost in both cases by clerical oversight not by lack of good faith on the part of the lease owners. In each case, the owners of the leases invested hundreds of thousands of dollars in order to develop the minerals, only to lose the leases after production was established because of a mistakenly missed $160 delayed rental payment in one case and an overlooked filing of a Federal form in the other.

Mr. President, for the further information of my colleagues concerning these issues, I have here a detailed explanation of each case. Since they are

rather lengthy, I ask unanimous consent that they be included in the RECORD as if read.

I sincerely hope my colleagues will give swift and favorable action to this legislation.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

FACTUAL BACKGROUND

Lease W-24153 was issued June 1, 1970, for a primary term of ten years. It covers the east half (320 acres) of Section 26, Township 20 North, Range 112 West, 6th P.M., Sweetwater County, Wyoming and provides for a 12½ percent royalty to the United States. Exh. 1. Devon was assigned a 50 percent working interest in the lease by assignment approved by the Bureau of Land Management on November 14, 1973, effective October 1, 1973. The assignment to the other 50 percent working interest owner, Eason Oil Company, was approved by the Department of Land Management on November 14, 1973, effective September 1, 1973. Exh. 2.

The lease on the west half (320 acres) of the Section 26 is owned by Tenneco Oil Company under lease W-47820, dated November 1, 1974. This lease also provides for a 12½ percent royalty. Exh. 3.

During 1979, Devon, acting on behalf itself and Eason, made plans to drill a test well in the Frontier formation in the east half of Section 26. On August 8, 1979, Devon applied to the Wyoming Oil and Gas Conservation Commission requesting an exception to the Fabian Ditch Field Spacing Order, which called for a single well in the southwest quarter of 640 acre spacing units. Exh. 4. Devon requested permission to drill a Frontier formation test well in the southeast quarter of the section on its lease instead of on the Tenneco lease. This exception request was opposed by Amoco Production Company on the grounds that there was no geological or topographic necessity for the exception. Exh. 5.

Devon also applied for a forced pooling order to the Wyoming Oil and Gas Conservation Commission because Tenneco, the owner of the lease in the west half of the Section, had declined to participate in the cost and expense of drilling a test well. Exh. 6. The forced pooling application and the exception application where withdrawn in September, 1979, when Tenneco changed its position and agreed to participate in a test well.

Devon, Tenneco and Eason then entered an operating agreement dated October 18, 1979, covering all of Section 26. The agreement designated Devon as the operator of the well to be located on the Tenneco acreage, in the west half of the section. Exh. 7. Designations of Devon as operator were duly filed. Exh. 8. Devon then applied to the United States Geological Survey ("USGS") for permission to drill the well, designated the Federal 1-26 well The application dated November 5, 1979, was approved by the District Engineer on December 6, 1979. Exh. 9. Drilling operations for the Federal 1-26 were covered by Lessee's bond on Tenneco Oil Company of $150,000.00.

The Federal 1-26 well was spudded on January 5, 1980, and reached total depth on March 10, 1980 at 12,508 feet. The well was completed on July 20, 1980 as a gas well. The calculated 24 hour test rate for the well was 20 barrels of oil and 1.9 MM of gas. Exh. 10. The well is currently shut-in awaiting pipeline connection.

Devon submitted to the Bureau of Land Management checks dated May 1, 1980 and May 20, 1980, designated as "in payment of delay rental to the party or parties named on attached stub pursuant to lease identified herein." Exh. 11. The lease number on the face of both checks was Devon's lease number (WY-011700-00) corresponding to Federal lease W-24153. Each check was for the entire annual rental due under the lease, $160.00. On November 24, 1980, Devon received a check for $320.00 drawn on the United States Treasury with the designation "refund BLM W-24153." Exh. 12. After receiving the refund check, Devon filed a protest of expiration of the lease with the Wyoming State of BLM by letter dated November 25, 1980. Exh. 13. On December 11, 1980, the Wyoming State Office issued its decision dismissing the protest and holding that the lease had expired because the lease contained no drilling operations and was not part of an approved unit plan or communitization agreement. The agreement was not filed through the error of an employee of Devon whose employment was terminated by Devon prior to the discovery of this error.

STATEMENT OF CASE

Re: History of United States Lease NM-A26947 (Oklahoma) T13N, R25W, I.M., Section 10: E/2 160 net acres, Roger Mills County, Oklahoma No. 35-129-003.

United States Lease NM-A26947 (Oklahoma) was issued under the effective date of January 1, 1976, to Monsanto Company for a five year primary term beginning January 1, 1976, said lease issued as a result of competitive bidding.

On August 25, 1980, Monsanto Company entered into a Farmout Agreement with Harrison L. Townes, Inc., which Agreement was accepted by Harrison L. Townes, Inc., on September 16, 1980. In accordance with the terms and provisions of the Farmout Agreement, referenced above, Monsanto agreed to execute and deliver to Harrison L. Townes, Inc., an assignment of 75 percent of all its right, title and interest in and to the above referenced lease, limited in depth to 50 feet below the total depth drilled and logged on a test well. Furthermore, Monsanto reserved an overriding royalty interest of 12.5 percent with the option to convert the overriding royalty interest after payout to a 25 percent working interest in and to the test well.

If Monsanto decided to exercise its option to convert the override to a 25 percent working interest, the parties to the Farmout Agreement (Monsanto and Harrison L. Townes, Inc.) were to enter into an operating agreement essentially in the same format as the Model Form Operating Agreement AAPL Form 610-1977. Prior to the effective date of the Operating Agreement, Monsanto was to pay delay rentals to keep the above referenced lease in force. Under Schedule "B"-Competitive, attached to the lease, delay rentals were to be paid to the United States by Monsanto on or before the 1st day of the month in which the lease issued and for each lease year thereafter, prior to a discovery of oil or gas on the leased lands, in the amount of $2.00 per acre. Delay rentals were paid by Monsanto on December 21, 1976, for the lease year 1977, on December 16, 1977, for the lease year 1978, on December 8, 1978, for the lease year 1979, and on December 17, 1979, for the lease year 1980.

On September 5, 1980, Harrison L. Townes, Inc., and others as non-operators, entered into an Operating Agreement AAPL Form 610 Model Form Operating Agreement-1946 with Ports-of-Call Oil Company, as operator, covering all of Section 10, Township 13 North, Range 25 West, Roger Mills County, Oklahoma, the Clift No. 10-1 well. The non-operators, other than Harrison L. Townes, Inc., are Nova Energy Corporation, El Paso Natural Gas Company, Palmer Investments, Hoover and Bracken Energies, Inc., Nicor Exploration Company, Patrick Petroleum Corporation, Monsanto Company, Eastern Energy Corporation, Plains Resources, Inc., Transwestern Gas Supply, and Pacific Lighting Gas Development Company. This Operating Agreement covered all of Section 10-13N-25W insofar and only insofar as said land covered from the surface of the ground down to the stratigraphic equivalent of a point 50 feet below the base of the Upper Morrow formation.

On October 1, 1980, a Communitization Agreement became effective as to all of Section 10-13N-25W as to natural gas producible from the Douglas, Tonkowa, Cottage Grove, Cleveland, Marmaton, Upper and Lower Cherokee, Atoka, and Upper Morrow formation. This Agreement was approved by the US Geological Survey, Tulsa District, on December 11, 1980. The Agreement was entered into by and between Ports-of-Call Oil Company, as operator, and Monsanto Company, Transwestern Gas Supply Company, Pacific Lighting Gas Development Company and El Paso Natural Gas Company, as the lessees of the leases communitized in the Agreement.

The Communitization Agreement provided for all of Section 10 to be developed and operated as an entirety, with the understanding and agreement between the parties that all communitized substances produced therefrom shall be allocated among the leaseholds comprising said area in the proportion that the acreage interest of each leasehold interest bears to the entire acreage interest committed to the Agreement. By virtue of this Agreement, Harrison L. Townes owns an undivided 25 percent interest in the communitized lands (Section 10-13N-25W) subject to the reversionary interest of Monsanto. The Agreement provided that the payments of delay rentals under the terms of the leases committed to the Communitization Agreement should not be affected by the Agreement except as provided for under the terms and provisions of the leases.

On October 27, 1980, Ports-of-Call Oil Company commenced drilling operations in a legal location, located in the SW/4 of Section 10-13N-25W, designated as Clift No. 10-1 well. The drilling was finished on January 27, 1981, and the Clift No. 10-1 well first began producing on February 22, 1981. The well was drilled to the Morrow formation with a total depth of 15,821 feet, with perforation and production from 15,678-15,682 feet. In May of 1981, the well went on-line and began producing gas.

On July 23, 1981, Monsanto was informed by telephone that federal lease NM-A26947 (Oklahoma) had terminated by operation of law for failure to pay the $320 delay rental for the 6th lease year as extended. On July 24, 1981, Monsanto contacted Harrison L. Townes regarding the BLM's placing the lease in "dead file" status. Neither Monsanto nor Harrison L. Townes have received formal decision notice from the U.S. Department of Interior, Minerals Adjudication Section, as to the leases automatic termination. To date, Monsanto has not made its tender of the past due $320 delay rental.

A proposed Gas Purchase Agreement is pending between El Paso Natural Gas Company, as buyer, and Harrison L. Townes, Inc., and its partners Nicor Exploration Company, Patrick Petroleum Corporation of Michigan, Eastern Energy Corporation, and Plains Resources, Inc., collectively, as seller.●

ADDITIONAL COSPONSORS

S. 234

At the request of Mr. HATCH, the Senator from New Jersey (Mr. WIL-

LIAMS) was called as a cosponsor of S. 234, a bill to amend the Public Health Service Act to encourage the establishment of home health programs and to amend the Social Security Act to provide expanded coverage of home health services under the medicare and medicaid programs.

S. 265

At the request of Mr. PERCY, the Senator from Georgia (Mr. MATTINGLY), the Senator from Pennsylvania (Mr. SPECTER), and the Senator from Indiana (Mr. LUGAR) were added as cosponsors of S. 265, a bill to amend the Congressional Budget Act of 1974 to establish procedures for setting targets and ceilings, in the congressional budget process, for loans and loan guarantees under Federal credit programs.

S. 604

At the request of Mr. MATHIAS, the Senator from Connecticut (Mr. WEICKER) was added as a cosponsor of S. 604, a bill to amend the Communications Act of 1934 to provide that telephone receivers may not be sold in interstate commerce unless they are manufactured in a manner which permits their use by persons with hearing impairments.

S. 985

At the request of Mr. MOYNIHAN, the Senator from Kentucky (Mr. HUDDLESTON was added as a cosponsor of S. 985, a bill to authorize the issuance of variable-rate debentures by the FDIC and FSLIC.

S. 1053

At the request of Mr. MELCHER, the Senator from Rhode Island (Mr. PELL) was added as a cosponsor of S. 1053, a bill to amend the Federal Meat Inspection Act to authorize the Secretary of Agriculture to regulate the transportation in commerce of horses intended for slaughter, and for other purposes.

S. 1491

At the request of Mr. MELCHER, the Senator from Montana (Mr. BAUCUS) was added as a copsonsor of S. 1491, a bill for the relief of Josefina Gonzales Batoon.

S. 1713

At the request of Mr. MATHIAS, the Senator from Wisconsin (Mr. KASTEN) was added as a cosponsor of S. 1713, a bill to amend the Internal Revenue Code of 1954 to permit the rollover of gain from sale of farmland development rights to a State or a political subdivision thereof under a farmland preservation program, and for other purposes.

S. 1814

At the request of Mr. JEPSEN, the Senator from California (Mr. HAYAKAWA) was added as a cosponsor of S. 1814, a bill to amend title 10, United States Code, to require the Secretary concerned to comply with the terms of certain court orders in connection with the divorce, dissolution, annulment, or legal separation of a member or former member of a uniformed service and which affect the retired or retainer pay of such a member or former member, and for other purposes.

S. 1852

At the request of Mr. JEPSEN, the Senator from Nebraska (Mr. ZORINSKY), the Senator from Montana (Mr. BAUCUS), the Senator from South Carolina (Mr. THURMOND), the Senator from Arkansas (Mr. PRYOR), and the Senator from North Dakota (Mr. ANDREWS) were added as cosponsors of S. 1852, a bill to amend the Export-Import Bank Act of 1945 to provide for the extension of credit for agricultural commodities.

S. 1889

At the request of Mr. MATSUNAGA, the Senator from Connecticut (Mr. DODD) was added as a cosponsor of S. 1889, a bill to establish the United States Academy of Peace, and for other purposes.

SENATE JOINT RESOLUTION 121

At the request of Mr. MITCHELL, the Senator from Oklahoma (Mr. BOREN), the Senator from Texas (Mr. BENTSEN), the Senator from Kentucky (Mr. FORD), the Senator from Virginia (Mr. HARRY F. BYRD, JR.), the Senator from New Jersey (Mr. WILLIAMS), the Senator from Nebraska (Mr. EXON), the Senator from Iowa (Mr. JEPSEN), the Senator from Nebraska (Mr. ZORINSKY), the Senator from Maryland (Mr. SARBANES), the Senator from Louisiana (Mr. JOHNSTON), and the Senator from South Dakota (Mr. ABDNOR) were added as cosponsors of Senate Joint Resolution 121, a joint resolution to provide for the designation of the year 1982 as the "Bicentennial Year of the American Bald Eagle" and the designation of June 20, 1982, as "National Bald Eagle Day".

SENATE JOINT RESOLUTION 122

At the request of Mr. THURMOND, his name was added as a cosponsor of Senate Joint Resolution 122, a joint resolution to authorize and request the President to designate the week of February 28, 1982, through March 6, 1982, as "National Construction Industry Week."

SENATE RESOLUTION 218

At the request of Mr. MELCHER, the Senator from North Dakota (Mr. BURDICK) was added as a cosponsor of Senate Resolution 218, a resolution retaining nutritional goals in the school lunch program.

SENATE RESOLUTION 251—RELATING TO CONGRESSIONAL RECESSES

Mr. PRESSLER submitted the following resolution; which was referred to the Committee on Rules and Administration:

S. RES. 251

Resolved, That it is the Sense of the Senate that no congressional recess be taken after October 1 of any new fiscal year, exceeding a two-day period, until final Congressional action on all general appropriations measures has been completed for that fiscal year.

NO APPROPRIATIONS . . . NO VACATION

● Mr. PRESSLER. Mr. President, today I am introducing a resolution to stop the practice of overreliance on continuing resolutions as a procedure for congressional avoidance of conclusive action on general appropriations measures. Recent congressional action on budget and appropriations measures demonstrates again a certain lack of discipline in the search for a reduction in Federal spending.

As a cosponsor of Senate Joint Resolution 58, a constitutional amendment requiring balanced budgets, I must say that the proposed amendment is a last resort. Favorable congressional action on the President's economic recovery program would be much better medicine, although still bitter medicine, than the time-consuming constitutional amendment process.

When Congress stalled until the last minute last month in producing a continuing appropriation to keep the Government functioning, in the absence of regular appropriations enactments, it was playing "Russian roulette" or the game of "chicken" with the White House. In this game, the President won. And I hope he wins time and time again if Congress persists in its avoidance of timely and responsible spending reductions.

The President's veto of an expensive continuing appropriation bill was a spark of discipline which Congress needed and may need again. The President could also resort to rescissions and deferrals to reduce spending. These tools of fiscal responsibility seem to be all that stand in the way of runaway deficits and resulting high interest rates.

It would be far better for Congress to understand the facts of contemporary political life than to rely totally on the executive branch to produce balanced budgets. The whole Nation is in trouble unless Congress develops the political fortitude to stay in line with the President's budget requests.

I applaud the President's courage to use the veto and his other constitutional powers to keep the Congress on track toward a stronger economy.

Mr. President, we are once again rapidly approaching the cutoff date for Federal funding—the third one in less than 3 months. We should not again wait until the last minute to put together an appropriations package to keep the Government running. The last-minute spectacle that the public witnessed 2 weeks ago, regrettably, is being viewed as an indictment against congressional practices. If we are to regain a semblance of order, Congress must pass the regular appropriations bills in a timely fashion to avoid the threat of a costly and disruptive governmental shutdown.

Therefore, I am today introducing a resolution calling for the suspension of recesses, exceeding 2-day periods, as long as all general appropriations measures are not completed beyond the beginning of the fiscal year. Should this resolution be adopted—and I would urge the support of my colleagues on this measure—this would mean a cancellation of the upcoming Christmas recess. This is a drastic measure because I know that we all have plans in our States during this period. However, the Congress must run itself on a businesslike basis and complete its work before going on leave. We owe this much to the American people.●

ADDITIONAL STATEMENTS

SAUDI ARABIA PRESSURE ON OMAN

● Mr. BOREN. Mr. President, yesterday it was reported in the Washington Post that Saudi Arabia continues to apply pressure on Oman to withdraw from military agreements with the United States. A text of the article follows these brief remarks.

The article states:

Saudi Arabia and the other Persian Gulf Arab states have offered the sultanate of Oman $1.2 billion in aid if Oman agrees to cancel an agreement allowing the United States access to its military facilities.

To say that I am distressed by this Saudi action is an understatement. At the time that I reluctantly cast my vote in favor of permitting the sale of AWACS aircraft to Saudi Arabia, I indicated that since the planes will not be delivered for a few years, there would be a period of time in which to evaluate the relationship between our two nations. I made it clear that if Saudi Arabia does not turn out to be the friend we hope and expect her to be, then I would urge that the planes not be delivered.

It is far too early to make a final evaluation. This latest action by the Saudis is particularly negative. I plan to carefully monitor the situation.

I am especially disturbed by this latest action because it directly contradicts what I have been told by some Saudi and American officials. During my visit to Saudi Arabia with the delegation headed by the majority leader, I interpreted statements by some Saudi leaders to mean that they opposed a presence for the United States anywhere within the region.

I could understand Saudi opposition to bases within their own kingdom, but I could not understand their opposition to the availability of facilities elsewhere in the region which could be used by the United States to stockpile supplies and for other purposes in the event of aggression directed at the area. Such a policy clearly contradicts any notion of effective mutual action to protect Saudi and American interests. I was assured by American diplomatic and military personnel that I had misunderstood Saudi intent. If the report in the Washington Post is accurate it would appear that I was not the one who misunderstood those conversations. It also causes me to doubt the credibility of assurances about Saudi policy given to me during the AWACS debate.

I am only one Senator with a limited ability to impact foreign policy. However, if the Saudis do follow a course of action which impairs and impedes the ability of the United States to protect our friends and our interests in the area, I will not hesitate to do all that is within my power to reverse the decision on the sale of AWACS to Saudi Arabia.

Let us hope that the Saudis will follow a more reasonable course.

The article follows:

SAUDIS WARY OF U.S. MILITARY ROLE

(By David B. Ottaway)

RIYADH, SAUDI ARABIA.—Saudi Arabia and the other Persian Gulf Arab states have offered the Sultanate of Oman $1.2 billion in aid if Oman agrees to cancel an agreement allowing the United States access to its military facilities.

The offer, disclosed by a high Saudi government official during a recent interview, was made during a meeting here of the newly formed Gulf Cooperation Council last month and would provide Oman with the equivalent of what it reportedly hopes to obtain in military and economic assistance from Washington as a quid pro quo for U.S. use of Oman's facilities.

The action highlights the ambiguity of Saudi policy toward the growing American military presence in the region and the difficulties Washington faces in centering its Persian Gulf defense policy around the Saudi kingdom.

On the one hand, the Saudis seem eager for closer military cooperation with the United States, at least after a solution is found to the issue of a Palestinian homeland in lands held by Israel. On the other hand, they are urging Oman to sever its formal military ties with Washington.

The official Saudi view that the gulf states must keep a certain distance from the United States seems unchanged even by the U.S. Senate's approval of the sale of sophisticated Airborne Warning and Control System airplanes to Saudi Arabia, which was greeted here with great satisfaction if not outright jubilation.

The explanation for this ambiguity in Saudi attitudes appears to lie partly in the internal political dynamics of the Gulf Cooperation Council, which groups Kuwait, Qatar, Bahrain and the United Arab Emirates in addition to Oman and Saudi Arabia.

But, partly, too, it can be attributed to differing viewpoints within the Saudi royal family about how best to protect the security of the kingdom and the region from hostile outside forces.

The gulf council is still little more than a skeleton organization for economic and military cooperation among the six conservative Arab kingdoms and sheikdoms in the Persian Gulf region. But the group, with its emerging strategy for keeping all outside powers from interfering in the region's affairs, already has generated pressures on Saudi Arabia and Oman to lessen the closeness of their ties with the United States.

The other gulf council members, most notably Kuwait, hold that such a close association with the United States only encourages the Soviet Union to seek similar access. There is already a strong Soviet presence in South Yemen, which is a Marxist, party-run state.

Kuwait has taken the lead in trying to convince Oman and South Yemen to agree mutually to cut their respective ties with the two superpowers and patch up their bilateral differences. For years Oman, a monarchy ruled by Sultan Qabous, fought a Yemeni-backed insurgency in its southern Dofar Province, and there is still a deep distrust between the two neighboring countries.

Kuwait is the only gulf Arab state that maintains diplomatic ties with the Soviet Union, and its attitude is likely to be crucial to any American attempt to organize a U.S.-backed regional air defense system.

Reports that such a system was in the works coincided with approval of the AWACS sale, but just how far the Saudis and Americans have gone in laying the groundwork for such a strategy is difficult to determine here. The high Saudi source denied there had been any official talks on the system between the two governments.

He said a regional air defense system had been discussed only as a "potentiality" in addition to other "contingencies" for problems in "purely hypothetical areas."

Close observers of Saudi politics here say that reports of an understanding between Saudi and American military officials on a gulf defense strategy may reflect only the advanced planning of the two military establishments and fails to take into account the divergent views within the Saudi political leadership.

Younger members of the Saudi royal family are scattered throughout the high commands of the armed forces, but decisions ultimately are taken by senior family members grouped around Crown Prince Fahd, the kingdom's day-to-day ruler. These senior royalty are keenly aware of the political pressure on the kingdom and the problems posed by such a close Saudi-American military strategy in the absence of a settlement of the Palestinian issue.

Prince Fahd is regarded as a leading proponent within the royal family of a close Saudi-American alliance to protect the kingdom and the gulf, but he also is seen as extremely sensitive to the political arguments against the alliance in the prevailing Middle East climate.

Prince Saud Faisal, the highly articulate, Princeton-educated foreign minister, is widely viewed as one of the chief opponents of a closer Saudi-American tie, arguing that the kingdom is better served by keeping the U.S. military "over the horizon" in the Indian Ocean and out of the Persian Gulf altogether.

The high Saudi official said the offer to Oman was extended as "an expression of solidarity" so that Oman would not feel isolated from the other gulf states and without an alternative should it agree to end its military cooperation with the United States.

Oman has been the only council member advocating close ties with the Western powers as the best way of defending the gulf and its vulnerable oil fields. Despite the council offer, Oman is going ahead with participation in the U.S. military's Bright Star exercises in early December, when American troops are scheduled to practice a landing on Omani shores.

Some Western diplomatic sources here believe the formation of the Gulf Cooperation Council and pressures within it for all members to keep their distance from Washington will make organization of a U.S.-backed air defense system in the region even more difficult.

Even without these pressures, the physical problems of organizing such a system among the six council states are sizable, according to Saudi government and Western diplomatic sources.

The high Saudi official, noting the different military traditions and equipment among the six members, said the council was still "very far" from establishing a joint military command or an air defense system.

He said the Saudis had proposed as a first step the creation of "channels of coordination" among the six states to synchronize the development of their armed forces and to carry out joint purchases of arms when possible.

The official said this was already taking place in some instances. Kuwait and Saudi Arabia, for example, have American-made Hawk missiles, the United Arab Emirates and Saudi Arabia have French tanks, and the Emirates and Qatar have the French Mirage fighter plane.

He said the defense ministers of the six states were scheduled to meet in mid-December to discuss a Saudi proposal for a go-slow approach to a coordinated defense system and an Omani proposal for a speeded-up and more detailed plan of cooperation. But he called the Omani plan "too specific at the present time to allow its execution."

Among the major obstacles to a joint air defense umbrella for the region are the congressional restrictions placed on the sharing of information gathered by the Saudi AWACS planes.

This problem cannot be overcome, according to diplomatic sources, until the other gulf states first reach some kind of bilateral agreement with the United States over access to the information, and they then plug into

an integrated command, control and communication system presumably centered in Saudi Arabia.

Whether the other council members are really interested in establishing such a Saudi-dominated air defense network remains unclear. The Saudi defense minister, Prince Sultan, said in an interview with the Kuwait Arab Times in early November that the council was only discussing "coordination of defense" rather than "joint leadership."

This seemed to suggest the other members are reluctant to integrate their defenses into one overall system, let alone one linked to U.S. military strategy for the region.●

FOURTH CIRCUIT RULES THAT AGENCIES NEED EXPLICIT AUTHORITY FROM CONGRESS TO GIVE MONEY TO PUBLIC WITNESSES

● Mr. DANFORTH. Mr. President, on Monday the Fourth Circuit Court of Appeals ruled that Federal agencies cannot pay the expenses of public witnesses in agency proceedings unless they have express authority from Congress to do so. This is an important victory for the Congress. During the Carter administration—with the approval of the General Accounting Office—Federal agencies took it upon themselves to decide whether to provide money to public interest advocates in agency proceedings. In my view, this was wrong. Whatever the merits may be of providing tax dollars to private intervenors in agency proceedings—and in my view the merits are hard to find—there is clearly no merit in allowing agencies to make such expenditures on their own, without authority or guidance from the Congress.

During consideration of the regulatory reform bill in the Governmental Affairs Committee, I offered an amendment—together with LAWTON CHILES and several of our colleagues—which would prohibit Federal agencies from paying the expenses of persons participating or intervening in agency proceedings unless they have express statutory authority to make such expenditures. The amendment carried by a vote of 10 to 2. Nonetheless, because the amendment lacked unanimous support the prohibition has not been included in the consensus draft of the bill which will be taken to the floor in the near future. Therefore, I will again offer the amendment when the bill is debated by the Senate. The decision of the fourth circuit provides strong support for the amendment and deserves the attention of the Senate.

I ask that a copy of the Washington Post article reporting the fourth circuit's decision be printed at this point in the RECORD.

The article follows:

MONEY PLUG PULLED FOR REGULATORY WITNESSES

(By Mary Thorton)

Federal agencies cannot award legal fees and expenses to public witnesses in administrative rule-making proceedings unless the agency has explicit authorization from Congress, a U.S. appeals court ruled yesterday.

The decision, handed down by the court for the 4th circuit in Richmond, was sought by the California-based Pacific Legal Foundation, a non-profit law firm with strong ties to the Reagan administration.

The court, reversing an earlier decision by a federal district court in Maryland, found in a 2-to-1 opinion that the Food and Drug Administration may not reimburse witnesses at hearings for their expenses or attorney fees.

On its own, the FDA began a reimbursement program in October, 1979, to encourage more public participation in the hearing process.

FDA spokesman Wayne Pines said that of the $250,000 originally appropriated for persons who wanted to testify but couldn't afford the expenses, only several thousand dollars has been spent. In each case, the witness's application for assistance was approved by an FDA evaluation board.

Two other agencies—the Agriculture Department and the Federal Deposit Insurance Corp.—have set up reimbursement programs for costs in rule-making proceedings without specific authority from Congress, according to a recent study by the General Accounting Office.

Several other agencies, including the Environmental Protection Agency, Federal Trade Commission, Consumer Product Safety Commission, and Federal Energy Regulatory Commission, have reimbursement programs that have been approved by Congress.

Under legislation passed by Congress last year, all agencies now must pick up the attorney's costs of individuals and small businesses when the government loses in a court case, unless the agency can get a judge to agree it had a good reason to bring the case.

The Pacific Legal Foundation, which describes itself as dedicated to the values of free enterprise, private property and limiting the role of government, argued that Congress never approved spending the money to implement the regulation.

Eileen White, the foundation lawyer who argued the case, said the purpose of the suit was to "see that the government sticks to the laws it has."

Congress did not authorize the payment program, but the FDA argued it held implied power to spend the money because it has broad regulatory powers and is required to hold frequent hearings.

The appeals court ruled, "It has always been the practice in this country's jurisprudence for a party to pay its own litigation expenses. Thus, in the absence of specific statutory authorization, a court is without authority to compel the losing party to pay the attorneys' fees of his successful opponent." ●

ARMS IN DEFENSE OF LIFE AND PROPERTY

● Mr. McCLURE. Mr. President, in past years, the media seemed to encourage passivity. Without the constant succor of the Government, we were told, the average citizen would be helpless, destitute, a victim. I do not believe that this is a natural posture for the American person. And more and more, we see the true, self-reliant individual speaking out. Perhaps the most basic right we have is not to be victimized, by the Government, or by violent criminals.

We have a right to live where we choose and peacefully go about our business without being robbed, raped, or murdered. And we have the right to insure this freedom. I think that those who feel as Chip Elliott does, as shown in an article in Esquire are a rapidly growing majority. And I think this is good.

The article follows:

LETTER FROM AN ANGRY READER

(To the editor from Chip Elliott)

The streets of America in 1981 are as dangerous as the roads and alleys of an earlier century. But before we resign ourselves to helplessness, this reader urges us to listen to the story of how he took up arms in defense of his life and property in regard to Adam Smith's April column, "Fifty Million Handguns": Come off it. Smith laments the fact that large numbers of people are prepared to defend themselves with handguns. He can't really accept the fact that we are living in a world where personal self-defense is a necessity. Didn't he read the article in the February Esquire called "Shooting to Kill"—about middle-class citizens who are determined to shoot to defend their lives? Did he or you think that was a joke? That it was made up?

I went from being where both of you seem to be at this point to carrying a 9mm Smith & Wesson automatic in ten weeks. My wife is a psychiatrist. Very attractive, very easy to intimidate, very abstracted, a likely target for muggers both outside, because she's lost in her thoughts, and at home, because punks think doctors keep drugs in their houses (they don't). She has a gun, too, a .38, and she knows how to use it. We are not hillbillies: we are people who went to Radcliffe and Stanford respectively. Apalling, huh? It used to appall us too, until we were forced to realize that our lives, both as a married couple with a deep commitment and as individuals doing important and meaningful work, were worth protecting.

In the spring of 1976 we were living in the San Francisco Bay area. My wife was doing her psychiatric residency. I had just walked out on the advertising business and was working on a novel. That spring, Peter Brook directed a play called The Ik, a hair-raising piece created by the troupe of the International Center for Theater Research from Colin Turnbull's anthropological study called The Mountain People. Sponsored by the French government, Brook and his gang made a six-week American tour and played Berkeley.

The play cast in theatrical bronze the lives of a tribe of hunters in Uganda who had been displaced from their centuries-old hunting grounds by the creation of a national park and a game reserve. What followed was an utter disintegration of their social structure, and it turned every Ik—including members of the same family—into mortal enemies seeking, each alone, food.

The play's premise is that what we call human values are actually luxuries—qualities that only emerge and exist under the best and calmest of conditions. It was a spooky production and great theater, but I did not see how it could possibly relate to America in the late Seventies.

Two years later, we moved to Los Angeles. We did not move to the glamorous, movie-struck Los Angeles of The Ginger Man and the Beverly Hills Hotel—though I would be lying if I said the thought had never crossed our minds. We moved to the Los Angeles of the Nuart theater, the Fox Venice, the Jung Institute, a city with the sense of being in another country with American hamburger overtones. And, of course, the sea. Not the beach, the sea.

Our friends Boris and Ute—a Yugoslav sculptor and a German painter—had just bought a house in Venice, and we quickly rented a house nearby on Electric Avenue. Electric Avenue yet! Whooee! It was dirty pink with a gray-green roof, and its outstanding feature was an eight-by-thirty glassed-in porch. A grown man in good condition could have torn this house down with his hands, but I loved it because it swayed when you walked through it. It was like being on a weather-beaten but seaworthy closed-cabin schooner.

Venice at that time seemed like Sleeping Beauty after a century of trance: musty, dusty, and long stagnant, but with the promise of awakening magic. On that porch I intended to write a new Three-penny Opera, to invent at least two or three new Sally Bowleses. I would knock the world on its ear.

More friends quickly turned up: Rene and Renata, European graphic wizards; Carolyn and Chris, a mime and an actor who wanted to get away from off-Broadway and into movies and television; a middle-aged Australian writer and adventurer and his half-Irish-half-Mexican wife with her wall-to-wall cheekbones and her head full of D. H. Lawrence and Denise Levertov . . . and many others.

My beloved French Lop rabbit, Nicole, had a yard to romp in. We quickly discovered a sensational wine from a local vineyard, a county-fair prizewinner that sold for $3.38 a gallon at the local Safeway.

Our days quickly became ordered: group breakfasts, work all day, talk all evening, lights out ten p.m. My wife took a job as staff psychiatrist for a county mental-health clinic in downtown Los Angeles. We settled in in a hurry. There was no time to lose. We were going to re-create the world not of the Sixties but of F. Scott Fitzgerald's friends Gerald and Sara Murphy in the years 1922 and 1923. We would throw a two-year-long working party.

But it quickly became apparent that all was not as it seemed in Venice. For starters, we had moved to the intersection of turfs of two rival Mexican gangs. We got along with them. When they shot at each other—as they did less than a week after we had moved in—they shouted to us in Spanish to get out of the way. We did.

There were other clues. Walking, I would occasionally see brown spots on the sidewalk that, from my experience as a police reporter, I could recognize as bloodstains. I would notice this the way you might notice a scruff of feathers where something has gotten a small bird: a tiny memorial to violence.

One morning, as I was sitting on the wobbly glassed-in-porch, I watched a gang of black teenagers pour gasoline all over a parked car and set it on fire. This was at ten o'clock in the morning. Broad daylight.

A few days later, I heard of a robbery two blocks from where we lived: A woman came to the door of a house and asked to use the telephone, said it was an emergency. When the man opened the door, her henchmen came in right behind her. The three of them stabbed the man to death and left his wife barely alive. In the next block a woman was raped twice after her nose and jaw were broken.

Just to be on the safe side, after a kitchen-table powwow, we went to a gun shop on Pico Boulevard one Saturday morning and bought a .38 snub-nosed revolver. After all, this was Los Angeles, land of Joe Friday. Strange things had happened here. Sharon Tate had once had a very bad evening here. But a gun! Who had ever owned a gun? I picked the revolver up after the normal fifteen-day waiting period and wrote the guy a check from the Santa Monica Bank, It cost $160. It seemed like a lot for a silly object. I would rather have bought a painting. We put the revolver under the corner of our mattress and there it stayed. For ten days.

One night we went to the Fox Venice to see Forbidden Planet—you know, the movie about monsters from the id. When we returned, the door had been broken in. The stereo was gone, the television was gone, the paintings and cameras and typewriters were gone. The dressers had been turned over and ransacked, the bed had been torn up and the revolver taken; the birdcage had been torn off the wall and the parakeet set free for a while until the cat got it and ate it, leaving the remains on the floor where a rug had been. All the jewelry was gone, such as it was. Including my Cartier watch. I had earned that watch, you know? I had saved for it just as surely as I had saved the money for a house or a car or a couple of new suits. That ended my romance with Cartier watches. There is an enormous black market for them in Los Angeles, but I don't want one now. I wear a Thirties Gruen Curvex now, a sister to the watch Bogart wore in Casablanca. It's worth about the same as a tank watch but very few people know what it is.

Three thousand in after-tax dollars. It took the police two hours and forty-five minutes to show up.

Our revolver, which had begun as a museum piece, a curio, as far as we were concerned, had now entered the underworld. We were unprotected now, and we felt so. We reported the gun stolen, of course. Serial number and all that. Big deal. Five months later, it was used in an assault against a Los Angeles woman. I made up my mind that the way to handle a gun in a dangerous situation was to never let it out of my sight.

Our friends were robbed, burglarized. Carolyn, of her sewing machine, her typewriter, her clothes. Another couple, of all their photographic equipment, used not for a hobby but for their livelihood. Easy-going Boris bought a twelve-gauge riot gun and hid it in a trunk with his sixteen-millimeter movie equipment so no one would steal it. And a huge black shepherd dog to protect the trunk. Someone broke in anyway and slit the dog's throat.

We bought a new revolver, a .38 Special Smith & Wesson, and had the handgrips filed down so my wife could hold it easily. The two weeks while we waited for the permit to go through were the most terrifying of my life.

It turned out that my wife's work for Los Angeles County was more like a Clint Eastwood movie than a medical practice. One of her street patients quickly fastened on her and began writing her death threats with sexual overtones. There was no place to put him away because there was no money for any serious treatment, and there were no available psychiatric beds in any of the local hospitals. She began carrying the .38 in her briefcase along with her patient case-load progress notes.

We quickly developed a pattern: when she came home at night she would park her car and blow the horn; I would go outside and escort her into the house. It dawned on me for the first time that we might be killed. That it was possible we would die here.

I bought a second handgun, a 9mm automatic that would fire as fast as lightning. I phoned around, discovered where to go to practice with it. And I practiced.

A word about revolvers versus automatics: If you don't know much about all this, a revolver is better because it is a simple mechanism. You can see if there are cartridges in it.

I also went to the police and got a carry permit. A carry permit is not as difficult to obtain as a lot of people would have you believe. You have to give a good reason for wanting the permit. You have to not be a felon and not have, for example, eleven hundred outstanding parking tickets. If you are a crackpot, someone will sniff it out and you will not be issued the permit.

One night I was awakened by a noise outside on the street. I got up, peeped through the dining room curtains and saw a gang of teenagers taking the fog lights off my car. I raised the curtains and knocked on the window. The sight of a thirty-three-year-old naked guy is not going to frighten very many people anymore, but the sight of a thirty-three-year-old naked guy with an automatic did the trick. They fled.

Our lives settled down again. We cut a safe into the floor of our dining room and hid our remaining valuables in it. It was never discovered, even though they took the Oriental rug that covered it.

We went to a wedding in San Francisco on a Friday night. The week before, I had prepped the house as you might prepare for medieval warfare: two-by-six boards bolted into doorframes with lag bolts six inches long and a socket wrench. That sort of thing. Anything we had left that was slightly portable—my wife's doctor bag, a pair of binoculars, our passports and checkbooks—I threw into two suitcases, which I put into storage.

When we returned from the wedding there was no back door and no doorframe, only an enormous hole with smashed edges leading into a set of empty rooms. We were left with a bed, some pots and pans, and a bookcase. It was one of our more memorable Thanksgivings.

On the seventeenth of December in 1978, I saw a woman mugged for her purse—and I watched her run screaming after her assailant until she collapsed, crying in the street.

On the eighteenth or nineteenth of December, my wife was at a meeting, everybody else was busy doing something, and I walked alone to the Venice Sidewalk Cafe for some dinner. It occurred to me that it was silly to put on a shoulder holster just to go out for a beer and a sandwich, but I did it anyway, although I had never been threatened physically, ever, except in foreign countries.

Walking home about six-thirty at night, just off the corner of West Washington Boulevard and Westminster Avenue, I was confronted by five young, well-dressed uptown brothers. Black. Okay. Let's get that right out front. They could just as easily have been white. We were directly under a streetlight and less than fifty feet from an intersection thick with traffic.

I was not dressed as a high roller. I am not a high roller. I don't look like a robber baron or a rich dentist. I look like exactly what I am, a middle-aged guy who's seen a little more than he needs to see. I thought, what are these guys doing?

Their leader pulled a kitchen knife out of his two-hundred-dollar leather jacket. His mistake was that he wasn't close enough to me to use it, only to threaten me. He smiled at me and said, "Just the wallet, man. Won't be no trouble."

That was a very long moment for me. I remember it just as it happened. I remember thinking at the time that it was one of those moments that are supposed to be charged with electricity. It wasn't. It was hollow, silent, and chilly.

I looked at this guy and at his companions and at his knife, and I thought: Don't you see how you're misreading me? I am not a victim. I used to be a victim, but now I'm not. Can't you see the difference?

I pulled the automatic, leveled it at them, and said very clearly, "You must be dreaming."

The guy smiled at me and said, "Sheeeit," and his buddies laughed, and he began to move toward me with the knife. I thought, this guy is willing to kill me for thirty-five dollars. I aimed the automatic at the outer edge of his left thigh and shot him.

He dropped like a high jumper hitting the bar and yelled "Goddamn!" three times, the first one from amazement, I guess, and the second two higher pitched and from pain.

He yelled at his buddies, "Ain't you gonna do nothing?" They did do nothing.

I backed off and I walked away, right across busy West Washington Boulevard, with the gun still in my hand. I remember thinking, shouldn't I call a doctor? And then I thought, would he have called a doctor for me? And I kept right on walking.

I am not a macho guy. White water to me is club soda. I haven't been skiing in ten years. Anything I order from L.L. Bean ends up on the dining room table and then in a box in the basement. I'm never going to

shoot a zebra and have it made into a rug, okay?

I was not coming on like James Bond, and I was not being territorial or aggressive. I was simply protecting my right to walk around town with a lousy thirty-five dollars in my pocket and not be afraid for my life.

I walked home. I felt terribly strange, but it was a strangeness that I could identify. I realized that what I was doing—in our current state of affairs—was a cultural procedure no different from going to the grocery or getting a haircut or buying a shirt. And that I had balked over it and felt strange because it was a new procedure, something I was doing for the first time—not unlike dealing with one of those twenty-four-hour banking devices with the code numbers and the buttons—and that if I wanted to stay alive, it was possible I would have to get used to it.

I am not proud of this. I did not swallow it easily, either. More than a year passed before I talked about it with anybody, not even my wife. But I did it. And I could do it again if I had to.

What happened to us, of course, is that we got hit in the face with time's swinging door. The world changed sometime between 1975 and 1980, and we had a couple of tough years getting from one Pullman car to another. We were lucky. We lost more than eleven thousand dollars of what we owned, but we weren't killed. We adapted. Now the guns are a normal part of our lives. We accept them, just as we accept the seven motors of suburbia. They are a necessary convenience, like the washing machine or refrigerator or one of those devices that zaps mosquitoes with electricity.

Sometimes I think, this is a stupid, abhorrent, exasperating situation. And it is. But we've adapted to other stupid, abhorrent, exasperating situations: 20 percent interest rates. Iran. And now we've adapted to this one.

Let me tell you how we've adapted. We dress low-key, we don't flaunt anything, we keep loaded guns in the house, and we don't keep them stashed in some drawer where we can't find them if we need them. We keep them right out in the open, and we always know exactly where they are. The difference is in that exterior framework of protection and in our attitudes toward it: it is something that was not necessary when we were younger, and it is something which most of us, Adam Smith included, still carry on about. We don't even think it's too bad anymore; we're beyond that. We accept it as a fact of life and go right on. And it will stay a fact of life until our fellow countrymen get it out of their heads that they can do as they please, that there is no such thing as social responsibility, that they have a right not to behave. Because the way we see it, if they have the right to mug us, we have the right to shoot them.

I used to believe that these people had some justifications on their side. I used to feel that I ought to have some compassion for them, and I did. I used to believe that a job and some credit would put them on the right path. It isn't true. I also used to believe that much of the human wreckage—the millions upon millions of people with emotional damage—could be repaired. That isn't true either. They can't be, for the most part, because the effort necessary to straighten out a single one of them is enormous: four or five years perhaps of therapy, in an age when there is no time for anything but emergency medicine.

Let's face it. Some of these people are poor. Some of them are driven crazy with desire for stuff they will never be able to afford. But not all of them are poor, not by a long shot. A lot of them make as much money, or a great deal more, than you or I do. They do it because it's easy. They do it because they believe no one wil stop them. And they'e right.

Let's talk for a moment about John Lennon. Adam Smith brought him up. I'm particularly interested in this one because John and Yoko had something very similar to what my wife and I have: two equal people who happened to be able to witness each other's life to the fullest possible extent. The grand passion. The real thing. Now it's gone.

When all is said and done, the real tragedy of John Lennon is that he dinosaured out. He ought to have known better. He stayed in the house for four or five years, and when he came out again, the world had changed. He could have had a bodyguard, for Christ's sake. He could have lived in the country. He did not have to stay in New York City and rub people's noses in it with his $150 million and his blue jeans. The clown who killed him did it for fame, not money, obviously. But if someone is willing to stick a knife in me for thirty-five dollars and not bother to find out what blood type I am, you can just imagine what they are willing to do to someone who has real money.

I think a lot about John Lennon. You know what I think? I think, Jesus Christ, if it's this bad for my wife and me now, what will it be like if either of us ever becomes well known?

More to the point, let's talk about Adam Smith's friend Michael Halberstam. I did not know Halberstam, but I liked his work. He surprised a burglar in his Washington, D.C., home and was shot.

Halberstam figured all of this out in the very last seconds of his life. He didn't like being killed. He must have thought it was pretty damned unfair. He was furious. In his last few moments, rushing adrenaline and pouring blood, he got in his car and ran down his assailant.

You know what? If he had made this discovery even slightly earlier—long enough to buy a weapon and wait for the permit to go through—he would very likely be alive right now.

Now listen to me a minute. The guns themselves don't cause all this. What causes it is that people think they can have the American dream by sticking someone up for it. They think that there ought to be a huge equal society out there. Equal shares for everybody. Forced equal shares if necessary.

What is true is that we are entering a time of vast restratification. The United States is becoming more European ... but it is a Europe of a different century. We are moving toward a culture in which we'll have cooks, chauffeurs, maids, carpenters, brewmasters, vintners, industrialists, bankers, machinists, hat makers, shopkeepers, and kings and queens of a sort. And, of course, we'll also have highwaymen, cutthroats, and thieves. Think of it in terms of a vast panorama, a huge cross section much like the world Balzac, Hugo, and Dumas described. Think about Dickens. Read Weber's The City. Read Pirenne's The Economic and Social History of Medieval Europe. None of this is new. What is new is that we're experiencing it. What was new was the social structure in America of the past three or four decades, which has collapsed.

To have any kind of culture or civilization in a world like this, it is going to be necessary to stop talking about things like prisoners' unions and start talking about the concept of crime and the definition of the word "criminal."

It would be nice also to talk about police. But if you'll read these books, you'll find very little mention of police. What you will find are numerous references to people who wore swords and pistols whenever they went anywhere.

People now fashionably put down the Seventies, but it was a time when many people reached a level of personal success and satisfaction that may not be achieved again in our lifetimes. By comparison, we are in the pit, and I don't mean the floor of the commodities exchange. In many ways the Seventies gave us a glimpse of what life may be like in 125 years.

But it's like the Dark Ages now. Each time there is a major change, it is necessary to gain a clear understanding of what the changes are, what skills still hold, which ones need to be discarded, which new ones need to be developed.

Now, about those fifty million handguns: taking them away will not automatically give us a society like England's or Holland's. We are just not like that. It would be nice if we were. That's why Americans run away to Europe. What might help is a good set of disc brakes on people's behavior here. But anything that might put such desperately needed stops on people's personal "freedoms" is perceived out there in the streets as a violation of civil liberties, of constitutional rights. That is, it is a "right" to mug, rape, burglarize, murder, and commit arson for the insurance money. So there you are: a nation of pirates.

I would like to see impossibly tight gun-registration laws, but I secretly scoff. Anyone who's honest can get through any registration process we can come up with. Anyone who's not honest won't bother. The way guns get into the criminal underworld is that they are stolen. That makes registration a useless exercise.

As for the manufacture of all those devices and all those bullets, during World War II the United States became "the great arsenal of democracy." It is a damned good thing for the English that we were, too, or they would be holding Oktoberfests right now.

Do you really think the rest of the world sees us as insane because we bear arms? Try going to one of the South American countries. Try going into a country in which only the government has weapons. Try watching armed soldiers carrying their semi-automatic carbines around the airport gates and the customs offices, while the people have none. You want the wealth redistributed? Try it under those circumstances.

Don't talk to me about the saintly Japanese either. Everyone says they have a very low crime rate. No one really knows. It could be, because they are very big on making each person responsible for himself and also to his fellow countrymen: a sort of "One for all, all for one" attitude. They are sublimated like mad and they are rich because of it. It looks good on the surface, but just below that surface is a caldron; and if you look close you can see it. They have a history of barbarism that goes back for centuries and that we could never hope to match.

When the Soviets invaded Afghanistan, the first thing I thought was, now I'll never get to go there. Try putting yourself in Afghan shoes: no matter what you think, from your current vantage point, with a cellarful of good vintage wines and a wallful of Wittgenstein, if you lived there and the Soviets came trucking in with tanks and occupational forces, I am willing to bet you would hock your house, your automobile, your Baume & Mercier watch, or you ass on the street for a good gun and the bullets to put in it.

So much for international relations; on the home front, suffice it to say that as long as we live in a society in which a large constituency thinks it can do whatever it damn pleases—no sense of morality asked for or required—then those of us who have the middle-class work ethic, those of us who believe the Freudian epithets of work and love, will be seen as potential victims by the flocks of hustlers and lurkers who are out there. It is sometimes tough to get a job. It is also, right now, easier to rob people than it is to work for money. It's easier because it can be

gotten away with. These people believe no one will stop them. They're right. No one will. Not the police, not the courts, not the penal system. No one but the growing number of us who have decided we will not be victimized again, ever.

We moved from Venice in 1979. Our old friends blew away to various other places. Their dreams, like ours, blew away too.

We moved to a condominium in Culver City. Very uptown. Top floor, surrounded by Russian olive trees and flaming bougainvillea. Three swimming pools, Jacuzzis at every turn, an underground parking lot, and a tennis court. We didn't have anything to put in our place, but still it was pretty.

People were robbed in the parking lot. People were mugged on the tennis court. There was a rape nearby and then another. My wife began carrying her .38 again when she walked from our place to the car. We were burglarized again. We didn't even call the police.

One night we went to West Hollywood to see the movie Watership Down. We sat through it twice and couldn't understand why neither of us could stop crying.

Sometime after that, we packed up—a simple matter, believe me—and drove east. We parked my rabbit, Nicole—who had survived Venice by digging a hole and hiding in it—in a picnic basket so we could sneak her into motels.

While we were looking for a house and staying in a motel, a white teenage boy and his girlfriend knocked on the door of a nearby room and asked to use the telephone. Inside, they held the couple at gunpoint; tied them to chairs with wire rope; took their wallets, clothes, luggage, traveler's checks, and car. We slept peacefully that night. If they had come to our door, they would have been surprised.

Now we live in a big old house out in the Midwest. Big enough for each of us to have a studio in the house. Huge yard, ravine, et cetera. The neighbors are friendly. A lot more friendly than we are, because we have memories we're trying to forget. It's not completely safe here, but it is a notch or so better than other places we've lived. We keep the guns, loaded, in the house, but we don't have carry permits anymore and we don't carry them around as though it were 1880—or 1980.

I've stopped going to target ranges to practice. But I still keep my hand in, as they say. Because every time we leave this relatively sublime neighborhood and enter the world of hotels and airports, we enter into a world of imminent danger—an area where the law is no recourse. So we remember how to use the guns, and try to forget that we have had to use them or ever will again.

When President Reagan was shot, I was outside painting a trellis. Some neighborhood children told me. At first I thought they had just seen a documentary on JFK. It seemed as far away to me as the moon—or the "forbidden planet." But it isn't.

Are human values luxuries? Could be, right now. If so, I lead a pretty luxurious life. I've paid for it, though, and the price was too goddamned high, because those human values used to come free. Part of the American package. Although sometimes I wonder if something so precious could ever have been—or be—free.

So you can fuss and bitch, Adam Smith, all you like, and you can rail at the hillbillies in the NRA, but the next time someone breaks into your house or your apartment, the next time someone busts the window of your car and rips off your FM radio and your thirty-five millimeter camera, the next time some woman you know gets raped and busted up and you have to visit her in the hospital and try to cheer her up, the next time you are totally freaked out after coming up against a gang halfway between the restaurant and the car, sit yourself down and do some serious considering about who has the right to do what to whom. Often this stuff has to touch people personally before they think about self-protection, and often by then a tragedy of far more epic proportions than getting knocked off for a Sony stereo receiver has occurred. I hope that doesn't happen to you. You have a right to carry on merrily with what you're doing.

Whenever I'm perplexed, upset, need some stillness, you'll find me out in the yard somewhere, pulling thistles out of my rosebushes, digging in the dirt. That's where I am today.

Let us know, you guys, when you figure out that sociopaths may be worthy of your concern but not your life. The rest of us would like to come out of hiding.●

SUCCESSOR GENERATION III

● Mr. HEINZ. Mr. President, I ask that the following speech by John J. McCloy be presented in the RECORD as a sequel to my July 16 and August 19 statements on the "Successor Generation" problem. The speech, delivered upon Ambassador McCloy's acceptance of the Jean Monnet Award in Lausanne, Switzerland, sheds light on a situation which has very serious implications for our national security. Ultimately, the survival of the Atlantic Alliance is at stake.

Recently the attention of most Americans has been focused on rebuilding and modernizing the alliance's military deterrent. And properly so. We need sufficient strength to guarantee that we never have to use it.

But we also need to pay close attention—as President Reagan did in his speech yesterday—to the political health of the alliance. The surest invitation to armed confrontation would be a politically weak and disintegrating alliance, ripe for Soviet military-diplomatic blackmail attempts. The danger of the peace movement in Europe today is that if it were to continue unchecked, it could push some of our allies to embrace neutralism, leaving what is left of the alliance weak and vulnerable.

One of the dangerous strands of thought in the peace movement is the assumption that the Soviet Union is benign and presents little threat. In recent years Moscow has helped create this illusion through a massive propaganda effort, the centerpiece of which has been the importation of thousands of Western European young people for visits to the Soviet Union. The visitors are then treated to a showcase view of communism.

These same young people too often develop an equally distorted view of America. In their minds, the United States has abandoned such values as democracy, guaranteed individual freedoms, pluralism, and the rule of law, for which we have traditionally stood and which in fact are part of the very fabric of American life.

We need to ask ourselves why these young Europeans see the United States as part of the problem, not part of the solution.

One reason, I submit, is that we have not been aggressive enough in demonstrating that the United States, in contradistinction to the Soviet Union, practices the democracy it preaches. According to the State Department, the most effective way to get this message across is through direct exchanges of American and Western European young people, at the age when they are forming their political philosophies.

In particular, we need to sponsor visits by the unconvinced that they might observe life in our truly open society, where reform can and does take place within the system. We simply have not done enough in this area in the past to cope with both Soviet efforts and the internal dynamics operating in Europe. I am convinced that the right kind of exchanges can do much to dispel the misconceptions evident today among Europe's "Successor Generation."

Unfortunately, exchanges are expensive. Given their importance, however, it would be absolute folly—even at a time of budget contraction—to cut back USICA funds for Fulbrights and other exchanges, as has been proposed. Not only do we need to maintain our publicly supported exchanges, but we need to supplement them with new private initiatives, in keeping with the spirit of this administration.

We must realize all the while that spending for exchanges is just as much part of our national security effort as spending for new bombers is. In fact, if we do not spend for exchanges, we are that much more likely to have to use those bombers in the future.

On November 3, in conjunction with the Atlantic Council of the United States, Senators BOSCHWITZ, COHEN, LUGAR, and NUNN, and Representatives FENWICK and LEACH, I sponsored a conference on the Successor Generation issue. Our guests speaker was Dr. Hildegard Hamm-Bruecher, Deputy Foreign Minister and member of the Bundestag of the Federal Republic of Germany. That conference convinced me that we cannot downplay the battle for people's hearts as we fight the battle for new hardware.

John J. McCloy was present at our conference. His Jean Monnet Award acceptance speech—particularly the latter half—explores the "need for a deeper understanding and appreciation of the fundamental commonality of European-American interests than we now seem to display." The man in whose name Ambassador McCloy was being honored, Jean Monnet, conceptualized the European community to preserve and extend those freedoms and values which we in the Western World—on both sides of the Atlantic—hold in common.

The speech follows:

REMARKS ON THE OCCASION OF THE CEREMONY FOR THE PRESENTATION OF THE JEAN MONNET AWARD

I am, of course, deeply warmed by the receipt of this award which bears the name of my old and dear friend, Jean Monnet. I suppose I was as old a friend of his as almost anyone in this room. My association goes back to the time he spent in the United States as a member of an American investment banking firm. Indeed, it goes back farther to the period immediately following World War I and the early days of the League of Nations. I had the good fortune to work with him during some of his most

productive years and I continue to marvel at his dedication to the public tasks he set himself.

Monnet and I had a mutual friend dating from those Blair & Co. days. His name was Swatland, a man of great ability, perhaps the ablest I have ever known. Typical of Monnet, who was a past master when it came to identifying talent, they soon came together and produced a most impressive combination. In comparing my ability, somewhat unfavorably, with that of my friend's, and former partner, Jean once said "You also have a most admirable trait, you are lucky." While I know there are a number of Monnet's later colleagues and followers who are at least as well entitled to this Award as I am, I do believe that there are none who could appreciate more than I do the thought which caused the Trustees or jurors of the Monnet Foundation to grant this Award to me.

I can quite readily think of one who deserves, beyond all others, a Jean Monnet Award, First Class. Of course, it is his wife, Sylvia. Their life together was, as we all know, a real romance, though at times, due to some of his idiosyncracies, it might have seemed somewhat less than idyllic. She was the moderator of his optimisms and a mender of his frustrations. She frequently played a most constructive role in refining his judgments as to both people and events. In this, and other imponderable contributions to his work, she was indispensable.

Throughout his career, Jean could identify talent as I say, but he also had a highly developed sense of where power lay. He never seemed, however, to be interested in having his own recognized. After he had been in Washington only a short time, he gained the ear of such men as Harry Hopkins and Averill Harriman, as well as Secretary of the Treasury Henry Morganthau and Justice Felix Frankfurter. He didn't have to know many more such influential figures, but he soon did.

I could name perhaps a half dozen, who by reason of their position or capacity, were prime movers in the Roosevelt Administration with whom Jean gained easy access. These contacts, joined with his vision and perseverance, and I was about to say, coupled with a touch of his own obstinancy, was all our friend needed to make his influence deeply felt in the Washington of those war days.

You have probably heard it said that Monnet was the originator of the term "The Arsenal of Democracy" which Mr. Roosevelt used in making one of his great wartime speeches. There were several who claimed to have originated that expression, including some speech writers and White House staff members. I cannot prove that Monnet originated the term, but I do know this much about it. Monnet used it in my presence one day and I was struck by it.

Shortly thereafter I cribbed it in talking to Mr. Justice Frankfurter about the role the United States should be able to play at that stage of the war. The Justice immediately admonished me never to use the phrase again and in my presence called up Bob Sherwood, the playwright and one of the President's best speech writers. It was not long before it appeared in President Roosevelt's famous speech. I have reason to believe that Justice Frankfurter also personally passed it on to the President.

I firmly believe that Monnet, during his stay in the United States, gained much of a United European Community concept from his observance of the continental sweep and depth of the American economy and its markets. In later days, when we worked together attempting to marshal the resources and productive potential of the United States for the successful conduct of the war, I recall that Monnet, almost out of thin air, hit upon an objective of 50,000 war planes in one year. He arrived at this total with no precise or carefully calculated analysis of the men and materials it would take to produce it. It was largely his own instinctive and pragmatic vision of what a country of the magnitude and size of the U.S. was capable of producing. And it was accomplished.

Commentators properly called Monnet a "supranationalist". He certainly had a breadth of vision which transcended narrow nationalism wherever he encountered it. This brought him in conflict with a good many able and devoted public servants whose outlook and training had largely been framed within the conventions of nationalistic thinking.

Later, when he began his massive individual effort to advance the concept of a United Europe, he came to be known as "Mr. Europe", and he well earned the title. Yet it was an element of his strength that he embodied so many of the virtues and characteristics of his own countrymen. He was quite as Gallic as deGaulle, even though they were very differently motivated men. He was proud of his sturdy, middle class French winemaker's background, and I often felt he, like Antaeus, used to gain strength from his contact with the soil of France.

When he encountered an impasse in his thinking, he would take a walk in the countryside, preferably it seemed to me, in the mud and the rain, plodding over his Houjourray acres. Well shod and clothed, with a sort of Loden mantel cloak about him and a sturdy cane, (whether he needed it or not), he would defy the elements (as long as there was no thunder and lightning about), and confidently return with a solution to the current problem confronting him. Though he was most unsympathetic to political dictatorships, he was disposed, I thought, to employ quite dictatorial methods when it came to the administration of his own office.

He imposed mercilessly on the time and good will of his staff, men and women alike, but he always seemed to have the time to come forward, after the battle, with some particularly thoughtful recognition of their loyal devotion and service to him. Whenever I called at his Avenue Foch office, it seemed to be at a point where work was interrupted by the search for a misplaced document or file, whose production Jean was demanding. I learn that his archives are now reposing here in Lausanne. I would be inclined to think there may be some gaps in them.

Moreover, it always seemed to me that he was either telephoning or just putting on his hat and coat to go out and see someone of importance in the government, or elsewhere, sparing himself meanwhile no exertion or indignity in the process of getting the matter at hand advanced. I have difficulty in thinking of him as a collector or a preserver of documents, but then he did have, always at hand, a Kohnstamm, a Duchene, a Hirsch, a Marjolin or a Uri or similarly well equipped individual to compose a draft or make a record.

I depart from these reminiscences of our friend with one more picture I have or him in Houjourray. I came upon him once looking at himself in the mirror just before he was to set out on one of his walks. He had on his heavy shoes and rustic clothes, but he also had on his head a beret with a red bandanna scarf at his neck, his "plume" as it were, all of which combined, set off his rather confident and somewhat handsome appearance. There was no vanity in the scene. He was simply satisfied with what he saw, and it gave him the self confidence to confront and solve the challenges which his spacious vision brought forth.

Having had these things to say about my friend and having indulged to some degree my urge to reminisce a little about him and me our rich association, I quite realize that something more than this is called for today in accepting and thanking you for this Award. Monnet's memory needs no new eulogies at this time. The existence of this Foundation does greater homage to the man and his accomplishments than any I could now render. Furthermore, most of you now present in this room knew Jean Monnet personally and were familiar with his quality, his achievements and his method of operation. You need no further account of them from me.

In giving thought to what would be relevant to this occasion, I concluded I would try to identify what Jean would feel were the priorities which should be applied today to the further progress of the European Community he did so much to advance.

One hears from many sources that a lack of progress or slackening of pace has occurred in the development of the European Community. There has been a too extended discussion amongst the members as to whether they are receiving individually as much from the Community as they feel their contributions to it entitle them. Overconcentration on the agricultural program has deflected consideration of serious industrial and political developments of a more fundamental character. One also hears of resolutions leading to a possible British withdrawal. After all the delay and debate surrounding the U.K. entry, this is, indeed, discouraging news. I have also read recently some severe criticisms of the lack of coordination and apparent malfunctioning in the existing institutions of the Community. If true, it should not be allowed to drift into any prolonged lack of progress. But it would be a great mistake if, in taking note of the present imperfections, we lose sight of the great advances which have already taken place, and the solid base on which the new leaders of the movement have the means to build. Not all of the progress in the area can be related to the establishment of the Community concept, but much of it clearly can be. The institutions on which Monnet placed such great store are in place, including the very significant direct election of delegates to the Assembly. Trade and commerce have increased and a standard of living has reached levels never contemplated before the advent of the Community. The European Community has become the world's largest trading bloc. Moreover, the dangers which were predicted as the Community was being created, have simply not been realized. Political advantages of far reaching significance have been achieved to parallel the economic advance.

Today people cross boundaries and old frontiers in Europe as if they were no more than county lines, while hostilities within the Community, including the perennial ones between France and Germany, have become virtually unthinkable. Indeed, I can think of no respect in which the world would be as well off, as it is today, were it not for the United Europe movement. To be sure, the Soviet Union continues to take a hostile attitude toward a United Europe, and considering the exclusively nationalistic approach it takes, it is perhaps understandable.

Khrushchev, while still in power, once said to me at Putzinda, that the major part of Russia's distress followed invasions from Western Europe, not Eastern Europe, and this was when it was divided. Napoleon in one century, the Kaiser and Hitler in another.

The last thing the U.S.S.R. sought, according to him, was a United Western Europe, which might undertake another Eastern adventure. Nor could he comprehend why the United States so consistently supported it. Because he could think only in nationalistic terms, its creation and competition, he contended, would only bode ill for United States' economic and political interests. Because of the desire of the U.S.S.R. to extend its hegemony over all of Europe, we can continue to expect a constant effort from the Soviet

Union to wish a divided Europe, sharply separated from the U.S.

The world has greatly changed from the condition it was in when Monnet first began his crusade for a United Europe. Europe has, it is said, miraculously recovered from the devastation of World War II, and now two great super powers have emerged, as d'Toqueville prophesied they would so long ago. Interests and attitudes that once existed between Europe and America have now been greatly altered. American prestige following the war, once so immeasurably high because of the victories and the extent of the expectations of benefits sought from the U.S. is now considerably, and I believe, fortunately, moderated.

No longer are Americans incomparably richer than their European counterparts, as the per capita income of a number of European countries is now about the same as it is in the United States. And so it is with the G.N.P. Moreover, the level of technology is about equal, although the productivity ratios of the United States have not kept pace with foreign competition, nor with previous high records set by the U.S. economy.

The world is also more diverse. One of the most significant developments is that the broad Atlantic is no longer the impassable barrier to any serious aggression against the United States. Cities in the western part of the United States are as vulnerable today to the heavy Soviet missiles as are Hamburg and Frankfurt. An indisputably heavy Soviet build up in conventional and strategic military power has been taking place within the last fifteen years, to a point where serious thought and attention must be given to it by the North Atlantic Treaty Organization Alliance.

It is no longer possible for us to confine our perceptions, whether from Europe or the United States, to the NATO area. And as the world becomes more diverse and our perceptions vary, new strains, and quite possibly serious differences, will develop as we face our respective problems. We shall need to apply our best combined statesmanship to resolve them. This is the stage at which I sense we now find ourselves.

At one interesting point in my public service, I was asked what I thought should be the chief imperative, or priority, of the new Federal Republic of Germany. The Military Government was about to end and that of the Federal Republic to begin. Konrad Adenauer was the new Federal Chancellor. On the eve of the transfer of authority, he sought from me my opinion on this question.

As Allied Military Governors, we had been rather heavily preoccupied with economic affairs related not only to the rehabilitation of West Germany, but of all Western Europe as well. We had such things as monetary reforms, the valuation of the Mark, the economic priorities, the allocating of the counterpart funds, the disposition of the refugees from the East, and a number of other economic matters with which to contend. I believe the new Chancellor was thinking of what economic measures I had in mind, when he put the question to me. I had no hesitation, however, in replying that his chief priority, I thought, was political rather than economic. It was, in short, the establishment of a permanent rapprochement with France.

The Chancellor had made it quite clear that he was not asking any directive from me, for I would and could give him none, nor was he making any commitments in regard to my recommendations. He was simply asking for my views for whatever they might be worth. I pointed out that twice in my lifetime I had been called upon to commit all my energies to help end wars started in Europe, in large part because of the prevailing hostile attitudes of France and Germany. In an earlier generation, there had been still another war—the Franco-German war of 1870.

Whether it was in 1917 or in 1940, the intervention of the United States had been accompanied by a costly expenditure of U.S. blood and treasure. On both occasions the United States had thrown the balance, belatedly perhaps, but, indisputably. I suggested that the pattern was getting tiresome. I felt it was to a very large degree within the Chancellor's power to put an end to the pattern. I emphasized it was not a matter of placing blame—it was simply incumbent upon rational leaders in Europe to end the process. The Chancellor needed little urging. He was a Rhinelander.

Charlemagne, Aachen and the Holy Roman Empire loomed large in his heritage. This, I think, accounted, in an important degree, for his later highly constructive relationship with General de Gaulle. I mention this here because the thought of such a permanent rapprochement between Germany and France was an integral factor in the genesis of the United Europe concept. It was an augury of peace. I did not need to "crib" this idea from Monnet, as his thinking, and mine, as well as that of many others, coincided on this subject.

I have likewise little hesitancy now in identifying, in my own mind, at least, what would be Monnet's chief priority today were he alive and active.

I would imagine that Monnet would have to give thought to several priorities, some would undoubtedly relate to the need for better functioning and coordination of the work of the institutions which compose the structure of the Community. Among these would certainly be to impart more significance to the functioning and situs of the Assembly, on which Monnet placed such importance. I would imagine he would try to divert the attention of the Community's agencies from the minutiae it deals with now to more fundamental European problems.

But my conviction is that his main preoccupation would be on the increasing need for a better recognition, and understanding, of the sense of partnership and interdependence between the people of Western Europe and those of the United States. The political and economic challenges of the two communities would be much better dealt with at this critical point in history by the fuller acceptance than now exists of the sense of a common commitment and a common responsibility for the preservation and protection of the free and democratic societies which compose the Alliance.

I have already indicated that it was my belief that a large part of Monnet's emphasis upon the unfortunate effects of the fragmentation of Europe, and its intensive nationalism arose from his life in the United States, and his observations while there. One of the chief tenets in his philosophic attachment to the idea of a European Community, was the part which could and should be played by a firm partnership with the United States.

To him, it was a matter of mutual necessity. Europe needed the example of the wide markets and the depth of the American economy, as well as its profound attachment to political freedoms, while, on the other hand, the United States needed the support of Europe, its culture and experience in government, as well as its like attachment to our common values.

When one looks at the world map and observes the massive territory presided over by the Soviet dictatorship, one can appreciate the need of Europe to rely on the strength, resources, economy, and goodwill of what is both a nation and a continent, to act, not so much as a guarantor, but as an effective partner in the protection of our common freedoms.

All this connotes something more than improved communication, or intermittent consultations—it requires, to repeat, the full acceptance of the need of fairly sharing our common commitments and common responsibilities. At the outset, in his devotion to the concept of a European Community, Monnet strongly stressed the integral importance of such a common partnership with the U.S.

Because, as time went on he became preoccupied with the need for structuring the institutions upon which his United Europe could be based, together with the fact there were then in Europe some less disposed to place as much emphasis as he did on the Atlantic partnership, Monnet made less reference to the partnership, but he never doubted its necessity.

Today, with the strains developing from the differing perspectives of our common interests, the need for renurturing the vigor and quality of the United States-European cooperation becomes more apparent. The Soviet build up and its increasingly aggressive moves, in highly strategic parts of the world, directly and through its militant proxies, only accent this need.

Moreover, the sustained character of the Soviet build up, together with the loss of U.S. prestige in the Vietnam war, has resulted in some impairment of the credibility of the American deterrent which, during a vital period of European recovery, served as a comforting umbrella of security.

But, if it is said that there has been some impairment of that credibility, not only the commitment of a great nation remains intact, but an eloquent earnest of that commitment is the fact that there are now deployed in Europe upward of 300,000 American troops, and they have been there for a very long time. The NATO commitment, when closely examined, is not automatic. Indeed, it has what might be called some illusory aspects. The United States has, however, buttressed its NATO commitment with this extraordinary earnest.

These troops are still deployed in substantial size on the ground in Europe in spite of Mr. Roosevelt's desire to have them return as soon as possible. They remain in Europe, and they will be involved the minute any attack occurs. The response, as a practical matter, would be automatic and all out. There is no comparable security given by any other NATO member to its commitment to defend the United States.

Judged by any criterion in history, it is an extraordinary phenomenon. The quality of our troops has been criticized in some quarters. They may not have the bearing of traditional Guard Regiments, but they are still American soldiers, quite like those who, on many battle fields, including not a few in Europe, have proven, by their fighting qualities, to be worthy of their allied counterparts, as well as of those they opposed. It should also be remembered that they have the advantage, in their present posts, of being able to train and maneuver with some of the finest troops in Europe.

It has been unpleasantly suggested that for the U.S. to urge our European allies to take steps to improve their defenses against the formidable new missiles actually being deployed against Western Europe and its capitals, is due to our wish to shift the possibility of a nuclear exchange, from one across the Atlantic, to a Soviet-European one. The presence of our troops in such quantity in Europe, so long after the war, ought to be quite enough to demonstrate to any fair mind the utter falsity of the charge.

To the extent that the Soviet Union is faced with a convincing European-U.S. determination and capacity to meet any attack, or any threatened attack, the chances of it ever occurring greatly diminishes. The joint will, in itself, suitably demonstrated, would be worth many missiles and many tanks. As it is unthinkable that hostilities could ever recur within the community today, so is it unthinkable that the U.S. could ever be

induced to attack the Soviet Union, unless attacked, or directly threatened by an attack.

Moreover, I believe the Soviet leaders would never be so foolish as to attack, or attempt to blackmail, either Western Europe, or the U.S., once they were convinced of the solid unity and determination of the Alliance to protect itself. Only if there existed any likelihood of a division within the Alliance would there be a real temptation for the U.S.S.R. to do so.

A full and convincing acceptance of the implications of the European-U.S. Alliance, throughout its membership, can at one and the same time constitute a guaranty of the security of those covered by it and an assurance to the U.S.S.R. and to the world, for that matter, of the continued adherence to a policy of combined restraint on the part of the Alliance.

Recently there have been appearing on both sides of the Atlantic, but I think perhaps more here than in America, a spate of recriminations. It is due perhaps to a series of interrelated economic and political developments. The world is clearly out of joint and very tense. No wonder, with the Pope, the President of the United States, President Sadat, and a good many others, being shot. On top of which, high interest rates and anti-inflation measures induce repercussions in our respective economies. In the meantime, the invasion of Afghanistan seems almost forgotten.

El Salvador has taken its place as a point of apparently greater international concern than Afghanistan, Poland or Pakistan. Only on one thing do the critics now seem to agree. It is that the U.S. is somehow responsible for it all. The time has certainly come for us to stop indulging in these recriminations, and set about doing what I believe Jean Monnet would do, go to a high hill and search for new and more objective perspectives. He would, I think, come back with them, worried, as indeed, I am, but with a clearer sense of the need for a deeper understanding and appreciation of the fundamental commonality of our interests than we seem now to display.

Whether our problems be political or economic, they would be more readily soluble by such an understanding, though to achieve it may demand a level of leadership and statesmanship comparable to that of those who were responsible for the creation of the Alliance.

When I was recently in Europe, in Berlin as a matter of fact, I gained the impression that Europe had rather convinced itself that it could not alone defend itself, and it was uneasy about the credibility of the American deterrent. There was some irritation in the air, as a result, as well as a real element of fear. I doubt that the mood was representative of the city as a whole, but any suggestion of such an attitude was something new to me, for when I was officially in Berlin, it was the symbol of combined strength and resistance. There might have been a few qualms in what we used to call "the Zone," but not in Berlin. There the U.S. could do no wrong.

We are all subject to fear at times, for we are human, but as a general course of action, it is never wise to take counsel only of one's fears. It is a poor guide. It is clear to me that if Europe, in combination with the U.S., undertook to do what is necessary to deter any attack it could be accomplished. Western Europe and the American continent have tremendous strengths and great resources, difficult to marshal perhaps, but quite large enough to make it quite irrational to risk any aggression against them.

We must all realize that though our friend, whose name accompanies this Award, spent such a large part of his life and energies in endeavoring to move forward his grand, and yet pragmatic, concept of a United Europe, it was all in the context of achieving a further purpose, that is the preservation of our freedoms, the elimination of wars in Europe and the general advancement of the cause of peace. It is because he always had these objectives so deeply in mind, I feel confident that if he were with us today, his chief priority would be as I have outlined it. His aim of peace within the community, as well as, of course, between the communities of Europe and the United States seems already to have been achieved.

Monnet was, indeed, a man of peace. He sought a United Europe as a stepping stone to peace. He was well on the way to it. Our recollection of him and his work should inspire us to reach for the new perspectives which would help bring about the accomplishment of his full vision.

Thank you.●

VLADIMIR FELTSMAN

● Mr. LEVIN. Mr. President, I rise to call the attention of my colleagues to an important issue.

Vladimir Feltsman, a renowned Russian pianist, and his wife have been denied permission to emigrate to Israel. This is the fourth time their request has been refused.

Since the day he began playing, Feltsman was shackled by Soviet suppression and censorship. Overcome by an intense desire to fully and freely express his artistic potential, Feltsman decided he had to emigrate. Maxim Shostakovich, who recently defected from the Soviet Union, explained in an interview with U.S. News & World Report why so many Russian artists decide to defect or emigrate.

Mainly, it is because there is a lack of true expression in the Soviet Union, a lack of freedom. That has led to this great loss of very valuable individuals. Very unfortunately, the situation is so bad there that there is now a mass exodus of artists from the Soviet Union—painters, writers and composers.

The "lack of freedom" described by Shostakovich is detailed in a Newsweek article.

Soviet artists say their main grievance is the degradation of living under a regime that regulated every aspect of their lives, treating them not as creative adults but as naughty children. The government agency Goskontsert maintains complete control over every artist. Soviet security agents watchdog every touring ensemble, and musicians are ordered to move about in groups dubbed "quartets," usually headed by a Communist Party member, so that they can have no private contacts with Westerners. "The most humiliating experience I ever had was being a Soviet artist abroad," says violinst Dmitry Sitkovetsky, 26, who came to the United States in 1977. "Onstage, you're a celebrity. Backstage, someone is telling you what to do."

I ask that the full texts of these articles be printed in the RECORD at the conclusion of my remarks.

Vladimir Feltsman wants to cast the yoke of restraint and restriction off of his creative endeavors. But he has two strikes against him. First, he is one of the Soviet Union's most promising young pianists and has become too valuable to lose. He has won numerous competitions and has performed internationally. Second, it is unofficially reported that his father, a popular composer, wrote to the Communist Party Central Committee describing his son's desire to emigrate as "unpatriotic"—evidently to protect his own career.

Not only has Feltsman been prevented from emigrating, he has been prevented from pursuing his career. Hours after he first applied to emigrate in 1979, his records and tapes were removed from shops and radio stations; his performing engagements were canceled. Feltsman's talent has been locked inside him as he is locked in the Soviet Union.

It is an outrage that a gifted pianist has been deprived of his avenues of artistic expression and that the world has been deprived of the superior talent of Vladimir Feltsman.

The article follows:

INTERVIEW WITH MAXIM AND DMITRI SHOSTAKOVICH—EXODUS OF ARTISTS LEAVES RUSSIANS "MORE ALONE"

Q. Why are so many artists—like ourselves—defecting from the Soviet Union now?

Maxim Shostakovich: Mainly, it is because there is a lack of true expression in the Soviet Union, a lack of freedom. That has led to this great loss of very valuable individuals. Very unfortunately, the situation is so bad there that there is now a mass exodus of artists from the Soviet Union—painters, writers and composers.

Q. What are the main differences between American and Soviet artists?

A. First of all, the difference lies in the freedom of expression available. In America, an artist doesn't have to stop to think about the political aspects of his creation. I'm not going to speak very much about the American artist, because I don't know that much about it.

But I know that in the Soviet Union when a person writes, he writes with a weight attached to him—a weight of censorship. The Soviet artist must constantly be aware which spheres of life are available for his writing, which are forbidden. Everyone becomes accustomed to writing between the lines. They must—for survival. All of that very much narrows all of the avenues of expression for any artist.

Q. Would your father have written differently if he had had the freedom you have now?

A. My father possessed a very unusual inner freedom, because in the basic line of his creativity he always expressed what he wanted to express. It's a different question whether it was always understood by the bureaucrats who examined his art. His entire product of creativity was always a battle. Underlining it were the highest humanistic ideals and the most profound expression of protest against the circumstances in which he found himself and in which his homeland is now.

It's difficult to say that his music might have been completely different, because his life was filled to excess with global cataclysms such as revolution and world wars and all the horrors of the epoch of the cult of personality of Stalin and facism in general. They say in Russia that, with the music of Shostakovich, the future generations are going to judge today's history, and I believe that is really so.

Q. Have the departures of so many Soviet artists made any difference for the artists still left in Russia?

A. The presence in the Soviet Union of people such as my father and Mstislav Rostropovich, cellist and now music director of the National Symphony Orchestra in Washington, D.C., provided moral support for the rest of the artists. When these leaders were no longer there, the rest of the Russian people were even more alone in their misery.

There are still many composers and performers of outstanding quality left in the Soviet Union, but people like Shostakovich and Rostropovich were of an especially civic

bent, and toward the end of their opinions were very much counted on by the Soviet government. So they were able to give a lot of help and support to the rest of the country. The people have become much poorer having lost men such as these.

Q. How will the recent departure of two prominent Shostakoviches affect their countrymen?

Dimitri Shostakovich: It will give them a little incentive to assert their independence.

Maxim Shostakovich: From the superficial point, I had everything in the Soviet Union. So anyone who will stop to think a moment will come to realize that if I was able to leave my homeland, then not everything was hunky-dory in the soul of Maxim Shostakovich. My defection from the Soviet Union was a very deeply thought-out step of protest. It was a mark of disagreement with everything that went on.

Another push that led me to the step was the defamation of the image of the character of my father that is constantly presented to my countrymen. I consider it my obligation to speak to the whole world about his true character. The Soviet government very often used the phrase that my father was a "Communist of conviction." By doing so, the bureaucrats wanted to share their responsibility for what is happening in their country. In fact, I remember very, very well that I saw my father weeping bitterly only twice in his life: At the death of Nina Shostakovich, his wife and my mother, and the second time was when he came home and told us that under the force of blackmail he had been forced to join the Communist Party.

Q. Are many Russians aware of how your father hated Stalin?

A. It's hard not to guess through his music.

Q. In the long run, who will win the Soviet Union—the artist or the state?

A. Today, it's just as hard to determine that as to determine who will win in Poland—the Army or Solidarity. But I'm an optimist, and I believe that good will prosper and the humanistic powers will win in the long run.

Q. What is your impression of the U.S. since your arrival?

A. First of all, it's the scope of the country. There is this great concentration of everything that pertains to the arts. Then there are the amazingly friendly people and the amazing number of different lifestyles—city, suburban and differences in between. Everybody lives the way he wants to live.

Q. Have American orchestras that you have conducted and performed with lived up to your expectations?

A. For so many years, the United States has been establishing a tradition of great artists and people who have come here of such high caliber, and it seems to me that America has at her disposal some of the best orchestras of the world.

Q. How would you rank them with those of the Soviet Union and the rest of the world?

A. Europe and the Soviet Union have world-class orchestras, but not as many as here. What is very important is that in the United States not just the large cities but also the provinces, so to speak, have a great number of very high-caliber orchestras.

Q. What do you hope to accomplish in the West?

A. I have to start all over again because everything that I have accomplished in the Soviet Union will now be obliterated. So I have a wide circle of goals.

First of all, I want the maximum popularization of the works of my father. This, of course, would include not only concert performances but also the recording of all his works. I had almost completed this cycle of recording in the Soviet Union, but now everything that was available there will no longer be available.

I also want to conduct the works of other composers to whom I have a debt: Mahler, Bruckner, Stravinsky, Tchaikovsky and Brahms. I will also try to record the works of American composers because I've become accustomed to working with new music, having worked with the radio in Moscow. Without this constant stream of new music, I simply don't feel well. I start to get a little dusty without this new music.

Q. Do you like American orchestral music?

A. Very much. As my father used to say, American music is developing a lot more quickly than the music of other countries simply because it got such a late start.

Q. Why have there been so many great Russian composers?

A. It's true that there were many great Russian composers, but there were also many great writers and painters. Perhaps it is because life in Russia was always without a special hurry. This encouraged thinking and even meditation. The Russian people are very emotionally wealthy.

From the political point of view, Russia always suffered a great deal. Through art, the people sought relief because art helps in difficult moments.

Q. What can be done in the West to foster more artistic freedom in the Soviet Union?

A. Political influences do help. When the world political situation becomes just a little bit softer, then the artist's life is easier also. But those are just temporary solutions. Right now, I can't see any deep hope for basic changes in the Soviet Union.

A lot depends on the idiotic decisions made by the top bureaucrats. For example, some functionary will not like Boris Pasternak, the novelist, and will do all he can to destroy him. Another bureaucrat for 40 years despised my father and tried to ignore all his compositions.

There's no security one way or the other that things will get worse or better. Everything is very capricious and depends on the momentary decisions of the rulers.

Q. Can you give an example of the kind of bureaucratic decision making you abhor that is going on now in the Soviet Union?

A. Yes. It relates to this remarkable period when the 75th anniversary of my father's birth is being observed and I see how often the music of Dmitri Shostakovich is performed and how much attention is paid to it in the United States. The Soviet Union is also celebrating the occasion. There are a lot of performances and completely new editions of the works. Some have already been published, and there are more to come.

But even in this occasion there are things that confound me. The powers over the arts in the Soviet Union have decided to delete all the dedications that Shostakovich had made in all his works—to his friends, to other artists, to his relatives. The primary reason for that was the departure from the Soviet Union of "Slava" Rostopovich and his wife Galina Vishnevskaya, to whom so many of Shostakovich's works are dedicated. Now, of course, I'm gone, too. So this exodus pushed them to delete all of those dedications. I wonder what the Soviet authorities will do to the dedication of the 12th Symphony, which is dedicated to Lenin!

I think for anyone to interfere with the intimate act of a composer's dedication is a slap in the face to the composer. Generations after a composer's death, people will still be able to judge about his surroundings, about who was close to the man, about which personalities he liked—through the dedications. Such rude interference by the bureaucrats is totally unacceptable.

Q. Do you ever feel nostalgic for the Soviet Union?

A. I suffer not because I left other people there but only because I know that there are people left there whom I would like to have with me here.

Q. What are the best and worst things Dmitri Shostakovich has discovered about America?

Dmitri Shostakovich: I haven't seen anything bad yet. And I don't think that I will soon. So far, I've seen only the good part—very friendly people, astoundingly beautiful nature, just everything.

NEW FLIGHT TO FREEDOM

In the West German town of Nuremberg, members of the Second Moscow Radio Symphony Orchestra straggled out of the Merkur Hotel one night early last week. They had just finished a twelve-city concert tour, and now it was time to board buses that would start them on the journey home to Russia. Suddenly someone shouted, "Where's the director?" and Soviet security men began a frantic search. The director was nowhere to be found. In the confusion of the departure, Maksim Shostakovich, 42, had slipped out of the hotel and into the custody of West German police. With his son Dmitri, a 19-year-old pianist, he was headed for a new life in the West.

Their ultimate destination appeared to be the United States, and the news stunned Soviet authorities. Shostakovich is a towering name in Russian music; by the time of his death in 1975, Maksim's father, Dmitri, was regarded as the greatest of Soviet-era composers. "Shostakovich is the mirror of the soul of our country, and the son's defection is a tremendous occurrence," said Russian cellist Mstislav Rostropovich, an émigré himself and now music director of Washington's National Symphony Orchestra. After obtaining asylum in West Germany, Maksim telephoned Rostropovich, a close family friend. Rostropovich then called "my friend Mr. William Clark," the Deputy Secretary of State, who arranged refugee status for the father and sons. Rostropovich made plans to bring Maksim to the National Symphony.

In Moscow a Russian musician heard the news and said wonderingly: "Maksim Shostakovich. The authorities must be asking themselves if there is anyone they can trust." In recent years Soviet musicians have flooded the West, among them the late conductor Kiril Kondrashin and pianists Vladimir Ashkenazy and Bella Davidovich. Some are Jews who have managed to emigrate legally, ostensibly to go to Israel; others are ethnic Russians who exist route was defection. For every artist who has fled, hundreds more long to do so, even though the Soviet Government pampers its top cultural figures, paying them handsomely and heaping them with honors.

Soviet artists say their main grievance is the degradation of living under a regime that regulates every aspect of their lives, treating them not as creative adults but as naughty children. The government agency Goskontsert maintains complete control over ever artist. Conductors complain that bureaucrats decide whether to fire a second-rate flutist or whether a certain symphony can be performed. Before any visit to the West, musicians are interrogated by Communist Party officials and required to answer a 100-item questionnaire that seeks clues to their political attitude and reliability. (Simple questions: Who is your father and what does he do? What was the date of the last Communist Party congress? Who is the President of Zambia?)

Once permission to travel is granted, a musician must leave his closest relative behind as a hedge against defection. (It was a measure of Maksim Shostakovich's high reputation that he was able to take his son to Germany.) Soviet security agents watchdog every touring ensemble, and musicians are ordered to move about in groups dubbed

"quartets," usually headed by a Communist Party member, so that they can be no private contacts with Westerners. "The most humiliating experience I ever had was being a Soviet artist abroad," says violinist Dmitry Sitkovetsky, 26, who came to the United States in 1977. "Onstage, you're a celebrity. Backstage, someone is telling you what to do."

Musicians who betray their disenchantment with the system find their careers at a sudden dead-end. Hours after Moscow pianist Vladimir Feltsman, 29, applied for permission to emigrate to Israel in 1979, Soviet officials ordered all of his records and tapes removed from radio stations and shops. The government has turned down Feltsman's visa application three times, although he has obtained all the required letters of permission from his parents and those of his wife, Anna. Unofficially, Newsweek has learned, it is Feltsman's father who is holding up his departure; evidently to protect his own career, popular composer Oskar Feltsman wrote a letter to the Communist Party Central Committee in which he described Vladimir's desire to emigrate as unpatriotic.

Rigid Rules: As many musicians see it, it is the Kremlin that is unpatriotic: by restricting artistic freedom, Communist officials are driving some of the nation's finest talent out of the country. Faced with this fact, even some official Soviet spokesmen say they believe that travel policy should be eased. "If we didn't have such rigid rules on travel, maybe nobody would defect. They would go for a while and then return," says an officer of the Moscow composers union.

Among Soviet artists living in the West, there was little jubilation at the news of the Shostakovich defection: many had felt the pain of being cut off from the Russian musical roots they treasure so deeply. "I cannot tell you I am very happy that Russian musicians are leaving Russia," said Rostropovich, 54. "I cannot tell you I am very happy there are such circumstances that must run away." The cellist did admit to one great joy. The late Dmitri Shostakovich, he said, was "the most precious person in my life. When I see Maksim again, it will be like seeing my own son."●

MISSOURI WINE

● Mr. DANFORTH. Mr. President, most Americans are aware of Missouri's standing as one of the premier beer-producing States in the union. The praises of Missouri beers are sung every weekend at halftimes and between innings across the Nation. Less well known is the fact that Missouri also produces some great wines. Indeed, when the Federal Government recently classified America's viticultural regions, Augusta, Mo., was first in line.

Missouri's accomplishments as a wine-producing State are heralded in the November issue of Texas Flyer magazine, in an article entitled "Another Wine Country." Author Robert Lewis Thompson notes that Missouri is no Johnny-come-lately to the wine business. Augusta wines won gold medals at the Chicago World's Fair in 1893 and at the St. Louis World's Fair in 1904. Prohibition took its toll on the Missouri wineries, however, and it has only been in the last 20 years or so that Missouri wines have achieved their richly deserved renaissance. Now, there is no place to go but up. Beware Napa Valley. The day is not far away when names like Aurora, Heinrichshaus, Hermanoff, and Bardenheier's will strike fear in the hearts of Ernest and Julio.

Mr. President, I ask that Mr. Thompson's article be printed in the RECORD.

The article follows:

ANOTHER WINE COUNTRY

(By Robert Lewis Thompson)

The first wine-growing region in the United States to be recognized by the federal government as a distinct viticultural district was not the Napa Valley. It was, in fact, none of the grape-producing areas in California. Look to New York and you will also be wrong.

But drive forty miles west of St. Louis, just beyond the burial place of Daniel Boone, and you will encounter Augusta, Missouri (population 301)—home of America's first wine district. Although this fifteen-square-mile area above the winding north bank of the broad Missouri River presently boasts only two commercial wineries, no one has accused these Augusta vintners of being slow to take the initiative. When the Federal Bureau of Alcohol, Tobacco and Firearms launched its program to classify the various viticultural areas throughout the nation, akin to the *appellation controlée* designations in France, these Missouri grape growers were among the first in line. Fortunately for them, the Augusta application was both promptly filed and uncontested—unlike some from the more famous but geographically more controversial wine-growing areas. On June 20, 1980, the Federal government made it official: the Missourians waltzed away with the first appelation designation in the country, and tiny Augusta became the nation's first wine district.

Lest Missouri's nomenclatural coup d'etat appear to be merely Trumanesque chutzpah or a regional derivative of Madison Avenue hype, be assured that wine making was a serious business in this rolling countryside long before there was a Federal Bureau of Alcohol, Tobacco and Firearms. Augusta wines won gold medals at Chicago's 1893 World's Fair and swept four-fifths of the gold at the St. Louis World's Fair in 1904. Before Prohibition, thirteen wineries prospered throughout the region, including one founded in 1869 that claimed vineyards dating back to 1832.

Today, the venerable Mt. Pleasant Winery is Augusta's largest and, by most measurements, the state's most successful winery. Lucian Dressel, whose prior experience in the dairy business taught him, in his words "how to use chlorine and how to clean up," bought the winery (which was built in 1881) seventeen years ago. This year, he will make about thirty thousand gallons of wine, and the winery has the capacity to double that output in the future.

If the names of Missouri wines appear unusual to the average consumer (Aurora, or Baco Noir, for example), there is a reason: the grapes for which they are named are different from those *vinifera* varieties that are widely grown in California (such as Cabernet Sauvignon or Chardonnay). Neither Dressel nor colleague Clay Byers of Augusta's tiny Montelle Vineyards is optimistic about the prospects for *vinifera* grapes in their area, principally because the vines are not hardly enough to withstand "winter kill." Others believe that Missouri's hot summers cause the *vinifera* grapes to ripen too quickly, before desirable acid levels have been attained.

Consequently, Dressel's white wines (and reds too) are produced from French-American hybrid grapes, such as the Vidal and the Seyval, which are the principal varieties grown in the Eastern United States. Although the unprecedented heat of the 1980 season (forty days over 100 degrees) yielded wines that Dressel believes do not fairly reflect his wine-making potential, one of his 1980 white wines, the Münch Blanc de Noir, is a light, clean wine with medium-dry flavors and a pleasant, balanced finish. The 1980 Vidal Blanc is drier, almost austere, and finishes somewhat like an Italian Soave. Although he has used sixteen wooden barrels in wnich to age white wines in past years, Dressel is converting to stainless steel. In an effort to waste not, the white cyress barrels will be sold as hot tubs.

Dressel and Byers have had significantly more luck with their white wines than with their reds. "My last and only good year with red wines," Dressel observes, "was 1972." He went to California's Napa Valley in 1977 "to learn how not to make bad red wine." It may have worked. He is cautiously sanguine about his 1979 red wines, which were bottled this summer after aging for over eighteen months in oak barrels.

The lightest of his three principal red wines is the Blanc de Noir, a pleasant, medium-bodied wine that displays a soft, Merlot-like nose. The medium-bodied Cynthiana has an intense mulberry bouquet that, Dressel says, yields to a more vinifera-like character after several years. Mt. Pleasant's Cordon Rouge, which won a gold medal at the Missouri State Fair this year, is said to have an aging potential of ten to fifteen years, although it is not a big, tannic wine. Dressel explains that the "St. Louis style" of producing lighter red wines is ideally suited for the hot and muggy Missouri Valley area. "Big wines here," he states, "would be almost oppressive." Dressel himself finds considerable relief from the heat and from winery routines in a cold beer.

Mt. Pleasant's most expensive wine, at eight dollars, is "Stark's Star," a 16 percent alcohol, 5 percent residual sugar wine that wins raves from fans of the "late-harvest" style of red wines. Another popular wine is a fruity sparkling wine (champagne) made from the Delaware grape. Dressel personally prefers his drier Blanc de Blanc champagne, but he is often sold out of the latter variety.

Mt. Pleasant and Augusta are not alone, however, in the state's grape-growing sweepstakes. "Show Me" Missouri and you will be shown more than twenty other wineries scattered throughout the state. Most have tasting rooms open to visitors in summer months, and some even offer free tours.

An hour west of Augusta, the picturesque town of Hermann, settled by wine-loving German immigrants, is home to two of Missouri's most charming wineries. The Stone Hill Winery, established in 1847, is a National Historic Site featuring the largest underground arched cellars in America. Its wines are made from French hybrid and native American grapes, grown on sixty acres of hillside vineyards overlooking the Missouri River. During the annual Oktoberfest celebrations, visitors also flock to the Hermannhof Winery, another National Historic Site, which also contains magnificent cellars dating from 1852.

Other wineries, such as Peaceful Bend Vineyard, Heinrichshaus Vineyards, St. James Winery, Winery of the Abbey and Rosati Winery, flank Interstate Highway 44 in south-central Missouri. Bardenheier's Wine Cellars, founded in 1873, is the state's largest winery and is located in the northern suburbs of St. Louis. While these wineries produce generally sweeter table wines and fruit wines, other wineries, such as Midi Vineyard near Kansas City and Reis Winery south of Rolla at Maples, are experimenting with hard-to-grow vinifera varietals such as Chenin Blanc and Riesling.

Despite the achievements of Missouri's wine-making renaissance, most vintners are cautious about their predictions for the future of the state's fledgling industry. The demand for Missouri wines is, frankly speaking, modest. Mt. Pleasant wines were at one time sold coast to coast. Today, Dressel can boast that his is the only Eastern United States winery whose product is featured on a major airline. Yet, nearly all of the Mt. Pleasant wines are sold today to local customers and to the more than fifty thousand tourists who trek to Augusta each year.

The root of the problem may lie with the vine. Weaned on principally Californian and European vinifera varietal wines, most Americans have an identity problem with wines made from and named after French-American hybrid grapes. Aurora and Baco Noir may have a light, fresh bouquet; in today's market, however, they are not Chenin Blanc or Zinfandel.

There is also the "provincialism" factor. Despite how pleasing or affordable Missouri wines may actually be, they must compete—at least east of St. Louis and west of Kansas City—with the entrenched wine barons of California and, to a lesser extent, New York. Augusta is not St. Helena, and St. Louis is San Francisco's arch rival only on the NFL football field.

Dressel, whose immediate, personal goal is to "take Sunday off," earnestly is seeking a talented wine maker but has been unsuccessful in luring help from California, even at twice the West Coast salaries.

Moreover, the level of grape growing in the state has not increased significantly in past years. As long as the corn and soybean markets hold firm, specialized Missouri farmers are not likely to turn to the time-consuming, capital-intensive cultivation of grapes. As Montelle's Clay Byers observes, "Professional people are the ones behind the new wineries, not the farmers."

Yet, Byers is confident that the "half-dozen serious scholar-vintners" in the state will upgrade their techniques and, hence, the reputation of Missouri wines in general.●

PRELIMINARY NOTIFICATION PROPOSED ARMS SALES

● Mr. PERCY. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of $25 million or, in the case of major defense equipment as defined in the act, those in excess of $7 million. Upon receipt of such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sales shall be sent to the chairman of the Foreign Relations Committee.

Pursuant to an informal understanding, the Department of Defense has agreed to provide the committee with a preliminary notification 20 days before transmittal of the official notification. The official notification will be printed in the RECORD in accordance with previous practice.

I wish to inform Members of the Senate that such a notification was received on December 1, 1981.

Interested Senators may inquire as to the details of this preliminary notification at the offices of the Committee on Foreign Relations, room 4229, Dirksen Building.

The notification follows:

DEFENSE SECURITY
ASSISTANCE AGENCY,
Washington, D.C., December 1, 1981.

Dr. HANS BINNENDIJK,
Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR DR. BINNENDIJK: By letter dated 18 February 1976, the Director, Defense Security Assistance Agency, indicated that you would be advised of possible transmittals to Congress of information as required by Section 36(b) of the Arms Export Control Act. At the instruction of the Department of State, I wish to provide the following advance notification.

The Department of State is considering an offer to a NATO country tentatively estimated to cost in excess of $25 million.

Sincerely,

ERICH F. VON MARBOD,
Director.●

PROPOSED ARMS SALES

● Mr. PERCY. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of 25 million or, in the case of major defense equipment as defined in the act, those in excess of $7 million. Upon such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sales shall be sent to the chairman of the Foreign Relations Committee.

In keeping with my intention to see that such information is available to the full Senate, I ask to have printed in the RECORD at this point the notifications which have been received. Any portion which is classified information has been deleted for publication, but is available to Senators in the Office of the Foreign Relations Committee, room 4229, Dirksen Building.

The notifications follow:

DEFENSE SECURITY
ASSISTANCE AGENCY,
Washington, D.C., November 30, 1981.

Hon. CHARLES H. PERCY,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith Transmittal No. 82–07, concerning the Department of the Air Force's proposed Letter of Offer to Saudi Arabia for defense articles and services estimated to cost $27 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

ERICH F. VON MARBOD,
Director.

TRANSMITTAL NO. 82–07

(Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act)

(i) Prospective Purchaser: Saudi Arabia.

(ii) Total Estimated Value:

	Million
Major Defense Equipment*	$ 0
Other	27
Total	27

*As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

(iii) Description of Articles or Services Offered: Cooperative logistics supply support arrangement (FMSO II) for follow-on spares and supplies to support aircraft and other systems and subsystems of U.S. origin being operated by the Saudi armed forces.

(iv) Military Department: Air Force (KBP, Amendment No. 1).

(v) Sales Commission, Fee, etc., Paid, Offered, or Agreed to be Paid: None.

(vi) Sensitivity of Technology Contained in the Defense Articles or Defense Services Proposed to be Sold: None.

(vii) Section 28 Report: Case not included in Section 28 report.

(viii) Date Report Delivered to Congress: November 30, 1981.

POLICY JUSTIFICATION

SAUDI ARABIA—COOPERATIVE LOGISTICS SUPPORT ARRANGEMENT

The Government of Saudi Arabia has requested the purchase of a cooperative logistics supply support arrangement (FMSO II) for follow-on spares and supplies to support aircraft and other systems and subsystems of U.S. origin at an estimated cost of $27 million.

This sale is consistent with the stated U.S. policy of assisting other nations to provide for their own defense by allowing the transfer of reasonable amounts of defense articles and services. It will demonstrate the continuing willingness of the U.S. to support Saudi Arabia which is an important force for moderation in the region.

This cooperative logistics supply support arrangement is necessary to ensure an uninterrupted flow of spare parts to support the Saudi F–5, F–15, and C–130 aircraft and other systems and subsystems of U.S. origin. Saudi Arabia will have no difficulty in absorbing the articles.

The sale of this equipment and support will not affect the basic military balance in the region.

Procurement of these items will be from the many contractors providing similar items to the U.S. forces.

Implementation of this sale will not require the assignment of any additional U.S. Government or contractor personnel to Saudi Arabia.

There will be no adverse impact on U.S defense readiness as a result of this sale.

DEFENSE SECURITY
ASSISTANCE AGENCY,
Washington, D.C., November 30, 1981.

Hon. CHARLES H. PERCY,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith Transmittal No. 82–08 and under separate cover the classified annex thereto. This Transmittal concerns the Department of the Navy's proposed Letter of Offer to Indonesia for defense articles and services estimated to cost $20 million. Shortly after this letter is delivered to your office, we plan to notify the news media of the unclassified portion of this Transmittal.

Sincerely,

ERICH F. VON MARBOD,
Director.

TRANSMITTAL NO. 82–08

(Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act)

(i) Prospective Purchaser: Indonesia.

(ii) Total Estimated Value:

	Million
Major Defense Equipment*	$18
Other	2
Total	20

*As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

(iii) Description of Articles or Services Offered: Forty-eight Mark 46 Mod 2 torpedoes and related support equipment.

(iv) Military Department: Navy (AAM).

(v) Sales Commission, Fee, etc., Paid, Offered, or Agreed to be Paid:

(vi) Sensitivity of Technology Contained in the Defense Articles or Defense Services

Proposed to be Sold: See Annex under separate cover.

(vii) Section 28 Report: Included in report for quarter ending September 30, 1981.

(viii) Date Report Delivered to Congress: November 30, 1981.

POLICY JUSTIFICATION

INDONESIA—MARK 46 MOD 2 TORPEDOES

The Government of Indonesia has requested the purchase of 48 Mark 46 Mod 2 torpedoes and related support equipment at an estimated cost of $20 million.

This sale will contribute to the foreign policy objectives of the United States by strengthening the naval capabilities of a friendly country. As an island country, naval defense is an important element of Indonesia's overall national security posture.

Indonesia intends to deploy these torpedoes aboard its U.S.-origin destroyer escorts and Dutch-origin corvettes to enhance their effectiveness against surface units and submarines.

The sale of this equipment and support will not affect the basic military balance in the region.

The prime contractor will be the Honeywell Corporation of Hopkins, Minnesota.

Implementation of this sale will not require the assignment of any additional U.S. Government or contractor personnel to Indonesia.

There will be no adverse impact on U.S. defense readiness as a result of this sale.

DEFENSE SECURITY ASSISTANCE AGENCY,
Washington, D.C., November 30, 1981.

Hon. CHARLES H. PERCY,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding under separate cover Transmittal No. 82-09, concerning the Department of the Navy's proposed Letter of Offer to Australia for defense articles and services in excess of $25 million. Shortly after this letter is delivered to your office, we plan to notify the news media of the unclassified portion of this Transmittal.

Sincerely,

ERICH F. VON MARBOD,
Director.

POLICY JUSTIFICATION

[Deleted.]

[Deleted.]

As an ally under the ANZUS Treaty, Australia plays a major role in assuring the stability of Southeast Asia and the South Pacific and is strategically located with respect to the Indian Ocean. Therefore, the United States has cooperated in improving Australia's military capability through foreign military sales, logistics agreements, and combined exercises.

[Deleted.]

The sale of this equipment and support will not affect the basic military balance in the region.

The prime contractor will be the McDonnell-Douglas Corporation of St. Louis, Missouri.

Implementation of this sale will not require the assignment of any additional U.S. Government or contractor personnel to Australia.

There will be no adverse impact on U.S. defense readiness as a result of this sale.

DEFENSE SECURITY ASSISTANCE AGENCY,
Washington, D.C., December 1, 1981.

Hon. CHARLES H. PERCY,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D. C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding under separate cover Transmittal No. 82-11, concerning the Department of the Navy's proposed Letter of Offer to Japan for defense articles and services estimated to cost in excess of $25 million. Shortly after this letter is delivered to your office, we plan to notify the news media of the unclassified portion of this Transmittal.

Sincerely,

ERICH F. VON MARBOD,
Director.

POLICY JUSTIFICATION

[Deleted.]

[Deleted.]

This sale will further the close mutual security relationship between Japan and the United States by contributing to commonality and interoperability. The mutual security relationship is governed by the 1960 U.S.-Japan Treaty of Mutual Cooperation and Security, and is a vital factor in the political stability of the Pacific Ocean area.

[Deleted.]

The sale of this equipment and support will not affect the basic military balance in the region.

[Deleted.]

Implementation of this sale will require the assignment of one additional U.S. Government employee to Japan.

There will be no adverse impact on U.S. defense readiness as a result of this sale.●

SOCIAL SECURITY: OUR SOLEMN COMPACT WITH THE ELDERLY

● Mr. SASSER. Mr. President, many of us have followed with great interest the meeting of the White House Conference on Aging this week. Today marks the close of the conference. And it reflects more than 2 years of preparation and the countless hours of thousands of citizens and volunteers.

I know that in the weeks ahead we will have ample opportunity to review the positions taken by the conference delegates. And we will have time, I hope, to act on some of the recommendations made by the delegates.

I would like to note for the RECORD, actions taken by one of the conference committees on December 2. The Social Security Committee adopted almost unanimously a resolution opposing any reductions in social security benefits for current recipients. The resolution also calls on the Congress and the administration to resist reductions in current benefit levels for future beneficiaries.

I am sure that all of my colleagues can remember when the administration earlier this year recommended painful cutbacks in social security benefits for both current and future recipients, far more than was needed to solve any problem. The Congress immediately and overwhelmingly rejected these ill-timed and ill-conceived recommendations. Even the administration finally realized their error, and backed away from these proposals.

Today, we are told over and over again that social security benefits will not be subjected to the future entitlement cuts to be announced early next year. The President himself went before the conference of aging delegates and promised them that "social security can and will be saved."

Congress has already approved legislation to guarantee the financial solvency of the social security system in the short term.

And, the administration now says that it will wait until 1983 for the recommendations of a 15-member commission on how to solve social security's financial problems.

We must not forget the needs of our older citizens, and we must not forget our contract with our senior citizens to provide social security in their retirement years.

More older Americans live in poverty today than 2 years ago. We owe our elderly, as Franklin Roosevelt said, a "measure of protection * * * against poverty-ridden old age."

Mr. President, we must not disrupt the retirement hopes and dreams of our older people.

I want the administration in 1983 to remember the promises they have made to the elderly in 1981. And I want the administration to understand that neither the Congress nor the people of this country, young or old, will permit the old and disabled retired worker to bear the brunt of this effort to reduce the budget.

That is why we rejected the May 12, recommendations for the social security program proposed by the administration.

Lest we all forget the dramatic impact of those proposals, I ask that the May 12 proposal be inserted in the RECORD.

The material follows:

PROVISIONS OF THE SOCIAL SECURITY PROPOSAL

I. Changes to encourage work between 62–65:

Change benefit computation point from age 62 to 65.—The benefit formula treats early retirement the same as waiting until age 65. After 65, there is an annual incentive to continue working. Early retirees at 62 get 80 percent of what they would get at 65.

Proposal would discourage early retirement by assigning zero value to the age 62–64 period, thus reducing benefits in such cases while rewarding those who elect to work until age 65. This returns the program to the formula used before the age of retirement for women was lowered to 62 in 1956.

Reduce benefits for early retirement.—Workers electing early retirement at 62 now receive benefits equal to 80 percent of what they would receive if they delayed retirement to age 65.

Proposal would reduce early retirement benefits to 55 percent of the maximum, thus strongly encouraging workers to remain in the work force until age 65.

II. Change to reduce opportunity for "windfall" benefits:

Eliminate "windfall" benefits for non-covered employment.—The benefit formula now makes it possible for a person, such as a retired Federal employee, who enters Social Security-covered employment for only a few years to receive disproportionately high benefits, in some cases exceeding those paid to low-wage earners who have spent a lifetime in covered employment.

Proposal would have formula take pension resources from non-covered employment into account in such cases, thus sharply lowering the Social Security benefit in such cases.

III. Changes to relate disability insurance closer to work history and medical condition:

Require "medical only" determination of disability.—Workers can now qualify for disability benefits on combinations of medical and non-medical factors, such as age, education and work experience. More than one-third of disability cases age 60 to 65 involve non-medical factors.

Proposal would limit qualification to medical factors alone, thus restoring program to original purposes.

Increase waiting period of six months.—Under a 1972 liberalization of the program, the waiting period for disability benefits was reduced from six to five months on the assumption that ample funds would be available.

Proposal would restore the six-month waiting period previously in law. This conforms to the terms of most private disability insurance programs.

Require prognosis of 24-plus months of disability.—Workers now seeking disability benefits must show only that disability claimed will exceed 12 months or will result in death. The 12-month test, enacted in 1965, replaced a test of "long-continued and indefinite duration" in prior law.

Proposal would restore the original intent of the law, requiring that the prognosis of disability be of long duration, at least 24 months, a more reasonable definition of disability.

Increases requirement for insured status to 30 quarters.—Workers may now qualify for disability benefits even if they have been in the work force only 20 out of the past 40 quarters. Therefore a person could be out of covered employment for 5 years and still qualify.

Proposal would set the minimum at 30 out of the past 40 quarters, thus more closely tying benefits to the principle that they are replacement for wages recently lost.

IV. Changes to reduce welfare elements:

Eliminate children's benefits in early-retirement cases.—Children under 18 or under 22 if in school are now eligible for benefits on the basis of a retired parent's wage record. Thus a retiree with a child receives a dependent's benefit, whereas a retiree with no children gets only his own benefit.

Proposal would end this inequity in early-retirement cases and thus encourage the worker to continue work until 65.

Extend disability maximum family benefit to retirement and survivors cases.—Benefits for families of retired and deceased workers can now actually exceed that worker's net take-home pay.

Proposed would extend the maximum limitation benefits to families in disability cases enacted in 1980 to retirement and survivor cases. This would return the program closer to its original purpose as a "floor" of protection.

V. Other amendments for short-term:

Increase bend points by 50 percent instead of 100 percent of wage increases for 1982–87.—In 1977, the "bend points" (dollar amounts referred to in the weighted benefit formula) were made subject to automatic wage indexing. This change was adopted in legislation intended in part to offset the cost impact of earlier legislation and the faculty benefit computation procedure adopted in the 1972 amendments. However, benefit levels today remain disproportionately high (by about 10 percent) compared with the pre-1972 levels.

Proposal would restore the traditional relative benefit levels for future beneficiaries by increasing the "bend points" by 50 percent (instead of 100 percent) of increases in average wage earnings for the years 1982–87, after which the 100 percent factor would be restored to the formula.

Move date for automatic benefit increases from June to September and use 12-month CPI average.—Under the 1972 amendments (as modified in 1974), annual Social Security benefit increases have been automatic such June (payable beginning in July). The increase is based on changes in the Consumer Price Index as measured between the first quarter of the current calendar year and the corresponding quarter of the preceding year, a provision which can unduly inflate or deflate the increase, depending on economic conditions in those quarters.

Proposal would correct the anomaly of having benefit increases initiated on the pre-1976 Federal Fiscal Year basis and change the CPI computation to cover a full year (July–June) period, thus making the measurement a more accurate reflection of economic trends and measuring living costs in a period ending closer to the initiation of benefit increases.

VI. Change in coverage:

Extend coverage to first six months of sick pay.—Most sick pay is not taxed due to complex exclusion which forces employers to track sick pay on daily, even hourly basis, and leads some to unwittingly break the law.

Proposal would extend tax to all sick pay during first six months of an employee's illness. This would eliminate the administrative burden and would treat sick pay in the same way as vacation pay.

VII. Phase out retirement earnings test by 1986:

Under current law, 1981 Social Security benefits payable to persons aged 65 through 71 are reduced by $1 for each $2 of annual earnings in excess of $5,500, a level which rises each year in relation to average wage earnings. However, benefits are not reduced for those aged 72 and over (70 and over beginning in 1982).

Proposal would phase out the retirement test over a three-year period, permitting $10,000 in earnings in 1983, $15,000 in 1984, $20,000 in 1985 and unlimited earnings thereafter.

VIII. Reduce long-range social security taxes: Assuming enactment of these proposals, and those introduced in the Administration's Budget proposals, it will be possible to lessen the Social Security tax increase now scheduled for 1985 and to actually decrease Social Security taxes below the current level in 1990. (See chart below). Note that while an increase will again become necessary in 2020 due to the aging of the population, the rate will still be lower than the 1990-and-after rate scheduled under current law.

SOCIAL SECURITY TAX RATES UNDER PROPOSAL—TAX SCHEDULE

[In percent]

Period	Present law	Proposal	
		Under budget assumptions	Under worst-case assumptions
1981	6.65	6.65	6.65
1982–84	6.70	6.60	6.70
1985	7.05	6.45	6.95
1986–89	7.15	6.45	7.05
1990–2019	7.65	6.45	6.45
2020 and after	7.65	7.55	7.55

COST ANALYSIS OF EFFECT OF VARIOUS SOCIAL SECURITY OPTIONS

[Positive numbers indicate savings; negative numbers indicate added costs or amounts needed to meet cost of present program]

Item	Short-range effect, CY 1982–86 [a]	Long-range effect [b]	
Status of present system, deficit	−$11.0	(−110.8)	−1.52% (100%)
Effect of budget proposal	35.5	(36.8)	.20 (15)
Status of program after budget proposals enacted		(−74.0)	−1.32 (87)
PROPOSAL			
(1) Cover sick pay in 1st 6 mo	2.6	(2.6)	.02 (1)
(2) Change computation points for average indexed monthly earnings from age 62 to age 65	1.3	(1.4)	.39 (26)
(3) Increase bend points in primary benefit formula by 50 percent (instead of 100 percent) of wage increases, 1982–87	4.2	(4.7)	1.30 (86)
(4) Benefit rate of 55 percent of primary benefit for retired workers (and 27½ percent for spouses) at age 62	17.6	(20.3)	.85 (56)
(5) Eliminate benefits for children of retired workers aged 62–64	1.9	(2.0)	.02 (1)
(6) Disability maximum family benefit applicable to survivor and retirement cases	2.9	(3.3)	.10 (7)
(7) Eliminate windfall portion of benefits for persons with pensions from noncovered employment	.6	(.6)	.10 (7)
(8) Require "medical only" determination of disability (i.e., exclude vocational factors)	7.7	(9.0)	.06 (4)
(9) Increase disability waiting period from 5 mo to 6 mo	1.4	(1.5)	.03 (2)
(10) Require disability prognosis of 24+ mo duration (instead of 12+ mo)	2.8	(3.4)	.07 (5)
(11) Require 30 QC out of last 40 quarters for disability benefits (instead of 20/40)	10.0	(11.5)	.21 (14)
(12) Move date for automatic benefit increases from June to September (and use 12-mo average)	6.3	(27.8)	.14 (9)
(13) Raise retirement-test exemption for age 65+ to $10,000 in 1983, $15,000 in 1984, $20,000 in 1985, and eliminate test in 1986	−6.5	(−7.4)	−.14 (−9)
Total effect	[d] 46.4	(75.0)	2.86 (188)

In billions. Figures in parentheses are based on "worst case" assumptions; other figures are based on the expected economic assumptions (those in the President's Budget).

Average-cost over 75-year period, in percentage of taxable payroll. Figure in parentheses long-range effect of this item as **percentage of actuarial deficiency of present program.**

Amount necessary to restore "financial **soundness of program over the long range."**

Including effect of additional net income to Hospital Insurance program.

ESTIMATED SHORT-RANGE EFFECT OF PROPOSAL AS COMPARED WITH PRESENT LAW, FUND RATIOS AT START OF YEAR [a]

[In percent]

Calendar year	Expected economic conditions		Worse-case economic conditions	
	Present law	Proposal	Present law	Proposal
1981	23	23	23	23
1982	21	22	21	22
1983	18	23	16	22
1984	16	25	[b] 6	19
1985	14	28	(c)	17
1986	16	30	(c)	18
1987	22	[d] 35	(c)	[e] 21

Balance in combined Old-Age and Survivors Insurance Trust Fund, and Hospital Insurance Trust Fund at beginning of year as percentage of outgo from trust funds in coming year (i.e., assumes availability of inter-fund borrowing).

Funds have insufficient balance to pay monthly benefits (actually, this situation would occur several months earlier).

Funds exhausted.

By 1990, the fund ratio would be about 50%.

By 1990, the fund ratio would be about 30%, and by 1995 it would be about 50%.

YEAR-BY-YEAR COST ANALYSIS OF PROPOSAL

[In billions]

Calendar year	Proposal	
	Under expected economic assumptions	Under worst-case economic assumptions
1981	$0.9	$0.9
1982	9.1	11.3
1983	11.8	16.2
1984	15.7	21.7
1985	20.5	28.1
1986	23.9	33.6
1981-86	81.9	111.8

ILLUSTRATIVE BENEFITS FOR WORKERS RETIRING AT AGES 62 AND 65 UNDER PROPOSAL AND UNDER PRESENT LAW [a]

Earnings category [b]	Present law	Proposal
Age 62 at retirement in January 1982:		
Low	$247.60	$163.90
Average	372.80	246.80
Maximum	469.60	310.50
Age 65 at retirement in January 1982:		
Low	355.30	355.30
Average	535.40	535.40
Maximum	679.30	679.30
Age 62 at retirement in January 1987:		
Low	384.40	225.20
Average	580.70	348.30
Maximum	755.60	430.00
Age 65 at retirement in January 1987:		
Low	477.10	447.40
Average	719.00	691.90
Maximum	942.80	860.30

[a] Includes effect of (1) 55 percent benefit rate (instead of 80 percent) for retirement at age 62, (2) age-65 computation point (instead of age 62) for all ages at retirement, and (3) increasing bend points in primary-benefit formula by 50 percent (instead of 100 percent) of wage increases in 1982–87. Benefit amounts are for worker only. Worker is assumed to reach exact age shown in January.

[b] "Low earnings" are defined as the Federal Minimum Wage in each past year, and the 1981 Minimum increased by the change in average wages in future years. "Average earnings" are defined as the average wage for indexing purposes in each year. "Maximum earnings" denote the contribution and benefit base in each year.

Assumptions:

(1) Worker entered covered employment in 1956 and worked steadily thereafter.

(2) Future earnings (for retirement in 1/87) follow trend under intermediate assumptions in 1980 Trustees Report.●

RUSSIAN DAY OF SORROW

Mr. DOLE. Mr. President, on November 7, 1981, the rulers of the Soviet Union celebrated the 64th anniversary of the "Great October Socialist Revolution." As has been their practice in the past, the Soviet leaders proclaimed their devotion to world peace, at the same time parading before its citizens and the rest of the world an array of military hardware that goes far beyond the defensive needs of the motherland. The anniversary celebration was also accompanied by the usual self-congratulatory announcements touting the alleged economic and social progress achieved under Soviet rule, progress that any knowledgeable Soviet citizen would tell you, were he or she free to speak freely, is nothing more than a cruel hoax perpetrated for over half a century on a suffering Russian people and the captive nations of communism.

In mentioning this notable, yet less than fortunate event, I would like to quote from a recent press release from the Congress of Russian-Americans:

On this tragic anniversary of the Bolshevik takeover in Russia, the Congress of Russian Americans reiterates its continued concern for the condition and destiny of all people living under Communist rule. Sixty-four years ago a tragedy occurred which scarred not only the Russian nation but also the entire free world: Lenin and his minority party overthrew the democratic provisional Government of Russia. Two months later the Bolsheviks dissolved the freely elected constituent assembly, in which they had polled only 25% of the vote and renamed the nation the Union of Soviet Socialist Republics.

Despite the bitter struggle waged in the ensuing civil war, which lasted more than three years and was followed by numerous peasant and worker uprisings against Communist domination, Lenin and his successors were able to consolidate their iron hold over the people that make up the U.S.S.R. Moreover, since World War II, Communist leaders have added to their empire most of Eastern Europe. This tyranny has caused millions of deaths and untold suffering in the prisons and concentration camps of the Gulag Archipelago, and has kept life at a subsistence level for most of the population.

The Soviet build-up of armaments in conjunction with foreign policy aimed at spreading the Communist system wherever possible has caused the threat of world war to hang over the United States and the free world for several decades. Furthermore, unsolicited Soviet meddling in the affairs of the devoloping nations continues to cause serious foreign policy problems faced by the United States and its allies.

For sixty-four years Russian immigrants have repeatedly warned the world of the dangers of communism. Too often they have been not only misunderstood, but even mistaken for Communists. As a result, the word "Russian" has ironically become synonymous with the words "Soviet" and "Communist". Moreover, despite being the first and foremost victim of communism, the Russian nation is not even included on the list of captive nations.

Thus, in light of the ever-increasing threat of Communist domination we appeal to all people of good will to join us in condemning the inhuman and evil nature of communism, reminding ourselves of all the people deprived of their basic human rights, defending those persecuted for their religious beliefs and praying for the souls of the millions of victims of Communist terror in all captive nations.

DAY OF SORROW DECLARED

Mr. President, in concluding, I would note that at the behest of the Congress of Russian-Americans, the Governors of the States of New York, Pennsylvania, New Jersey, and Michigan have declared November 7, 1981, to be a "Day of Sorrow" and have urged our American citizens to become fully aware of the dangers inherent in a Communist form of government. I commend these gentlemen in calling to our attention once again the threat that communism presents, not only to these United States, but to all the peoples of the free world.●

ARMS SALES TO PAKISTAN

● Mr. MOYNIHAN. Mr. President, yesterday's New York Times carried a story that is as disturbing as it was predictable. It was inevitable from the outset that shortly after Congress approved the administration's proposal to sell 40 F–16 fighter bombers to Pakistan, which it did on November 21, the Times would run a story with the headline: "India Says It Will Counter Arms Sale to Pakistan."

Now we have the story, along with the accelerated arms race on the Indian subcontinent that was, that is, the only possible effect of this decision to sell Pakistan fighter bombers with which it can attack all the major cities of India. There could be no other result, as the Senate was forwarned.

On October 28, during the debate on the sale of AWACS and the F–15 enhancement package to Saudi Arabia, I pointed out that the two arms transfers are related. I said then:

Pakistan is building a nuclear weapon, very likely with much financial help from Libya, and also from Saudi Arabia. The Pakistanis have close contacts with the Saudis, and already supply much of the technical competence of the Saudi military, it being a common practice in that region for dynasties to engage warriors of distant tribes for their own defense. Or offense. The British in their time mastered this technique.

Pakistan will get its bomb, from Libya, as it were, and 40 F–16 fighter-bombers to deliver the weapon from the United States, if another proposal of the present administration comes to fruition. This creates a strategic nuclear power, lacking only the fighter protection required to strike in any direction on the compass. The Saudi F–15s—with Sidewinder missiles, long-range fuel tanks, and the AWACS command and control guidance function—provide fighter protection. No nation anywhere in the region is any longer secure.

This sequence would take several years, and several coups, but these are plausible, even predictable. It is equally predictable that India will go to war to prevent the final consummation of the nuclear force.

Though the U.S. Government may be unwilling or unable to perceive the natural and inevitable consequence of a foolhardy arms transfer program, others do perceive it, the Indians surely appreciate it.

On November 21, when the Senate discussed and then set aside a resolution of disapproval of the F–16 sale to Pakistan which I had cosponsored, I engaged in a short colloquy on this subject with the distinguished Senator from Oregon (Mr. HATFIELD). One exchange followed a statement by the Senator from Oregon to the effect that he had received certain confidential assurances from the Secretary of State that alleviated some of his concerns about the wisdom of selling F–16's to Pakistan. I insert a portion of that colloquy in the RECORD at this point:

Mr. MOYNIHAN. Will the majority leader yield for a moment? Before the Senator from Oregon leaves the floor, may I ask him two questions?

First, did the Secretary of State, in his bizarre behavior of sending you a confidential letter about public policy, on which the U.S. Congress had expressed itself by statute, assure you that Pakistan is not building a nuclear weapon? You might have noticed the article in yesterday's New York Times about the seizure, on October 31, of an illegal shipment of zirconium, a key metal used in the construction of nuclear weapons, to Pakistan. Second, did the distinguished Senator ask—and did the Secretary tell the Senator—if the administration had made any effort to obtain a commitment from the Pakistani Government that these weapons would not be used against India? It is inconceivable from the point of view, of New Delhi, that they would not be.

There have been two Indo-Pakistani wars in this generation. In both cases, Pakistanis invaded India with American weapons that they had been given to fight Russians. They have never yet fought a Russian. They keep fighting the Indians. And they keep getting whipped.

Mr. HATFIELD. To respond to the Senator, we did not explicitly get into that part of the issue. I did again raise that issue in conversation with the representatives of the Secretary, that two-thirds of the Pakistani Army today is not on the Afghanistan border; it is on the Indian border.

Mr. MOYNIHAN. On the Punjab border.

May I make a point? We necessarily think of the world from the part of it we occupy. And that is normal. But we are a world power and are obligated to know what we are doing in other places.

Let me offer you a scenario. Pakistan has produced a nuclear weapon. That weapon is delivered by an F–16. We have unwittingly given Saudi Arabia, which has close military contact with Pakistan, the F–15, the AWACS, and the sidewinders to protect the bombing missions. That is a nuclear weapons force.

The Pakistanis are financing the establishment of the nuclear weapons force with Saudi money. The Pretorian Guard in Jidda is Pakistani. That government of 2,000 cousins, as the distinguished ranking minority member of the Foreign Relations Committee described it, certainly would not want itself protected by its own country.

We are giving the Saudis and the Pakistanis together a nuclear weapons system, and I am sorry to tell you that before it is consummated, the Indians will go to war. We will have a nuclear war in the subcontinent.

In his confidential letter, did Secretary Haig raise the thought? I just put it to you: We do not know what it looks like out there.

I am not sympathizing with the Indians. When that bomb went off in 1974, I was in New Delhi serving as our Ambassador. I recall saying to the Foreign Secretary and to the Prime Minister, "You have just done something disastrous. You have absolute hegemony in South Asia today, and yet you set off this bomb." The day will come in 10 years' time when there will be a mogul general in power in Islamabad and he will call you up one day and say, "I have four bombs, one for Madras, one for Calcutta, one for Bombay, and one for New Delhi. We would like to have the Punjab and Kashmir back by Thursday, or we'll all meet in Heaven on Friday."

That is geopolitics for you.

Mr. HATFIELD. I thank the Senator.

That was on November 21. According to yesterday's Times, the Deputy Defense Minister of India, Mr. Shivraj Patil, has now said Indian is increasing its own military preparedness because of the sale, "acting swiftly and in a planned manner." Does that not suggest at least that some form of military confrontation is envisioned, if the date has not yet been set?

Mr. President, I insert the Times story to which I have referred in the RECORD:

INDIA SAYS IT WILL COUNTER ARMS SALE TO PAKISTAN

(By Michael T. Kaufman)

NEW DELHI, December 1.—A Defense Ministry official told Parliament today that India was increasing its military preparedness because of the American sale of F–16 fighters and other sophisticated arms to Pakistan.

"We are acting swiftly and in a planned manner," said the official, Deputy Defense Minister Shivraj Patil, who declined to spell out specific steps during testimony before the upper house of Parliament.

His appearance came after considerable drum-beating, including a warning by Prime Minister Indira Gandhi that American military links to Pakistan were creating war clouds. Mr. Patil's comments, however, were the clearest public expression of Indian anxiety since the United States Congress endorsed the arms sale last month.

Mr. Patil essentially echoes the public Indian view that the presence of 40 F–16 fighters and other sophisticated equipment in Pakistan will alter the military balance that has kept the peace between India and Pakistan for the last 10 years. Privately, some Indian foreign policy experts concede that they think the political dangers of a restored arms-supply relationship between Pakistan and the United States are far greater than the military risks to India's vastly larger military machine.

Nonetheless, Mr. Patil, striking a note of grave concern if not alarm, declared that the transfer of the jet fighters, communications systems and tanks in the $3.5 billion package involved "the induction into this region of a class of armament at least a generation ahead of anything operating with the other armed forces of the subcontinent."

Contrary to reports from Washington and Islamabad that the F–16's would be delivered gradually over several years, Mr. Patil declared that the planes were likely to begin arriving "very soon." He said: "I think the delivery could be any time. Beyond this I can't say anything."

Mr. Patil also repeated the assertions of Mrs. Gandhi that the quantity and quality of arms being sought by Pakistan could not be intended to repel any Soviet incursions from Afghanistan. "The arms appear far in excess of Pakistan's legitimate defense requirements," Mr. Patil said. He said the Government had told Pakistan it was disturbed by the arms sale.

Mr. Patil said India's desire to buy still-experimental Mirage 2000 jet fighters from France was independent of Pakistan's arms purchase and he dismissed the contention of one member of Parliament that India's defense policies seemed reactive.

He also denied the burden of another question by saying that the Government was not trying to create insecurity among Indians by indicating that war was inevitable. "But we are definitely trying to keep them ready for any eventuality," he added.

In Pakistan, Government officials expressed fears last month that India would be tempted to use the arms purchase as a pretext to attack Pakistani installations to humiliate the country and deflect any resurgence of military might.

The long-range implications of Pakistan's being supported by the wealthy Islamic states of the Persian Gulf and drawing closer to Washington are what Indian diplomats privately find upsetting.

Meanwhile, the Pakistanis, in an attempt to draw international attention to what they regard as Indian belligerence, have offered to discuss an agreement against war with India. At first this offer was dismissed by India on the ground it had not been tendered in a serious form. More recently, Indians have declared that they proposed such a pact in 1949 and that although Pakistan spurned the gesture then, the proposal still stood.

OPPOSITION TO THE GENOCIDE TREATY

Mr. GRASSLEY. Mr. President, today, the distinguished Senator from South Carolina, Senator THURMOND, testified before the Senate Committee on Foreign Relations in opposition to ratification of the Convention on the Prevention and Punishment of the Crime of Genocide.

Senator THURMOND's testimony should be of interest to the Senate in providing an analysis of the legal and Constitutional defects of the proposed Genocide Convention.

The Genocide Convention has been before the Senate for 32 years and has never received Senate approval, but Senator THURMOND's testimony will be beneficial, in my judgment, especially to new Members who may not be fully familiar with the many defects of the treaty even though these defects have been repeatedly brought to the attention of the Senate in years past.

I ask that Senator THURMOND's testimony be printed in the RECORD.

The testimony follows:

STATEMENT BY SENATOR STROM THURMOND

Vietnam over the past several years has reportedly used poison gas is a large-scale attempt to exterminate several anti-Communist tribal groups. On June 9, 1981, Vietnam became party to the Convention on the Prevention and Punishment of the Crime of Genocide—the Genocide Treaty.

The point is this: The Genocide Treaty, where it should restrain atrocity is not observed, and where it would be observed, it is unnecessary. In the barbaric nations of the world, the treaty is given lip-service. In our civilized free republic, the treaty would be followed to the letter and could thus harm irreparably the fabric of our Constitutional system.

I welcome the opportunity to testify

against the Genocide Treaty because, in my view, the time has come for the President to request the rturn of the treaty so that the Senate will not year-after-year face needlessly an issue which has already been effectively resolved and which is wasting the time of this institution to no good purpose whatsoever.

I have today written to the President to express that opinion, and I am hopeful that he will request the return of the treaty without further delay. Thirty-two years of Senate consideration is long enough.

In my view, the individuals who seek Senate consent to ratification of the Genocide Treaty do not understand the legal effect of such action in terms of the domestic law of the United States.

Unlike many other nations of the world, our Constitution provides that an international treaty shall become "the supreme law of the land" and shall have the status of supreme law for all purposes of domestic law in binding the conduct of American citizens and the States. In our Federal system, a treaty does much more than simply to bind the international conduct of the Federal government as a contracting state.

In the United States, the Genocide Treaty would become both an international contract between the United States and other contracting states, and it would become binding domestic law which would immediately supersede all law and practice inconsistent with the treaty. The treaty, being later in time, would nullify all provisions of Acts of Congress and of all prior treaties of the United States which were inconsistent with the provisions of the Genocide Convention.

I am confident that virtually all Americans abhor even the thought of genocide. Every thoughtful American should, however, analyze the actual effect that the Convention would have within the United States, if the Senate makes the error of consenting to its ratification and if the President thereafter proceeds to ratify the agreement and thus causes it to become law.

Controversy surrounds almost all of the nineteen separate articles of the Convention. I will deal here with a few major points.

Article I states: "The contracting parties confirm that genocide, whether committed in time of peace or in time of war, is a crime under international law which they undertake to prevent and to punish."

Article IV provides: "Persons committing genocide or any of the other acts enumerated in article III shall be punished, whether they are constitutionally responsible rulers, public officials or private individuals."

Article III specifies: "The following acts shall be punishable:

(a) Genocide;

(b) Conspiracy to commit genocide;

(c) Direct and public incitement to commit genocide;

(d) Attempt to commit genocide;

(e) Complicity in genocide."

Questions concerning fundamental concepts naturally arise as a first issue.

The 1973 Senate Foreign Relations Committee report states that genocide would simply be added to a list of other agreements such as "the protection of submarine cables . . . and anti-social conduct like slave trading." That statement is a dangerous and erroneous oversimplification.

The Convention would create a series of new crimes as the supreme law of the United States. Under the Constitution these new crimes would "be the supreme law of the land; and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding."

Matters concerning fundamental criminal conduct involving murder or conspiracy to commit murder should be primarily a matter of State domestic jurisdiction. The use of the treaty-making power in this area is inappropriate. In effect, the Convention would continue the policy made possible by the Supreme Court in its decision in *Missouri* v. *Holland*, 252 U.S. 416, in which the Court held that State powers could be transferred to the Federal government through the treaty-making process as a *de facto* method of amending the Constitution.

Moreover, the Convention, if ratified, would nullify Article II, Paragraph 7, of the Charter of the United Nations which expressly prohibits that organization from intervening in matters within the domestic jurisdiction of a country by the method of making treaties on domestic subjects within the jurisdiction of member countries and, in the case of the United States, within the jurisdiction of either the Federal government or of individual sovereign States.

The treaty defines "genocide" as "acts committed with intent to destroy, in whole or in part, a national, ethnical, racial, or religious group, as such." Insofar as the specified acts are already prohibited by law when done against individuals, it is novel to contend that the nature of the crime changes when committed against the same individuals as a group.

In other words, under our common law tradition and, indeed, as part of our religious heritage, to murder one man, for whatever reason, is as inherently evil as to murder a group. That concept has done more in America to prevent genocide than any treaty could ever do. Ironically, the Genocide Treaty would erode that concept by implying that the life of a group, or of a group member, is somehow more valued than the life of an individual.

We should not wonder, then, that the term "genocide" is loosely thrown at the United States by Communist and Third World countries in the United Nations when those very countries have, by their own conduct, ignored the sacredness of individual life. Our society is built on respect for the individual, a respect which makes genocide impossible.

There are other less philosophical and more technical objections to the treaty.

For example, Article VI of the Convention would permit persons charged with genocide to be tried by "such international penal tribunal as may have jurisdiction with respect to those contracting parties which shall have accepted its jurisdiction." Admittedly, there is now no international penal tribunal of that type in existence, and it is unlikely that the United States would accept the jurisdiction of such an international tribunal should one be established.

However, the fact remains that if the Convention were ratified, a future Administration could agree to accept the jurisdiction of an international penal tribunal and American citizens could be called before that tribunal to answer for an international crime without any of the guarantees given a criminal defendant by the Constitution. Presumably, our courts would hold unconstitutional any proposal to send a person charged with a crime committed within the United States outside the country for trial, but that is a risk we ought not to take.

I am concerned, too, that Article VII provides as follows:

"Genocide and the other acts enumerated in article III shall not be considered as political crimes for the purpose of extradition.

"The Contracting Parties pledge themselves in such cases to grant extradition in accordance with their laws and treaties in force."

That Article would void the provisions found in most extradition treaties which allow the United States to refuse extradition for offenses determined to be of a political or military nature.

For example, a serviceman could be charged with the crime of genocide for fighting enemy soldiers in a country which had contracted with the United States for the extradition of American nationals. The extraditing state would assert that the soldier was guilty of genocide, and under the terms of the Genocide Convention, the United States would not be in a position to refuse extradition on grounds that the crime charged was a political or military offense.

There is also great potential for abuse of the terms of Article IX of the Convention. That Article provides that disputes between the contracting parties "including those relating to the responsibility of a state for genocide or for any of the other acts enumerated" must be submitted to the International Court of Justice at the request of any party to the dispute. Under that provision, Vietnam could have charged the United States with genocide in Vietnam and brought the issue before world public opinion using the forum of the International Court of Justice. Similiarly, the Soviet Union could allege that the murder or other act of violence against an individual member of a minority group within the United States constituted genocide, and wage an unfounded propaganda campaign, again using the International Court of Justice as a public forum.

The Committee also should consider carefully the potential impact of the provision of Article III which makes criminal "direct and public incitement to commit genocide."

During the hostage crisis in Iran, any number of Americans urged massive military action against Iran in retaliation for the hostage seizure. Regardless of the wisdom of that form of outcry, it was protected speech under the First Amendment of the United States Constitution.

Should the Genocide Treaty become supreme law, the incitement provision of Article III would, at a minimum, chill free speech in any area which might be interpreted by any contracting state as "incitement to commit genocide."

Using the incitement provision, Iran, as a contracting party, could have called the United States before the International Court of Justice for permitting editorial writers, citizens groups, and even individual citizens, the freedom to urge the bombing of Iran.

These, then, are some of many legal and political problems which ratification of the Convention would undoubtedly cause.

The Convention has proven ineffective where true genocide has been committed. Where there is no danger of genocide being committed, the Convention would only serve the enemies of freedom in their effort to propagandize against the United States and to disrupt our internal domestic liberties.

In preparing this statement, I was impressed by the testimony given in 1950 by Charles B. Rix, Vice Chairman of the Special Committee on Peace and Law of the American Bar Association. At that time, Mr. Rix stated that the Genocide Treaty would change the traditional concept of international law as the law of the relations of states to each other into the law of "relations of states and *individuals* in states, thereby imposing individual liability for international law and creating unknown individual rights."

The Genocide Convention is uncharted water alien to our free traditions and fundamentally dangerous to our sovereignty and unique institutions.

I urge no action on the Convention other than its return to the President without Senate consent.●

BILL KLING—OUTSTANDING ACHIEVEMENT IN RADIO

● Mr. HEFLIN. Mr. President, the Alabama State Legislature recently adopted a resolution honoring Bill Kling, Jr., of

Huntsville, Ala., for his outstanding achievements in radio broadcasting.

I have known Bill Kling, Jr., for a number of years and I know he is a man of the highest integrity and dedication to his chosen profession—that being a professional radio broadcast journalist. I wish to join the Alabama State Legislature in commending Bill Kling, Jr., for his outstanding achievements.

Bill is the news director of WLRH, public radio station in Huntsville, Ala., the high technology and space center of the South. Bill is a native Alabamian and a graduate of the journalism school at the University of Alabama.

Bill has won numerous awards for journalistic excellence, including the Alabama Sigma Delta Chi, society of professional journalists statewide radio news competitions for investigative reporting, spot news, and best documentary.

Bill has won the Troy State University's statewide Hector Award for public service newswork for the past 2 years.

Mr. President, I am very proud of this fine young man from my home State. His achievements and dedication to hard work and accuracy make him most worthy of the honor bestowed upon him by the Alabama State Legislature.

Mr. President, I ask that the resolution adopted by the Alabama State Legislature, HJR 19, be printed in the RECORD.

The resolution follows:

ALABAMA STATE LEGISLATURE—H.J. RES. 19

Whereas, Bill Kling, Jr., News Director of WLRH Public Radio in Huntsville, is a state employee; and

Whereas, Bill Kling, Jr., is a native born Alabamian; and

Whereas, Bill Kling, Jr., is the senior full-time radio news reporter in Huntsville; and

Whereas, Bill Kling, Jr., airs live broadcasts of the annual public forum that the Huntsville-Madison County Legislative Delegation holds prior to the regular session of the Alabama Legislature; and

Whereas, Bill Kling, Jr., airs live radio broadcasts of the meetings of the Huntsville City Council; and

Whereas, Bill Kling, Jr., has won the Alabama Sigma Delta Chi statewide radio news competitions for "Investigative Reporting," "Spot News," and "Best Documentary"; and

Whereas, Bill Kling, Jr., has won Troy State University statewide "Hector" Award for Public Service newswork for the past two years; now therefore.

Be it resolved by the Alabama House of Representatives, That we hereby commend Bill Kling for outstanding achievement in radio broadcasting and for distinguished public service on behalf of the people of Huntsville and North Alabama.

Be it further resolved, That Mr. Kling receive a copy of this resolution in token of our praise and warm, personal regard.●

U.S. POPULATION

● Mr. PACKWOOD. Mr. President, I wish to report that, according to the latest U.S. Census Bureau approximations, the total population of the United States on December 1, 1981, was 230,327,647. This represents an increase of 200,037 since November 1, 1981. In 1 short month we have added enough people to our population to fill the entire city of Roanoke, Va., two times.

The final count of the 1980 census was 5 million more than what was anticipated. This has made any comparison between 1981 figures and 1980 figures difficult. I should be able to resume the yearly comparison in January.●

AMERICAN TUNA PROTECTION ACT

● Mr. WEICKER. Mr. President, on July 31 of this year I introduced S. 1564, the American Tuna Protection Act, along with 14 cosponsors. This legislation provides for the conservation and management of all tuna within the 200-mile economic zone established by the Fishery Conservation and Management Act (FCMA).

Last year Public Law 96-339 was enacted as an attempt to alleviate overfishing of Atlantic bluefin tuna by Japanese longliners. While this was an important first step it has not solved the problems caused by Japanese longlining in U.S. waters. It has not resulted in increased observer coverage of foreign longline fishing vessels as intended.

Further, annual reports to Congress, as provided for in the act, on the status of bluefin tuna stocks will not serve to increase our knowledge on the health of the stocks since the information would be available in any case.

S. 1564 will effectively address the multiple problems of dwindling Atlantic bluefin stocks, the incidental taking of large numbers of swordfish, marlin and sharks by Japanese longliners, the gear conflicts between U.S. commercial fishermen and Japanese longliners, and the problems of developing tuna fisheries in our trust territories. However, I understand there has been some misinterpretation of the intentions of this bill. I would like to take this opportunity to clearly state my position on a few important issues.

There can be no argument that stocks of bluefin tuna are gravely diminished in the western Atlantic. At a recent International Convention for the Conservation of Atlantic Tuna (ICCAT) Advisory Committee meeting, data was presented showing that stocks of 1-to-4-year-old bluefin have dwindled to one-twentieth of their 1960 levels. Since they spawn at age 6 to 10, fewer and fewer bluefin are reaching maturity. This is despite rigid controls imposed upon U.S. fishermen by the National Marine Fisheries Service (NMFS) limiting their take of bluefin.

Clearly, past attempts at conservation and management of bluefin tuna through ICCAT resolutions have been ineffective. This bill is not intended to supplant ICCAT but to assert jurisdiction over the tuna in our waters just as 87 other coastal nations have, including nearly every ICCAT member nation. In so doing, we will close a loophole in the FCMA and insure future stocks of tuna and billfish for tens of thousands of commercial and recreational fishermen along the Atlantic and Gulf coasts.

May I reiterate, Mr. President, that it is not our intent to forego international management of tuna. However, as a practical matter it is possible to significantly improve western Atlantic bluefin stocks by passing S. 1564 and curtailing the taking of bluefin from the U.S. 200-mile economic zone by foreign interests.

Bluefin congregate near our shores for spawning and feeding, thus making them easy to catch despite dwindling numbers. This is precisely why the Japanese, despite intense political pressure, have continued to longline for bluefin in our 200-mile zone. This fact also counters the argument that if we stop foreign vessels from fishing for tuna in our waters they will simply move to the high seas and catch the same amount there.

As an instrument to collect scientific data ICCAT has been and will continue to be essential. Clearly it is important to internationally manage tuna. Our bill does nothing to prevent this and may well be the spur ICCAT nations need to seriously negotiate an effective international regime.

Some believe that gear conflicts between United States and Japanese fishermen can be alleviated through administrative regulations. If so, why has this not been done already? The fact is, the United States has no real control over Japanese longliners fishing for tuna in our FCZ either through domestic law or international convention.

At the recent ICCAT meeting which ended on November 18, the United States proposed that a quota be placed on the taking of western Atlantic bluefin. The proposed quota is essentially zero, with a small tonnage divided among the United States, Japan, and Canada mainly to monitor the stocks.

While we appreciate the State Department's understanding of the seriousness of the problem, this is a drastic shift in policy compared with the negotiating posture we understood the State Department would take at ICCAT, which was to recommend a coastal State preference regime where fishermen from coastal States would have the first opportunity to take stocks in their waters.

A zero quota would mean that, once again, the U.S. fishermen would have to bear the burden of U.S. tuna policy. A zero quota for bluefin would not address the problems of gear conflicts or incidental catches since Japanese longlining could continue in our FCZ for bigeye and yellowfin tuna.

Furthermore, there is no assurance that a zero quota will even help bluefin stocks since non-ICCAT nations and even ICCAT nations which go through a simple objection procedure will still be able to take bluefin from the western Atlantic.

Next, Mr. President, I would like to address the effects that changing our juridical position on tuna through S. 1564 will have on the Pacific tuna fishery.

To begin, it is important to note that the present U.S. position on tuna is the extreme minority position worldwide, with 87 coastal nations now claiming control of tuna. The situation was vastly different when the present U.S. policy originated. We are now operating in a confrontational manner and are forcing our policies on the world largely through the use of embargoes on the importation of tuna products into the United States. Resentment against this U.S. policy is building.

Clearly, the current U.S. position has not resulted in effective international management of Pacific tuna. Yellowfin tuna were managed in the eastern Pacific through the Inter-American Tropical Tuna Commission (IATTC). Conservation efforts ended, however, when Mexico and Costa Rica withdrew from the IATTC in 1978 and 1979, respectively.

According to the Director of the IATTC the lack of management has resulted in yellowfin stocks slipping below optimum levels in just 2 fishing years. Currently the IATTC has but six members: the United States, Canada, Japan, France, Nicaragua, and Panama. Even if the embargoes on Mexico and Costa Rica force these countries back into the IATTC fold, the antagonism and resentment that has built up will keep Pacific tuna conservation efforts in constant turmoil.

Current U.S. policies are also severely hurting our own trust territories in the Pacific. Many of these small governments have only one resource—tuna. But they believe their interests have been bargained away by the United States in order to support a small but wealthy U.S. distant water tuna fleet. Because of this they are dependent on the U.S. Treasury.

The combined ocean area within the 200-mile zones of the trust territories is 3 million square nautical miles, 30 percent of the South Pacific, or an area greater than the 200-mile zone of the continental United States plus Alaska. This is precious acreage, particularly to our Defense Department, and the amount of untapped tuna resource in this area is enormous. However, due to a lack of interest in this resource by the U.S. distant water fleet, some of these island nations have resorted to fishing agreements with Asian nations, among others.

The proposed legislation, S. 1564, will help our trust territories and tuna conservation efforts by swinging U.S. policy into line with the rest of the world. By demonstrating to other nations our willingness to cooperate, we can open the doors to fruitful negotiation of a stable conservation regime. This will never occur if we ignore the right of coastal States where a large part of the resource exists. Additionally, we see no evidence that our distant water tuna fleet will be hurt by a change in the U.S. juridical position on tuna.

We know that our distant water tuna fleet is an important segment of the U.S. fishing industry. S. 1564 will most certainly not result in a collapse of the U.S. tuna industry. The Fisherman's Protective Act and the import prohibitions of section 205 of the FCMA will remain intact. Hopefully, a more cooperative U.S. stance will reduce the need for these measures since the U.S. taxpayer bears the burden of their use.

In 1980 over $8 million were paid through the Fisherman's Protective Act to reimburse U.S. purse seiners for losses resulting from seizure by foreign nations. Further, U.S. consumers must pay higher prices for tuna every time an embargo is used.

Unfortunately, past U.S. policy has created a situation in which it is quite lucrative for the U.S. tuna fleet to depend on subsidies from the Federal Government, in order to force access into waters where they are not wanted.

In summary, Mr. President, it is my conclusion that passage of S. 1564 will: alleviate overfishing of bluefin tuna, gear conflicts, and incidental killing of swordfish, marlin, and sharks by Japanese longliners fishing in the U.S. waters off the Atlantic and gulf coasts; help our trust territories gain financial independence; and create an atmosphere conducive to negotiating effective international conservation and management regimes.●

HIGH INTEREST RATES

● Mr. MELCHER. Mr. President, I have been fighting for many months now to get something done to reduce interest rates. The high interest rates of the last 12 months have pushed us into a recession.

No sector of the economy has been hurt more than housing. I have been fortunate to hear from many representatives of the home building industry on the problems they face because of high interest rates.

I invited Mr. Edwin J. Swope, president of the Shenandoah Valley Builders Association to testify at a recent hearing held by the Senate Task Force on Interest Rates. His testimony hits at the heart of the problems being caused by high interest rates, and at this time I would like to insert this testimony in the RECORD.

The testimony follows:

STATEMENT OF EDWIN J. SWOPE

My name is Edwin Swope. I live near Harrisonburg in the heart of the Shenandoah Valley of Virginia. I'm a builder and I also operate a small family farm. This year I'm president of the Shenandoah Valley Builders Association, a small grass-roots organization, one of 800 local groups affiliated with the National Association of Home Builders. Our membership includes builders, subcontractors, local banks and thrift institutions, realtors, and many other small businessmen who furnish goods and services to build our communities.

I'm not here just to repeat bad economic news . . . like yesterday's headlines about housing starts being at their all-time lowest level. What I do want to say here is that things are much worse than those dismal statistic suggest. If you will allow me to use myself as an example, perhaps I can show you what I mean.

I'm a residential builder. For the past ten years I've built an average of five houses a year. But 1981 has been a nightmare. The housing market in our area is dead, as it is in many other areas. And the new houses that can't be sold are probably going to bury those builders who have survived so far. I'm just finishing a house and I'm afraid I won't be able to sell it because there aren't many people who can qualify for a loan to buy a $60,000 house like mine even if they want or need to. High interest rates have got people scared to death. Many have just given up hope of ever owning a home of their own.

I frankly don't know if I can survive in the building business. If I am forced to lay off the three people who have worked with me all these years, I doubt that I can rehire them when, and if, things get better. And I'm one of the lucky ones. I've survived this far. But I know from first-hand experience that there are a lot of builders in our part of the country just hanging on because their lenders and suppliers and subcontractors aren't willing to put them out of business by demanding overdue payments. My personal experience, and that of those I work with, has proved this to us: that as bad as all the national statistics are about business failures in the building industry, things are much worse at the grass roots level than those figures indicate.

Just last week we held our annual joint meeting with the other builder associations in the Shenandoah Valley. This year, in keeping with our National Associations' "Unlock the Economy" theme, we invited Realtors, auto dealers, and farmers to meet and share their views with us. All of us are small businessmen and we all have common concerns and fears. We also have common goals. We all support efforts to control inflation, to reduce federal spending, to stimulate savings and investment and production. But our biggest fear is that our business won't survive long enough to enjoy the improved economy that is supposedly just around the corner. The remedy of high interest rates may kill the patient before it cures the disease of inflation. We're afraid that government fiscal and monetary policy is based just on theory and statistics rather than the real needs of real people. We're afraid that our government is more concerned with Wall Street than Main Street.

None of us is suggesting that there are simple, quick answers to the problems of inflation and high interest rates. After all, those economists and planners who claims to have all the answers can't agree on what to do. But ordinary people don't need computers or research studies to know this: When money finally does become available at affordable rates, the price of housing is going to skyrocket. That means more inflation, and another, deadlier cycle of higher interest rates. The longer high interest rates continue now, the worse our national economy will suffer in the future.

We are told there is a Trojan Horse somewhere here in the capitol. Well, let's color it "high interest rates" because inside that policy are hidden the weapons that will kill off the small businessman. . . . the builder, the farmer, and others who produce the essential needs of this nation.

What I've tried to convey to you here today is my personal experience of the economic damage that high interest rates are inflicting on builders like me. But—as a builder, a farmer, and a family man—I am also concerned with the social consequences of this high interest rate policy. I have to wonder if my children and their generation will be able to realize the American dream of home ownership that has been our country's special blessing. Our nation has always placed a high priority on decent, affordable housing for all its citizens. Now I'm not sure that our government is still committed to that priority or that it's support of a high interest rate policy will let us accomplish the goal of affordable housing.

I wish I could have expressed better the feelings of the people with whom I work back home. And I wish I could be more confident about the future. But at least your willingness to listen to the concerns of small business men like myself is encouraging.

Thank you.●

DEVELOPMENTS IN RURAL EDUCATION

● Mr. MELCHER. Mr. President, I would like to report to the Senate on the developments in rural education in the Department of Education since 1977 when

I was dismayed to learn that the Federal education agency—then the Office of Education in HEW—had not even one of its thousands of staff members assigned to this important segment of the education enterprise.

Secretary Bell, unlike his predecessor, has given far more than lipservice to the unique concerns of small schools. The following statement of policy, presented to the Rural Education Association at the October 13 meeting in Tucson, is gratifying, indeed, to those of us who are concerned over the pattern of neglect which has denied rural and small schools their fair share of appropriate assistance.

Mr. President, I ask that the policy statement be printed in the RECORD at this point.

The statement follows:

A RURAL EDUCATION POLICY FOR THE 1980's*

Historically Federal and State policies have tended to militate against rural schools because of the inherent characteristics of rural areas. These characteristics are usually described as (1) population sparsity, (2) geographic isolation, (3) smallness of size, (4) scarcity of resources and (5) cultural differentness. Policy makers at all levels either ignore rural LEAs or attempt to eliminate them through imposition of unreasonable standards or consolidations. Neglect of rural concerns is further encouraged by the demographic fact of life that rural areas have fewer voters and less political clout than urban areas. Therefore, even though 66 percent of the LEAs in U.S. are rural (11,000 of the 17,000) urban LEAs receive the most attention, services and funds. This has lead rural personnel to describe themselves as an aggrieved minority and to raise the question of equity in matters of Federal and State educational policies.

In response to the concerns of this significant constituency the Department of Education adopts the following as policy: Rural schools will share on an equitable basis with urban and suburban schools the information, services, assistance and funds available from or through the Department of Education and its programs.

Toward this end the Department will take the following steps:

1. Expand the data base on the condition of education in rural areas.

2. Support research and dissemination efforts to develop knowledge of special curricular, organization, personnel and support services needed for rural schools.

3. Institute two-way communications with the rural constituency through local, State and National networks of rural personnel.

4. Monitor Department program regulations, eligibility and evaluation criteria, subregulatory directives and administrative policies to ensure equity for all LEAs regardless of size, location or condition.

5. Provide for consultative assistance to rural educational entities towards the goal of improving the quality of education in rural areas.

All offices in the Department are instructed to act in accordance with this policy.

Mr. MELCHER. Further, Mr. President, I am impressed with the "tell it like it is" quality of a paper by Dr. Norman Hearn, senior policy analyst of the Office of Elementary and Secondary Education of the Department of Education. Dr. Hearn was designated as the rural spokesman for the Department after months of urging on my part that someone from within the agency be named as the contact person for rural education. It was a wise choice and I hope, whatever the future holds for the Department, that Dr. Hearn will continue his present responsibilities as the "point man" for rural education at the policy level. His commonsense is essential to continued progress.

I ask that Dr. Hearn's paper "The Roots of Rural Educational Inequity—or How Country Folks Get Whipsawed and Bushwacked" be printed in the RECORD.

The paper follows:

THE ROOTS OF RURAL EDUCATIONAL INEQUITY—OR HOW COUNTRY FOLKS GET WHIPSAWED AND BUSHWHACKED

Rural folks have borne the indignities of "hicks", "bumpkin", "red-neck" and other such name-calling and stereotyping since time immemorial. Even the dictionary carries the message. City means "civilized"; urban means "urbane" or "sophisticated". Rural has always meant "crude" or "peasant". Country implies "uncultured" as in "Hee-Haw" and "Let's-all-laugh-at-them." Most rural people respond to such ridicule good-naturedly and without rancor.

But this historic baggage of biases has influenced our thinking about rural education and our public policies regarding rural schooling with some serious consequences. As Paul Nachtigal points out in "Improving Rural Schools," policy makers regard the "reality" of the rural schools condition—sparsity, isolation, smallness and limited economic base—in negative terms. This bias has led to public policies that either ignore them, neglect them or stamp them out. The evidence is monumental that this is exactly what has happened. During the past 75 years small schools everywhere were turned into storage sheds or antique barns, and rural children, in the name of reform, were hauled out of their home communities to larger urban centers.

But we need not point accusing fingers at some ambiguous "they" as in "They-did-it-to-us." As in Pogo, "we" is "us". The fact is that those who molded and enforced rural education policies during the past 75 years came from rural schools. The leaders of the school consolidation movement, for example, were country born and reared. Neither can we escape the fact that we taught ourselves that we were somehow inferior, that we must put country ways behind us and camouflage the nature of our rural birth with a gloss of erudition. Only recently as cities began to groan under their burden of large numbers and deteriorating environments has it become "chic" to even confess our rural heritage. We may even brag a bit about our good fortune, though we know that past bias and resultant inequity have hurt us and our children

It is obvious that the tap root of rural educational inequity is a cultural prejudice but the off shoots are not nearly as conspicuous. It is my purpose to expose as many of these roots and offshoots as possible in the hope that future public policies will not penalize rural areas and thus rural children and adults.

One basic source of anti rural bias is the "big-is-better" syndrome. The American preoccupation with bigness—tall buildings, big crowds, mass markets—has caused policy makers to arrange their priorities by the numbers rather than by the intensity of the human need.

The criticalness of a problem becomes a function of the degree of concentration of students. This works against rural areas in two ways: (1) a large quantity of learners becomes a precondition for a quality curriculum, and (2) a large concentration of non-learners constitutes a more serious problem than a similar number of dispersed non-learners (underachievers and dropouts, for example). When translated into grants-making policy this means that agencies will give more rating points for such concentrations, thereby penalizing rural areas because of dispersion. Rural and small schools lose on at least two counts: (1) they don't have large numbers of pupils, and therefore in any competition with populous schools they appear less cost effective and (2) guidelines and the laws for formula-grant allocations often specify a minimum number of pupils before an LEA is eligible for a share of the monies—cutting them off at the pass, so to speak.

Ironically, the large number of LEAs works against rural areas when it comes to sharing information and receiving assistance. A common exclamation is: "There are too damn many of them". (11,000 LEAs are under 1500 enrollment). Unabashedly, agency personnel preparing mailing lists or assistance schedules will state that it is not feasible to notify so many.

Small rural schools are expected to find out about financial opportunities, technical assistance or promising research and successful practices through some kind of telepathy or hearsay network; or they are to read some expensive and obscure publication, such as the Commerce Business Daily or the Federal Register.

Another curious thing happens to rural areas when legislators sit down to design a formula for distributing public monies. Though obviously it would cost more to provide a really quality education for the rural disadvantaged child in small and isolated schools, when it comes to distributing funds to States to help these same kids, the per-pupil expenditure (PPE) gets cranked in to the formula as if PPE were the real cost of a truly quality education. A rural State gets less per child because it "costs less" than a higher cost State. In this way policy makers and legislators blithely perpetuate the poverty-level education of less affluent areas under the guise of administering programs designed to address the causes of inequality. Schools that have spent less (because they can't afford it) get less because they didn't have it to spend.

Another manifestation of a subtle bias that causes unintended harm is the habit of policy makers and grants administrators to favor a "commitment" by the local educational agency when deciding who shall be funded. Surrogates for this commitment are usually "matching funds" or "full-time staff" or "short-term phase-in". Though the objective of encouraging local continuation or adoption by such commitment is commendable, the side effect is to exclude the small and rural LEAs that lack financial ability to make such a commitment. Self exclusion by LEAs often takes place up front before the application. Or, if applications is made, the funding agency excludes LEAs during the proposal review process when this "commitment factor" is given special weight in the funding decision. This is a case where a noble program purpose subverts a basic intent of the program, such a serving the most needy.

Good intentions also mask the root cause of one of the most serious forms of discrimination by government and private funding agencies. That is found in the national mania to achieve pseudo sophistication for an otherwise simple process of grants making by aping the jargon of the research and management sciences fields. Specifications for project applications often read like a foreign language text. This practice has intimidated the harried school administrators from even walking onto the field of competition for grants.

* This policy was announced October 13, 1981 by Elam Hertzler, Executive Assistant to the Secretary, representing Secretary Bell speaking at the Tucson, Arizona, Convention of the Rural Education Association.

The avowed purpose of requiring comprehensive needs assessments, measurable objectives, elaborate research designs, valid and reliable instrumentation, PERT and Gannt charts, significance tests and other such technical provisions is to ensure a well-constructed and well executed project and program. But the larger unintended effect of these requirements often is to skew the outcome of the program from that of meeting pupil needs to that of serving the information and professional growth needs of researchers and administrators. It has been said that there is an inverse ratio between ability to get a grant and the need for a grant. As grantsmanship is so rewarded, small school administrators who have little time for such falderal because they may be driving buses, or counting lunch money will continue to lose. The capability to master the grants process becomes more important than the need, capability and motivation to serve children.

The most subtle but effective way that small and rural schools are penalized in the grants-awarding process is through the imposition of common criteria for rating proposals and applications. A few examples of the most widely used criteria illustrate the built-in bias.

Typically a "Plan of Operation" criterion awards points for a "clear description of how the applicant will provide equal access and treatment of the traditionally under-represented, including minorities, women, elderly and handicapped." Rural communities are often homogenous and have few or no minorities; womens' roles are traditional; the elderly are usually occupied; and the handicapped are dispersed—all enough to not only make a plan futile, but to discourage applicants even before they lose on points.

The "quality of key personnel" criterion, on the surface, would seem to be a fairly objective criterion; but rural schools are immediately at a severe disadvantage because of low pay and the isolation factor which makes recruitment and retention of highly qualified personnel difficult. Raters of proposals usually consider degrees and years of experience as quality points, both standards not usually found in rural areas.

Even more inappropriate is the commonly used "time-committed-to-job" standard. Rural personnel are notorious for their many occupational hats—drivers, part-time teachers, business managers, etc. It is unlikely that a small rural school could tolerate personnel devoting fulltime to one job. Furthermore, it presents an awkward personnel situation when a full-time State or Federal project director is prohibited by audit threats from sharing routine duties with regular personnel.

The almost universal inclusion of a "budget-and-cost-effective" criterion is especially detrimental to small and rural schools. Cost effectiveness is usually determined by looking at a quotient derived by dividing the number of pupils into total dollars. If the LEA designs a comprehensive quality program their ratio will be bad because a quality education for a small number of pupils requires a basic minimum number of teachers and the same number of library books as a larger school. If the LEA attempts to lower costs by skimping on salaries, for example, they will likely score lower on the "quality-of-personnel" criterion. Small schools get bushwacked and whipsawed.

But rural schools really get bushwhacked and whipsawed on the ubiquitous evaluation criterion. Not only are they not likely to have personnel who can design a sophisticated evaluation plan, they usually do not have a grant large enough to allow sufficient funds for an evaluation. A typical rural project of about $10,000 would be allowed by usual guidelines (5–10%) about $500–$1,000 for evaluation—hardly enough for a valid design and certainly not enough to win many points in any competition with larger projects. And technical assistance help is usually far away and far too expensive.

This entire travesty is reinforced by a common public and private agency practice of hiring experts to read and rate applications and grant proposals. These experts are usually researchers and writers—the very people who originate and perpetuate the system. Not only are the readers usually from academe; they are most often from the few commonly recognized large and prestigous institutions that are likely to be out of touch and out of sympathy with rural America. Seldom are persons fresh from the classroom or school board rooms, particularly of rural or small schools, asked to comment on the quality or reality of the proposals. As a result, much of what is funded is irrelevant for small and rural practitioners and, as time goes on, the grants-making process becomes further encumbered with more and more research and management sciences rhetoric. If this trend is unchecked, it will take the entire grants process into an esoteric orbit that will put public monies completely out of reach of the most needy, particularly those in small and rural schools.

It is risky to attack this system for fear of being dubbed as anti-intellectual and unsophisticated. But rural and small school advocates must not be intimidated. They should make it clear that they are not indicting the entire social and management science fields; but rather they are objecting to the inappropriate and unbalanced application of theoretical principles to a process that makes it difficult for small, rural and usually poor LEAs to participate.

No one will seriously argue with the need for clear objectives, good management, and solid evidence of success. But they can ask that while striving for those noble goals, policy makers not put undue stress on improving the process to the detriment of meeting real needs. Or to put it positively; the grants process must emphasize need, creativity and sincerity, and must put greater trust in the integrity of those who serve children. As this occurs, not only are rural areas more likely to receive a fair share of Federal, State, and private funds and services, but all pupils—regardless of place residence—will benefit from educational programs closer to the reality of everyday classroom learning.●

HAITIAN REFUGEES

● Mr. MOYNIHAN. Mr. President, there appeared in Sunday's New York Times an open letter to the American people from "The Unhappy Refugees of Enclave VI," a group of the Haitian refugees currently stored—there is no other word—by the U.S. Government at Fort Allen in Puerto Rico.

It is a powerful, eloquent plea for decent treatment and should be read by every member of the Senate. It reminds us that the vexing problem of immigration into this country from the Caribbean is not the bureaucratic question of formalities and procedures and quotas which the present administration seems to think it is. What we are confronted with is a human tragedy of monumental proportions.

The thousands of desperate Haitians who have made their way to American shores in flimsy, open boats have come to this country for the same reason. They want to escape a brutal tyranny and almost unimaginable poverty. They want to eat; they want to work; they want freedom. They want to make better lives for themselves and their children in a free land of opportunity.

And we, to our profound and continuing shame, are unprepared to help them, either to improve significantly the quality of life in Haiti or to provide for a just and orderly manner in which some Haitians might come to the United States to live.

Worse still, the U.S. Government has been unable or unwilling to halt the execrable trafficking in Haitian refugees that is occurring just a few miles from American land. Desperate Haitians pay whatever money they can gather to the vilest sort of people, who promise to transport them to American waters. Sometimes the bodies of the would-be refugees wash ashore in Florida. Can the Coast Guard not seek out these brigands on the high seas, and halt these murders? Why cannot the U.S. Government do this? We are talking of human beings, men and women and children who need our help.

Mr. President, I ask that the letter from "The Unhappy Refugees of Enclave VI," who may be the more fortunate of the Haitian refugees, be printed in the RECORD.

The letter follows:

HAITIANS: WE'LL KILL OURSELVES

(Following are excerpts from an open letter to the United States Immigration Service from "The Unhappy Refugees of Enclave VI"—a group of Haitians held at Fort Allen, Puerto Rico. In it, they threaten suicide. The letter was handed to a New York Times reporter.)

Dear Readers, Gentlemen, Civilian, and Military Authorities,

For the last few months we have been imprisoned without knowing what outcome our fates would have.

You can imagine that if we risked our lives by leaving our country on sailboats and planes it was in order to find a haven on the soil of America, which we thought was capable of receiving us, since it is a large power in the world.

Since 1957, we have endured atrocious suffering due to the lack of a good government. But now it is worse, and we cannot stand it. This is why we are forced to emigrate in larger numbers. At home if we manage to get work, we cannot collect our salary. If we claim our rights, our life would be in danger. Not only one's own, but also that of the entire family, which would be implicated by the authorities.

To our great surprise, upon arriving to the Immigration Center in Miami, we were made to wait for several hours during which time we were interrogated on one single topic, to wit, "Why did you come to the United States?" Since our answer is positive and always the same, we were finally accepted although we were told that we would have to spend a few days in the Krome [detention center] for formalities.

Upon arriving, our eyes widened with fear and surprise at the conditions of life. We thought we were throwing ourselves into a stable. One thousand persons are jammed into one and the same cell. It reminds us of black slavery. But alas, after shedding many tears and imploring God to come help us, we finally resigned ourselves to accepting this sufferance for a few days. Because we did not want to go back. Each day that would go by was one day less for us. We hoped that may be in 8, 10, or 15 days we would be called to be freed.

One day around 4 p.m., we [women] were all gathered at the sound of whistles. We spent a day and a night awaiting for our fate, after having been tagged with a plastic ID bracelet. After that we were made to parade in the nude in front of men and women. We were splashed, badly dressed. Stripped of our

own clothes and belongings, we were made to sit in a room where we were to spend the night. In this distress, the room was like a wake, where sad songs were being sung. At that moment an enormous chill would run down the spine. Around 5 a.m., we were jammed into a bus which was to drive us to the airport. This is how we left Miami for Puerto Rico.

If sometimes a few of us misbehave, it is not their fault. You must understand that all of us don't have the strength, the same understanding, nor the same degree of education, and that we all suffer a lot from the behavior of others. Life at Fort Allen has been very hard for us.

When we left Miami, we were led to believe that we were only going to Puerto Rico for a few days. And until now we have been suffering for eight months without knowing why. Each day we hear only one thing: those who wish to return to Haiti can come give their names.

Since we arrived on American soil, we have been mistreated. We have been made to suffer and we have accepted it all, we have endured it. We have left at home relatives who are relying on our help. How can we return to Haiti now, empty handed and stripped of everything? Oh no, it would be the greatest injustice. If the Americans did not want to take us in, they should have sent us back the very same day. And now, instead of making us suffer, why not send us to other countries like Russia, Cuba, France or Canada, who are willing to take us in with open arms?

We are Christians. We have blood in our veins and thoughts like all the other people who are free. We want our freedom because we have been suffering for five months, because we left our relatives in order to help others get out of the lion's mouth in Haiti.

Our situation is pitiful. We have been locked up behind barbed wire from Miami to Puerto Rico. The days are always the same for us. We don't know what the date is. Sometimes we are hungry and cannot eat.

We have needs and cannot satisfy them. Is this the better life we are seeking? We took refuge in the United States in the hopes of filling our voids. Can we not fill them? Where are we going?

Now we cannot stand it any more. It is too much. If we have not been freed by the end of November, a good number of us are going to commit suicide. Because we have sworn to die in the United States.

We are asking why you treat us this way. It is because we are Negroes? Why are you letting us suffer this way, America? Don't you have a father's heart? Haven't you thought we were humans, that we had a heart to suffer with and a soul that could be wounded? Give us back our freedom. Why among all the nations that emigrate to the United States have only the Haitians known such suffering?●

WHITE HOUSE CONFERENCE ON AGING

● Mr. DURENBERGER. Mr. President, this week marks a special occasion which will have an impact on this country for years to come. The event I am referring to is the 1981 White House Conference on Aging. From all over the Nation, leaders in the fields of gerontology and aging have gathered in an exceptional forum to develop aging policies for the 1980's and beyond. The 1981 White House Conference on Aging offers an opportunity for association leaders, senior citizen advocates, academicians, Government program officials, and other concerned citizens to come together offering their individual perspectives to the problems and challenges of aging policy. As a member of the Senate Special Committee on Aging, I have a personal concern in the actions of the conference, but I am sure all my colleagues share my interest in the outcome of this forum.

We have made great progress in developing programs for the elderly. But we have barely scratched the surface. Not only can we improve the delivery of services to the elderly, we can recognize the untapped resources they offer. When an older American reaches out his hand, it is not always to ask for help. It may be to offer assistance, encouragement, and wise advice to those of us less experienced. Part of our efforts in aging policy must recognize the many contributions seniors have to offer. Thus, policies for the elderly must focus both on their needs and on their abilities as individuals. Through recommendations developed in this conference, we will have a blueprint for aging legislation needed in the coming years.

We set in motion the 1981 White House Conference on Aging through authorizing legislation in the 1978 amendments to the older Americans Act. The goal of the conference is to develop a comprehensive coherent national policy on aging together with implementation recommendations designed to transform these policies into reality. During the course of this week, over 2,000 delegates and 1,500 observers met in committees to discuss and draft these policy recommendations. The delegates' inquiries will reach into every area of a senior's life—income security, health care, housing, social services, and more—drafting policies that will shape aging legislation in the 1980's.

I have had the opportunity to meet with the Minnesota delegation to the White House Conference. Coming from every walk of life, they present a unified concern for the well-being of older Americans. Each brings special talents and knowledge to the issues affecting today's seniors. As a group, the North Star State's delegation are capable and caring representatives of Minnesota's concern for seniors' quality of life. And, as an example of the leadership and knowledge brought together for this forum, the Minnesota delegation leaves me convinced that the recommendations of this conference will be important tools for future aging legislation.

As one who will implement the policy recommendations, I am grateful to every participant of the 1981 White House Conference on Aging. Through these delegates' efforts, Congress will have had the benefit of years of experience and insight into aging issues. I appreciate their willingness to help focus aging policy needs and look forward to receiving their recommendations.●

THE GREAT BUSINESS GIVEAWAY

● Mr. BOREN. Mr. President, in this morning's Washington Post, columnist Hobart Rowen has written an excellent article under the heading of "The Great Business Giveaway."

In the article, Rowen focuses upon a loophole which was created in the Economic Recovery Act of 1981. I have previously spoken about the problem created by this provision which allows the so-called leasing of tax credits from one company to another. It has cost the taxpayers far more than anticipated. It could run as much as double the original estimate of $29 billion of lost tax revenues.

There were many good features of the tax reduction bill. However, this provision as Rowen points out is being abused to an unconscionable degree. When Occidental Petroleum Co., which is certainly not in financial difficulty is able to take advantage of such a provision on a huge scale, it is clear that something needs to be done.

Tax relief for all Americans to the extent that we can afford to provide it and a reduction of nonessential Federal spending are both goals supported by me. However, I cannot understand why the administration has signaled its willingness to give up on the balanced budget and has begun talking about tax increases on the average American man and woman while not taking the lead in recouping revenues by ending this flagrant abuse of the tax laws.

Turning a blind eye to tax abuses by the affluent while considering tax increases on the average worker who is struggling to get by will not meet anyone's test of fairness. I intend to work to change the law.

The article follows:

THE GREAT BUSINESS GIVEAWAY

(By Hobart Rowen)

Only now is the nation getting a fuller appreciation—and the final story hasn't been told—of just how bad a piece of legislation is the "Economic Recovery Act of 1981." In the guise of an investment-stimulus program, via super-generous business credits and write-offs, it constitutes the biggest tax giveaway in history.

Most business assets, other than buildings, that have a real economic life of more than 10 years can now be written off against taxes in five years. Thus, in five years of "accelerated depreciation," a business recovers the total cost of its investment in equipment, which can be expected still to be producing and generating profits.

But even more startling, a company that doesn't have a tax liability against which to write off such expenditures can "lease" the tax break to somebody else through what former Internal Revenue Commissioner Sheldon S. Cohen has dubbed the "rent-a-deduction" provision.

This particular gimmick was dreamed up by Washington lobbyist Charls Walker—an unofficial adviser to the Reagan administration—when businessmen began to complain that the tax credits and depreciation allowances moving through Congress earlier this year were so generous they couldn't make full use of them. So, Walker reasoned, if Corporation A has tax benefits that it can't use, why not let it sell them for cash to Corporation B?

Cohen thinks that the whole tax system—personal as well as business—has been distorted and made less progressive. All told, the revenue loss will amount to nearly $750 billion by fiscal 1986. Says Cohen: "The tax burden has been shifted dramatically from capital to income and wages; the corporate income tax and the estate tax have been virtually eliminated; and substantial benefits, such as windfall [oil] profits tax reductions, have been bestowed upon certain industries."

The egregious and indefensible "rent-a-deduction" provision does more than enable red-ink corporations, like Ford, Chrysler and

International Harvester to "sell" their tax losses to profitable companies that can use them to reduce their own tax burden.

Even worse (and the administration's tax experts never anticipated it), some companies, like Occidental Petroleum Co., have been able to use the loophole even though they themselves are profitable. Occidental, for example, has a surplus of foreign tax credits that wipe out its U.S. tax burden, and thus was able to sell off millions in investment and depreciation credits it couldn't otherwise have used.

The tremendous "market" in tax losses that has been generated is evidence, Sen. Nancy Kassebaum (R-Kan.) said the other day, that "we simply had no idea what we wrought with that." Cohen guesses that by the time it's all counted up through 1986, the loss to the Treasury from this one gimmick alone will be double the $29 billion that the Reagan administration was expecting.

To his credit, the influential Sen. Pete Domenici of New Mexico, Republican chairman of the Senate Budget Committee, has begun to speak out against this and other legalized frauds in the tax code. "We are going to have to look at such things as the loopholes, the legal tax breaks which are growing like crazy," Domenici said on "Face the Nation" over the weekend.

"If we're asking the average citizen to sacrifice, then we can't let the very rich and the very big corporations get extreme benefits through legal tax loopholes and tax breaks that don't have any social merit, and are not aimed at building the whole economy back up."

Domenici says that $45 billion to $50 billion should be trimmed from a list of $266 billion in loopholes, or so-called "tax expenditures," by fiscal 1984. The House Rules Committee, incidentally, will hold hearings next week on a proposal by Rep. David Bonior (D-Mich.) to require that the congressional budget resolutions set a binding ceiling on tax expenditures.

Curiously, Treasury Secretary Donald T. Regan, who should be worrying about these revenue losses to the government, stepped forward to claim "paternity" for "rent-a-deduction," even though everybody in Washington recognizes it to be Charlie Walker's baby. "What's wrong with helping an ailing company rather than put it out of business?" Regan asked defensively.

What's wrong, of course, is that the tax-loss sale or lease is just one more form of government bail-out for companies that have flunked the test of the marketplace. Where is the vaunted dedication of the Reagan administration to a free-market philosophy?

As Republicans like Domenici and Democrats like Cohen agree, there is a desperate need to repeal the worst mistakes of the tax bill bonanza. They also see the need for further budget cuts, especially in the bloated military spending program, to help reduce overwhelming deficits in prospect for years to come. Unless there is progress on both fronts, taxpayers at the lower end of the scale inevitably will pay the price through new excise, value-added, energy, or other regressive taxes.●

AMENDMENTS SUBMITTED FOR PRINTING

COMMISSION ON MORE EFFECTIVE GOVERNMENT

AMENDMENT NO. 648

(Ordered to be printed and to lie on the table.)

Mr. ROTH (for Mr. LEVIN) submitted an amendment intended to be proposed by him to the bill (S. 10) to establish a Commission on More Effective Government, with the declared objective of improving the quality of Government in the United States and of restoring public confidence in government at all levels.

Mr. President, I am submitting today, on behalf of Senator LEVIN, an amendment to S. 10. Senator LEVIN will be offering this amendment when S. 10 is brought to the Senate floor. I am submitting the amendment now so that it may be printed and available for Senators when S. 10 is brought to the floor. I ask unanimous consent that the amendment be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

On page 13, line 14, strike out "Senate majority leader" and insert "President pro tempore of the Senate".

On page 14, line 2, strike out "Senate majority leader" and insert "President pro tempore of the Senate".

On page 14, line 9, strike out "two" and insert "three".

On page 14, line 15, strike out "other major political party" and insert "political party which is the minority party in the House".

On page 14, line 22, insert after the period the following: "In appointing members under subsection (a)(2) who are from the political party which is the minority party in the House, the Speaker shall obtain the advice and consent of the Minority Leader of the House.".

On page 15, line 1, strike out "other major political party" and insert "political party which is the minority party in the Senate".

On page 15, lines 1 and 2, strike out "majority leader" and insert "President pro tempore".

On page 15, line 15, strike out "appoint" and insert "select".

On page 15, line 17, insert after the period the following: "The selection by the President of the Chairman shall be subject to the approval of a majority vote of the members of the Commission, conducted by secret ballot.".

On page 21, strike out lines 17 through 20 and insert the following: "On December 3, 1984, the Commission shall submit to the Congress and the President its final report with respect to such activities, including all of its findings and recommendations.".

On page 23, line 23, strike out "$16,000,000" and insert "$10,000,000".

DEPARTMENT OF DEFENSE APPROPRIATION, 1982

AMENDMENT NO. 649

(Ordered to be printed and to lie on the table.)

Mr. MATHIAS submitted an amendment intended to be proposed by him to the bill (H.R. 4995) making appropriations for the Department of Defense for the fiscal year ending September 30, 1982, and for other purposes.

AMENDMENT NO. 650

(Ordered to be printed and to lie on the table.)

Mr. METZENBAUM (for himself, Mr. PELL, Mr. RIEGLE, Mr. EAGLETON, Mr. DODD, Mr. RANDOLPH, Mr. BURDICK, Mr. FORD, Mr. KENNEDY, Mr. MELCHER, Mr. SASSER, Mr. BAUCUS, Mr. MOYNIHAN, Mr. BRADLEY, Mr. DIXON, Mr. MITCHELL, Mr. HEINZ, Mr. COHEN, Mr. HATFIELD, Mr. TSONGAS, Mr. BIDEN, Mrs. HAWKINS, and Mr. PRYOR) submitted an amendment intended to be proposed by them to the bill H.R. 4995, supra.

NOTICES OF HEARINGS

SUBCOMMITTEE ON EMPLOYMENT AND PRODUCTIVITY

Mr. QUAYLE. Mr. President, the Subcommittee on Employment and Productivity will hold hearings on the problem of unemployment in the automobile industry. The hearings will be held in Washington, D.C., January 11 and 12, 1982.

The purpose of the hearings is both to gather factual information on the nature and dimension of the unemployment problems of the industry and to hear recommendations.

Questions and issues that the subcommittee hopes to have addressed in the hearing are as follows:

I. DIMENSIONS OF THE PROBLEM

What are the employment prospects in the automobile industry in the next few years? How many workers with experience in the industry have no reasonable expectation of future employment there? Where are they, who are they? What is their age, sex, and economic status? What is their educational and employment background? What occupations have been most affected? What has been the duration of unemployment for laid-off workers?

II. WHAT HAS HAPPENED TO THE UNEMPLOYED WORKER?

How many workers laid off from the automobile industry have returned to other work? What are their characteristics? Which workers are least likely to return to work, either at their previous jobs or other jobs and why? What has happened to unemployed workers whose unemployment benefits have expired; how are they supporting themselves and their families? How many are on welfare, and how many have relocated to other labor market areas or regions?

III. WHAT EMPLOYMENT OPPORTUNITIES ARE THERE FOR THE UNEMPLOYED WORKER?

What is the likelihood of matching current skills and abilities of unemployed workers with the occupational skills in demand in the locality, State, or elsewhere? What skill levels are required and what training or retraining is needed to match the skills of these workers with occupational opportunities in the labor market?

IV. WHAT ASSISTANCE PROGRAMS ARE AVAILABLE TO OR NEEDED BY THESE WORKERS?

What assistance programs are available to the workers at the Federal, State, and local level, from the employer, from the union? What training/retraining is being done by the Vocational and Adult Educational Systems, by the Federal Government, by private industry?

What assistance programs are needed, particularly in the area of employment and training and related support services?

WHAT DOES THE FUTURE HOLD FOR THESE WORKERS?

Persons interested in testifying at this hearing should submit a written request to Bob Guttman, 4230 Dirksen Senate Office Building, Washington, D.C. 20510 by December 18, 1981. Questions should be directed to Mr. Guttman at 202/224-6306.

SUBCOMMITTEE ON GOVERNMENTAL EFFICIENCY AND THE DISTRICT OF COLUMBIA

Mr. MATHIAS. Mr. President, I would like to announce that the Subcommittee on Governmental Efficiency and the District of Columbia of the Governmental Affairs Committee will be holding a hearing on S. 1845, technical amendments to the District of Columbia Self-Government and Governmental Reorganization Act and the charter of the District of Columbia. The hearing will be held on Wednesday, December 9, 1981 at 9:30 a.m. in room 5110 of the Dirksen Senate Office Building.

For further information, please contact Eileen Mayer of the subcommittee staff at 224–4161.

AUTHORITY FOR COMMITTEES TO MEET

COMMITTEE ON ENVIRONMENT AND PUBLIC WORKS

Mr. STEVENS. Mr. President, I ask unanimous consent that the Committee on Environment and Public Works be authorized to meet during the session of the Senate on Thursday, December 3, to continue the markup of the Clean Air Act Amendments.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON ENERGY, NUCLEAR PROLIFERATION, AND GOVERNMENT PROCESSES

Mr. BAKER. Mr. President, I ask unanimous consent that the Subcommittee on Energy, Nuclear Proliferation, and Government Processes of the Committee on Governmental Affairs be authorized to meet during the session of the Senate on Friday, December 4, at 9:30 a.m., to hold a hearing on enforcement of Federal regulations.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON CIVIL SERVICE, POST OFFICE, AND GENERAL SERVICES

Mr. BAKER. Mr. President, I ask unanimous consent that the Subcommittee on Civil Service, Post Office, and General Services of the Committee on Governmental Affairs be authorized to meet during the session of the Senate on Friday, December 4, 1981, to hold a hearing to discuss pay matters.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDERS FOR FRIDAY

RECESS UNTIL 10:30 A.M. TOMORROW

Mr. BAKER. Mr. President, I ask unanimous consent that when the Senate completes its business tonight it stand in recess until the hour of 10:30 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECOGNITION OF CERTAIN SENATORS

Mr. BAKER. Mr. President, I ask unanimous consent that after the recognition of the two leaders under the standing order, the following Senators be recognized on special orders: The Senators from Alabama, Mr. DENTON and Mr. HEFLIN, jointly for 15 minutes total: the Senator from Texas (Mr. BENTSEN) for 5 minutes; the Senator from Mississippi (Mr. COCHRAN) for 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEADERSHIP TIME REDUCTION

Mr. BAKER. Mr. President, I ask unanimous consent that the time for the two leaders be reduced to 5 minutes each on tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

PERIOD FOR ROUTINE MORNING BUSINESS

Mr. BAKER. Mr. President, I ask unanimous consent that after the expiration of the time for the recognition of the leadership and the special orders there be a period for the transaction of routine morning business to extend not longer than 5 minutes in which Senators may speak for not more than 2 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

RESUMPTION OF CONSIDERATION OF DEPARTMENT OF DEFENSE APPROPRIATIONS, 1982

Mr. BAKER. Mr. President, I ask unanimous consent that upon the expiration of time for routine morning business the Senate resume consideration of the Department of Defense appropriations bill, H.R. 4995 on tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. BAKER. Mr. President, on tomorrow the Senate will resume consideration of this measure. It is the intention of the leadership to pursue this measure as long as necessary to finish it. We already have an order to convene on Saturday. It is the intention of the leadership to do this bill, if possible, as well as the Small Business bill, and perhaps other measures before the Senate goes out for the weekend.

Mr. ROBERT C. BYRD. How about the Military Construction bill?

Mr. BAKER. Mr. President, I also hope we can do the Military Construction appropriations bill either tomorrow or Saturday, and if not, then on Monday.

RECESS UNTIL 10:30 A.M. TOMORROW

Mr. BAKER. Mr. President, if there be no further business to come before the Senate—and I see no Senator seeking recognition—I move, in accordance with the order previously entered, that the Senate now stand in recess until 10:30 a.m. on tomorrow.

The motion was agreed to; and at 12 o'clock midnight the Senate recessed until Friday, December 4, 1981, at 10:30 a.m.

CONFIRMATIONS

Executive nominations confirmed by the Senate December 3, 1981:

ALASKA LAND USE COUNCIL

Vernon R. Wiggins, of Alaska, to be Federal Cochairman of the Alaska Land Use Council.

DEPARTMENT OF THE INTERIOR

Pedro A. Sanjuan, of the District of Columbia, to be an Assistant Secretary of the Interior.

Janet J. McCoy, of Oregon, to be High Commissioner of the Trust Territory of the Pacific Islands.

The above nominations were approved subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.

THE JUDICIARY

Edward R. Becker, of Pennsylvania, to be U.S. circuit judge for the third circuit.

Jackson L. Kiser, of Virginia, to be U.S. district judge for the western district of Virginia.

Robert G. Doumar, of Virginia, to be U.S. district judge for the eastern district of Virginia.

DEPARTMENT OF JUSTICE

Brent D. Ward, of Utah, to be U.S. attorney for the district of Utah for the term of 4 years.

Joseph P. Stadtmueller, of Wisconsin, to be U.S. attorney for the eastern district of Wisconsin for the term of 4 years.

Donald B. Ayer, of California, to be U.S. attorney for the eastern district of California for the term of 4 years.

Louis G. DeFalaise, of Kentucky, to be U.S. attorney for the eastern district of Kentucky for the term of 4 years.

William S. Vaughn, of Missouri, to be U.S. Marshal for the eastern district of Missouri for the term of 4 years.

Howard V. Adair, of Alabama, to be U.S. Marshal for the southern district of Alabama for the term of 4 years.

Paul R. Nolan, of Washington, to be U.S. Marshal for the eastern district of Washington for the term of 4 years.

Harry Connolly, of Oklahoma, to be U.S. Marshal for the northern district of Oklahoma for the term of 4 years.

James L. Meyers, of Louisiana, to be U.S. Marshal for the middle district of Louisiana for the term of 4 years.

THE JUDICIARY

Jules G. Korner III, of Maryland, to be a judge of the U.S. Tax Court for a term expiring 15 years after he takes office.

Perry Shields, of Tennessee, to be a judge of the U.S. Tax Court for a term expiring 15 years after he takes office.

Meade Whitaker, of Michigan, to be a judge of the U.S. Tax Court for a term expiring 15 years after he takes office.

EXTENSIONS OF REMARKS

INTERIOR SECRETARY JAMES WATT—PART I

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. McDONALD. Mr. Speaker, during the past few months accusations have been made that the policies of Interior Secretary James Watt will undermine efforts to preserve and protect our natural resources. I strongly disagree with this contention. What Secretary Watt has done is reversed the business-as-usual syndrome. For the first time in a very long time, the policies emitting from the Interior Department reflect a more balanced and reasonable approach to managing our natural resources.

An article by Lee Edwards, which appeared in the October 1981 issue of Conservative Digest, discusses this in greater detail and shows that Secretary Watt has not abandoned the goals of the truly concerned conservationists. I commend the first part of this article to the attention of my colleagues:

Some people really don't like Interior Secretary James Watt, an outspoken, unabashed conservative Republican.

Former Senator Gaylord Nelson, a liberal Democrat and chairman of the Wilderness Society, calls Watt "unfit to hold public office."

Rep. Morris Udall, a liberal Democrat and chairman of the House Interior Committee, contends that Watt hopes to "destroy and distort some of the nation's basic environmental laws."

Sen. Alan Cranston, a liberal and the Senate's number two Democrat, urges the ouster of Watt on the grounds that he is "a puppet of the exploiters and destroyers." Cranston has also described Watt as an "extremist," a "radical" and a "butcher."

Former Interior Secretary Cecil Andrus, appointed by Jimmy Carter, calls Watt one of the "rape, ruin and run boys of America."

Democratic National Chairman Charles Manatt labels Watt "a man who would despoil the surface of the earth." His comments followed passage of a resolution by Democratic Committee members from the Western states calling for Watt's "immediate resignation."

On the other hand, some people, including one very important person, like James Watt and what he is doing as Interior Secretary very much.

President Ronald Reagan stresses that Watt "has my full support."

Republican seantors from the West—men like Alan Simpson of Wyoming and Paul Laxalt of Nevada—strongly praise Watt.

Carl Bagge, president of the National Coal Association, says of Secretary Watt: "He's made my job a pleasure to do again. I can look myself in the mirror and no longer see myself as evil incarnate."

What's going on? Why is Secretary Watt, the head of a government agency that normally makes as many waves as there are in an old mill pond, so controversial?

There are basically two reasons. The first is national politics.

Angry over President Reagan's continuing success on Capitol Hill, but afraid to attack him directly, Democrats are striking at the men around the President, especially those who they think are politically unpopular.

Specifically, leaders of the Democratic Party have forged a political alliance with outraged environmentalists to oust James Watt and, not so incidentally, wound the President.

Both groups are quite open about their alliance.

Environmental lobbyists have met with Ann Lewis, political director of the National Democratic Committee, and chairman Charles Manatt.

"The very extreme positions by Watt and others in the administration leave us looking for some leadership," admits Rafe Pomerance of Friends of the Earth. "Manatt was responsive."

Officials of no less than seven major environmental groups have met with Manatt, including the National Audubon Society, the Sierra Club, the League of Conservation Voters, the Environmental Defense Fund, the Environmental Policy Center, the Wilderness Society and Friends of the Earth. Not so incidentally, all supported Jimmy Carter and opposed Ronald Reagan in 1980.

A recent issue of Democrats Today, the official publication of the Democratic Party, focused on Watt. It featured an article by Congressman Udall denouncing the Interior Secretary.

Robert Neuman, spokesman for the National Democratic Committee, concedes: "We're watching Watt with some interest because he's a political liability."

How much of a political liability he is remains to be tested. As political analyst Kevin Phillips wrote, the places where Jim Watt seems to be the most unpopular "just happen to be Aspen, Cape Cod, Carmel, Marin County, Calif., and so forth, locales where 'the environment' is a marvelous backdrop for a wine-and-cheese picnic or a stunning view from the deck of a $400,000 home. They're by no means the areas where 'the environment' (or the wilderness) is a place to earn a living in the copper mines or in the potato fields or in the sawmills."

The second reason for the controversy swirling around James Watt is national resources.

Although most Americans are not aware of it, the Secretary of the Interior, as Newsweek puts it, "is not only the nation's chief environmental officer, but also its game warden, dam builder, miner and Indian chief."

Secretary Watt oversees one-third of the land in the United States, some 762 million acres. He administers 300 national parks, 400 wildlife refuges and the wilderness areas. He manages the Bureau of Reclamation, which builds the dams and other irrigation projects that provide water for the West. He executes the strip-mining law, leases oil rights on the 1 billion acres of the Outer Continental Shelf and regulates the mineral rights on some 190 million acres of national forest.

For many years, the Department of the Interior was run by single-minded proenvironmentalists who considered "economic development" two dirty words. They made preservation of the land a holy cause. In the process, they acquired new federal parklands, slapped severe restrictions on mining and oil and gas drilling, and emphasized the importance of saving various endangered species, but paid little attention to one species that was experiencing considerable economic danger—man.

For nearly two decades, these environmental extremists rode tall in the saddle, but they were also riding for a fall. It came last November with the election of Ronald Reagan as President and his selection of James G. Watt as Secretary of the Interior.

The environmentalists knew there would be changes but did not suspect they would come so swiftly. They did not take proper measure of Jim Watt.

Within days of taking office, the new Secretary fired 51 of Jimmy Carter's political appointees and abolished the agency charged with acquiring additional parklands.

In addition, as the *Los Angeles Times* summarized the first hectic months, large sections of the California coast were reopened to potential offshore oil production, strip-mining controls were relaxed, the budget of the endangered species program was reduced by 40 percent, granting of mineral leasing rights was speeded up and 50 attorneys in the departmental solicitor's office, mostly responsible for investigating violations of environmental regulations, were removed.

For many, these changes were long overdue. Traditional roles of the department, such as dam building and mineral and petroleum development, had become increasingly difficult because of new regulations. Chris Farrand, a lobbyist for Peabody Coal Co., and a former Interior official, says his industry had concluded that "you just could not get a fair hearing over there. Now, people are listening."

The charge that environmental extremism prevailed at Interior is borne out by findings of the General Accounting Office, the official watchdog of the federal government. According to a number of GAO reports released over the past 18 months, the National Park Service and the U.S. Forest Service (both Interior agencies) have often acquired land where full ownership was not necessary to provide adequate protection. They added to inflationary pressures by bidding up the price of the land, disregarded the interests of local communities and private owners and refused to consider alternate protective measures that would be more efficient.

GAO official Ray Kirk told a Senate workshop in July: "We recognize that some lands must be purchased, but we find no plausible reason why every one must be owned."

Jim Watt was determined to change the "land-over-man" attitude quickly and without apology. Within the first few weeks of taking office, he declared that his mission was "to undo 50 years or so of bad government." He brought his own team in with him, and they litterally cleaned house—moving, for example, the Secretary's office

□ This symbol represents the time of day during the House proceedings, e.g., □ 1407 is 2:07 p.m.

● This "bullet" symbol identifies statements or insertions which are not spoken by the Member on the floor.

from the enormous ceremonial hall fancied by his predecessor to a small, plain room that had served as Harold Ickes's bedroom back in the 1930s.

After six months, and in a reflective mood, Secretary Watt told the Washington Star that he had not chosen to be provocative or to stir up controversy with environmental groups but was trying to redirect the policies of Interior back toward a centrist position.

"I came here," he explained, "in an effort to bring balance to this department, to bring the pendulum back from left field. My early actions may have appeared to be pro-development, but that was because we were trying to swing the pendulum back to the middle ground" between unrestricted development and unbridled conservation.

In an exclusive interview with Conservative Digest, Secretary Watt stressed that he had a responsibility to see that public lands are managed for the nation's short-term and long-term benefit. He says that every decision is measured in three ways: Will it improve our national security? Will it protect the environment? And will it create jobs?

It is the Secretary's insistence on "multiple uses" of the land, more than anything else, which has infuriated the environmentalists who clearly believe they have a divine mission to protect America's public lands against miners, hunters, farmers and ranchers—in short, against the very people who discovered, settled and developed the land in the first place.

The environmentalists don't know what to make of Watt. As Newsweek says, they are used to those who oppose them out of economic self-interest—miners, developers, oilmen—rather than on principle. But Jim Watt has never profited from any exploitation of the outdoors. He is, next to David Stockman, the least prosperous member of Reagan's Cabinet, with a net worth of only $65,000.

Actually, although it is seldom mentioned by the environmental extremists, the majority of Americans are not on their side, but with Jim Watt. A Newsweek poll conducted in June showed that an overwhelming majority of the public agrees that it is possible to have strong economic growth and still maintain high environmental standards.

Even larger majorities support most of the measures proposed by Watt to increase energy production. By a 70-22 · percent margin, Americans approve of expanded offshore oil drilling, an by 76-19 percent, they favor increasing oil exploration on federal lands.

A plurality would ease strip-mining regulations to allow more coal to be mined, while a majority would relax air-pollution standards to permit more coal to be burned. These findings suggest that, like the man who appointed him, Jim Watt is a man whose time has come.

James Gaius Watt was born in the High Plains—in Lusk, Wyo., near the Nebraska border, in 1938. His grandmother came west by covered wagon in the nineteenth century. His father, William, was raised on a small cattle ranch in the middle of Wyoming. The Watts moved to Wheatland when Jim was in the eighth grade. There his father practiced law and his mother ran the town's 30-room Globe Hotel.

Jim Watt has always been an achiever. He was a high school officer for three years, a varsity athlete, a member of the honor society and the governor of Wyoming's Boys' State. He married the only girl he ever dated, Leilani Hombartner, when they were both sophomores at the University of Wyoming. They had two children, Erin, now 20 and married to a divinity student, and Eric, 19. Both children presently attend Oral Roberts University in Tulsa, Okla.

A nominal Christian in his early years, Watt was "born again" in 1964 when he accepted Jesus Christ as his personal savior. His charismatic faith is central to him and his entire family, but he scrupulously separates his professional work from his religious beliefs. He and his wife now attend the Assembly of God Church outside Washington, D.C.

Jim Watt is a big man—6 feet 2 inches tall and a lean 185 pounds. He moves with lanky grace in a crowd or on the range. He does not smoke, nor does he drink alcohol, coffee or tea. He frequently takes his lunch at his desk and avoids idle chitchat during the working day. He is serious but not solemn, with a quick wit that frequently punctuates his conversation with colleagues or visitors.

Watt received both his undergraduate and law degrees from the University of Wyoming. In 1962, he worked in the Senate campaign of conservative Republican Milward Simpson. When Simpson won he brought Watt to Washington as his administrative assistant. Watt worked for the U.S. Chamber of Commerce and then served at the Interior Department from 1969 to 1975, including a period as director of the Bureau of Outdoor Recreation. During those six years, he learned much about the ins and outs, the strengths and weaknesses of the 80,000-employee agency. He was appointed to the old Federal Power Commission by President Ford, serving from 1975 to 1977.

Jim Watt then returned to the West, settling down in Denver, when he formed the Mountain States Legal Foundation (MSLF) with the financial backing of conservative businessman Joseph Coors. The foundation usually represented clients, large and small, who were challenging overly restrictive regulation of natural resources. MSLF went to court constantly to open public lands to exploitation, to expand grazing rights on federal land and to open recretational areas to vehicles and powerboats.

According to Newsweek, one case that Watt remembers as particularly significant involved 35 Mexican-American ranchers who grazed their small herds on a patchwork of federal, state and private lands along the Rio Puerco in New Mexico. The Bureau of Land Management, concerned about erosion due to overgrazing, ordered substantial cuts in the size of the herds. The MSLF successfully challenged the cuts in court.

Watt points to this case as an all-too-typical example of government intrusion affecting private as well as federal land. "To tell people how to manage their own land—that's despicable in America," he declares.

In effect, Watt and his lawyers used the same legal tactics that had worked so well for environmental groups seeking to slow or halt development. The Mountain States Legal Foundation was patterned after the Pacific Legal Foundation in California, started nearly 10 years earlier by former Reagan aides.

"Jim would never say, 'I don't know,' or 'What do you want me to do?' about questions that would come up," said Kea Bardeen, and attorney at Mountain States. "He was a leader. He was never wishy-washy, and most of us felt inspired by his presence."

Watt was chosen as Secretary of the Interior after former Senator Clifford Hansen of Wyoming withdrew his name because he did not want to sell his family's extensive grazing rights to comply with the new conflict-of-interest regulations. Senator Paul Laxalt was unofficially responsible for all top Interior appointments. Laxalt had never met Watt, but after interviewing him, he phoned Reagan to say, "He's our man."

Jim Watt has been Reagan's man ever since. He is all the things the President looks for in a Cabinet member: He is loyal, he is conservative and he is a good manager. Reagan has recognized his ability by naming Watt chairman of a Cabinet subcommittee, the Council on Natural Resources and Environment, which gives him authority over Energy Secretary James Edwards and Environmental Protection Administrator Anne Gorsuch.

Watt explained his quick rise to prominence in an interview in Public Opinion magazine: "No other Secretary of the Interior, in recent times at least, has had a President who understands my department like Ronald Reagan does. He's a Westerner. Fifty percent of his state is owned and managed by the Federal government. . . . I move with confidence in the management skills I bring to the department, because I know I'm going to be backed by the President."●

JOHN DELANEY

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. STARK. Mr. Speaker, it gives me great pleasure to honor an outstanding public servant, Mr. John Delaney, who is retiring from the board of trustees of the Amador Valley Joint Union High School District.

Over the past 12 years, John has devoted countless hours of personal time, at no small sacrifice to his own family, to insure the youth of our valley the best possible education. He was tireless in his effort to identify community and academic needs and to set goals for the future. Due to his efforts, and to the efforts of his fellow board members, parents and teachers, Amador Valley High School District is recognized as one of the finest in the State, proud of its diversity and its commitment to individual achievement.

Mr. Speaker, may I take this opportunity to ask you and all my colleagues in the House to join with me in wishing Mr. John Delaney further success and continued involvement within our community.●

ATOM BOMB'S PRAYER

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. BINGHAM. Mr. Speaker, how would the famous prayer of St. Fran-

cis read if it were the prayer of the atom bomb? Bishop William E. Swing of the Episcopal Diocese of California has proposed an arresting answer.

The following is an excerpt from an address made by Bishop Swing to the Diocesan Convention on October 23, 1981:

Although I understand and sympathize with the necessity for strong Military preparedness in the face of possible Russian aggression, I believe we have to face the moment of truth when our weaponry exceeds our defense needs and then threatens God's created order far beyond our national interests. Now that Russia can destroy all our major cities 17 times and we can destroy all major Russian cities 40 times—and both sides are producing 3 more nuclear bombs each day—we must now ask the simple question: Will these bombs be used? The answer to that as far as I am concerned is, "Yes."

The first story we read in the Bible is the story of Adam and Eve in the Garden. They are told they must not eat of the fruit of the tree of the Knowledge and Good and Evil. What Adam and Eve do about that apple is exactly what people in all time do about using god-like power. They will eat the apple. We will use the bomb. To trust in the potential perfect conduct of this world's two great powers seems naive. The only way to keep Adam and Even from eating this apple is to chop down the tree and get it out of there. The only way to keep us from nuclear self-destruction is to pursue aggressively a course of mutual disarmament.

On this 800th anniversary of this city's patron saint, Francis, the man who had such profound respect and appreciation for the created order, I changed the words of his famous prayer. Having the same form but an opposite theme, this could be the prayer of the nuclear bomb:

Lord, make me an instrument of total annihilation.
Where there is hatred, let me bring it to finality;
Where there is injury, death;
Where there is doubt, chaos;
Where there is despair, oblivion;
Where there is darkness, void;
Where there is sadness, doom.
O Divine Master, grant that I may not seek so much to be intimidated as to intimidate;
To be understood as to avoid detection,
To be loved as to be feared;
For it is in threatening that we control;
It is in condemning that we bring condemnation; and
It is in dying I bring an end to what You created.●

THE SALE OF F-16 FIGHTERS TO PAKISTAN

HON. THOMAS J. TAUKE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. TAUKE. Mr. Speaker, an important deadline passed on November 22, 1981. As of that date, the administration was free to carry out its proposed sale of 40 F-16 fighter-bombers to Pakistan. Only a vote of disapproval by both Houses could have prevented the sale, and neither House acted within the required 30 days after Congress was formally notified of the proposed sale.

The F-16, as one of our most advanced aircraft, has been doled out sparingly to other nations. Apart from the NATO countries, only Israel and South Korea have been favored with the F-16. Both of those countries have been closely tied to the United States in formal and informal alliances. But Pakistan is no such ally. The only reason for this sale is the presence of 85,000 Russian troops in Afghanistan. We are told that we must shore up Pakistan against the threat of attack from the north. But is it wise to base our policy toward Pakistan solely on the threat from the Soviet Union?

Our policy should be based on other factors as well, I think. We must not overlook the fact that Pakistan is led by a military government that has taken positions clearly opposed to American policy in the Middle East and other parts of the world. General Zia, Pakistan's President, is a man whose poor record on human rights has won him broad unpopularity among his own people. He has contributed to nuclear proliferation—and thus to the dangers in an already dangerous world—by leading his country into a covert program to develop a nuclear explosive. Selling F-16's to Pakistan sends the wrong message to the rest of the world. It says that no matter what actions a nation takes, the United States will extend a shield if that nation is threatened by the Soviet Union.

At best, we share only limited interests with Pakistan, and there is good reason to question whether those interests will be served by the sale of the F-16's. It is clear that for Pakistan, the F-16 is most appealing not as protection against the Russians—the Pakistanis have often showed themselves to be less concerned about the Russian threat to their borders than we are—but as a potential weapon against Pakistan's old adversary, India.

India is much larger than Pakistan—in land area, population, gross national product, and military strength. The 40 F-16's may well offer Pakistan the illusory hope of redressing the military imbalance. Sixty percent of India's territory will lie within the range of the F-16, and, in particular, India's nuclear facilities will be vulnerable to F-16 strikes. It should be remembered that when Israel struck the Iraqi nuclear reactor earlier this year, it was with F-16's supplied by the United States. The F-16's sold to Pakistan will thus be a destabilizing element in an already unstable region. Indeed, it is not beyond the realm of possibility that the presence of the F-16's in Pakistan will tempt India into the sort of preemptive strike that would serve the interests of the Soviet Union itself.

In short, by selling the F-16's to Pakistan we may be defeating our own purpose—that is, helping Pakistan to defend itself from attack. We could have served that purpose much better by selling Pakistan aircraft that are not capable of long-range strikes but are suited only to defensive uses.

Fortunately, Congress may yet be able to block at least part of this sale. Direct military assistance to Pakistan is barred under section 669 of the Foreign Assistance Act, because of Pakistan's efforts to develop a nuclear explosive. Unless Congress lifts that ban, arms sale credits cannot be extended to Pakistan—and without such credits, it is at least questionable that the sale of all 40 F-16's can be completed.

For my own part, I will strenuously resist the lifting of restrictions on aid to Pakistan when that issues comes before the House.●

CONGRESSIONAL THEATER OF THE ABSURD

HON. RALPH REGULA

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. REGULA. Mr. Speaker, the spectacle surrounding the adoption of the latest continuing resolution must not reoccur.

Congress—on its own, yet buttressed by the administration—permitted the crucial budget debate to deteriorate from important issues of policy to obfuscating issues of numbers.

The fact of the matter is that nobody—OMB, the Appropriation Committees, the Budget Committees, nobody—knew whether the budget embodied in the continuing resolution vetoed by the President on November 23d was over or under the administration's budget in the only category relevant to appropriation bills—discretionary spending. This was an absurd situation.

How could this be? The answer is as complex as the problem. The problem of sorting out the numbers is very difficult. Honest analysts will disagree. Yet, many of the numbers used in debate were clearly derived from a partial or complete vacuum.

Mr. Speaker, I am encouraged by what I perceive to be an honest and sincere effort on the part of all the players—the administration, congressional Republicans and Democrats, Budget and Appropriations Committee staffs—to resolve the numbers dispute so that we can get on with our job-making policy.●

COMMENTS ON ST. LOUIS CIRCUIT ATTORNEY'S STYLE OF JUSTICE

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. CLAY. Mr. Speaker, I would like to call a matter to the attention of my esteemed colleagues. In this day and time, the rights of an individual in our criminal justice system are under severe attack and in danger of being eroded to the point of nonexistence. Citizens throughout the country are calling for law and order, no matter what the cost. They believe the way to end crime in the streets is to eliminate an individual's protections under the law so as to insure incarceration. Such actions would cut the moral fiber this country is made of. The matter I want to acquaint you with concerns the circuit attorney of the city of St. Louis, Mo., Mr. George Peach. He has made some remarks that are not only disparaging, but disgusting, and disappointing. Upon hearing of the release on bond of a defendant accused in a bombing case, Mr. Peach commented that, "If someone decided to take care of him, it would save us a lot of time and effort. I won't worry a bit about his safety."

Mr. Speaker, those remarks were callous, insensitive remarks. For someone in Mr. Peach's position, the comments were in complete disregard of the position he holds and shakes the premise of this Nation's basic code of law. In all educational institutions in this country, from elementary school through college, we are taught that a man is presumed innocent until proven guilty. To advocate citizens taking the law into their own hands is inexcusable. To condone the exacting of punishment by citizens before guilt is established is reprehensible, unconscionable, and grossly negligent, especially when it is done by the very person whose responsibility it is to uphold the law. The legal profession and the citizens of St. Louis deserve better. With this in mind, I would like to share with my colleagues the following editorial:

[From the St. Louis Post Dispatch, Oct. 27, 1981]

MR. PEACH'S NOVEL APPROACH

It is discouraging enough to realize that good sense may never govern the tongue of St. Louis Circuit Attorney George Peach. It now appears that shame will not do so either. What else is one to conclude upon reading Mr. Peach's comments that a gangland murder of a defendant in a bombing case would be in the interests of law and order? The prosecutor's gross remarks were made upon the release on bond of Michael E. Kornhardt, who has been charged in the bombing death of George M. Faheen Jr. Speculating slyly that Mr. Kornhardt himself may become the victim of another bombing, Mr. Peach said that "If someone decided to take care of him, it would save us a lot of time and effort. I won't worry a bit about his safety."

Caught up, as Mr. Peach no doubt is, in the heady prosecution of his duties, it may well be easy for him to overlook the niceties of the law, which prescribe that Mr. Kornhardt is an innocent man until proven guilty. And pressed by his many duties, Mr. Peach may well imagine that it would be convenient if the hoodlum world would save him "a lot of time and effort" by bumping off suspects, thus obviating the need for formalities and the bother of going to trial. What a carefree existence prosecutors would have if all of their criminal cases could be disposed of with so little fuss. The fact that such a resolution would produce more work for law enforcement authorities in the form of new murders to solve apparently has not yet penetrated Mr. Peach. But give him time. The man, after all, is working on the very edge of criminal justice theory—where no responsible official has tread, at least for a couple of centuries.●

PRESIDENT REAGAN'S CALL FOR ARMS REDUCTIONS

HON. DONALD J. PEASE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. PEASE. Mr. Speaker, on November 18, President Ronald Reagan addressed the Nation in his first major foreign policy speech. In this address, the President made a strong statement for nuclear arms control—a bold and welcome move on his part. Speculation abounds among the President's critics as to his reasons for his statements. To me, however, speculation about motives is far less important than the fact of the speech itself.

This is the topic that I discussed in my most recent weekly newspaper column. It follows:

WASHINGTON REPORT

(By Don J. Pease)

American and Soviet negotiators met this week to talk about whether limited-range "Theater Nuclear Forces" can be restricted in Europe.

President Ronald Reagan deserves much credit for moving aggressively to take the initiative for arms reductions with his November 18 speech to the nation.

The United States, Reagan told Soviet President Leonid Brezhnev, is willing to forego deployment of any nuclear warhead missiles in Europe if the Soviet Union will dismantle medium-range missiles it already has aimed at Europe.

Further, said Reagan, his administration is eager to begin talks "as soon as possible" on ways to reduce the intercontinental ballistic missiles and other strategic nuclear weapons which the world's two greatest powers have aimed at each other.

For good measure, the President added conventional arms limitations to the agenda for future negotiations between the two nations.

It was a bold, and in my view, welcome move on the part of President Reagan.

To be sure, some critics contend that the Reagan speech was a hasty effort to slow down the rapidly growing anti-nuclear movement in Europe which might ultimately leave the U.S. with no European soil on which to place its Pershing II and cruise missiles.

The anti-nuclear demonstrations, critics say, developed because of Reagan's sword-rattling and his scrapping of the SALT II arms control treaty negotiated by his three predecessors.

To me, speculation about motives is far less important than the actual fact of the speech itself. For whatever reason, President Reagan made—in his first major foreign policy speech—a very strong statement for nuclear arms control. The speech ought to be taken at face value.

I'd like to think that President Reagan is becoming increasingly aware of the awesome power which is his to wield. At any time of the day or night, he may pick up the phone and be informed of a possible or probable Soviet nuclear missile launch. He will have 20 minutes to decide whether the reports are accurate and whether to launch U.S. missiles in retaliation. Dozens of B-52 bombers and thousands of land and submarine-based missiles will await his word. Any one of those bombers will carry more destructive force than all of the bombs dropped in the six years of World War II.

Perhaps, too, President Reagan has recently re-read President Dwight Eisenhower's farewell address to the American people in 1961 in which he not only warned about the power of the military-industrial complex but also said: "America's leadership and prestige depend, not merely upon our unmatched material progress, riches and military strength, but on how we use our power in the interests of world peace and human betterment."

And, continued Ike: "Disarmament, with mutual honor and confidence, is a continuing imperative. Together we must learn how to compose differences, not with arms, but with intellect and decent purpose."●

THE RETIREMENT OF MR. WAYNE BARNES

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. STARK. Mr. Speaker, it is a great honor to have been invited to speak at the retirement of Mr. Wayne Barnes. Such events always bring a multitude of thoughts and emotions to mind. The Amador Joint Union High School District will miss the dedication and guidance of Wayne Barnes, yet we are more than grateful for all he has done.

During his 6 years on the school board we have seen many changes, and Wayne Barnes has played an active role the entire time. His participation in the task force to establish high school proficiency tests has been critical to the success of secondary education programs in the valley.

I want to join the entire staff, administrators, teachers and students, in wishing Wayne Barnes, his wife, Valerie, and their children, Steve, Richard, Jeffrey, Tina Marie and Mary all

the best. I speak for everyone when I say he will be missed.●

RUBIK'S ECONOMICS

HON. NORMAN D. SHUMWAY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. SHUMWAY. Mr. Speaker, it is part of an economist's job to try to mystify us with a lot of numbers and formulas. Despite that, the basic principles of human economic activity can be read within each of us. In trying to make sense of "supply side" economics, maybe that is a good place to start.

The Keynesians tell us that demand creates supply. Their idea is that demand can be created by putting money into the hands of the people, who will then demand goods and services, and so those goods and services will be provided. For many years, Government has chosen to put money into the hands of the people by spending more than it takes in, and printing enough money to cover the difference. It would be possible to give people money by cutting taxes, but politicians do not like that method, because the people might spend the money on the wrong things.

Supply-side economics starts at the other end. Supply-siders tell us that supply creates its own demand. They say that someone will produce something even though there is no demand for it. Although at first that seems unlikely, if you think about it, you see that it couldn't be any other way. How could anyone demand something that did not exist? Let me give a simple example.

Think about Rubik's cube. No matter how much pump priming Congress did, or tax cutting, nobody was sitting around waiting for a Rubik's cube to play with. It was Rubik who had the bright idea of creating a supply of the little beasties. Once they were created, the demand grew enormously, and now thousands of man-years have been wasted trying to put the things together properly.

Exactly the same thing happened with video games, with home computers, with front-wheel drive cars, with jogging shoes, and with color television. These things did not come into being because of a demand for them. They came into being because an entrepreneur figured he could find someone to buy them if he went into the business of making them. The demand followed the supply.

The question for us today is how we can encourage more entrepreneurs to undertake the creation of more supply. The answer involves tax cuts, but not just any tax cuts. We can cut taxes across the board, or just for rich people, or just for poor people. The kind of cuts that are likely to help, it seems to me, are across the board cuts, the kind Congress recently passed.

These cuts are what we need because they affect marginal tax rates. They reduce taxes on the next dollar earned. And they do it for everyone. The result is that anyone with a bright idea sees that he will profit more from putting that idea into production than he would without the cut. He has an added incentive to produce, to create a supply of new storage batteries, or food processors, or Rubik's cubes.

Lower marginal rates encourage Mr. Rubik and all his friends to get to work creating the supply that will answer tomorrow's demand. Productivity increases; the standard of living rises; and lo and behold, even the tax man gets more, as the general level of economic activity rises.

And that, in a plastic cube, is supply-side economics.●

SAFETY IN THE POST OFFICE MUST BE MANDATED

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. BIAGGI. Mr. Speaker, today I am introducing legislation that would protect the health and safety of our Nation's postal workers by affording them coverage under certain provisions of the Occupational Safety and Health Act of 1970. By bringing the post office under the jurisdiction of certain provisions of this act, it is my expectation that we can reduce the abysmally high accident rate which plagues the post office and its employees.

Accident statistics for postal workers dramatically illustrate the pressing need for this legislation. The numbers show that the illness and injury rate for the U.S. Postal Service is close to twice the average of all agencies of the Federal Government, and higher than that for private industry. According to our data, between 1973 and 1978, the illness and injury rate among postal workers increased by 50 percent; the lost workday case rate nearly doubled, the rate of lost workdays per 100 full-time workers increased by 150 percent and the fatality rate remained nearly the same. In 1978, the three injury rates declined slightly, while the fatality rate increased.

As New York's senior member of the House Education and Labor Committee which will consider this legislation, I remain an active and ardent supporter of OSHA which has galvanized workers rights to safety in the workplace since its creation in 1970. Its record for protecting and insuring employee safety is well documented and the post office and its employees should be afforded the same rights as others who receive its monitoring and enforcement activities.

The reasons why these injury and illness rates have increased over time and remain unnecessarily high are largely due to the increased volume of mail processed annually. In the last 9 years, pieces of processed mail have increased from 88 to 100 billion annually while the number of the postal work force has been reduced by 80,000. Today, only 30 percent of the mail is processed manually as compared to 70 percent in 1979. If we are to begin to address this issue successfully, the Occupational Safety and Health Administration, within the Department of Labor, must be able to monitor and enforce safety in the post office. My bill will do just that.

In addition, because the Postal Service was established as a quasi-government, independent agency in 1970—the same year OSHA was created—it was neither totally private industry nor totally Federal Government. The OSH Act set forth protection coverage for private workers and section 19 of that act provided special coverage for Government employees but neither of these two were applicable to the Postal Service in an apparent oversight by Congress. My bill would eliminate this nonalined sector status of the Postal Service once and for all. It would also provide an added incentive to postal supervisors to insure maximum safety in the workplace.

Surveys indicate that nearly 26 percent of all reported injuries in the Postal Service are primarily preventable. This includes 20 percent of the accidents due to manual mail handling and 6.4 percent which result from workers striking against things. While we realistically cannot expect to address all areas where illness and injury might occur, we can, at a minimum, tackle those work situations which are preventable. My bill would encourage better safety precuations in the mail service which would undoubtedly assist in the timely delivery of mail to customers.

The Postal Service provides a service to this Nation which is critical to all sectors of society—commerce and industry, the Federal Government, and the small business man. The safety and health of its workers must be of paramount importance to us if we are to adhere to the scope and intent of OSHA and to assure them that their right to a safe workplace will be provided and protected.●

CONGRATULATIONS TO HONDURAS

HON. MICHAEL D. BARNES

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. BARNES. Mr. Speaker, last Sunday, November 29, there was an election in Honduras. As any observer of events in Central America knows, a fair and free election is no small accomplishment, but the election in Honduras demonstrates that it can happen. The reports now available indicate that the turn-out was near 80 percent and that it was fair, open, and free. Three of our colleagues, Congressman BENJAMIN GILMAN, Congressman ROBERT LAGOMARSINO, and Congressman JAMES JEFFORDS were present during the election and report that it was truly democratic.

I want to take this opportunity to congratulate the citizens of Honduras. Congratulations are also in order for the Liberal Party and its Presidential candidate, Roberto Suazo Cordova. Mr. Suazo was elected with 54 percent of the vote, while his main opponent, Ricardo Zuniga of the National Party received 41 percent.

Despite this success, Honduras and its new President face a difficult future. Their economic situation is critical, and they are surrounded by conflicts. I think that the United States has a responsibility and a national interest in doing all that we can to assist Honduras new government. It is time to make clear that the United States supports democratic governments—both before and after the elections.●

DEATH OF A DREAM

HON. NORMAN E. D'AMOURS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. D'AMOURS. Mr. Speaker, I would like to take this opportunity to commend to my colleagues the following article, entitled "Death of a Dream" from a New Hampshire newspaper, the Concord Monitor, of November 16, 1981, and written by Ralph Jimenez. This article points out very poignantly the current crisis in the housing industry, a crisis which is destroying the economic livelihoods of homebuilders, construction workers, and the building materials and lumber industries as well as denying the opportunity to many of our citizens the goal of homeownership and realizing the American dream.

DEATH OF A DREAM

The roof of the housing industry hasn't fallen in yet, but it's sagging badly.

New Hampshire contractors who once built the affordable homes of the American dream, are now taking shelter in office buildings and luxury housing.

"By April, I foresee a fatality rate of more than 40 percent in the ranks of New Hampshire's builders," said Wally Beede. Beede is the owner of Liberty Home Builders, which he described as the area's largest builder of custom homes.

This is the third bad year in a row for the housing industry. Nationally, housing starts are down more than 40 percent over last year and are nearing a record low set in 1959.

The situation is forcing construction companies to pack up their toolboxes. Their failure rate is up 49 percent over last year, according to the business information firm of Dunn & Bradstreet.

Though no exact figures were available, at least a dozen builders are out of business in New Hampshire while others are simply idle.

"The American dream is dead—it's gone," Beede said. "The days when most people could look forward to owning their own home are passe. Only about one out of 10 potential homebuyers make enough money to qualify for a mortgage and I don't see that changing for at least three years, if it ever changes at all."

Because buyers can't afford homes, builders aren't building them. Part of the story sits in slim manila folders on a desk in Concord's code enforcement office.

In 1978, the city issued 157 building permits for single family homes and 144 in 1979. By 1980 it was down to 92. And as of Nov. 1, only 42 permits had been issued, 55 percent fewer than last year.

Concord is not unique. In Bow, new housing start figures have also tumbled into the cellar. Just 16 permits were issued as of Nov. 1, less than half last year's number.

With the year nearly over, and the construction season coming to an end, a large increase in the numbers of permits being issued in either town is unlikely.

If no permits are issued next month, the number of housing starts in Bow will have fallen an incredible 450 percent since 1978 when 73 permits were issued.

In Concord, six permits were granted in November and December of last year. If six more are granted this year, housing starts will be 300 percent below the city's 1979 level.

The city also keeps track of the total number of new dwelling units built each year. These include houses, apartments and condominiums.

Douglas Woodward, assistant city planner, said Concord has added only half as many dwelling units in the first nine months of this year as it did in the same time last year.

The best of the last five years was 1979, thanks to projects like the 83-unit Firehouse block building. But Woodward knows of no similar projects in the works.

"There is no other word for what is happening to the housing industry, but a depression," Beede said.

The president of the New Hampshire Homebuilder's Association said the situation is going to get worse before the end of the year.

"I know that some builders, at least a dozen but probably more than that, have folded up their tents and slipped away," Warren Davis said.

So far, he said, none of them are from the Concord area.

Bob Dunning is a contractor from Hopkinton who owns The Dunning Home Group. He said he's heard of 15 or 20 builders who have gone under this year.

Many more, Dunning said, are sitting on the sidelines.

"The guy still has his business cards and would build a home if someone came to him with the money, so I guess you could say that he's still in business," he said.

Dunning is a newcomer to the custom home business. He turned down $1.5 million worth of work two years ago because his company was simply too busy to handle it. That, he said, isn't likely to happen again.

The contractors who are working, he said, are building homes for upper income bracket clients or have expanded into commercial work.

"The range of homes being built has changed dramatically," said Dunning. "Affordable houses in the mid-50s price range used to be 90 percent of our business but now it's down to 20 percent."

Two or three years ago, he said, three-quarters of the housing market consisted of young families. Now, Dunning and his brother Craig are building homes in the $100,000 bracket for local professionals and executives transferred here from other states.

"We're not building houses anymore for the people who really need them," he said.

But even the well-to-do are not entirely insulated from the bad economy.

Wally Beede has been building nothing but custom homes for 11 years. He has built more than 200 of them. Prices start at $100,000.

High interest rates, he said, have also hurt house sales in that income group, which traditionally is somewhat protected during a recession.

"My business, though we haven't had to lay anyone off, is down 60 percent over last year," Beede said.

Where Liberty Homes once built an average of 25 luxury houses a year, this year it will build just nine.

Beede sold two $200,000 homes recently to buyers who had down payments of $120,000 and $140,000. Even they had to pay 18 percent for mortgage money on the balance.

"You need to have an income of at least $38,000 a year to buy a $60,000 house today and be able to afford a $1,000 a month mortgage payment," Beede said.

He has kept his crew busy by having them do most of the work that he once subcontracted to other companies.

Beede also believes in going after a sure thing. He has never been a "spec builder" a contractor who borrows the money to build a house in the hopes of selling it later at a profit.

"Most of the builders who go under are building on speculation," said Beede. "You can't borrow money at 20 percent, wait a year to sell a home and make money. And the smaller the builder the sooner he goes under."

At The Dunning Home Group, all eight people on the payroll are still working but Bob Dunning said that he has had to go after business agressively and diversify by doing additions and commercial construction.

"We're doing more renovations, because people are keeping the homes they have," said Dunning. "We're also putting up an office building and doing work on a church."

Commercial construction, he said, is still booming in New Hampshire and keeping many contractors in work. Nationwide, however, 40 percent of all construction workers are unemployed.

Though high interest rates basically are at fault, another factor has aggravated the problem. Changes in federal law designed to tighten the availability of mortgage money have choked it into lifelessness.

"In recent years, nearly two-thirds of all Concord housing starts were subsidized with low interest mortgages provided by the New Hampshire Housing Finance Agency," said Woodward. The agency, which sells tax free bonds to raise the money, has not done so since 1980.

Both Woodward and Davis blame federal legislation passed that year for making many people's dreams of owning their own home a castle in the air.

"The regulations have been made so tight that no housing agency in the country can float bonds to raise mortgage money," Davis said. "Until Congress, in its wisdom, amends the Ullman bill, the consumer is just going to have to sit by and wait."

Before the bill passed, families with incomes under $28,350 could qualify for a reduced rate loan if the new home did not cost more than $64,000. The bill eliminated the family income ceiling, but limited eligibility to first-time homebuyers who could locate a house selling for under $56,070.

Last year, the state housing agency lent out its money at slightly more than eight percent.

Housing costs, the builders say, are likely to remain high indefinitely. Even families with two wage earners no longer can afford to own a home, Dunning said.

Even so, condominiums in the $100,000 to $150,000 range are still selling, he said.

"What is now an economic problem will soon be a serious social problem as well," Dunning said.●

GOLD MEDAL FOR BRYAN LEWIS ALLEN

HON. CHARLES PASHAYAN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. PASHAYAN. Mr. Speaker, last October I circulated a letter requesting support for a measure to have a gold medal struck in honor of Bryan Lewis Allen, who pedaled his way across the English Channel in a self-powered airplane. This was the first time in history that man has achieved this. I thank those who have agreed to cosponsor this legislation with me. I am introducing that bill today and ask those who have yet to do so to assist me by cosponsoring this bill.

Bryan Allen is one of America's aviation pioneers. In August 1977 he piloted his airplane, the *Gossamer Condor,* on the first controlled and sustained flight ever in a human-powered airplane. Powering his plane with a pedal system similar to that of a bicycle, he steered the *Condor* around a figure-eight course covering a distance of 1.15 miles. The *Gossamer Condor* is now on permanent display at the National Air and Space Museum.

On June 12, 1979, Bryan began a far more ambitious flight. Flying the *Gossamer Albatross,* a plane similar to the *Condor,* he took off from Folkstone, England, and made the first human-powered flight across the English Channel. This grueling ordeal ended after 2 hours and 43 minutes when Bryan landed on the beach at Cape Cris-Nez, France. The next day every Western newspaper headlined the story.

Bryan Allen fulfilled one of the world's oldest aviation dreams—human-powered flight. A gold medal honoring Bryan is in keeping with the practice of America to honor its aviation pioneers. This practice began with the awarding of a gold medal to the Wright brothers in 1909. Most recently a gold medal was presented to the three men who piloted the *Double Eagle II* balloon across the Atlantic.

I hope to receive the assistance of my colleagues in promoting this bill for California's innovative aviator. Mr. Allen's effort deserves this congressional recognition. A text of the bill follows:

H.R. 5117

A bill to authorize the President of the United States to present on behalf of the Congress a specially struck gold medal to Bryan Lewis Allen

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, (a) the President of the United States is hereby authorized to present, on behalf of the Congress, to Bryan Lewis Allen, the first aviator to cross the English Channel in a self-powered plane, a gold medal of appropriate design in recognition of his distinguished feat as an aviation pioneer. For such purpose, the Secretary of the Treasury is authorized and directed to cause to be struck a gold medal with suitable emblems, devices, and inscriptions to be determined by the Administrator of the National Aeronautics and Space Administration with the concurrence of the Commission of Fine Arts, subject to the approval of the Secretary of the Treasury. There are authorized to be appropriated not to exceed $15,000 to carry out the provisions of this subsection.

(b) The Secretary of the Treasury may cause duplicates in bronze of such medal to be coined and sold under such regulations as he may prescribe, at a price sufficient to cover the cost thereof, including labor, materials, dies, use of machinery, and overhead expenses, and the appropriation used for carrying out the provisions of this subsection shall be reimbursed out of the proceeds of such sale.

(c) The medal provided for in this section is a national medal for the purpose of section 3551 of the Revised Statutes (31 U.S.C. 368).●

THE NEED FOR CERTAIN NATIONAL POLICIES

HON. DOUG WALGREN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. WALGREN. Mr. Speaker, I am pleased to share with my colleagues some interesting thoughts about the need for certain national policies. Anthony Lewis' column, entitled "Pernicious Myths About Free Enterprise," appeared in the November 21, 1981, Pittsburgh Post-Gazette:

PERNICIOUS MYTHS ABOUT FREE ENTERPRISE

(By Anthony Lewis)

BOSTON.—Thanksgiving Day, as history and symbol, throws some curious light on a myth of our day: that American greatness came from free enterprise, from individual rather than community effort, and that a return to individualism can solve our current problems.

That myth informs Ronald Reagan's whole political program, and a lot of people believe it. But it is a myth.

The Pilgrims who landed at Plymouth Harbor in 1620 were a community in the deepest sense. Those in charge were a group of separatist religious believers, moved by their faith to seek a place where they could live in their own way together, undisturbed by outsiders.

Their survival in the new land depended on joint struggle, and on the help of friendly Indians. Half the colonists died during their first terrible winter. When Gov. William Bradford declared a Thanksgiving to celebrate their first harvest in 1621, Indians shared the feast.

Individualism in the political sense was there at the beginning. In the Mayflower Compact, drafted on the way across the Atlantic, the company agreed that their settlement would be governed by majority rule. There was no divine right or inherited rank; every man had an equal vote.

The development of this country has been shaped, from that beginning, by a mix of individualism and community enterprise. At times more of one than the other, then swinging back. It was an America of pioneers and frontiersmen—but also, by some of our earliest political decisions, of public roads and a national postal system. It was a country of Horatio Alger and Henry Ford—but also of public schools and public libraries.

One of the distinctive aspects of American culture was and is an expression of community. That is, the existence of myriad civic organizations: the educational, business, professional and do-good groups that have such an influence on the society. We are so used to these collective enterprises that we do not usually realize how American they are: how much more numerous and significant, for example, than they are in European countries.

Since the 1930's we have looked increasingly to government to meet community needs. That is the trend that President Reagan says he wants to stop, and he has a point—especially about the concentration of responsibility in Washington. Liberals, too, ought to recognize that we sometimes go too far in relying on the federal government to solve local problems. The point was made 50 years ago by that great liberal, Louis Brandeis.

But it does not follow that national programs are automatically bad, that ending federal regulations will always free the people's creative energies, or still less that individual enterprise can solve all of today's social and economic problems. Those are not just myths but pernicious ones.

Like it or not, the United States is a nation now—much more so than before the 1930s, with a national economy and a highly mobile population. We need a national mon-

etary policy, a federal system of unemployment insurance, a Social Security system.

Nor can we escape the consequences as a nation if we ignore social evils here or there. We learned in the 1950s and 1960s that the country as a whole was damaged when black citizens were not allowed to vote in Mississippi, and it would be a disaster if the national commitment against racial discrimination were weakened now. And the same for the food-stamp program, by which the richest country on earth protects its poor and weak from hunger: a highly efficient way to meet a community responsibility.

The most misguided notion in the current political rhetoric, and the most dangerous, may be the idea that relaxing federal environmental standards will help the economy. And it is not just an idea. The Environmental Protection Agency is eliminating wholesale the rules that protect our air and land and water.

It is the very essence of an industrial world's environmental problems that they cannot be met by individual or local action. What happens in one place affects others. Poison in Chesapeake Bay or the Hudson River touches the striped bass fishermen of New England. Sulfur fumes coming from the smokestacks of the Middle West poison the lakes of New York State and Canada with acid rain.

When we speak of the environment these days, we are most often talking about health. It is not just a question of esthetics when the EPA undoes just about all the restraints on toxic-waste dumping—as it has done in the last 10 months. It is not just some "environmental extremists" who will suffer if the EPA budget is cut in half from its 1981 fiscal year level, as the Reagan budget-cutters are trying to do.

There are community values that can be preserved only by action of the community. And Americans really do understand that. In a recent poll, 61 percent said they would keep present clean-air laws even if some factories must close. Thanksgiving is a good time to remember that America is not synonymous with individual greed.●

SOMETHING SHOULD BE DONE

HON. CARROLL HUBBARD, JR.

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. HUBBARD. Mr. Speaker, John S. Davis, a realtor with John Smith Gallery of Homes in Paducah, Ky., has written a very thoughtful letter to me regarding his ideas on how to cope with the current economic situation. I feel that Mr. Davis' letter is one which should be shared with my colleagues and I wish to do so at this time. The letter follows:

DEAR CONGRESSMAN HUBBARD: We want three things from you and the other members of Congress:

1. The President and the Congress to hold the budget deficit to under $42.4 billion in fiscal 1982. Balance the budget in fiscal 1984.

2. The Federal Reserve Board to allow the money supply to increase at the upper end of its monetary targets to accommodate economic growth and stability.

3. The President to appoint a non-banking, small business representative to fill the first vacancy on the Federal Reserve Board.

The public can no longer be asked to accept the economic hardships that are resulting from the devastating cost of money.

We want something done NOW, not 12 months down the road when election time gets close.

Sincerely,

JOHN S. DAVIS,
Realtor.●

REAUTHORIZATION OF THE OLDER AMERICANS ACT OF 1965—URGES PASSAGE OF H.R. 3046

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. BIAGGI. Mr. Chairman, as an original cosponsor of the pending bill and a member of the Education and Labor Committee, I rise to lend my full and enthusiastic support of H.R. 3046, the Older Americans Act Reauthorization of 1981. For the past 16 years, and hopefully for many years to come—the Older Americans Act has been the centerpiece of this Nation's policy for providing social and human services to millions of our older citizens.

We consider this legislation—and all of its key provisions—just days before the convening of the 1981 White House Conference on Aging. The fact is, the Older Americans Act grew directly out of the very first White House Conference conducted in 1961. Just 4 years later, under the auspices of the Great Society programs of President Lyndon Johnson, the Older Americans Act of 1965 was enacted. It began as a $6 million social service program and today its funding level has grown close to $1 billion. It has also grown in the variety of services it offers to older Americans as well and now includes nutrition, employment, legal, and transportation, as well as educational and outreach services.

This bill, H.R. 3046, will extend all programs of the Older Americans Act for an additional 3 years and will extend the number of titles in the act to seven. The length of the reauthorization is critical. Equally vital is the fact that passage of this legislation by the House will reaffirm total congressional support for the Older Americans Act remaining a categorical grant program as it has been from its inception. The significance of this is especially evident in 1981 with the new wave of "block grant fever" which has swept this Nation. The maintenance of the categorical status of this act is fundamental to its success.

The bill contains a number of improving amendments. The most critical of them is provision which permits State agencies to transfer up to 20 percent of its funds between title III-B and III-C. The purpose of this is to provide/needed flexibility to States in how they allocate their social service dollars. More specifically, the 1978 amendments to the act called for title III-B to assume funding responsibilities for the supportive service related to the nutrition program under III-C. One of the most important of these services is transportation. A basic problem developed when the funding levels for III-B did not grow at a rate sufficient to assume responsibility for services such as transportation.

Consequently, States found themselves with adequate funds for nutrition but not enough money to get the people to the meal sites. The 20-percent transfer language—which I authored—should greatly relieve this problem.

In addition, H.R. 3046 eliminates one of the more contradictory provisions in the act which mandate that area agencies on aging allocate 50 percent of their funds under title III-B for in-home access and legal services. While no one has ever disputed the importance of these services, a number of us always had problems with the Congress telling area agencies on aging how they had to spend their money. Earlier amendments to the act created the "aging network" which included area agencies as a concept. Today, there are more than 660 AAA's nationwide. They are the central focus on the local level for the development of social and human services to the elderly.

H.R. 3046 eliminates the 50 percent mandate and instead, urges that an adequate portion of funds be used. It would be my hope, as a cosponsor of this legislation, that the determination for the "adequate" portion will be that of the area agency.

Other important provisions of this legislation include an amendment which I authored in the Education and Labor Committee, which would greatly upgrade the status of the Commissioner on Aging. Presently, the Commissioner and her administration on aging is mired deep within the bureaucracy of the Department of Health and Human Services. My amendment would have elevated the Commissioner's position by giving the job directly line authority to the Secretary, rather than the Office of the Secretary, as is the present case. It is a long-overdue recognition of the importance of this position and of course, the act, to older Americans. This amendment was approved in 1978 and almost made it into the final legislation. I contend that with older Americans being the fastest growing segment of this Nation's population—we must begin to give them something better than second-class treatment by the Federal Government.

This bill retains the grandfathering clause which has helped to insure

speedy delivery of nutrition services to millions under the act. The thousands of nutrition projects which provide one hot meal a day, 5 days a week, are a vital element in the overall Older Americans Act. I hope there can be a complete continuation of existing services without any major interruptions in whatever revised administrative structure is agreed upon as part of the reauthorized bill.

It is important to note that H.R. 3046 clearly rejects the so-called "consolidation" proposal proposed by the administration. Under this plan, authorizations for the home-delivered and congregate meals programs and the commodity foods program within the Department of Agriculture, would have been merged. This consolidation would have not achieved better efficiency in terms of the delivery of nutrition services and might in fact lead to interruptions. The Committee on Education and Labor clearly went on record against a consolidation proposal and I hope that the House will accept the reported bill's language in this area.

I wish to note that the bill also allows contributions received at nutrition sites from participants to be used for both nutrition and supportive services. This is an important reform which should help us in our quest to provide a balanced and coordinated network of services to our seniors.

The committee bill also approved my amendment establishing special demonstration projects in mental health. This amendment was offered on behalf of my colleague, Mr. HAMMERSCHMIDT, and is reflective of the concern of the House Select Committee on Aging on which we both serve—about the mental health needs of our seniors. While the elderly make up just over 12 percent of our population—they have more than 25 percent of all the cases of mental illness in our Nation.

The authorizations provided in the committee-reported bill are a reflection of the high degree of support which our committee has for the various key service programs in the act. We felt that substantial growth is needed in these programs if we are to better fulfill the mandate of the Older Americans Act. I will support, with reluctance, the committee amendment which will lower the authorizations to be more in line with the Budget Reconciliation Act, but sincerely hope that we can maintain or increase appropriation levels.

Several other points in brief. While H.R. 3046 retains the 1 percent set-aside for a nursing home ombudsman program on the State level—the Senate passed Older Americans Act eliminates the specific set-aside amount. I wish to reiterate my total support for the nursing home ombudsman program and urge States to guarantee its continuation.

Finally I wish to bring to the attention of my colleagues a matter of profound concern to me. Under the terms of the Older Americans Act formula for the distribution of funds under title III—States are awarded funds on the basis of their percentage of the 60 and over population. A total of 19 States in this Nation, including and especially my home State of New York, have registered increases in their 60 and over population—but not at a rate sufficient to increase their percentage of older people thus increasing their portion of funds under the act. I am seeking to address this problem in one of two ways—either through earmarking funds from section 206(g) for a hold harmless for these States to avert service reductions, or a commitment from the administration that they will distribute some $1.4 million from these same funds, outside the existing formula to insure no service reductions.

Mr. Chairman—I fully support this bill and urge its adoption.●

THANKS TO SCANDINAVIA—A SCHOLARSHIP FUND

HON. CHARLES E. SCHUMER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. SCHUMER. Mr. Speaker, I rise today to pay tribute to an organization that has been referred to as "a candle in complete darkness." I refer to a very special organization named "Thanks to Scandinavia." "Thanks to Scandinavia" approaching its 20th anniversary was founded in order to commemorate the Scandinavian rescue of thousands and thousands of Jews from Hitler's "Final Solution."

Since 1963, "Thanks to Scandinavia" has provided educational scholarships enabling young Scandinavians to study here in the United States. These scholarships and apprenticeship opportunities cover a wide spectrum of studies in technical and cultural subject areas not available in Scandinavia.

The result of this important exchange has been a perpetual memorial to the parents and grandparents of these young scholars; a memorial more important than any building or monument, because it is carried on through the continuation of the human spirit.

The success of "Thanks to Scandinavia" can easily be attributed to the efforts of National Chairman Victor Borge, President Richard Netter, and Vice President S. Ralph Cohen. They are to be commended for their dedication and devotion. The various Scandinavian countries, overwhelmed with gratitude, have taken great pride in knighting each of these men several times. The result of their efforts is not only evident in the success of "Thanks to Scandinavia," but is also evident in an intensified good will shown by Scandinavian countries toward both America and Israel.

I join "Thanks to Scandinavia" in its effort to provide a living memorial of the Scandinavian "mitzvah." It is with immense tribute to "Thanks to Scandinavia" and the Scandinavian countries themselves, that I repeat: "Never Again."●

INTERNSHIPS A WORKABLE ALTERNATIVE

HON. G. WILLIAM WHITEHURST

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. WHITEHURST. Mr. Speaker, all of us receive frequent inquiries from young people seeking internships, and many more applications than we can possibly accept for placement in our own offices. As we all know, the Office of Personnel Management has an excellent publication which comes out at the end of each year outlining summer positions with the Federal Government for the following summer.

In addition, the "Careers" column by Joyce Lain Kennedy which appeared in the Norfolk Virginian-Pilot on Thursday, November 26, contained some particularly useful guidance regarding internships, and I am pleased to share it with my colleagues in the thought that it might help them assist their young constituents:

[From the Virginian-Pilot, Nov. 26, 1981]

INTERNSHIPS A WORKABLE ALTERNATIVE FOR INEXPERIENCED

(By Joyce Lain Kennedy)

There's a specter hanging over students, new graduates, women returning to the work force and career changers: "They only hire people with experience, so how can I get experience unless they give me a job?"

Internships can banish that ghost. Not only do good ones offer real experience, they can ease the psychic transition from school, home or another job to the work place. When your internship ends, you may be asked to stay on permanently. Or you may discover your interests lie elsewhere.

Money could prove to be your biggest hang-up: if you're trying to scrape together enough to pay for your next school term and eat a decent meal, ask yourself, "Can I afford this opportunity?"

Some internships pay off in experience or college credit only; others ante up minimum wages or better. If you must relocate, lean on relatives and friends to help you find lodging. Find out where other interns stayed.

Expect prickly competition for paid internships. Here are a few concrete leads:

A new book, "1982 Internships," is available for $11.50 postpaid from Writer's Digest Books, 9933 Alliance Road, Cincin-

nati, Ohio 45242. The book explains how to select and apply for internships and how to get the most out of them. It also suggests places where you can find inexpensive living quarters. The editor, Colleen Cannon, says 75 percent of the book's listings fit returning women and career changers as well as they fit the traditional student.

Other publications: "Directory of Public Service Internships," edited by Debra Mann and updated yearly, is $9.50 postpaid from the National Society for Internships and Experimential Education, Suite 601, 1735 Eye St. N.W., Washington, D.C. 20006. The "National Directory of Summer Internships" is available for $10 postpaid from Career Planning Office, Haverford College, Pa. 19041.

Get advice from friends, professors, internship coordinators and other interns. When you've narrowed your selection to half a dozen, send the sponsoring organization a copy of your resume, a sample of your work, letters of recommendation and a personal statement emphasizing your strengths. Some organizations may want a transcript of your grades.

If, after you've begun your internship, you feel you're not getting the experience you bargained for, speak up. But don't be surprised if you get stuck with some gofering at first—it usually comes with the territory.●

ELLIOT STREET SCHOOL

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. RODINO. Mr. Speaker, my home city of Newark will celebrate the 100th anniversary of a very important educational institution on December 10. Mayor Kenneth Gibson, County Executive Peter Shapiro, the members of the Newark Board of Education, and numerous other public officials and private citizens will join in a day long tribute to the Elliot Street School in Newark.

First established in 1881, this elementary school moved a few years later to its present site, which was then called Cottage Street. In 1914 the school took its name after John Elliot, past president of Yale University. Not long after that the street was named after its most important building—a place of fundamental learning which helped to educate the children of Irish, Italian, and more recently Hispanic immigrants. As its role has changed several times over the years—at one time it functioned as a center for visually impaired children, and then it became a school for music—it has remained a place of steady enlightenment for generations of Newarkers.

Next Thursday Elliot Street School's principal, John W. Hansen, will lead the school's administrators, its 85 teachers and nearly 1,000 students in a special celebration of the school's past, present and future. Many of the children will present posters they made depicting various stages in Elliot Street School's history. Several former teachers, administrators and students of the school will return to remember the place which contributed to their lives.

The city of Newark is rightly proud of Elliot Street School and of the very active parent-teachers association there headed by Helen Poch. But I believe the entire Nation has reason to share in our celebration—because Elliot Street School represents the best of our educational traditions and I am sure it will endure for many generations to come.●

NEW YORK STATE ASSEMBLY SPEAKS ON NORTHERN IRELAND

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. BIAGGI. Mr. Speaker, as chairman of the 126 member bipartisan ad hoc congressional Committee for Irish Affairs, I wish to present a resolution adopted by the New York State Assembly on October 29, 1981, dealing with peace and reunification for Ireland.

A applaud this important legislative initiative of the State Assembly and especially commend the various sponsors, Messrs. Feldman, Walsh, Butler, Conners, Ms. Dugan, Ferris, Mrs. Lipschutz, Morahan, Perone, and Ms. F. M. Sullivan.

The basic theme of the resolution is its call for Great Britain to work for the unification and freedom of Ireland. It is laudable objective to seek and work for a peaceful political resolution and it is my contention as chairman of the ad hoc committee that this Nation has an important role to play to make that happen.

LEGISLATIVE RESOLUTION, ASSEMBLY No. 1207

Whereas, The members of the New York State Legislature, being for the most part not of Irish ancestry, have viewed the English Government's lack of response to the recently ended Maze Prison hunger strike, the ultimate protest against injustice, with increasing horror; and

Whereas, This Legislative Body believes that the time has come for Americans of all ethnic backgrounds to take notice of the urgent human appeal that is the message of these Irish martyrs and patriots; and

Whereas, The United States purports to have a special relationship with the United Kingdom which should also imply a special responsibility for the actions of the United Kingdom; and

Whereas, Certain responsible groups in the United Kingdom, although not in the seats of power, have urged that the Government of the United Kingdom adopt an explicit policy that Northern Ireland be united under the jurisdiction of Free Ireland over a reasonable period of time, most likely a decade; and

Whereas, The announcement of an explicit unification policy, the unification itself however to take place through a gradual process over a number of years, would assuredly have the effect of initiating the processes of psychological as well as political and economic adjustment to this inevitable occurence; and

Whereas, Those who prefer to avoid action using as a cloak for their real motivation the false excuse that the particular dilemma of Northern Ireland is forever insoluble should have been confounded by the recent example of the Rhodesian solution; now, therefore, be it

Resolved. That the Government of the United States shall express to the Government of the United Kingdom our firm conviction that an Irish unification policy must be implemented if the United Kingdom wishes to retain its status as a nation which lays claim to a reasonable standard of civilization, and to a special relationship with the United States, this conviction to be expressed in increasingly concrete terms, both diplomatic and economic, as time passes; and be it further

Resolved. That a copy of this Resolution, suitably engrossed, be transmitted to the Honorable Ronald Reagan, President of the United States, to the President Pro Tem of the Senate, to the Speaker of the House of Representatives, to the Secretary of State and to each member of Congress from the State of New York.●

THE STOCKMAN ARTICLE

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. HAMILTON. Mr. Speaker, I insert my Washington Report for Wednesday, November 25, 1981, into the CONGRESSIONAL RECORD:

THE STOCKMAN ARTICLE

Budget Director David Stockman's comments in a magazine article on President Reagan's economic program have dominated conversation in Congress this week. The article is a fascinating piece of political literature, based as it is on 18 candid interviews with the nation's top budgetary officer from December, 1980, to September, 1981.

Mr. Stockman's many statements add up to a stunning confession that the Reagan program cannot work. The heart of the program is the idea that huge cuts in taxes and spending will increase government revenues, eliminate budget deficits, stimulate growth, and halt inflation; yet Mr. Stockman says, "I've never believed that just cutting taxes alone will cause output and employment to expand." One wonders at Mr. Stockman's willingness to pretend in public about the adequacy of the program when he believes that it is inadequate. Mr. Stockman has been saying privately that the budgetary numbers are chaotic and uncertain, but he has been using them in public with great assurance. The admission of ignorance about the data is especially distressing. Mr. Stockman confesses that "none of us really understands what's going on with all these numbers." He states that the President's own numbers are constructed on shaky premises which, at bottom, do not add up. Time and again, Mr. Stockman is quoted as saying that the administration's budgetary

projections are unreliable. There is, he notes, "less . . . than met the eye" to the $35 billion in cuts enacted last summer. Deficit projections have been made "by hook or by crook, mostly the latter." When budgetary rhetoric produces such dramatic claims from all sides, it is deeply disturbing to hear that the numbers have been conjured up. There is a tone of desperation in Mr. Stockman's comments as his high hopes for the economy are overwhelmed by the reality of an unforeseen recession and the prospect of enormous deficits which will again drive interest rates up.

For months, opponents of the Reagan program have charged that it is tilted toward the wealthy. Mr. Stockman acknowledges the tilt when he says that the cutting of taxes across the board is a "Trojan horse" designed to make the reduction of maximun tax rates for the wealthy politically acceptable. He also acknowledges that by permitting the biggest share of the tax cut to go to the wealthy, the Reagan program espouses a subtler version of the old "trickle down" theory of economics.

Most of the deficiencies of the budgetary process are plainly revealed in the article. Acknowledging that the power of organized groups is stronger than even he has realized, Mr. Stockman says the "unorganized groups can't play in this game" and that "weak clients" suffer for their weaknesses. He admits accepting projects he has long criticized because they are supported by powerful legislators whose backing of the budget is essential. Illustrating the government's short-term perspective, he rejects long-term reform in social security because he is "just not going to spend a lot of political capital solving some other guy's problem in 2010." He admits that the Defense Department has been handed a "blank check," that his subordinates have not given its budgetary estimates the usual scrutiny, and that "the defense numbers got out of control." The pressures of time on top policymakers are exposed when he says, "I don't have time, trying to put this whole package together in three weeks, so I just start making snap judgments." He also says, "the thing was put together so fast that it probably should have been put together differently . . . we were doing that whole budget cutting exercise so frenetically . . . we didn't know where we were ending up for sure."

The illuminating statements of the budget director show a sensitive, intelligent man overwhelmed by the difficulty of the budgetary process, assailed by doubt about the complexity of the decisions to be made, aware of the insufficiency of the data, and frustrated by the thought that neither he nor anyone else really understands what has been happening. His statements show that even a budgetary reformer dedicated to radical change who starts out from a solid base in policy can be engulfed in the political "horse trading" of organized interest groups as he loses the fight for a lower deficit. "Do you realize," he says, "the greed that comes to the forefront?—The greed level, the level of opportunism, just got out of control." The statements also show him losing the battle within the administration for a cut in military spending. He accuses the Pentagon of "blatant influences, poor deployment of manpower, contracting idiocy," and $30 billion in waste.

The President's decision to retain Mr. Stockman after the embarrassing article is a political gamble. One can only conclude that the President considers Mr. Stockman an indispensable member of the economic team. Mr. Stockman has been the principal spokesman of the Reagan program, yet it is doubtful whether he can remain a persuasive proponent.

In the end, perhaps our judgment of Mr. Stockman should not be too harsh. He is a capable and important member of the President's economic team even if his usefulness to the President is not as great as before. Mr. Stockman has given opponents powerful ammunition to use against the President. He has surely increased the vulnerability of the Reagan program. However, if we understand that we have ahead of us an awesome struggle to get the budget under control, and if we recognize that all of us could be a bit more humble with respect to the economic theories we so confidently toss around, then maybe the education of David Stockman can be our education.

Finally, I think that the President should be worrying less about Mr. Stockman and more about the economy. As attention is refocused on consideration of the budget in Congress, I hope that we will not fail to see that behind the numbers and computer projections are real people with real problems. These people and their problems—not economic and political abstractions—are what the budgetary process is all about.●

UKRAINIAN INDEPENDENCE

SPEECH OF

HON. DENNIS E. ECKART

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 17, 1981

● Mr. ECKART. Mr. Speaker, once again the anniversary of the Ukrainian Public Group to Promote the Implementation of the Helsinki Accords is passing by with the hopes of the group's leaders unrealized. While the express purpose of this admirable "family" has been undermined by the enemies of human rights, the group and its message are certainly not passing unnoticed.

In the free world, the heroic efforts and sacrifices of the Ukrainian group are an example we must always remember. Our efforts must reflect their dedication. We must not condone the injustices of Soviet human rights violations through silence by Congress, the collective voice of the United States. Certainly, the Soviet oppression of Ukrainians, Soviet Jews, Lithuanians, Afghanistanis, and others is shocking, although the Soviets' actions, however perverse, are not particularly surprising. Constant oppression is a fact of life for dissidents and their families.

Even in the Soviet Union, the efforts and ideas of the Ukrainian group are commanding attention. This fact is apparent in the continuous and diversified attempts to subvert the groups' motives. The Soviet leaders must be confounded at the resilience of those under their heavy hand. To those of us whose ancestors and immediate families have fought for natural rights, though, it is no surprise for we understand that the spirit's strength is indomitable.

Mr. Speaker, I am honored to be able to speak for the rights of the people of the Soviet Union. I am even more honored to actively aid in the fight being waged by the members of the Ad Hoc Committee on the Baltic States and Ukraine.●

A TRIBUTE TO WILLIAM O. WALKER, PUBLISHER OF THE CLEVELAND CALL AND POST

HON. GUS SAVAGE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. SAVAGE. Mr. Speaker, the passing of William Otis Walker, 85-year-old publisher of the Cleveland Call and Post, ended a life of service and dedication to the fourth estate in general and an era in the history of the black press in particular.

Mr. Walker, a longtime friend and fellow publisher, died on October 29.

Throughout my 26 years as an editor, including 16 years as editor/publisher of my own newspapers, Mr. Walker was a source of strength for me and other younger journalists affiliated with the National Newspaper Publishers Association (NNPA). An outstanding leader of NNPA since 1941, Mr. Walker served two terms as its president—in 1957 and reelected in 1958. He served as secretary from 1946 to 1957.

His contributions to NNPA were numerous. For example, he established at Howard University the Association's "Gallery of Distinguished Newspaper Publishers."

Active in publishing circles in his home city, he served as a board member of the Greater Cleveland Newspaper Publishers Association.

Mr. Walker was born in Selma, Ala., on September 19, 1896, son of Alex and Annie Walker. His father was a businessman.

Walker was educated in the public school of Selma. In 1914, he entered Wilberforce University, Wilberforce, Ohio, and was graduated from this historic black institution's department of business in 1916. He was graduated from Oberlin Business College in 1918.

Prior to his newspaper career, Mr. Walker was a staff member of the Urban League of Pittsburgh, Pa. He served as secretary to the director.

Early in 1919, he joined the staff of the Pittsburgh Courier. After 3 weeks' service, he was promoted to city editor. In October 1920, he joined the staff of the Norfolk (Virginia) Journal and Guide as city editor.

Mr. Walker was one of the founders of the Washington Tribune, a weekly newspaper published by the Murray Bros. Printing Co. in Washington, D.C.

He served as managing editor of this publication from its inception in May 1921 until 1930.

In 1930, he became advertising manager of The Fair Department Store, located in downtown Washington. This was the first major venture to integrate black and white clerks in a retail store. After a few months, Walker was promoted to assistant manager. In 1932, when a branch store was purchased in Baltimore, he was promoted to to manager with full charge of the new store.

Walker, however, was anxious to return to the newspaper field. He left Baltimore in October 1932 to go to Cleveland, Ohio, to take over the Cleveland Call and Post, a weekly newspaper.

Under Walker's leadership, the P-W Publishing Co. (The Call and Post) became one of the largest black-owned newspaper publishing companies in the United States. The firm prints three editions of the newspaper—in Cleveland, Columbus, and Cincinnati. Walker's company also does extensive printing of other newspapers and grocery circulars.

The Call and Post has an ABC audited circulation of more than 30,000 and has a staff of more than 60 employees. The annual payroll exceeds $500,000.

William O. Walker was more than just a leader in the publishing field. He was affiliated with the civic, business, and political movements in his chosen city of Cleveland. He also was active in the other communities in which he lived before coming to Cleveland.

He organized and served as chairman of a summit meeting of black leaders in Washington, D.C. in May 1957. He was an organizer and chairman of the Cleveland Leadership Council in 1957-58, and was one of the founders of Future Outlook League.

In 1946, Walker was appointed by President Franklin D. Roosevelt to a delegation assigned with the task of inspecting and reporting on the status of black soldiers in Germany, Austria, Italy, France, and England.

He was a member of the U.S. delegation in 1960 to French Cameroon and Liberia. He was a member of the African-American Institute's delegation to the African Dialogues in Addis Ababa, Ethiopia, in 1973, and was special U.S. ambassador to Jomo Kenyatta's 10th anniversary in Kenya. He also visited Guinea, Mali, Nigeria, and Tanzania.

Mr. Walker was a member of the delegation to the German Democratic Republic in 1975, a delegation to Egypt, Jordan, and Israel, in 1976, and a group to Taiwan in 1977 and 1980.

Among Mr. Walker's many awards were the following:

The Shield Club, Community Service Award; Urban League of Greater Cleveland's Past Presidents' Award for Community Service for Leadership in the Pursuit of Social Justice; Glenville Area Community Council Award of Appreciation for Outstanding Community Service to Greater Cleveland; Founding Member Award—Whitney M. Young, Jr. Memorial Foundation; Cuyahoga Community College—Editor of the Year Award; Cleveland Association of Real Estate Brokers' Award as a Distinguished Black Publisher, all 1978. He also received the Real Estate Brokers' Award in 1959. Capital Press Club—Journalist of the Year Award in Recognition of 58 Years of Journalistic Service (1977); Frederick Douglass Civic Club's Award for Outstanding Service (1976); Plus Club's Award for Positive Leadership, Unstinted Service to All Mankind, and Cleveland Branch NAACP—Award of Merit for Implementing the Goals and Objectives of First-Class Citizenship Under the Constitution, both in 1972.

Interracial Interfaith Committee of Fellow Citizens' Award for 50 Years as a Crusading Newspaper Writer, Editor and Publisher (1970); Ohio State Bar Association's Newspaper Award for Constructive Contribution to the Administration of Justice (1968-1969); 18th Ward Republican Club's Award for Recognition for Outstanding Achievement in the Field of Business and Notable Pulbic Service in the State of Ohio; and National Association of Negro Business & Professional Women's Award for Outstanding Achievements, both in 1963; National Association of Market Developers' James (Billboard) Jackson Award for Outstanding Service to the Negro Market (1958).

Mr. Walker was inducted into the Ohio Senior Citizens Hall of Fame in 1979.

His affiliations included Operation Alert and The Surrogates; Cleveland Convention and Visitors Bureau; Legal Defense Fund, New York City; coordinator, Ohio Republican Council; Omega Psi Phi Fraternity; National Newspaper Publishers Association; Board—Executive Committee, National Conference of Christians and Jews; Board—Cleveland Zoological Society; Advisory Board—Greater Cleveland Safety Council; Trustee Board, Ohio College of Podiatry; Bluecoats, Inc.; Sigma Delta Chi; Cuyahoga Community College Foundation Board; League of Women Voters Educational Fund; Greater Cleveland Roundtable; African-American Institute International Advisory Council; and Nationalities Service Center.

Past affiliations included International Association of Government Labor Officials; Board of Trustees, Wilberforce University; U.S. Commission for UNESCO; National Urban League Board; Negro Business League Board; Budget Committee, Cleveland Welfare Federation; Cleveland Urban League Board; Cleveland NAACP Board; Cleveland Transit Board; Greater Cleveland Growth Board; American Red Cross; Review Board, LERTH; Board—Continental Bank; Board—Aim Jobs; Cuyahoga Valley National; Recreational Advisory Committee; Board—Downtown Corp.; and Census Advisory Committee on Black Population for 1980 U.S. Census.

Walker was a member of St. James African Methodist Episcopal Church.

He held honorary degrees from Wilberforce University, 1977; Central State University, 1967; and Cleveland State University, 1981.

Surviving the publisher is his widow, Mrs. Naomi Walker of Shaker Heights, Ohio and a sister, Mrs. Josie Waller of Cleveland.●

IRISH ECHO CALLS FOR SUNDAY ELECTIONS

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. BIAGGI. Mr. Speaker, in a recent editorial, the Irish Echo, the largest Irish American newspaper gave their support to H.R. 84 legislation I have introduced to provide for same time voting on Sundays beginning with the 1982 off year congressional elections.

I authored this bill in response to the alarming drop off in voter participation in this Nation. In the 1980 elections, a paltry 53.95 percent of those registered to vote in fact exercised this vital privilege. This represented the lowest turnout in 32 years. My bill is simply a 6-year experiment with Sunday/same time voting. By contrast—in those Western European nations where voting is on Sunday—participation rates range from 87-91 percent.

I offer my bill as one possible solution to a basic problem affecting this Nation. I hope that it can be given expeditious and favorable consideration by Congress to permit us to give it a trial run in 1982.

At this point, I wish to insert the Irish Echo Editorial entitled "Enhancing Our Voting Record."

ENHANCING OUR VOTING RECORD

As this is written, people are voting throughout the nation in the general election. Only in Virginia and New Jersey where governorships are being decided is there much national interest.

Next year at this time, however, there will be many major contests—the entire House of Representatives, one-third of the U.S. Senate and a number of governors will be elected.

It seems to us that this would be a good time to test a bill proposed by Representative Mario Biaggi (D-N.Y.) which calls for general elections to be held on Sundays at the same time across the nation.

Obviously, Congressman Biaggi's bill is mainly concerned with presidential election

years, but a trial run next year would not hurt in our opinion.

Mr. Biaggi points out that in the last several presidential elections voting fell off in the Western states as television results poured in from the East and the Midwest.

His proposal that we all vote at the same time would eliminate that problem. For instance, voting could start at 10 a.m. Eastern Time, 9 a.m. Central, 8 a.m. Mountain and 7 a.m. Pacific. It would end—let's say 10 or 12 hours later—with the polls closing at the same time throughout America.

This way, vote results from one area would not affect those from another. In fact, everyone's vote would be important.

This is an idea whose time has come and we strongly support it. If more people vote, the nation will be well served.●

DOUG BANDOW

HON. DUNCAN HUNTER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. HUNTER. Mr. Speaker, on May 3 of this year, the graduates of Okaloosa-Walton Junior College in Florida heard the following presentation by a graduate of the college—and a fellow San Diegan—Doug Bandow.

Mr. Bandow, a native of Escondido, Calif., has achieved at the early age of 24 what many would want in a lifetime—service on a successful presidential campaign, a law degree from Stanford University, and a key position in the administration. He currently serves as Special Assistant to the President for Policy Development.

I commend his remarks to the Members of the House:

Commencement speech follows:

COMMENCEMENT SPEECH, OKALOOSA-WALTON JUNIOR COLLEGE, MAY 3, 1981

(By Doug Bandow)

Dr. McCracken, faculty, OWJC graduates and families, and other friends. I want to thank you for your kind invitation to speak here today.

It's been some six and one-half years since I last set foot here as a student. I hope I can share with you whatever wisdom and experience that I've been able to gain in that short period of time.

However, I must warn you: my experience has little to do with the real world. I've variously been an undergraduate student, a law student, a campaign worker, and a federal employee—none of whom are particularly noted for their grasp of reality. And, I have to confess, I hope the trend continues for awhile. I really don't want a little reality to ruin my life.

But, most of us really can't be that lucky—if it is lucky—for long. Indeed, as graduates, you are facing a new reality. I congratulate you on your current achievement, and wish you well in your future endeavors, as you make those educational and career decisions that lie before you.

As you move out into your new reality, you will be making your own future. And I use the word "making" carefully. You won't be "finding" your future: your future has yet to be determined. You won't be "claiming" your future: your future is not guaranteed. Instead, you will be making—creating, designing, assembling, molding, forming, developing, building—your future.

As you prepare for the future, you should see your experience at a community college as a positive factor in your personal growth. You've received a quality and community-based education, with the informality of a small campus. Build on that experience.

Perhaps most important, do not feel that your opportunities are limited. I won't promise you that a degree from OWJC and six years will land you in the White House. But an OWJC degree, six years, and some luck did get me there. And hard work, ability, and luck can get you to places you may not yet have dreamed of.

Indeed, I encourage you to dream. For there are many people in our society who are equally capable of being political, business, and social leaders. But only a handful are at the right place at the right time. You can't create luck, but you can certainly encourage it by watching for, and taking advantage of, opportunities where luck may strike. And by being willing to take a chance if a once-in-a-lifetime opportunity occurs. So don't be afraid to dream. Just be prepared to act if your dream suddenly becomes reality.

However, I don't want to leave you with the impression that success is achieved only if you're a Senator, or a corporate president. Or a social editor, or a star athlete. Or a White House staffer.

To the contrary. Success can be measured by the standards of others. But it should be measured by yours. By that I mean our society depends upon the efforts of millions of people, virtually none of whom are Senators, corporate presidents, social editors, star athletes, or White House staffers. There are millions and millions more successes all across this country.

Thus, you should follow your personal moral code in deciding where to take your life. Business may yield material wealth, but can one objectively say acquiring material wealth is more important then, for instance, healing the sick? Politics may yield fame, but how can one compare the gain of fame with the result of teaching?

There are many examples of fine people who have succeeded in their own ways by living their own lives. But there are two in particular who I'd like to mention today.

One is 41-year-old James Brady, the President's Press Secretary, who was tragically injured barely a month ago. Brady is a success, having reached the top of his profession. And his career includes serving as Press Secretary for the Connally for President Committee, working for Delaware Senator Roth, handling public relations for former Defense Secretary Rumsfeld and former OMB Director Lynn, as well as thriving in private business.

But more than that, he's earned the respect and affection of his colleagues. As one who spent eight months on the campaign tour with him, I can't help but admire his personal qualities—his wit, personableness, and irrepressability.

Indeed, he possessed what may be the most difficult human virtue to maintain—humility—refusing to take himself or his cause too seriously. Perhaps the most celebrated instance of his irreverence occurred after President Reagan had made reference to the pollution given off by trees. A week or so later, on the campaign plane, Brady and another staffer sighted a forest fire below, and ran down the aisle shouting "killer trees, killer trees."

The remark was reported in the New York Times, and got Brady grounded. But he persevered without complaint, and, a week later, rejoined the campaign tour.

And in the past month, his courage in the face of the gunshot wound has gained admiration and respect across the nation.

The other one is 44 year-old Phil Brody, a Los Angeles school teacher. He trains children who are considered to be "trainable mentally retarded"—that is, who have IQ's between 25 and 50.

Typically, most TMR's, as the children are called, are taught but a few safety basics, such as stop and go. Then their education effectively stops.

But they don't stop learning in Brody's class. By using sign language, he's been able to take children who didn't even know the alphabet, and take them to where beginners can read several hundred words, and veterans several thousand.

One parent of 13 year-old Andy Royal said that: "What Phil had done with Andy contradicts everything I'd ever been told to expect. We were told he'd never get beyond the most elementary words, if he ever read at all. * * * Now he knows abstract things. * * * he talks more often. He's a totally different child than he was before."

Brady and Brody live on different coasts and work in different professions, but both are giving in service to others in thier own ways. One cannot compare their achievements; one gives understanding to the nation as a whole, and the other to a dozen children. Both are successes.

However, perhaps the more fundamental lesson to be learned from these two individuals is about the system which allows the Bradys and Brodys of our world to thrive. A system in which individual rights transcend majority dictates. A system in which Jim Brady can choose public relations, and Phil Brody teaching.

It is a fragile system, one that is under a frightening attack from all sides. And this struggle, far from being abstract and esoteric, and unrelated to your life, may have a profound impact on your future, and your childrens' future.

Most of the attacks are made by well-meaning but misguided people intent on turning their personal beliefs and whims into law. Not content with persuading their fellow man, they want to coerce their fellow man.

Much of such legislation is in the area of economics, and reflects the almost routine separation of economic freedom from political freedom. For example, the Supreme Court guards the latter and despoils the former. Congress regulates lightly on political rights, but infringes greatly on economic rights. People carefully discuss threats to political freedom. But they constantly vote for massive intrusions in economic freedom.

In fact, the right to utilize one's body—one's most important economic resource—is an economic right that underlies all personal rights of speech, property, and life.

This relationship between economic and political freedom is normally debated only in abstract philosophical terms. But there is some interesting real world evidence to consider.

For instance, Freedom House, a respected research organization, conducts an annual survey of the status of political freedom and civil liberties throughout the world. The survey includes a breakdown of the countries by economic system as well.

The results show that half of the capitalist countries were free, one-fourth of the mixed capitalist/statist countries were free,

and none—I repeat, none—of the socialist countries were free, or even partially free.

Though capitalism alone is not a sufficient condition for political freedom to exist—half of the capitalist nations are not free—some element of economic freedom appears to be necessary for political freedom to exist. Only those states that have some respect for economic freedom have a certain degree of political freedom.

This result should not be surprising. Giving the government—or, more accurately, those who control the government—power over productive economic resources necessarily empowers the government to suppress dissent and enforce conformity. Thus, any theoretical guarantees of political freedom are in practice devoid of any substance.

For example, if the government owns all TV and radio stations, and controls all paper and printing facilities, how can one exercise freedom of expression? Only access to the underlying economic resources can guarantee the political right.

A dramatic example of this phenomenon is the role of photo-copying machines in the Soviet Union. The Soviet regime strictly limits the number of, and access to, copying machines, because it realizes that unlimited copying would be a powerful catalyst for the reproduction and dissemination of illicit manuscripts and tracts. Thus the Soviet rulers control this economic resource, and, through it, the ability to exercise political freedom.

Compare the U.S., where for a nickel anyone can use such a machine. College campuses, in particular, are flooded by low-cost xerox political tracts. The end of photo-copying would end much of college political debate.

Now, I realize that some of you may want to say: that could never happen here. That the U.S. government would never intentionally suppress political freedom.

Unfortunately, that may not always be true. The reason we have a constitution is to limit the power of government, just in case. * * * We can't afford to take the chance on it wanting to abuse its power.

Moreover, government limiting access to those economic resources which it controls need not spring from an evil intent. If the government controls scarce resources, it must necessarily allocate them between competing interests. It must decide how the resources are to be used and who may use them.

Thus, it is only logical that resources get directed to "positive" pro-government, or status quo, groups, and away from "negative" anti-government, or anti-status quo, groups. And that resources flow toward parties representing the majority, and away from those representing minorities. The resources are scarce, and will be allocated according to the government's definition of the "social interest," "public interest," "general interest," or whatever other euphemism for the special interest of those who control the government.

However, maintaining an area of private ownership and economic decision-making circumscribes the power of government, and its ability to infringe on any rights, economic or political. This is particularly true of a country such as ours, where the government is limited, but which has been growing daily for years, increasing its intrusion into our economic and personal lives. A growing, protected, private sector will help arrest the heretofore inexorable growth of government.

Economic and political freedom are inseparable; the right to own property is itself a fundamental human right. Free speech is the right to rent a hall; free association is the right to sell or not sell. And the freedom to live is the right to become a press secretary, a teacher, or anything else.

In fact, perhaps the most threatening attack on our system focuses on the last point—the freedom to choose the direction ones' life will take. It comes from those who would take your most basic economic resource—you—and turn it into a resource of the state.

Now this is no abstract debating point. Government actions along these lines could affect you more than any other. Indeed, government actions along these lines could make it impossible for those following you to have the freedom of choice that you have.

This philosophy is in its most idealistic, but misguided, form as mandatory national service, or a selective military draft. There are many reasons advanced for such programs—including that people should learn particular values, such as selflessness, charity, and obedience, and that certain tasks, such as teaching the handicapped and defending the country, are obligations enforceable by law.

However, though the goals of such proposals are praiseworthy, the method is not. Unwilling to rely upon voluntary association in a free society, national service proponents would turn everyone into a government resource to be exploited at will. They realize that most Americans do not want to turn their lives over to high-minded paternalists. So they must be forced to do so.

There is no adequate justification for allowing a few to fix their goals on the rest of us. In a free society, it should be up to each individual to determine his or her commitment to that society and the level of service that he or she feels obligated to provide.

Even if most people believe that an obligation of some sort is imposed by merely living—a presumtuous notion at best—it is still strictly a personal, moral burden, and not a legal one.

Moreover, if service is owed to the country, it is strange that only the young are liable for the debt. Virtually all national service proponents talk as if the young are singularly selfish, wayward, insensitive, and parasitic. Thus everyone else—who is safely out of the proposed age range of service—can stand back and determine what the goals of the young should be, and how their obligation should be fulfilled.

And even it one accepts the premise of national service, it is difficult to see how the programs would achieve their lofty goals. The idea of compulsory compassion is nonsensical. Service ceases to be service once it is coerced.

Thus, instead of imbuing the young with the spirit of service, involuntary servitude would embitter them toward an oppressive government. Instead of cultivating altruism, such a program would highlight the selfishness of the rest of the population that exempted itself. And the civic morality that would be learned would be that of the power to force others to do ones' will.

A truly free society should seek to generate the voluntary support necessary to solve its problems. A society without the moral authority to persuade people to freely come to its aid surely lacks the moral right to force those same people to support it.

As you leave OWJC, I hope you'll stop a moment to reflect upon the basis of the system that allows you to make your future as you see best. It is the system that gives us people as fine as Jim Brady, Phil Brody, and you.

Former Supreme Court Justice Stone was speaking to us today when he said that "It may well be questioned whether the state which preserves its life by a settled policy of violation of the conscience of the individual will not in fact ultimately lose it by the process."

If America loses its life, it will be our fault, and our fault alone, for being too willing to use the power of government to impose our own values on others. For many, those values are economic. For others, they are moral, social, and cultural. But in all these cases, the role of the government is being perverted from that of protector of the rights of all to promoter of the whims of a few.

You can help turn that around.

Thank you.●

H.R. 5113

HON. RON de LUGO

OF VIRGIN ISLANDS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. DE LUGO. Mr. Speaker, today I introduced a bill which will reduce the 30-percent withholding tax in the Virgin Islands to 10 percent and allow for a full credit of the tax paid against U.S. taxes. This bill is the result of several months of analysis by the Governor of the Virgin Islands, in consultation with his Economic Policy Council.

The existence of the Governor's Council is indicative of the necessity in the Islands for direct, pointed measures to retain the business we went to great lengths to attract, and to attract new business. With the numerous trade agreements the United States has entered into, the Virgin Islands is finding it increasingly difficult to compete for offshore business.

Several businesses have declined the Virgin Islands Government's efforts to get them to locate in the territory, citing the 30-percent withholding tax as their sole impediment.

Furthermore, the 30-percent withholding tax was not producing resounding tax benefits for the Virgin Islands Treasury. The burden of paying the 30-percent tax on interest has stifled business expansion due to reluctance by mainland banks to lose 30 percent of their interest on loans to Virgin Islands taxes. On the other hand, dividends have not been declared by many businesses who chose to avoid the tax by accumulating earned surplus instead of declaring dividends.

To quote the Virgin Islands Commissioner of Commerce, with the exception of the Virgin Islands' competitors, no one wins under the existing withholding tax. The losers include Virgin Islands workers and entrepreneurs

and the strangely enough Virgin Islands Treasury itself.

The Virgin Islands cannot afford to view its current tax policy with tunnel vision. Available estimations of major tax revenues from the 30-percent tax discount the cumulative effect of high taxation; namely, reduced job opportunities, higher capital costs, reduced investment, and subsequently a lower tax revenue base.

This bill is important for the people of the Virgin Islands. It would provide a healthy investment incentive that should lead to a better circulation of capital, more available mortgage money and potential for funding a much needed housing development. It promises more in revenues to the Virgin Islands Treasury through this expansion than ever resulted from withholding of the 30-percent tax.

For these reasons, I ask for your support of this bill.●

INDUSTRY ANALYSTS PREDICT ALASKAN NATURAL GAS PIPELINE WILL NEVER BE BUILT

HON. TOM CORCORAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. CORCORAN. Mr. Speaker, even if the House votes to approve House Joint Resolution 341, which I oppose, there is serious doubt as to whether the Alaskan natural gas pipeline will ever be built. House Joint Resolution 341 provides for waivers of existing law and would supposedly expedite the pipeline's construction while "pre-billing" gas rate payers for gas they may never get.

In the November 23 issue of Energy User News, Deena Shoshkes cites the conclusions of various analysts who predict that the project will be unable to attract private financers. In view of these kinds of predictions, it seems particularly inappropriate for the House to approve of the pending waivers.

Mr. Speaker, for the benefit of our colleagues, I would like to include in the RECORD at this point the November 23 Energy User News article regarding the potential lack of Alaskan pipeline financing even if the waivers are approved by the House:

[From the Energy User News, Nov. 23, 1981]

ALASKAN GAS PIPELINE WILL NEVER BE BUILT, ANALYSTS SAY

(By Deena Shoshkes)

NEW YORK.—Even if Congress approves a plan to bill gas users in advance for the proposed Alaskan gas pipeline, the pipeline will not be built because the project will be unable to attract private financers, industry analysts predict.

The pre-billing provision could cost an average commercial user $38 to $447 per year in 1982 dollars, and an average industrial or utility user $2,062 to $25,032 per year in 1982 dollars, according to a report by the House energy committee staff. But even with this influx of capital, banks and investors will be reluctant to finance the pipeline because the Alaskan gas will be too expensive for the market, according to Dennis Bakke, deputy director of the Mellon Institute's Energy Productivity Center, Arlington, Va.

The Senate has approved the pre-billing legislation, which consists of a set of waivers to the original legislation authorizing the pipeline. In the House, the interior and energy committees have approved the legislation, and a vote by the full House is expected this week (see story page 4).

Gas users and user groups interviewed by Energy User News said that for the near future the availability of the Alaskan gas is not a necessity, and that decontrol of gas would stimulate the development of more easily accessible gas in the lower 48 states.

"The private market just cannot sustain the project," said Arnold Safer, president of the Energy Futures Group Inc., Bethesda, Md. "The only way the pipeline will be built is if the government were to put money into it."

The Reagan administration is against offering financial support to insure the construction of the pipeline, according to a Department of Energy spokesman. "We're all for the pipeline but it must be financed by the private sector," he said.

"The market will select the most cost-effective solution," Bakke said, adding that it appears the most cost-effective solution is not to build the pipeline.

"No pipeline will be built, and Alaskan gas probably cannot be marketed, under present law with or without the requested waivers," Arlon R. Tussing, a professor of economics at the University of Alaska testified at recent congressional hearings.

"The project will not be completed under its present organization and financial strategy, whether Congress approves or rejects these waivers. In one year, two years, or three years, either the present sponsors or a somewhat different group of sponsors will probably be here again, seeking additional waivers and additional subsidies or guarantees from consumers or the taxpayers," Tussing said.

"We're not counting on Alaskan gas," said Henry Sauer, manager of energy for the Chemical Manufacturers Association, Washington, D.C. "We're more concerned with rapid decontrol of gas."

"Looking at the decade ahead, we have sufficient gas supplies," said Ira Dorfman, legislative director of the American Bakers Association, Washington, D.C. "We can do without Alaskan gas."

Users also said they will avoid buying the Alaskan gas if its price rises as high as some analysts predict it will.

"Wherever possible, we will make the maximum use of the cheapest fuels and concentrate on conservation if gas prices get very high," said Carl Johnson, government affairs manager for Corning Glass Works, Corning, N.Y. "However, there will always be a certain amount of gas that we need for special processes and we will have to pay for it at any cost."

MARKET PROBLEM

"Under rapid decontrol, there will be a problem selling the Alaskan gas because there will probably be more domestic gas available at a much lower price," estimated Johnson. "We expect that prices will increase and are hopeful that decontrol will expand the supply and availability of gas."

The original Alaska Natural Gas Transportation Act, which in 1976 set up the regulatory framework for the pipeline project, specifically prohibits billing gas users in advance in order to raise money needed for construction. Sponsors of the pipeline proj-ect have said they now need the advance billing provision to attract private investors.

"Initially, Alaskan gas will cost in excess of $8-10 per million Btus," Bakke of Mellon Institute said. "The price will slowly come down, so that over a twenty-year period the price will average $4.50-6.00/million Btus. In order to compete, Alaskan gas prices must be that low in the 1980s, or they won't be able to sell it."

"No fuel is essential," Bakke said. "There are substitutes for everything. At that price it will be more economical to burn coal, convert to electricity and invest in conservation technology."

The 4,800-mile-long pipeline will cost about $23 billion to construct, according to a spokesman for the Northwest Alaskan Pipeline Co., Salt Lake City.

"By 1985, when the proposed pipeline should be completed, under the existing laws gas will already be two-thirds decontrolled," Safer of the Energy Futures Group said. "And even if the market price rises after deregulation, it probably won't rise sufficiently high to justify the cost of the Alaskan gas. By 1985, the average price of gas will be $6 per 1,000 cubic feet, or about $6 per million Btus."

SPONSORS' OPTIMISM

Sponsors of the pipeline have argued that there will be a market for the high-priced Alaskan gas because the price of decontrolled gas at present is already quite high, and therefore the overall price users will pay for gas in 1986 is higher than the analysts have predicted.

The cost of the Alaskan gas will be no higher per Btu than the price of oil in 1986, according to the pipeline company spokesman.

"Although the gas will be at $9 per million Btus initially, the cost averaged out over 20 years is $4.65 to $5.10," the spokesman said. "Right now, we are already paying $5 per million Btus for Canadian gas. That cost is tied to the price of oil and oil prices are not going to come down."

The price of the Alaskan gas will be reduced over time, he said, offering the country an assured, plentiful, and reasonably priced energy supply.

"Thirteen percent of the total U.S. gas supply is sitting up there. The longer we wait, the more expensive it will be to build the pipeline—which must be built eventually," he said.

"It is difficult to predict what the highest price users will pay might be," the spokesman said. "However, this gas will get cheaper over time, you can't say that about any other supply. Nothing ever gets cheaper."

The availability of Alaskan gas may even help to drive the price of all gas down under decontrol, according to Kenneth W. Thompson, vice president of government affairs for the Interstate Natural Gas Association of America. "If the pipeline is not built, the price of gas could be $15 per million Btus by 1985," Thompson said. "The gas from Alaskan gas would exert a downward pressure on the market."

"High prices could force users to other fuels, but the switch would be due to the overall market, not the price of Alaskan gas," Thompson said.

Gas users contacted by EUN said that if the price of gas were to climb up to $9 per million Btus they would convert wherever possible to alternate fuels and step up energy conservation programs. But they said that in certain industrial processes gas is essential, and they would have to pay for it whatever the cost.

A spokesman for Coca Cola Co., Atlanta, said the company would do everything it could to switch to an alternate fuel rather than pay for high-priced Alaskan gas if the prices are as high as analysts have predicted they will be.

Dave Dake, engineering projects manager for Salem Carpet Mills, Inc., Ringgold, Ga., said he was more pessimistic. "We expect to be paying $9 per million Btu's by 1986 even without the Alaskan gas and it will still probably be the cheapest fuel around for our needs."●

CERTIFICATE FOR HEROISM AWARDED TO JACK HYDRICK II

HON. ED JONES

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. JONES of Tennessee. Mr. Speaker, I rise today to share with my colleagues a heroic feat accomplished by one of my constituents, Jack Hydrick II. Last summer, this young man jumped into a drainage ditch filled with flood waters to save the life of one of his companions, Miss Christy Osborne.

Obviously, the saving of lives at the risk of one's own life takes special courage and bravery. What makes this case even more special is the age of the young man. He is 9 years old. When Miss Osborne, age 8, fell into the swirling water and was carried through a culvert under the street, young Jack jumped into the fast-moving water, pulled her out and pushed her up the bank of the ditch to safety.

For his quick action and courage and endangering his own life for another, Jack Hydrick has been awarded the Certificate for Heroism by the Boy Scouts of America. I think Jack's action should be recognized by all the Members of the House of Representatives and that his bravery should be applauded by all of us who recognize the significance of his deed.●

TAYLOR AND GAYLER: GOOD SENSE ON DEFENSE

HON. THOMAS J. DOWNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. DOWNEY. Mr. Speaker, on numerous occasions I have taken the floor of the House to express my dismay over the low quality of what passes for thought on national defense these days. A welcome exception to this dreary mass is a series of articles which appeared in the Washington Post over the summer. One of these articles is by former Chairman of the Joint Chiefs of Staff Maxwell Taylor; three are by former Pacific Fleet Commander Noel Gayler.

I will not review the substance of their arguments here, since I am about to insert the articles themselves. I do, however, urge everyone to read them. You will find in them perhaps a half dozen innovative and self-evidently valid insights into matters of national security, without the closed-mindedness and regidity which characterizes many defense iconoclasts. I can only wish our present national security appointees shared General Taylor and Admiral Gayler's intellectual depth and grasp of national security essentials.

[From the Washington Post, June 30, 1981]

CAN WE DEPEND ON DETERRENCE?

(By Maxwell D. Taylor)

In the debate over the needs of our strategic forces, one controversial point is always in the foreground—or background—of the discussion: do we have forces capable of deterring the Soviets from initiating nuclear war? From the Eisenhower through the Johnson administrations, there was little doubt either as to the credibility or the indispensability of their deterrent effectiveness. It was credible because our forces were clearly able to destroy the Soviet Union as a viable nation. It was indispensable because, after the Soviets had acquired intercontinental missiles, it was generally accepted that strategic war would be mutually suicidal and that no defensive means, passive or active, existed that could make it less so.

Not only were defensive measures viewed as futile, but damage control was equally unpromising. One could never hope to foresee where and how to stockpile reserves of food, water, medicines, hospital beds, firefighting equipment and the like needed to deal simultaneously with hundreds of regional disasters. Even if there were warning of attack, how to relocate senior government officials without closing down government itself, how to evacuate urban populations without creating nationwide panic, and how to disperse industry at a time when all communications might be blotted out by nuclear explosions? And after the attack, how to put out fires, restore order and keep survivors alive while disposing of millions of dead?

Unable to answer such questions, most of my contemporaries concluded, as I did and do, that there is no conceivable way of hedging adequately against a failure of deterrence. We are not dealing with war in any rational Clausewitzian sense—the use of military force as another means for a government to achieve political ends beneficial to the nation. In any major strategic exchange, the reciprocal damage would create conditions that would make victory and defeat virtually indistinguishable, save perhaps that the victors might survive a bit longer than the vanquished.

In recent years, there has been a progressive loss of faith in this doctrine, now derisively dubbed MAD (mutual assured destruction) by its critics. There is fairly broad acceptance of the possibility of a limited strategic attack concentrated on a limited target such as our silo-based ICBMs, a contingency used to justify the need for the new MX missile.

It is also widely asserted that deterrence is a dubious goal for our strategic forces because Soviet military writers never mention the word in discussing strategic doctrine. They make no sharp distinction between conventional and nuclear warfare as we do, and seem to expect to use both nuclear and conventional weapons in any combination as needed anywhere from the battle front to the heartland of the enemy. By using such blended military means, although expecting heavy losses, they seemingly anticipate ultimate victory pretty much as it was won against Germany in World War II.

The apparent existence of such a warfighting concept among Soviet leaders has convinced a considerable number of American experts on the subject that our own strategic forces are grossly inadequate to deter an enemy instilled with such a doctrine. They urge a drastic increase in our strategic forces to reinforce their visible strength and call for measures similar to the Soviets' for hedging against the failure of deterrence and fighting a nuclear war to a finish.

I am unconvinced by these arguments—in fact, I firmly believe that it should be easier for us to deter the Soviets from initiating nuclear war than it would be for them to deter us.

In the first place, the Soviets have superior conventional forces in close proximity to virtually all of their national interests that may require defense. Thus they would have no reason to resort to nuclear weapons for their protection.

Second, from their World War II experience, their leaders know how devastating conventional war can be. They also know nuclear war would be many times more so—that they would lose in a few hours more than they lost in four years fighting the Germans.

Third, they could not afford to fight or even "win" a strategic war with the United States. In doing so, their losses would so paralyze the nation as to make it easy prey to nearby enemies—wolves ready to take advantage of a stricken bear. Such enemies could include Chinese, Afghans, Turks, Germans and Poles beyond Soviet borders, and non-Russian minorities within.

Finally, the past record of the Kremlin leaders indicates an extreme reluctance to run unnecessary risks, particularly if there is a safer way to gain the desired end. In this case they have such an alternative—to ride the tide of the present favorable correlation of forces, increasing its momentum when possible and exploiting every opportunity to further weaken the United States and its allies. This moderate course would not only promise gain at minimum risk. It also would allow crediting the ultimate victory to the fulfillment of the Marxist-Leninist prophecy of the inevitable collapse of capitalism from its internal weaknesses and contradictions. It would be an ideological triumph of considerable worth.

If the foregoing reasoning is sound, the probability of a deliberate Soviet attack is extremely low and the possibility of effecting enduring deterrence very high. But even so, we should never cease our efforts to improve the quality and survivability of our forces, particularly their command and communications systems, and thus assure continued maximization of their deterrent potential. The size and numbers of their weapons would be determined not by what the Russians have, but by the weapons needed

to destroy enough targets causing Soviet losses equal to or exceeding those of World War II.

With an arsenal of such lethality to assure deterrence, it would be folly to race the Soviets further in numbers of weapons or to waste the finite resources available for national defense in profligate hedging against the failure of deterrence. We can apply the savings to far better purpose in strengthening the conventional forces necessary to defend our essential interests overseas, currently beyond the supporting range of our military power.

[From the Washington Post, June 17, 1981]

(I) STICKING BY OUR GUNS

(By Adm. Noel Gayler)

This is the first of three articles on defense by Admiral Gayler, who has participated in strategic nuclear planning, and who served as director of the National Security Agency and, before his retirement, as commander of all U.S. forces in the Pacific.

Chancellor Helmut Schmidt came to see us at a time when the NATO West was troubled over nuclear weapons based in Europe. He has had to tell his own party, the Social Democrats, to shape up on this issue, or find a new leader.

With full American support, he's taken a firm line. So have other NATO governments. But their electorates are not necessarily on board. And if there's one clear lesson of the Vietnam War, it is that military policy, without supporting political consensus, is a loser. The basic issue is that most Europeans don't want to fall under Russian military conquest or domination, with all the odious apparatus of Communist totalitarian rule. But, they also don't wish to take a serious or unnecessary risk of being eradicated by nuclear weapons. Most people will think these are reasonable concerns.

In the past some Europeans have made a choice, under the slogan of "Better Red than Dead." More robust characters have reacted in the spirit of our own Patrick Henry: "Give us liberty or give us death." But these are not the only alternatives. Both security and freedom for Europe are possible. They require that as allies we see clearly what the military needs are, and that we act on that knowledge.

The first nuclear proposal now before the allies is that NATO must "match" the Soviet medium-range ballistic missiles targeted on Europe (SS20) with medium-range ballistic missiles of our own (Pershing II or cruise missiles) based in Europe. This may or may not be a good idea. We have made it a touchstone of the unity of NATO, and Chancellor Schmidt's loyal support to that ideal should command admiration and respect. The deployment plan is seen also as a necessary, if paradoxical step to the negotiation of balanced nuclear force reduction. Let's hope the negotiating strategy works.

But there are few things we should understand about it:

Europe is under no special or unusual danger from SS20's. There are plenty—very many more than plenty—of Russian intercontinental-range missiles, which can strike any target in Europe, simply by shortening the trajectory. It makes no real difference to the target where a missile comes from—only where it lands.

● You don't have to "match" any weapons with an equal and opposite weapon of your own. Late in the 19th century, battle cruisers were built to rule the seas. They had 11-inch guns to sink other battle cruisers, 8-inch guns for cruisers, 6-inch guns for light cruisers, 4-inch guns for destroyers, 3-inch guns for torpedo boats and (I guess) small arms to repel boarders. Then British Admiral "Jackey" Fisher had a remarkable insight: 11-inch guns that could sink a battle cruiser could also sink any smaller ship! The all-big-gun Dreadnought was built, and all other big warships were obsolete. Our intercontinental weapons are our big guns.

● European-based NATO missiles impart no special freedom of action or autonomy to the European allies. It is inconceivable they could be used without American consent.

The basis to which to judge the proposals is the extent to which they contribute to or lessen the nuclear threat to Europe and to the unity of NATO.

The second nuclear issue before NATO is the so-called neutron bomb. President Carter first supported this notion, then snatched it back. Secretary Weinberger recently flouted the idea. Secretary Haig slapped it down, for reasons not central to its merits. No one doubts the idea will surface again. It has powerful supporters. What about it?

The "neutron" weapon is one of a class called "tactical" nuclear weapons. These are weapons smaller (but still enormous) in yield, designed to be used by military forces against military forces. Some examples are artillery shells, short-range missiles and aircraft bombs. They have great destructive power and their use entails grave risks. What are those risks?

● The enemy will certainly retaliate in kind, and he will up the ante. Rapid escalation to total nuclear war is a strong possibility, once the nuclear firebreak has been crossed.

● Russian incursion will be fought on allied soil. Noncombatants will be killed in their hundreds and thousands, and these will be our friends and allies. Since our friends may well object to this outcome, the alliance may be fractured at the outset.

● Even if we enjoy two miracles in series—there is no escalation and the alliance holds together—we will be far worse off militarily after a tactical nuclear exchange than before. That is because we have the more critical and vulnerable targets; ports, airfields and lines of communication central to our defense.

The so-called neutron weapons (also called enhanced radiation weapons) are designed to meet some of these objections. Most, but not all, of the energy comes out as radiation that kills or injures living creatures but does little damage to material. There is, however, an irreducible minimum of heat and blast, which is still very large by ordinary standards. Are they very different from "conventional" nuclear weapons in practical effect? No. Are they more dangerous? Perhaps, if they serve to lower the threshold to nuclear war. Are they really necessary to defeat tanks? No. There are better alternatives.

There is another difficulty, of a different kind. Rightly, no president with all his marbles is likely to release nuclear weapons for use, except in the most extreme circumstances, if even then. The risks are simply too high to make the game worth the candle. The commander in the field therefore, has an uncertain weapon on which he can never rely. Much better that he have effective means to victory that he can be confident will be available to him. We can have such means, if we will.

What are some of these alternatives? Weapons that effectively kill tanks, by finding them and hitting them. Weapons that ensure our aircraft are superior to the enemy's. Means to find and kill submarines and protect our ships at sea against aircraft and missiles. Weapons to stop infantry on the ground. Most important, means to control information, the key to tactics and to battle. All of this without resort to nuclear weapons. All of this, fundamentally, by technology well suited to the American and European genius and far ahead of the adversary.

Given political will and economic support NATO can field the forces necessary to defend ourselves. We have no need to resort to the unmeasured hazard of nuclear weapons. We need be neither Red nor dead.

[From the Washington Post, June 23, 1981]

(II) A WAY OUT OF THE NUCLEAR TRAP

(By Adm. Noel Gayler)

All the West is caught in the cruel trap of ever-increasing danger from nuclear weapons. We have strange company: the U.S.S.R. We and they struggle mightily for a preferred place within our trap, but every struggle draws the net tighter.

Most of you who read this live near Washington—you will not survive a nuclear exchange. Nor will those who live in New York or Boston or Seattle or Chicago or any of our great cities. Nor those who live in Moscow or Kiev or Tbilisi or Vladivostok or remote Alma-Ata or almost anywhere else in either enormous country.

Our present policy has reached a dead end. So has the Russian policy. But there is a way out of the trap. George Kennan has made a dramatic proposal for the immediate 50 percent reduction, on both sides, of all nuclear weapons, of all kinds, without haggling over detail. This is great, as far as it goes, but it does not go far enough. To see why this is so, read on.

Our basic need is truly to understand the nature of nuclear weapons. They are so enormous that, in a nuclear exchange, the first few weapons arriving do almost all the damage conceivable to the fabric of the country. So we have a military paradox: the power position of either side is not affected much by the size of its nuclear forces. Which way the wind is blowing (carrying nuclear fallout) makes more of a difference than an extra thousand missiles or so on either side.

In a similar way, technology has no great payoff. It makes no difference whether New York, say, is devastated by an old SS11 or a brand new SS19 MIRV warhead. In the absence of effective defenses, it makes no difference whether delivery is by a hypersonic maneuvering re-entry body, or a tired old Bear bomber. The results are the same.

But what about defenses? Can't we have the missile defenses and air defenses that would shield us against a Russian attack? The short answer is: no way. In conventional air defense, it's enough to shoot down a few aircraft at each go—the cumulative losses soon bring the attack to a halt.

In nuclear defense, the situation is reversed: essentially all weapons have to be stopped or else the damage is done. Effective defense against hundreds or thousands of weapons is impossible.

Isn't accuracy important, and its exotic technology? Well, yes, but only if you want to attack hard, fixed targets such as missile silos, and that brings us to MX.

MX is really two separate and separable ideas. One idea responds to the potential threat against our own missiles by creating

uncertainty about their precise location. No matter how powerful and how accurate the attacking missile, it cannot, except by chance, destroy a target it cannot locate.

The idea is good. We make our missiles relatively secure against attack, and we don't have to fire them out in the few minutes of warning time available. The hair-trigger is gone, as is much of the danger from false alarms. But the present scheme is unnecessarily elaborate. We don't have to pave the states of Utah and Nevada and suck dry the water of the West to give security to our force. Much simpler means will do the job.

The second MX idea creates a powerful rocket with numerous and very accurate independent warheads, as replacement for Minuteman. This is a dubious proposal, in its present form. If and to the extent we need to replace an aging missile with a new one, it's a good idea. To the extent we create a force with warheads numerous, powerful and accurate enough to threaten the Russian ICBM force in hard silos, it's a bad idea. Why?

Because the U.S.S.R. will surely respond. They will be no more content than we to see their land-based force threatened by surprise attack. What are their options?

They could live with their vulnerability. This would be very dangerous—they would feel the hair-trigger necessity to fire out on warning of attack.

They too could play hide and seek.

There is a worse Russian option. That is that they would do both the above. They could elect to keep the hair-trigger force they have and also to build a force we cannot target. We would end up with the worst of both worlds.

All of this means that the security of both their force and ours is good—stabilizing. The idea of attacking such forces—"counterforce" in the jargon—is a loser. It is destabilizing and dangerous for us and for them.

The missile-firing submarines are pretty secure. Sure, both sides are working hard on anti-submarine measures, and have had some limited success. But with the vast areas of the ocean they both can now hide in, it's inconceivable that any important number can be sunk in the opening hours of war. Three months, maybe—not three hours.

Still different are the bombers. We've accepted that their chance of getting shot down is so great they must carry cruise missiles to penetrate to the target. Better we should convert most of the bomber force, present and future, to useful military purposes.

This notion, that military force should have useful military purpose, is so self-evident that it seems fatuous to state it. Yet we must, for there is an obvious disconnect in our present forces.

There is no sensible military use for any of our nuclear forces: intercontinental, theater or tactical. Their only reasonable rationale is, first, to deter the other fellow from the use of his and, second, to gain whatever political edge there may be from the appearance of nuclear strength. As a general rule, we can state that nuclear forces are militarily sufficient whenever they are politically sufficient.

So now we know how to escape the trap. It is the usable conventional military power that counts, not the useless threat of distant destruction. Cut back the nuclear forces, ours and theirs, across the board, as Kennan suggests. Give up any notion of first use. Look to the united political, economic and usable military strength of the West to keep us free.

[From the Washington Post, June 25, 1981]

(III) THE SOVIETS WANT TO SURVIVE, TOO

(By Adm. Noel Gayler)

Neither we nor the Soviet Union can possibly want to be in our present position, where our very existence depends on the nuclear restraint of the other. There is only one way out—we must each negotiate with the other not only a major reduction of nuclear weapons but an absolute end to any military dependence on them.

Negotiating will be tough. We each have major and nearly insoluble problems with the other. The West feels threatened by the enormous Russian military buildup, by their worldwide trouble-making under the rubric of "wars of national liberation," by their unprincipled subjugation of their neighbors. They in turn recognize us as their most dangerous potential military adversary, as the stumbling block to their worldwide ambitions, and as the organizers of international alliances to contain them.

And we have a lot of experience negotiating with the Soviet Union—much of it bad. We see them as adversary, devoid of good will, manipulatory, unwilling to compromise. They see us as uncertain, compliant, willing to yield after a while to intransigent positions, for the sake of agreement. Both views have a good deal of validity.

Yet both are beside the point. The object isn't to "win" a negotiation, or to end up with "superior" nuclear forces. The object is to make the chance of nuclear war as small as possible. We have other political objectives. So has the Soviet Union. Most of them conflict intensely. But this one objective we share, and it is far more important than all the rest put together.

The key is to find our common interests, and they are not hard to find; we have a common interest in not being blown up. We also have a common interest, as great powers, that we not be subject to nuclear blackmail from smaller powers or terrorist groups. This is plenty to build agreement on, but only if we detach these overriding problems from all the other issues between us. The notion that we can punish or coerce the Soviet Union for its behavior by withholding our agreement on nuclear weapons is fallacious. Our need is every bit as great as theirs. If we wait until they shape up, to our standard, on every bone of contention between us, we will wait a long, long time. And the clock of nuclear danger is ticking away.

So we have the basis for negotiation. What precisely should we propose? Here is a list, for openers:

Immediate equal reduction of nuclear weapons of all categories as proposed by George Kennan. This can become a progressive process.

Renunciation of nuclear initiatives for any purpose whatever.

Renunciation of any "counterforce" strategy against strategic nuclear forces.

Concurrent strong opposition to any form of nuclear weapons proliferation, by our clients or theirs. The first step must be our own reductions, or we have no credibility whatever.

Are such agreements possible? Yes, because the Soviet Union and the United States would gain by them. Can they be verified? Yes. Weapons turned in can be counted. Weapons could be hidden away in small quantities, but only very large quantities would make a difference. And very large quantities we would know about. Nuclear initiatives are foreshadowed by the nature of the weapons, for example a "neutron" bomb must be made and deployed before it can be used. And opposition to nuclear weapons proliferation must by nature be public, or it isn't real opposition.

Supposing we believe all this; what are the Russian views? We know that they are suspicious, and slow to react to new proposals. We know that their military literature abounds in references to nuclear war exchanges and mixed nuclear-conventional campaigns. (To a certain extent, so does our.) We know that some of their military exercises and some of their military equipage bear out these ideas. But there is no evidence that the Soviet Union is irrational. The compelling logic against the use of nuclear weapons applies equally to the Russians as to us. The Party leadership has given every signal that they understand that logic. And the last effort to reach a limiting agreement, imperfect though it was, was terminated not by the Soviet Union, but by the Americans when the Senate refused to approve SALT II.

The nuclear preparations of the Soviet military can therefore be regarded as worst-case insurance, as indeed ours should be.

So we have our prescription for negotiations. We need be realistic, hardheaded and specific. Generalities about the "spirit" of Camp David or anywhere else will get us nothing but disappointment. And we must confine negotiations severely to our common interests: to reduce the chance of nuclear war. No attempted arm-twisting on other subjects, no attempts to gain points by "winning." If we do this, we and they have a good chance to reach agreements that will in some measure lift this cloud of danger from us.

President Reagan has an unmatched opportunity. He alone can initiate this process without suspicion of weakness. The American people wish, and he wishes, for America to have unmatched strength—military, economic, political strength and strength of purpose. Yet the president has common sense in uncommon measure, and will surely see, that our military strength lies in people and forces far removed from these useless and dangerous nuclear weapons. Should he act on this perception, and should he succeed, history will record him as one of our greatest presidents.●

IAEA "SAFEGUARDS" ARE AN ILLUSION

HON. EDWARD J. MARKEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. MARKEY. Mr. Speaker, for over 25 years we have heard the assertion made that nuclear commerce is conducted safely, and steps are taken which prevent the diversion of nuclear materials from peaceful nuclear programs to atomic weapons. But since the advent of nuclear commerce the world has had to rely on the efforts of the International Atomic Energy Agency to prevent this diversion. And now it has become all too clear that the IAEA safeguards are no barrier at

all to this diversion and the spread of nuclear weapons.

Mr. Speaker, the Nuclear Regulatory Commission has recently expressed the grave concern that "the IAEA safeguards system would not detect a diversion" of nuclear materials. It is time to recognize that the safety provided by the IAEA is an illusion and we must take steps to halt the export of dangerous nuclear materials, which carry such enormous proliferation risks.

Mr. Speaker, in the Washington Post of December 2, 1981, Jessica Tuchman Matthews wrote an incisive op-ed piece on the problem of proliferation and IAEA safeguards. I submit that article in its entirety into the RECORD.

LETTING NUCLEAR DANGER SPREAD

(By Jessica Tuchman Mathews)

The Nuclear Regulatory Commission's resounding vote of no-confidence this week in the international system of safeguards on which trade in nuclear technology is premised is but the latest in a series of events and policy shifts that has all but wiped out American non-proliferation policy.

As one who once had a hand in helping to formulate that policy during part of the Carter administration, I have watched with awe the rapidity with which the dismantling has taken place.

The erosion began last spring in a close vote by the Senate Foreign Relations Committee approving an administration request to permit a large new assistance program for Pakistan by waiving the law that prohibits assistance to a country trying to make nuclear weapons. The vote attracted little attention at the time, yet it was a significant milestone; in the first test of its own sanctions against nuclear proliferation, the United States was choosing to ignore them.

By the time the waiver reached the Senate floor a few weeks ago, there was no remaining doubt that Pakistan is aggressively pursuing every possible technical route to building a bomb. It may be ready to stage a nuclear explosion in one year.

Nevertheless, the full Senate chose not to vote on the wisdom of the waiver. Sen. John Glenn (D-Ohio), trying to redraw the line he had helped write into law a few years ago, offered an amendment requiring termination of American aid if Pakistan went all the way and actually detonate a nuclear bomb. But the message that was conveyed that evening to Pakistan, and who knows how many other interested governments, was not, that the amendment had passed—which it had, just—but rather that nearly half the Senate—45 members—had voted against it, in the name of preserving "flexibility" for the president. The flexibility in this case is the flexibility to do nothing—as this country did when India exploded its bomb in 1974.

Meanwhile Israel had bombed Iraq's research reactor. The International Atomic Energy Agency's response was not to investigate why Iraq, despite having no commercial nuclear facilities, was stockpiling hundreds of tons of uranium ore. Nor did it or any other group consider intelligence findings that Iraq was indeed pursuing a nuclear capability, despite having renounced the right to do so by signing the Non-Proliferation Treaty. Instead the IAEA called on its members to offer Iraq "emergency assistance" to rebuild the destroyed reactor.

France, Iraq's original supplier, responded. Discussions between France and Iraq have been under way since last summer. American officials are apparently not privy to the terms being negotiated, especially whether the new reactor will be as inexplicably large for its asserted "research" purpose as the old one was, or whether this time France will insist that the reactor not be fueled with highly enriched, weapons-usable uranium.

France's recent agreement with South Africa does not offer much ground for optimism. The United States has been trying for years to get South Africa to accept safeguards on its nuclear facilities. Its leverage was the supply of fuel rods for South Africa's first power reactors scheduled for completion next year. But American law requires that South Africa first accept safeguards. Suddenly, in mid-November, it was announced that the reactor would be loaded on schedule with fuel rods made in France, and without safeguards. The action took American officials completely by surprise, cutting the ground out from under the U.S. government's position.

A few years ago, the nuclear supplier nations agreed to an informal moratorium on the transfer of reprocessing and enrichment plants—facilities that produce material that is directly usable in bombs. This year, for the first time since that agreement, a non-nuclear weapons state—Mexico—has invited bids for the construction of power reactors and let it be known that it wants "advanced technology"—enrichment and reprocessing—to be part of the deal. The suppliers' responses will be a major test of how much, or how little, is left of the will to slow nuclear proliferation. The outlook is clouded by the administration's recently announced willingness to transfer classified enrichment technology to Australia, making it all the harder to say no to others.

Several other thresholds have been quietly crossed. In extending an agreement tht allows U.S.-supplied fuel to be reprocessed in Japan's pilot reprocessing plant, the administration, without prior congressional consultation, dropped two key provisions of earlier versions. One of these dealt with whether reprocessing plants, because they provide direct access to weapons-usable materials, can ever be effectively safeguarded. The other retained U.S. control over Japan's use of the separated plutonium.

U.S. negotiators, unable to find acceptable conditions for ending nuclear cooperation with India, are reportedly considering major concessions. The United States wants international safeguards to continue to be applied to the used fuel (containing more than a ton of plutonium) it has supplied to India over 18 years. India has refused, and is reportedly considering a unilateral renunciation of the agreement and its attendant safeguards. To avoid that damaging precedent U.S. negotiators may allow India to reprocess the U.S.-supplied fuel.

The Reagan administration let it be known from the outset that it planned a dramatic "shift in emphasis" from the Carter non-proliferation policy. It would emphasize American leverage as a "reliable nuclear supplier" rather than trying to restrict access to sensitive nuclear technologies. But leverage is only leverage if one is prepared to use it. The administration's easy acceptance of Pakistan's nuclear bomb program and many subsequent decisions signaled clearly that it was more interested in encouraging nuclear trade. The message was picked up not only by potential proliferators by also by other suppliers—France, especially—that had reluctantly gone along with earlier U.S. insistence on a tough non-proliferation policy. Congress, overwhelmed with other concerns, failed to respond. The result has been a frighteningly swift unraveling of the containment net that had been slowly stitched together in the seven years since India's nuclear explosion shocked the world. No one knows where it will end or what it will now take to stop the process.●

PRESIDENT'S PROGRAM DESERVES A FAIR CHANCE

HON. PHIL GRAMM

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. GRAMM. Mr. Speaker, it was recently my pleasure to read an eloquent article refuting the latest bit of "intelligence" floating about Washington; that is, the idea that President Reagan's economic recovery program has failed after only 2 months. The author of that article is Mr. Ray Zauber, the editor of the Oak Cliff Tribune in Dallas, Tex. I insert Mr. Zauber's article in the RECORD and recommend it to my colleagues.

Turning this country's economy around will be neither easy nor swift. However, the President is heading us in the right direction and, as Mr. Zauber's article demonstrates, the majority of the American public continues to agree with the President's policies.

CRITICS OF REAGANOMICS SHOULD EXERCISE MORE PATIENCE

The Reagan economics plan has been in place for less than six weeks and already many influential individuals and organizations throughout the United States have deemed it a failure.

For almost 50 years the nation has been guided by Presidents and Congresses—largely Democratic dominated—who have steered the ship of state toward socialism and welfarism.

The theory of the tax and spend political leaders—with heavy support from the media, academe, labor and liberal voters—has been to correct the deficiences of unproductive social programs with massive infusions of new money.

In the wake of these tactics a monumental bureaucracy at almost every level of government from the precinct to the national administration has proliferated.

Ronald Reagan and George Bush are the most outspoken tenants of the nation's two highest offices who have offered an overt, straight forward plan to reduce the federal establishment.

Reagan has preached the benefits of federalism which would return great power and responsibility to state governments as practiced in the early days of the Republic.

Getting Washington bureaucrats off the backs of taxpayers and businessmen, who provide the funds with which government is fueled has been Reagan's oft-stated objective.

They want to eliminate waste, duplication, fraud, malingering, theft, conversion, mismanagement, sinecures, inefficiency, over-

staffing, backbiting, greed and other common ills of socialism which have been the linchpins of Reagan's new deck economics.

The Tribune and this typewriter have often warned in discussing Kemp-Roth-Reagan, Gramm-Latta and Stockman economics that rolling back the welfare juggernaut would be extremely painful.

Additionally we insisted that before things got better they would get worse for the nation. Perhaps much worse.

In order for any kind of medicine to take effect, there must be time allowed for the curative ingredients to attack the disease symptoms.

Treating a very sick national government differs little from doctoring a human or an animal. Certain common sense procedures must be observed for a panacea to be effective.

Placebos have been tried by previous administrations without success because the ingredients are inert. The American economy is so sick that psychology will play only a minor role in curing the political patient.

What worries Scratchpad is the intolerance of some politicians who place personal ambition and the welfare of the party above the good of the country.

There are journalists, academics, students, fellow travelers and ultra liberals who prefer socialism or communism to our present system of government. Unscrupulous politicos also prey upon those who favor the free lunch.

To my utter dismay, there are some of the most influential media in the country—from the three television networks to the county seat weekly—who consistently support communist-inspired revolutions. Around the globe.

So powerful are many of the liberal east coast daily newspapers, news magazines, movie producers and network television news departments that they can strongly influence the thinking of Middle America.

Many were sounding the death knell of Reaganomics weeks before the program's October 1 commencement.

If ever there was time a time in this nation's history for patience by the voters and taxpayers, this is it.

The socialists and welfarists have tried every known political trick to redistribute the wealth of America without success. Wasting billions upon billions collected from the labors of the most affluent nation that history has ever known.

However, there are sinister forces at work to scuttle the ideals of the Reagan-Bush administration. These opportunists have great resources for mischief and misdirection.

Let's resist the demagogues and hypocrites inside and outside of government. Those who would gladly destroy this great system for selfish benefit.

For heaven's sake, let us conclude with the trite and often restated admonition: Please, let's give the new administration a chance. A fair chance.

THE RURAL ENTERPRISE ZONE AND DEVELOPMENT ACT OF 1982

HON. WES WATKINS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. WATKINS. Mr. Speaker, I included the following statement for the CONGRESSIONAL RECORD:

STATEMENT OF CONGRESSMAN WES WATKINS OF OKLAHOMA, CHAIRMAN OF THE CONGRESSIONAL RURAL CAUCUS, BEFORE THE SUBCOMMITTEE ON CONSERVATION, CREDIT, AND RURAL DEVELOPMENT (HOUSE COMMITTEE ON AGRICULTURE)

Mr. Chairman, thank you for scheduling this public hearing on H.R. 4576, Rural Enterprise Zone and Development Act of 1982. I am especially pleased that you, as Vice Chairman of the CRC, together with all Members of the CRC Executive Committee, unanimously endorsed and cosponsored HR 4576. To date, there are 51 cosponsors.

H.R. 4576, a bill to amend the Agricultural Act of 1961, authorizes the Secretary of Agriculture to provide financial assistance for the economic development of rural enterprise zones and it amends the Internal Revenue Code of 1954 to provide tax incentives for small businesses located in rural enterprise zones.

Much has been said and written concerning this concept in urban areas and it appears that not much has been said or written concerning small cities and rural areas in the enterprise zone dialogue between the Executive Branch, Congress, Public sector, and Private sector.

We are assuming a positive perspective as we discuss H.R. 4576, its role, and place in the Reagan Administration and the 1980's.

As you and the members of this subcommittee know, rural areas lack investment capital by banks and venture capital by rural entrepreneurs. Rural America has come to depend on both the farm and nonfarm job income to exist, resulting in a tax base from which to support needed local facilities and services.

Maximum effective and efficient utilization of local resources is essential to maintain and improve the economic and social health of rural America.

The distribution of private economic enterprises, income opportunities, and high quality developmental facilities and services, is a critical part of the process. The fair and equitable sharing of private and public resources is an important consideration for rural areas, bringing about an additional increase in such resources for the construction, expansion, operation, or trading of a business in rural areas which do not have sufficient access to investment funds from existing credit and investment.

The basic solution for rural America is in the maintenance and expansion of its small business, resulting in more jobs and productivity for our nation.

Small businesses are stymied by the high and exorbitant interest rates, as well as tight money policies of the Federal Reserve Board, causing irreparable damage to capital financing and long-term investments.

The Economic Recovery Act of 1981 failed to adequately accommodate small business. There must be an equitable tax incentive policy which is carefully thoughtout and considerate in its treatement of all people.

Sound economic development in rural America needs maximum coordination and communication among those who represent the private and public sectors, as well as the farm and non-farm sectors.

Technical and management skill is not readily available in rural areas when compared to the tremendous resources available in the urban areas. Planned and orderly growth and development of rural areas is a major factor in any program designed to meet rural challenges.

In many instances, reports cite the abundance of underexploited physical and human resources which, if developed, would alleviate the distress of an area if such financial resources were available locally. Capacity building in rural areas is crucial to raise the technical, occupational, and entrepreneural skill of existing and new labor force entrants to attract new industry and to encourage local expansion of existing business.

Federal policy consideration must include additional investment needs for additional investment and financial resources, including helping local people to plan, develop, and implement resource development and investment strategies for the orderly growth and development of distressed rural areas. There must be a local capability to provide adequate developmental facilities and services. The increase in technical and occupational skill levels among rural people is essential.

H.R. 4576 sets the stage for the dialogue between rural and urban proponents to designate rural enterprise zones, to provide appropriate financial and technical assistance required to reverse economic distress, and to provide tax and financial incentives to small businesses willing to locate or expand, resulting in increased employment and income producing opportunities in such areas.

By targeting job incentives, financial and technical assistance of FmHA to rural areas, coupled with private sector support, the enterprise zone concept can be used. The needs of rural America continue to be ignored at the very time our people are facing tremendous financial and other burdens.

During the late 1940's, we initiated a Marshall Plan to rebuild Europe. The 1960's and 1970's gave birth to many programs to rebuild our decaying inner cities and to alleviate urban poverty. Rural America was once again on the outside looking in.

Rather than restate detailed provisions of H.R. 4576, we have provided a Section by Section Summary and Highlights of its provisions for your information and consideration.

We want to continue to work with you to insure fairness and equity in the orderly growth and development of small cities and rural areas. Thank you.●

THE WEEK THE GOVERNMENT STOPPED

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington report for Wednesday, December 2, 1981, into the CONGRESSIONAL RECORD:

THE WEEK THE GOVERNMENT STOPPED

With increasing regularity, Congress and the President have failed to enact spending bills by the beginning of the new fiscal year. Time and again, they have failed to meet the deadlines which govern spending for federal activities. This past week, for the first time in history, all agencies ran out of money when a stopgap financing law expired at midnight on November 20. President Reagan moved immediately to shut the government down. It was the week the government stopped.

It is instructive to review the background of the impasse which led to the shutdown. Congress' failure to complete action on the

regular appropriations bills (the House has passed 12 of 13, the Senate six of 13) made it necessary to consider stopgap financing (in budgetary language, a "continuing resolution") to keep the government in business. Six months after submitting his budget request and two months after Congress approved his spending and tax proposals, the President insisted that Congress trim another $8.5 billion in spending from the continuing resolution. Later, he said he would accept half that amount. When Congress passed a continuing resolution which the President said did not cut enough, he vetoed it. Most agencies began to furlough "non-essential" employees under an 1870 statute which tells government managers, in effect, that if Congress has not provided the money then they cannot spend it. The impasse was temporarily broken a few days later when Congress approved, and the President signed, a continuing resolution extending current levels of spending to December 15. Since the underlying budgetary problems have not been resolved, another impasse could come in three weeks.

The blame for the impasse must be shared by all concerned. The President believes the free-spending Congress caused it, and he complains that Congress inaction left the country without a budget for 14 months. Every member of Congress would agree that the latenight, last-ditch legislating of the past week is a poor way to operate, but other reasons are offered to explain the delay in enacting regular appropriations bills. The House has done almost all its work, but the Senate has kept more than half the regular appropriations bills off the floor because it has been unable to agree with the President on his request for a new round of spending cuts. In fact, the Senate leadership told the President that he should not seek a new round of cuts so soon after the bruising battles of last summer. So the President blames Congress, and Congress blames the President.

By shutting down the government, the President demonstrated his determination to control federal spending. My guess is that his action was good politics—that it played well in the country—and that he wanted to show he would be tough in negotiating spending cuts next year. After a run of bad economic news, the President almost certainly concluded that he had to "take command" of the budget process. The cuts he won with his veto of the continuing resolution were surely not as important as the symbol of a resolute stance against spending. In addition, they were not large enough to have much effect on the 1982 deficit, which is now likely to exceed $80 billion because of the recession and the huge tax cuts. It is hard to see why a continuing resolution which came down to a difference of one-half of 1% caused such a fuss.

Throughout the debate on the continuing resolution, there was much confusion about the underlying budgetary figures. The President contended that the continuing resolution was far over his budget. Congress argued that it was under both the President's budget of March and the budget resolutions which he had supported. The dispute was eventually narrowed to a single issue: whether the continuing resolution was over the President's modified budget of September. Congress thought it was very close, but the President believed the difference was larger. The sources of disagreement were many. The President may have misread the continuing resolution, anticipated the passage of bills which Congress did not, and used different economic assumptions. Moreover, errors in calculation were easy to make because there were so many seperate programs in the continuing resolution, and separate calculations had to be made for each one. Finally, no accord was reached on the programs to be classified as discretionary, and thus subject to cuts, and the programs to be classified as entitlement, which go up automatically with inflation and increases in the population.

Having just gone through this divisive struggle, I have the strong impression that we must avoid legislating budgets with the threat of a shutdown of government hanging over us. Good legislation cannot be passed in such conditions. Unfortunately, stopgap financing has become the focus of too many disputes because Congress has fallen behind in its consideration of regular appropriations bills. We are using continuing resolutions for long periods of time, yet they should be used only wnen emergencies arise. We are using them to fund almost all government activities, yet they should be used only in isolated instances. The danger is that the continuing resolution will take the place of the regular appropriations process, yet it has none of the legislative safeguards the latter has.

The deadlocks which have plagued the budget process in recent years reflect structural weaknesses in the process. With four money committees and two budget committees, several stages of consideration, and dozens of votes, the process has become unwieldly. These weaknesses must be corrected. An issue of policy makes matters worse. At the root of the impasse which shut down the government is disagreement between Congress and the President on the segments of American society which should bear the burden of the spending cuts. Until a broader consensus on this issue is reached, Congress' budgetary troubles are likely to continue despite all efforts to reform the budget process.●

CIVIL AERONAUTICS BOARD SUNSET ACT OF 1981

HON. NORMAN Y. MINETA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 3, 1981

● Mr. MINETA. Mr. Speaker, on November 23, 1981, I introduced H.R. 5103, the Civil Aeronautics Board Sunset Act of 1981, on behalf of myself, Chairman HOWARD of the Public Works Committee, and Congressmen CLAUSEN and SYNDER, the ranking minority members of the Public Works and Transportation Committee and the Aviation Subcommittee. The bill is intended to serve as a vehicle for a subcommittee markup early next year. To assist interest parties in evaluating this legislation, we have prepared the following section-by-section analysis of the bill:

SECTION-BY-SECTION ANALYSIS OF H.R. 5103—CAB SUNSET ACT OF 1981

Section 1. The Act may be cited as the "Civil Aeronautics Board Sunset Act of 1981".

Section 2. Amendment of Federal Aviation Act of 1958. Unless otherwise specified, amendments to this Act are to be considered amendments to the Federal Aviation Act of 1958.

TITLE I. TERMINATION AND TRANSFER OF FUNCTIONS OF THE CIVIL AERONAUTICS BOARD

Section 101. Functions Under Federal Aviation Act of 1958. Under existing law, the requirement that CAB make public convenience and necessity findings before authorizing air carriers to provide interstate and overseas air service is terminated effective December 31, 1981. The introduced bill eliminates similar requirements for interstate all-cargo service.

The introduced bill also amends the sections in existing law terminating various CAB authority on January 1, 1983, and transferring CAB's remaining authority on January 1, 1985. Under the bill, the general date for termination of CAB functions which are not being transferred to other agencies is 60 days after enactment. The date for final "sunset" of CAB and transfer of its remaining authority is 150 days after enactment.[1]

The following CAB authority is terminated 60 days after enactment: Sections 401(q) and (r) of the Federal Aviation Act, which give CAB authority to require carriers to maintain insurance and file performance bonds, and impose a continuing "fitness" requirement on certificated air carriers; Sections 407 (b) and (c), which impose reporting requirements relating to stock ownership of air carriers and stock ownership by air carrier officers and directors; Section 409, which gives CAB authority over specified interlocking relationships involving air carriers; Section 410, which gives CAB authority over air carrier applications for loans and financial aid from the United States government; Section 417, which authorizes CAB to allow charter air carriers to provide scheduled service in specified circumstances; Section 418, which gives CAB authority to authorize all-cargo air service in interstate or overseas air transportation; Sections 1002 (d), (e), and (g), which give CAB authority to regulate rates and fares for interstate and overseas air transportation; and Sections 1002 (h) and (i), insofar as they authorize CAB to regulate joint fares and through transportation of property.

The following CAB authority is terminated 60 days after enactment insofar as it relates to interstate and overseas transportation: Section 401 of the Federal Aviation Act (other than subsections (j), (k), (l), (m), and (o)), which authorizes CAB to award certificates of public convenience and necessity for interstate and overseas air transportation; Section 403, which requires air carriers to file tariffs specifying fares, and imposes related requirements; Section 404, except insofar as this section requires air carriers to provide reasonable through service; to establish, observe, and enforce just and reasonable joint fares and just and reasonable classifications, rules, regulations, and practices relating to joint fares; and to establish just, reasonable, and equitable divisions of such joint fares; and except insofar as such section requires air carriers to provide safe and adequate service. (The requirements terminated include the duty to

[1] Where authority is extensively modified before being transferred, the modifications are accomplished under Title II of the bill. To obtain a complete picture of transfers and terminations it is necessary to review both Titles I and II.

provide "reasonable" individual fares, and the prohibitions against "unjust discrimination" or "undue or unreasonable prejudice or disadvantage"); Section 415 of the Act, which gives CAB authority to inquire into the management of the business of any air carrier.

Sections 401(d)(1), (2) and (3) of the Federal Aviation Act are terminated 60 days after enactment insofar as they require an applicant for a certificate for foreign air transportation to demonstrate that it is fit, willing and able to perform the transportation properly.

The bill further provides for the termination of the following provisions 150 days after enactment: Sections 201, 202, 203, and 205 of the Federal Aviation Act which establish CAB and give it basic authority; and Section 411 of the Act, which gives CAB authority over unfair or deceptive practices or unfair methods of competition in air transportation.

The following provisions terminate 150 days after enactment to the extent they relate to interstate and overseas air transportation; Sections 401(1) and (m) which require certificated air carriers to carry mail; and Sections 405(b), (c), and (d), which give CAB and the Postal Service various authority to require the carriage of mail.

The following provisions terminate on January 1, 1986, insofar as these sections relate to interstate air transportation: Sections 412(a) and (b) and Section 414, which authorize CAB to approve and grant antitrust immunity to certain agreements between air carriers.

The following provisions terminate 6 years after enactment: Section 404(a)(1), except insofar as it requires air carriers to provide safe and adequate service (this termination ends the duties of air carriers with respect to joint fares in interstate and overseas air transportation); and Sections 1002(h) and (i) which give CAB authority to regulate joint fares and through service in interstate air transportation.

The bill further provides for the transfer of remaining CAB authority to other agencies 150 days after enactment, as follows: The CAB's authority over the carriage of mail in interstate and overseas air transportation is transferred to the Postal Service to be exercised through negotiations or competitive bidding: the CAB's authority over foreign air transportation is transferred to the Secretary of Transportation to be exercised in consultation with the Secretary of State; and all other non-terminated authority is transferred to the Secretary of Transportation.

Section 102. Functions Under Other Laws. Transfers to the Secretary of Transportation CAB's authority under specified laws other than the Federal Aviation Act.

TITLE II. AMENDMENTS TO CONFORM TO CAB SUNSET AND RELATED AVIATION AMENDMENTS[2]

PART A—PROVISIONS TO TAKE EFFECT ON DATE OF ENACTMENT

Section 201. Temporary Air Transportation. The bill provides that all certificates for temporary air transportation shall be for an initial period of at least five years. Any temporary certificate in effect on date of enactment which is the first certificate issued to a carrier for a route is extended to terminate 5 years from the original issuance.

Temporary certificates shall be renewed unless the Board[3] determines that it is not consistent with the public convenience and necessity to award certificates to all applicants for the route, and another applicant demonstrates by clear and convincing evidence that it can provide a substantial improvement in the cost or quality of service.

Section 202. Division of Joint Fares. Under existing law, an airline's duty to enter into joint fares and the CAB's authority to regulate joint fares and divisions of revenues for interstate and overseas air transportation end on January 1, 1983. Prior to that date, the carriers have a duty to enter into joint fares and CAB has discretionary authority to regulate the fares. The bill amends these requirements to provide that for the three-year period beginning on the date of enactment, the Board's current uniform system for establishing joint fares and dividing the revenues therefrom shall continue to be applicable to interstate and overseas transportation. During this period, the Board may prescribe a different uniform method, but this uniform method must provide for a division of revenues based on the cost of each participating carrier. In no event shall a carrier participating in a joint fare receive more than its local fare.

For the next three years, DOT is required to establish a uniform system, but is given discretion over the method which is used to establish this system.

The duty to establish joint fares does not apply to any air carrier that does not participate in any through service or joint fares.

Section 203. Subsidy Reduction Program. This section places limits on the subsidy payable under Section 406 of the Act, effective 90 days after enactment.

The bill provides that Section 406 subsidy shall not be paid for service to cities enplaning 80 or more daily passengers during the preceding 12-month period. Subsidy payments may not exceed the level established on February 4, 1981 (in the case of class-rate carriers), or December 31, 1980 (in the case of other carriers). Subsidy payments shall be reduced by any excess profits realized on subsidy ineligible routes.

Ceilings are established for Section 406 subsidy payments in fiscal years 1982 through 1985. (Separate ceilings are established for Section 406 subsidy payments for service in States other than Alaska, and for service in Alaska.) For fiscal 1982, the ceiling applies to service beginning 90 days after enactment. If carriers are eligible for payments in excess of the ceiling, each carrier's payment shall be reduced by the same percentage.

The provision in existing law allowing a commuter carrier to replace a Section 406 carrier is revised. The effective date for this "bumping" is changed from January 1, 1983 (existing law) to date of enactment of this bill. Under existing law, a commuter may bump a Section 406 carrier if the commuter demonstrates that it can provide a substantial improvement in service at a substantial decrease in the amount of subsidy. The introduced bill provides that the commuter must show that it can provide "equivalent or better" service and a decrease in subsidy.

Section 204. Fare Flexibility in Foreign Air Transportation. Under existing law, carriers providing foreign air transportation have authority to raise fares 5% above or 50% below a specified standard foreign fare level. The Board has discretion to extend the zone. The bill modifies the zone of flexibility to provide for unlimited downward flexibility and upward flexibility beginning at 10%, or any higher lever currently established by CAB. Subsequently, the Board may reduce the upward zone but not below 10%. There is no limit on upward flexibility for service with a level of amenities higher than normal economy service.

Section 205. State Taxation. Prohibits the states from taxing air carrier transportation proterty at a tax rate or assessment level exceeding that imposed on other commercial and industrial property.

Section 206. Procedures for Certification for Limited Designation in International Markets. Requires the Secretary of Transportation to adopt rules to ensure that DOT will follow procedures providing an impartial decision-making process for awarding international routes to U.S. carriers in markets in which not all applications can be granted. The proposed and final DOT rules are to be made available to appropriate committees of the House and Senate.

Section 207. Report on Air Carrier Agreements. Requires the Secretary to report to appropriate Congressional committees by January 1, 1985, on the administration of authority to immunize inter-carrier agreements from the antitrust laws. The report shall include recommendations on whether authority to grant antitrust immunity should continue.

Section 208. Elimination of Discrimination and Unfair Competitive Practices in Foreign Air Transportation. Requires the Secretaries of State and Transportation and the Civil Aeronautics Board, through bilateral negotiations, to eliminate all forms of discrimination and unfair competitive practices faced by United States air carriers in foreign air transportation to the greatest extent feasible.

Section 209. Protection of Employees. Imposes a duty on the parties to air carrier mergers and other specified transactions to make arrangements for the integration of work forces and the protection of employees which are at least as protective of and beneficial to employee interests as the "Alleghenny-Mohawk" conditions developed by CAB. Before a transaction may be consummated, the Secretary of Labor must certify that the required arrangements have been made. Notwithstanding any other provision of this section, an agreement pertaining to the protection of the interests of such employees may be entered into by any air carrier or air carriers and the duly authorized representative or representatives of its or their employees. The subsection applies to transactions specified in Section 408(a) of the Act when at least two of the parties to the transaction are qualifying air carriers, defined as a passenger carrier operating 60-seat or larger aircraft, or a cargo carrier providing foreign air transportation with aircraft with a capacity of 18,000 pounds or more.

The employee protection provisions of the Airline Deregulation Act are amended to

[2] The summary of this Title does not discuss all changes to the Federal Aviation Act which conform the Act to the terminations of authority discussed in the summary of Title I above.

[3] This authority will be exercised by CAB until the agency is sunset. Thereafter, the authority will be exercised by the Secretary of Transportation. The same transfer of authority takes place for subsequent sections of the bill.

modify the "duty to hire" provisions. Under the bill, the duty to hire will apply only if there is a qualifying dislocation,[4] the same trigger which governs the financial assistance program. Under the bill, the "duty to hire" will apply to all air carriers providing passenger service with aircraft with a capacity of more than 60 seats, or cargo service in foreign air transportation with aircraft with a capacity of more than 18,000 pounds. The bill also amends the provision under which displaced employees who are hired by another carrier under the duty to hire retain their rights of recall with their original employer. The introduced bill provides that this right of recall does not extend to pilots, flight engineers or flight navigators who exercise their right to be hired by another carrier.

PART B—PROVISIONS TO COINCIDE WITH TERMINATION GENERALLY OF FUNCTIONS OF CAB

SUBPART 1—FEDERAL AVIATION ACT OF 1958

Section 221. Modification of Certification Requirements. Section 401 of the Act is amended so that certificates of public convenience and necessity will be required for foreign air transportation only. To issue a certificate for foreign air transportation, the Secretary will be required to make public convenience and necessity findings only. The requirement that the Secretary find that the applicant is fit, willing and able is eliminated. (However, a requirement similar to "fitness" requirement is imposed by Section 227, below.)

Section 402 dealing with foreign air carrier permits is amended to eliminate the requirement that the Board find the applicant fit, willing and able. However, it will still be necessary for the Board to find that the applicant is "qualified" and has been designated by its government under terms of an agreement with the United States, or that grant of the application is otherwise in the public interest.

Section 222. Insurance for Air Carriers. The Board's authority under Section 401(q) to require carriers to carry liability insurance and to file performance bonds is eliminated. FAA is given authority to require carriers to maintain liability insurance. This amendment does not affect the Board's authority over insurance and performance bonds under Section 404 of the Act which requires air carriers to provide safe and adequate service.

Section 223. Mergers and Interlocking Relations. Eliminates the current requirement that CAB approval must be obtained before air carriers merge with other carriers or aviation entities. CAB is given the right to intervene in any case under the antitrust laws involving these mergers. The bill also eliminates requirements for CAB approval of various interlocking relationships and requirements for the filing of reports of stock ownership in air carriers.

Section 224. Antitrust Exemption for Providing Advance Notice of Fares. Authorizes the Board to prescribe regulations setting forth methods by which carriers can give advance notice to any person of changes in their fares, for the purpose of facilitating the sale of air transportation by that person. Carriers complying with these regulations shall be immune from the antitrust laws.

[4] Defined as a bankruptcy or a 7½ percent reduction in employment during a 12-month period, the major cause of which is the Airline Deregulation Act of 1978.

Section 225. Essential Air Service. Modifies notice requirements for termination of essential air service to take account of the termination of certificates of public convenience and necessity. The bill provides that the notice requirements for termination of essential air service now imposed on certificated air carriers will be imposed on carriers operating aircraft with a capacity of more than 30 seats.

For cases not involving essential air transportation, the bill eliminates the requirements in existing law that air carriers must give advance notice of specified terminations or suspensions of service. However, notice will still be required before termination of all service to a city in foreign air transportation. The bill also imposes a requirement that a carrier which terminates all large aircraft service to a city must give notice to the community at the same time it gives notice to an organization which publishes airline schedules.

Section 226. Advance Filing of Fares. For two years after enactment, carriers must file in advance with the Secretary all changes in fares for interstate and overseas air transportation of persons and changes in the terms governing the construction of fares and the availability of particular fares. Apart from the latter, this section does not contemplate the filing of other carrier "rules" which are now filed in tariffs, such as limitations on liability.

Section 227. Other Conforming Changes to the Federal Aviation Act of 1958. Adds a new policy goal of assuring, to the maximum extent feasible, that charter services are not subject to more restrictive conditions than are imposed on group or bulk movements in scheduled service.

The bill changes various provisions governing airport certificates and security requirements to take account of the termination of certificates of public convenience and necessity.

Under existing law, airlines may be exempted from passenger screening requirement for operations which are not scheduled operations by a certificate holder. The bill modified this exemption authority to allow the Administrator to exempt operations from screening requirements where he finds those requirements unnecessary to assure security.

Existing law imposes airport security requirements, including requirements of a law enforcement presence, at airports served by certificated carriers. The bill amends this requirement to give the Administrator discretion as to which airports will be covered by the regulations.

The exemption of certificated carriers from emergency locator transmitter requirements is modified to exempt carriers "utilizing a dispatch system, including flight following, approved by the Administrator".

The FAA's authority to determine whether applicants for operating certificates are equipped and able to conduct a safe operation is modified to provide that the Administrator must also make findings on the financial fitness of applicants to conduct safe operations.

In existing law FAA is empowered to issue airport operating certificates to airports served by air carriers certificated by the Civil Aeronautics Board. This provision is amended to give the Administrator jurisdiction to issue certificates for airports enplaning 2,500 or more passengers, or airports which are receiving scheduled or unscheduled service from aircraft designed for 30 or more passenger seats.

Section 228. Amendments to Table of Contents. Makes conforming changes to Table of Contents of Federal Aviation Act.

SUBPART 2—OTHER LAWS

Section 231. Changes to Aviation Laws. The Aircraft Loan Guarantee Act is amended to reflect elimination of certificates of public convenience and necessity. The concept of certificated air carriers is replaced by a carrier operating passenger aircraft of 60 seats or more or cargo aircraft of 18,000 pounds or more capacity. The current expiration date of October 24, 1983, is extended to September 30, 1988. Between October 24, 1983, and September 30, 1988, loans may be guaranteed only for passenger aircraft of less than 60-seat capacity or cargo aircraft of less than 18,000 pounds capacity.

The "Love Field" provision in the International Air Transportation Competition Act of 1979 is amended to require that air carrier operating certificates issued under 604 of the Federal Aviation Act shall prohibit service from Love Field consistent with requirements imposed in the Love Field provision.

Section 232. Changes to Nonaviation Laws. Conforming changes to other laws which refer to certificates of public convenience and necessity, or to tariffs filed with CAB.

PART C—PROVISIONS TO COINCIDE WITH FINAL TRANSFER OF FUNCTIONS AND SUNSET OF CAB

SUBPART 1—FEDERAL AVIATION ACT OF 1958

Section 241. Federal Preemption.

Revises preemption provision in Airline Deregulation Act of 1978 to take account of elimination of certificates of public convenience and necessity. Excludes from preemption operations of an air carrier which operates wholly within a state, which does not interline, and which does not list schedules in any airline guide. Also excludes from preemption charter operations wholly within Alaska and operations wholly within Alaska by a carrier operating small aircraft only.

Section 242. Termination of the Board. Conforming changes to Federal Aviation Act to eliminate provisions establishing CAB and giving it general powers.

Section 243. Repeal of Duty to Carry Mail in Interstate and Overseas Air Transportation.

Conforming amendments to carry out termination of duty to carry mail in interstate and overseas air transportation, as set forth in Section 101 above.

Section 244. Limitation on Reporting Requirements.

Provides that the Secretary shall by rule, after notice and comments by all interested parties (including the air carrier industry and users of air carrier records and reports) reduce reporting requirements to the minimum necessary, considering the burden on air carriers and foreign air carriers and the public interest, to accomplish the purposes of the Federal Aviation Act.

Section 245. Unfair Practices and Methods of Competition.

Repeals Section 411 of the Federal Aviation Act which gives the CAB jurisdiction over unfair or deceptive practices or unfair methods of competition in air transportation or the sale thereof. Eliminated the exemption of air carriers and foreign air carriers from Section 5(a)(2) of the Federal Trade Commission Act which prohibits unfair methods of competition and unfair or deceptive acts or practices in commerce. Provides that for purposes of Sections 301, 302, and 303 of this bill, the foregoing provi-

sions shall be deemed a tranfer of the functions of the Civil Aeronautics Board relating to unfair and deceptive practices and unfair methods of competition to the Federal Trade Commission. Makes conforming changes in Consumer Credit Protection Act to take account of termination of Civil Aeronautics Board and give CAB's authority to the FIC.

Section 246. Miscellaneous. Conforming changes to War Risk Insurance Program in Federal Aviation Act to take account of termination of Civil Aeronautics Board.

SUBPART 2—OTHER LAWS

Section 251. Changes to Aviation Laws. Conforming changes to International Aviation Facilities Act and International Air Transportation Fair Competitive Practices Act to take account of the termination of the Civil Aeronautics Board. Generally, the Board's authority under these laws is given to DOT.

Section 252. Changes to Nonaviation Laws. Conforming changes to specified nonaviation laws to take account of termination of Civil Aeronautics Board. Generally, the Board's authority under these laws is given to DOT.

PART D—PROVISIONS TO COINCIDE WITH LATER TERMINATIONS OF FUNCTIONS OF CAB

Section 261. Air Carrier Agreements. Effective January 1, 1986, limits the Secretary's power to approve agreements between carriers to agreements affecting foreign air transportation.

Section 262. Joint Fares and Through Routes. Effective six years from date of enactment, eliminates air carriers' duty to enter into joint fare agreements and authority of the Secretary to regulate joint fares.

TITLE III. ADMINISTRATIVE AND PERSONNEL PROVISIONS

Section 301. Transfer and Allocations of Appropriations and Personnel. Provides that employees and unexpended appropriations in connection with transferred functions are transferred to the appropriate agencies. In order to facilitate transfers effectuated by this bill, the Director of the Office of Management and Budget is authorized, in consultation with CAB and the transferring agencies, to make necessary determinations on the transfer of functions, positions, and assets. During the period between the 60th and 150th day after enactment, CAB shall consult with the Secretary before making any decisions regarding personnel. The Chairman of the CAB and the Secretary are directed to consult and plan for the orderly transfer of functions and personnel, beginning as soon as practicable after the date of enactment.

Section 302. Effect of Personnel. Provides that transferred employees are entitled to have CAB evaluations used in determining merit pay, in addition to the evaluations of the new agency.

Section 303. Savings Provisions. Provides for the continuation of all effective CAB orders and proceedings after termination of Civil Aeronautics Board.

Section 304. Definitions. Definition of "agency" and "function" for purposes of this Title.

Section 305. Effective Dates. Establishes effective dates for provisions of the bill.●

SENATE—*Friday, December 4, 1981*

(Legislative day of Monday, November 30, 1981)

The Senate met at 10:30 a.m., on the expiration of the recess, and was called to order by the President pro tempore (Mr. THURMOND).

PRAYER

The Chaplain, the Reverend Richard C. Halverson, LL.D., D.D., offered the following prayer:

Let us pray.

Loving, Heavenly Father, Thy servants have worked long hours under great pressure, which shows no signs of diminishing. I do not pray for relief from responsibility, but for an extraordinary measure of grace. Strengthen the Senators who, under the duress of time and pressure from diverse interests, must make many decisions of great magnitude. Be with their staffs who run the offices and provide the information to make decisions. Be with those who process the mountain of business in and out of the cloakrooms. Be with those who record the debates and transcribe them for the CONGRESSIONAL RECORD with such demanding precision. Bless those who monitor parliamentary order, schedule and voting records. Be with the men and women who provide security at the doors, on the floor and on the street. Help all who are a part of the efficient support system without which the Senate could not function.

And Father, as we near Chanukah and Christmas, when families are more sensitive and fragile than ever, protect our families against the pressures of the Hill. Help us to make our homes a haven and not a Senate annex. Help us to make undivided, uncluttered time for our loved ones, free from distraction. Make us realize that national affairs will fail if our families disintegrate.

Gracious God, grant that these next 3 weeks will be times of peace, good will, hope, and love, to Thy glory and the honor of Thy Son. Amen.

RECOGNITION OF THE ACTING MAJORITY LEADER

The PRESIDENT pro tempore. The acting majority leader is recognized.

THE JOURNAL

Mr. STEVENS. Mr. President, I ask unanimous consent that the Journal of the proceedings of the Senate be approved to date.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMENDATION OF THE SENATE CHAPLAIN

Mr. STEVENS. Mr. President, I cannot help but reflect on how privileged we are to have the Chaplain open the session of the Senate each day to give us the guidance and, in spite of the heat of battle on the floor, to recall that we are here by the grace of God and due to the confidence of our constituents to continue our democratic process.

S. 1912—RECRUITMENT INCENTIVES AND PAY ADJUSTMENT FOR AIR TRAFFIC CONTROLLERS

Mr. STEVENS. Mr. President, the continued ability of Members of both Houses to attend to important matters with their constituents in their home States and still be present for the critical votes now taking place in this Congress provides ample evidence of a phenomenon for which citizens from all sectors of our populace can be grateful.

Despite the walkout of air traffic controllers in August of this year, our air traffic system is operating at about 80 percent of the prestrike commercial traffic levels.

The grave concerns that attended the impending strike have given way to admiration for the high level of performance delivered by those operating our air traffic system.

I am sure that there is no disagreement about the debt we owe the men and women in the FAA who have kept our air traffic control system operating both safely and efficiently.

However, we need to go beyond feelings of gratitude and admiration for what has been accomplished up to this point. We need to smooth the way for the more permanent adjustments in FAA staffing that remain necessary.

It is critical that we undertake an expedited effort to restaff our air traffic control facilities at the appropriate levels to insure the continued safety of the flying public. Special recruitment procedures and increased emphasis on controller training are necessary.

In recognition of this need, I am submitting legislation to provide special recruitment incentives and to assure that the current work force receives an equitable pay treatment. This body has previously agreed to the need for legislation of this nature when it added substantively identical provisions to the continuing resolution on agency funding.

The bill does not require an additional appropriation because sufficient funding is contained within the FAA appropriation.

Mr. President, this bill would enable the Federal Aviation Administration to appoint retired military and civil service annuitants to positions in the air traffic control system on a temporary basis. They would be hired to fill both controlling and training positions without reducing their annuities. They would be hired to fill short-term needs and would be used only in positions for which they were fully qualified.

It should be emphasized that maintaining safety would be a major consideration in selecting properly qualified annuitants to fill the positions in question.

Safety would be enhanced and not compromised in any manner. When the FAA Administrator determined the need for a special controller recruitment effort had terminated, these special employees would return to their retired status.

Designated classes of FAA employees would also receive an operational responsibility differential equal to 5 percent of their basic rate of pay in recognition of the important role they have played and continue to play in the operation and maintenance of the air traffic control system.

In addition, certain personnel—such as data system specialists and planning and procedures specialists in FAA terminals and centers—would be entitled to receive an operational currency differential of 1.6 percent of their basic pay.

Mr. President, the air traffic controllers who provide training to other air traffic controllers are assuming an extra responsibility on top of their already significant duties. I propose a premium pay of 10 percent of their basic rate of pay to those air traffic controllers.

The premium pay would be in addition to other premium pay to which the controller is entitled.

Further, I am proposing a training provision so that an air traffic controller could receive pay for time spent in a training status in excess of a 40-hour workweek. Pay would be at the basic pay rate, not at overtime rates. These provisions, Mr. President, recognize that intensified training efforts may be necessary to rebuild the air traffic system in a timely manner.

Although the FAA seeks to provide each controller with a meal break, this is not always possible given unusual workload conditions which may arise at a particular facility. Accordingly, my legislation proposes that, on those occasions when a half-hour meal break cannot be granted at a reasonable time during an 8-hour shift, a controller will be paid at one and one-half times his basic rate of pay for the time spent working rather than taking the time that most employees get for a meal break.

The last aspect of my proposal, Mr. President, would clarify the special controller retirement program which guarantees a minimum 50-percent annuity to a retiring controller.

My proposal would amend the controller retirement statute to make clear that a controller who had withdrawn money from the retirement fund would

not receive the minimum annuity of 50 percent unless it had been redeposited as is normally required.

As presently drafted section 8336(f) of title 5 could be construed to mean that a controller who resigns and withdraws all of his retirement contributions would still be eligible for a minimum 50-percent annuity upon reemployment. Of course, that is not the intent of the provisions, and this proposal today would clarify that.

Mr. President, I urge the Senate to study this proposal. I hope the Senate will once again support this concept so that we can rebuild our Nation's air traffic control system.

I state to the Senate that today, providing the schedule of the floor permits it, I will conduct a hearing on this legislation at 2 p.m. in room 3302, where we will receive testimony from the Department of Transportation and Administrator Helms of the Federal Aviation Administration.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the text of the bill was ordered to be printed in the RECORD, as follows:

S. 1912

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4109 of title 5, United States Code, is amended by adding at the end thereof the following new subsection:

"(c) Notwithstanding subsection (a)(1) of this section, the Administrator, Federal Aviation Administration, may pay an individual training to be an air traffic controller of such Administration, during the period of such training, at the applicable rate of basic pay for the hours of training officially ordered or approved in excess of 40 hours in an administrative workweek.".

SEC. 2. Section 5532 of title 5, United States Code, is amended by adding at the end thereof the following new subsection:

"(f)(1) Notwithstanding any other provision of law, the retired or retainer pay of a former member of a uniformed service shall not be reduced while such former member is temporarily employed, during the period described in paragraph (2) or any portion thereof, under the administrative authority of the Administrator, Federal Aviation Administration, to perform duties in the operation of the air traffic control system or to recruit or train others to perform such duties.

"(2) The provisions of paragraph (1) of this subsection shall be in effect for any period ending not later than December 31, 1984, during which the Administrator, Federal Aviation Administration, determines that there is an unusual shortage of air traffic controllers performing duties under the administrative authority of such Administrator.".

SEC. 3. (a) Chapter 55 of title 5, United States Code, is amended by inserting after section 5546 the following new section:

"§5546a. Differential pay for certain employees of the Federal Aviation Administration

"(a) The Administrator of the Federal Aviation Administration (hereafter in this section referred to as the 'Administrator') may pay premium pay at the rate of 5 percent of the applicable rate of basic pay to—

"(1) any employee of the Federal Aviation Administration who is—

"(A) occupying a position in the air traffic controller series classified not lower than GS–9 and located in an air traffic control center or terminal or in a flight service station;

"(B) assigned to a position classified not lower than GS–10 or WG–10 located in an airway facilities sector; or

"(C) assigned to a flight inspection crewmember position classified not lower than GS–11 located in a flight inspection field office,

the duties of whose position are determined by the Administrator to be directly involved in or responsible for the operation and maintenance of the air traffic control system; and

"(2) any employee of the Federal Aviation Administration who is assigned to a flight test pilot position classified not lower than GS–12 located in a region or center, the duties of whose position are determined by the Administrator to be unusually taxing, physically or mentally, and to be critical to the advancement of aviation safety.

"(b) The premium pay payable under any subsection of this section is in addition to basic pay and to premium pay payable under any other subsection of this section and any other provision of this subchapter.".

(b) The analysis of chapter 55 of such title is amended by inserting after the item relating to section 5546 the following new item:

"5546a. Differential pay for certain employees of the Federal Aviation Administration.".

SEC. 4. Section 5546a of title 5, United States Code (as added by section 3 of this Act), is amended by adding at the end thereof the following subsections:

"(c)(1) The Administrator may pay premium pay to any employee of the Federal Aviation Administration who—

"(A) is occupying a position in the air traffic controller series located in an air traffic control center or terminal;

"(B) is not required as a condition of employment to be certified by the Administrator as proficient and medically qualified to perform duties including the separation and control of air traffic; and

"(C) is so certified.

"(2) Premium pay paid under paragraph (1) of this subsection shall be paid at the rate of 1.6 percent of the applicable rate of basic pay for so long as such employee is so certified.

"(d)(1) The Administrator may pay premium pay to any air traffic controller of the Federal Aviation Administration who is assigned by the Administrator to provide on-the-job training to another air traffic controller while such other air traffic controller is directly involved in the separation and control of live air traffic.

"(2) Premium pay paid under paragraph (1) of this subsection shall be paid at the rate of 10 percent of the applicable hourly rate of basic pay times the number of hours and portion of an hour during which the air traffic controller of the Federal Aviation Administration provides on-the-job training.

"(e)(1) The Administrator may pay premium pay to any air traffic controller or flight service station specialist of the Federal Aviation Administration who, while working a regularly scheduled 8-hour period of service, is required by his supervisor to work during the fourth through sixth hour of such period without a break of 30 minutes for a meal.

"(2) Premium pay paid under paragraph (1) of this subsection shall be paid at the rate of 50 percent of one-half of the applicable hourly rate of basic pay.

"(f)(1) The Administrator shall prescribe standards for determining which air traffic controllers and other employees of the Federal Aviation Administration are to be paid premium pay under this section.

"(2) The Administrator may prescribe such rules as he determines are necessary to carry out the provisions of this section.".

SEC. 5. Section 5547 of title 5, United States Code, is amended by adding at the end thereof the following: "The first sentence of this section shall not apply to any employee of the Federal Aviation Administration who is paid premium pay under section 5546a of this title.".

SEC. 6. Section 8339(e) of title 5, United States Code, is amended by inserting before the period "unless such employee has received, pursuant to section 8342 of this title, payment of the lump-sum credit attributable to deductions under section 8334(a) of this title during any period of employment as an air traffic controller and such employee has not deposited in the Fund the amount received, with interest, pursuant to section 8334(d) of this title".

SEC. 7. Section 8344 of title 5, United States Code, is amend by adding at the end thereof the following new subsection:

"(h)(1) Subject to paragraph (2) of this subsection, subsections (a), (b), (c), and (d) of this section shall not apply to any annuitant receiving an annuity from the Fund while such annuitant is employed, during any period described in section 5532(f)(2) of this title or any portion thereof, under the administrative authority of the Administrator, Federal Aviation Administration, to perform duties in the operation of the air traffic control system or to recruit or train other individuals to perform such duties.

"(2) Paragraph (1) of this subsection shall apply only in the case of any annuitant receiving an annuity from the Fund who, before August 3, 1981, applied for retirement or separated from the service while being entitled to an annuity under this chapter.".

SEC. 8. (a) The amendments made by sections 2, 3, and 7 of this Act shall take effect **at five o'clock ante meridian (Eastern Daylight Time)**, August 3, 1981.

(b) The amendments made by the first section and sections 4 and 5 of this Act shall take effect on the first day of the first applicable pay period beginning after the date of the enactment of this Act.

(c) The amendment made by section 6 of this Act shall take effect on the date of the enactment of this Act.

The PRESIDING OFFICER (Mr. MATTINGLY). The time for the leader has expired.

RECOGNITION OF THE ACTING MINORITY LEADER

The PRESIDING OFFICER. Under the previous order, the acting Democratic leader is recognized for not to exceed 5 minutes.

Mr. STEVENS. Mr. President, I ask unanimous consent that the time allocated to the leader on the other side be allocated to Senator HEFLIN's special order.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HEFLIN. Mr. President, I ask unanimous consent that if we do not use all the time, and I do not think we will, that it be deferred for the minority leader to use later.

Mr. STEVENS. That is entirely agreeable.

The PRESIDING OFFICER. Without objection, it is so ordered.

HONORING AND COMMENDING PAUL W. "BEAR" BRYANT

Mr. HEFLIN. Mr. President, I send a resolution to the desk on behalf of myself, Mr. DENTON, Mr. BUMPERS, Mr. PRYOR, Mr. MATHIAS, Mr. SARBANES, Mr. FORD, Mr. HUDDLESTON, Mr. TOWER, and Mr. BENTSEN. I ask unanimous consent that the Senate proceed to the immediate consideration of this resolution and, if necessary, that we proceed to it in lieu of morning business and that any other technical aspects which might prevent its immediate consideration be waived so that we could proceed to the consideration of this resolution at this time.

The PRESIDING OFFICER. Is there objection? Hearing none, it is so ordered.

The clerk will state the resolution by title.

The assistant legislative clerk read as follows:

A resolution (S. Res. 252) honoring and commending Paul W. "Bear" Bryant.

The Senate proceeded to consider the resolution.

Mr. HEFLIN. Mr. President, this is a resolution honoring Coach Paul "Bear" Bryant. There are no original sponsors; they are all joint sponsors, primary sponsors. Two sponsors are from the State of Alabama, where he now resides and coaches. Two sponsors are from the State where he was born, Arkansas. The sponsors from Maryland represent the fact that he started his coaching career at the University of Maryland. The sponsors who are listed from the State of Kentucky represent his career at the University of Kentucky. The Texas sponsors are in connection with his coaching career at Texas A&M.

This is a resolution in which we have attempted to have no cosponsors but to have joint sponsors who have been limted to those particular States which are so important to the marvelous career of Coach Bryant.

Mr. President, in a world such as ours, there are many achievements which, at first glance, appear extraordinary, yet, upon further inspection begin to pale. I rise today to recognize a man whose achievements only become more remarkable the deeper you search.

This past Saturday in Birmingham, Ala., the University of Alabama defeated Auburn University in a football game seen across the Nation on television. The importance of this, as many of you know, is that it constituted the 315th coaching victory for Alabama's great coach, Paul (Bear) Bryant, breaking the record of the late Amos Alonzo Stagg.

Beginning in 1945, Coach Bryant has coached 1 year at the University of Maryland, 8 years at the University of Kentucky, 4 years at Texas A&M University, and almost 24 years at the University of Alabama. Through these moves, and all the changes 37 years have made, one thing has remained constant—Coach Bryant and his teams have always been winners. His record as a head coach is 315 wins, 80 losses and 17 ties. At Alabama, Bryant has coached the Crimson Tide to 224 wins against only 41 losses.

Coach Bryant has been named National Coach of the Year three times. No other coach has been named more than twice. Seven times he has been named Southeastern Conference Coach of the Year, three more than any other coach. He has coached teams to 12 Southeastern Conference championships, 11 at Alabama and 1 at Kentucky, the only one that university has ever won. His teams have won or shared six national championships. No other coach in history ever won more than four national titles.

Coach Bryant has been named Southeastern Conference Coach of the Century, and NCAA Coach of the Decade for the period of 1960–69. After winning that honor, he swept through the 1970's, becoming the first coach ever to win 100 games in a decade.

After growing up in Moro Bottom and Fordyce, Ark., Paul Bryant came to the University on a football scholarship. He played in the 1934 Rose Bowl, and has since coached teams to 28 bowl appearances, including a current streak of 23 at his alma mater.

Another amazing fact about this man is that 44 of his former players or assistant coaches have gone on to become head coaches on the college or professional level, certainly more than any other one person has ever tutored. Among these are Danny Ford of Clemson, Jackie Sherrill of Pittsburgh and Howard Schnellenberger of Miami, whose teams are all among the best in the Nation this year.

The numbers can go on endlessly, it seems, but the dimensions of the man go far beyond mere numbers. Coach Bryant is the only coach or athletic director ever to establish a scholarship fund with personal donations. He has given over $300,000 to the university to be used for scholarships for handicapped and needy students. None of the money can be used for athletics.

As athletic director, Coach Bryant has built an athletic program which is financially sound, while also building an athletic dormitory, a coliseum, a track stadium, a tennis stadium, a natatorium, a club house for the golf course, and enlarging the football stadium. Additionally, acres of tennis courts and recreational facilities for student use have been constructed. All this has been done through athletic receipts, without the use of State money.

His list of honors goes on and on—University Administrator of the Year, Charter Member of the Alabama and Arkansas Sports Halls of Fame, the National Award from the Fellowship of Christians and Jews, the National American Legion Commander's Public Relations Award, and only the third athletic figure to be named to the American Award of Achievement.

Still, this man who had outfought, outcoached, outthought or outlived his peers rises above all this. Perhaps the highest honor he has received, and maintained, is the respect of those who have played for him. The greatest testimony a coach can have is the people who have long since left the athletic program. Ask Coach Bryant's former players about him, and you hear things like "dedication," "proud," "the best," and "like a father."

All this is true of "Bear" Bryant—a coach who has excelled at the challenge of taking a group of very young men and melding them into a whole, making each man's vision of himself interdependent with those of his teammates.

Paul "Bear" Bryant—315 wins and still counting. His winning record is one that may very well never be matched, one that should rightfully be recognized here today, and his life, even beyond football, is that of a winner.

At this time, I yield to the distinguished Senator from Alabama, my colleague, Senator DENTON.

The PRESIDING OFFICER. The Senator from Alabama.

Mr. DENTON. Mr. President, it is a special privilege for me to join with my friend and distinguished colleague from Alabama in offering the resolution honoring Coach Paul W. "Bear" Bryant. He has established himself, as we all know, as the winningest college football coach in the history of that uniquely American sport.

The resolution addresses his coaching victories and many championships. I want to talk of Coach Bryant, as a man who, during his 37 years of coaching, has had a remarkable and salutary effect upon the people with whom he has come in contact and who have been entrusted to his care.

Coach Bryant sets an example. The lines on his face, his expressions, reflect a history of practicing what he preaches. One famous sportswriter said that, even if you have not met Bear Bryant, when he walks into the room he has the kind of face that makes you want to stand up and cheer.

Bear Bryant is a father figure. He has a fine family, and that is no small achievement.

But, Mr. President, I believe Coach Bryant's greatest achievement may be found in an even larger family he has helped produce and lead, the family of American football. Sharing in that special group, in its proud and distinguished heritage, are his players and his staff, their mothers and fathers and children, their teachers and their pastors, and the fans who have been an essential part of his football teams. For that larger family, Coach Bryant is not only father but also leader, teacher, and exemplar of the finest values of humanity and of this country.

A father, a teacher, a mentor must have many positive characteristics. He must comfort, but at the same time he must call out the inner strength of those who depend on him. He must teach the young to look outward and to care for others, not to remain solely within themselves. He must encourage all to maintain

the essential strengths and values of the self while also growing and preparing for the future.

The members of Coach Bryant's football family are remarkably prominent among past and present players and coaches in professional football, and in the ranks of college coaches. Their success reflects and emphasizes his.

In the broad sense, we are all members of "Bear" Bryant's family. We share the joy of his victories, we understand the necessity to learn from defeat. We take pride in what he accomplishes as a coach and as a man.

We should admire his humility. He sees his many accomplishments in football not as personal triumphs for which he alone is responsible. He sees them as collective achievements, in which all his players, his coaching staff, their families and friends, and the fans have played a role. It is a family accomplishment.

Alabama is especially in his debt for his brilliant record at the University of Alabama from 1958 to 1981 but we are all proud of Coach Bryant, and honored to be a part of what he has done, not only now but throughout his career as a coach and throughout his life as a man.

Mr. HEFLIN. Mr. President, I yield to the distinguished Senator from Texas (Mr. TOWER).

The PRESIDING OFFICER. The Senator from Texas is recognized.

Mr. TOWER. Mr. President, I am pleased to have this opportunity to cosponsor the resolution by Senator HEFLIN to honor Paul W. "Bear" Bryant, the former football coach of Texas A&M University. Coach Bryant compiled a win-loss record of 25–14–2 while he was at A&M, from 1954 to 1957. He coached 14 All-Southwest Conference players, 5 All-Americans, and the 1957 Heisman Trophy winner, J. David Crow. Another distinguished Texan, Coach O. A. "Bum" Phillips, served as Coach Bryant's assistant at A&M.

Incidentally, at Houston they wish they had "Bum" Phillips back from New Orleans.

Recently, he related an anecdote to me that sheds a bit of light on Coach Bryant's winning philosophy.

It seems that Coach Phillips had just been hired by the "Bear," and was reporting to work for his first practice. The "Bear" told "Bum" to go outside a little early and work on the option play with the quarterbacks and centers, the idea being that he would get to know the players and the plays a little better. "Bum" went out to the football field, and noticed that there were not any footballs. At that time, Coach Bryant came out onto the field, so "Bum" approached him, and asked, "Coach Bryant, you don't imagine that those managers can get any footballs over here in time to start practice, do you?" Coach Bryant responded with a surprised look, and then turned to "Bum" and said matter-of-factly, "I don't know, Coach Phillips. But one thing I do know: I'm certainly not goin' to get 'em!" As he turned to walk to the supply shed, Coach Phillips realized he had just learned the difference between a head coach and an assistant coach. Evidently Coach Bryant made that relationship clear everywhere he went.

I would be remiss, however, if I failed to mention one nemesis of Coach Bryant's, one that he is preparing to face at this very moment. It happens that the upcoming Cotton Bowl will pit the University of Texas Longhorns against Coach Bryant's Crimson Tide. Coach Bryant has done so well in his coaching career, and I wish him well in the future.

I just want to say that Coach Bryant has done extremely well in his coaching career, and I wish him very well in the future. But now that he has broken the record, I see no point in his beating up on the University of Texas on January 1 in Dallas. That would be an enormous embarrassment to the State of Texas.

I do wish him well, with some exceptions.

I ask unanimous consent to enter into the RECORD figures on his coaching career at Texas A&M.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

"Bear" Bryant coached the Texas A&M football team from 1954 through 1957.

His overall record during those years was 25–14–2.

His record by year is as follows:

1954	1–9–0
1955	7–2–1
1956	9–0–1
1957	8–3–0

He coached a total of 14 all-SWC players; 5 all-Americans; 1 Heisman Trophy winner: John David Crow, 1957.

Mr. TOWER. I might note that his record against my alma mater, Southern Methodist University, is somewhat better than it is against the University of Texas. When he coached at Kentucky we managed to beat him one year, and managed to beat him one year when he was at A&M. But he beat us four times and, therefore, he has a 4–2 record against my alma mater.

I am sorry that some of the record-breaking wins that he received here were missed by the poor old SMU Mustangs. I hope the University of Texas will not be the next victim.

I do wish coach Bryant well. He is a great man. I cherish this opportunity I have had today.

Mr. HEFLIN. I yield to the distinguished Senator from Texas (Mr. BENTSEN).

Mr. BENTSEN. Mr. President, I am pleased to join my distinguished colleagues from Alabama in sponsoring this resolution to honor the winningest college football coach in America, Paul "Bear" Bryant.

We Texans have a very clear memory of coach Bryant, dating back to the 4 years he coached at Texas A&M University. When he first arrived at the college station campus, he is reported to have stomped into a meeting with the 5,000-member student body, rolled up his sleeves, and announced in his low, firm voice: "My name is 'Bear' Bryant and I'm ready to go to work."

The people of Junction, Tex.—about 100 miles west of Austin—easily recall how coach Bryant went to work. He began his first A&M training camp in the summer of 1954 with 96 scholarship players. After 10 days of 110° heat and merciless drills, only 27 players remained. The rest had quit.

Bryant later called the physical and emotional tests he put his players through "terrible." Saying now that he knows more about how to lead his athletes, Coach Bryant admits that "if I had been one of those players, I'd have quit too."

During that first year at Texas A&M, Coach Bryant suffered his one and only losing season, winning only 1 of 10 games. But over the next 3 years, his Aggies lost only five games and won the Southwest Conference Championship. He had the Agges No. 1 in the polls in 1957 with two games to play when he accepted Alabama's offer to return to his alma mater. Nothing was to be said until the season's end, but someone talked and the Aggies were so dispirited that they lost their last two. Nevertheless, John David Crow went on to win A&M's only Heisman Trophy that year.

Coach Bryant earned 25 of his record 315 victories while head coach at Texas A&M. There are those Aggies to this day who still refrain with Coach Bryant's most famous statement "I believe."

There are those who complain that football is only a sport, and that too much emphasis is given to winning. But Coach Bryant is a winner not only because he is a tough taskmaster, but because he cares about his players. and is deeply concerned about the welfare of each athlete. He is involved in each player's future, as he teaches them as much about life as he does about football.

Mr. President, I am very glad that Coach Bryant has etched his name into the record book as the winningest coach this past weekend. I say that because I think it would be a tragedy for him to have to wait another year before gaining that 315th win. I remind my Alabama colleagues that the Crimson Tide will line up against my alma mater for their next game, in the Cotton Bowl. As much as I admire "Bear" Bryant, and wish him the best, I have to say that I will be pulling for the Texas Longhorns on New Year's Day, and for Coach Bryant's 81st loss.

Mr. HEFLIN. Mr. President, I feel that I should respond to the earlier remarks made by my distinguished colleagues from Texas, Senator TOWER and Senator BENTSEN, in a brief manner by saying that when the University of Alabama plays the University of Texas in the Cotton Bowl on January 1, 1981, I think the University of Texas will experience a Junction Day.

Mr. President, I yield to the distinguished Senator from Arkansas (Mr. PRYOR).

Mr. PRYOR. I thank the distinguished Senator from Alabama and his colleague, Senator DENTON for sponsoring the resolution.

I would also like to say, Mr. President, that I am honored to join in this resolution as a cosponsor. I am especially proud that the distinguished Senator from Alabama has recognized the fact that "Bear" Bryant is not from Alabama, that he is, in fact, from Arkansas. In fact "Bear" Bryant was born in Moro Bottom, Ark. Actually, one of the greatest victories of his career was getting out of Moro Bottom, Ark. The only thing they do down there for entertainment is fight bears and swat flies. Every now and then they get to go down on a weekend and see them change the Coke machine, but that is about the extent of their entertainment.

"Bear" Bryant a few years later went to Fordyce—we call it "Fordyce on the Cotton Belt"—where he enjoyed a distinguished high school career for the Fordyce High School Fighting Redbug football team. In 1931, "Bear" Bryant led that small and courageous team to the State championship.

Mr. President, there are many legends surrounding the career of Coach Bryant, including the story that he obtained the nickname of "Bear" when at the age of 16, he wrestled a bear at a carnival in Fordyce, Ark. I would say to my friend from Texas that I think it was one of those Texas carnivals that came through Arkansas during the summer of each year and fleeced all of our people out of their money. Paul Bryant was challenged to fight the bear, went on to pin his opponent, and thus attained that name and great notoriety.

But now, 315 wins later, he deserves this tribute today on the floor of the U.S. Senate.

Fans from all over our State, citizens from our State, and certainly from all across this country, share in this great commendation of coach Paul "Bear" Bryant this morning.

There was something said about "Bear" Bryant the other day when I was watching television, watching him win that 315th game against Auburn. He was interviewed before the game while leaning up against the goalpost. This reporter said, "Coach Bryant, why are you leaning up against the goalpost every time we interview you? You are always leaning up against the goalpost."

He said, "Well, because it's comfortable."

He is a man of few words, of solid philosophy, and great wisdom. He has become not just a coach of a great football team, as our friend from Texas has just said, but he has become a true leader. More than that, he has become a legend and a folk hero of this great country of ours.

It is a wonderful opportunity that Senators from Alabama have given us today to join in this commendation of Paul "Bear" Bryant, one of those great American citizens who take the time to say that maybe things are going all right in this country after all. That is what Paul "Bear" Bryant stands for in my mind.

I do appreciate the opportunity to join with my colleagues this morning.

Mr. HUDDLESTON. Mr. President, I am extremely pleased to be an original cosponsor of this Senate resolution which will honor Paul "Bear" Bryant for his achievements in, and contributions to college athletics. As a coach, "Bear" Bryant has deserved this honor for a long time but it is especially fitting at this point in his career when he has surpassed the record of the great Amos Alonzo Stagg by winning his 315th game.

The honors and awards which have been bestowed upon Coach Bryant over the last 37 years are almost countless. Among the many are National Coach of the Year—three times—Coach of the Century, and Coach of the Decade. He has set records in football which will probably never be surpassed. And every one of those records attest to the fact that Coach Bryant is truly the living legend he is said to be.

The "Bear" will always have a special place in the hearts of all Kentuckians because we had the privilege of knowing him personally. For 8 years from 1946–53 he was head coach at the University of Kentucky. During that period of time, he gave us a taste and love for football which carries over to this day.

During those glorious 8 years, he coached the Wildcats to a 60–23–5 record, gave us three bowl victories, and the Southeastern Conference championship. One of the awards he received while at the university, the Kentucky Man of the Year, symbolizes the admiration and respect we have always had for him.

While we are impressed by the number of wins he has achieved as a coach, we should be equally as impressed by the impact he has had upon the lives of those who have come in contact with him. A true leader is someone who can inspire others to do great things, and by this standard, Coach Bryant is a truly gifted leader of men. Forty-four of his former players or assistant coaches have gone on to become head coaches in either college or professional football. And 61 of his players have made the All-American first team.

Among the many outstanding players he has produced are Joe Namath, Lee Roy Jordan, Scott Hunter, Ken Stabler, Steve Sloan, John Hannah, and Ray Perkins. Although Coach Bryant is a genius at mastering football, his real genius obviously lies in his ability to inspire greatness in others.

I am proud to be an original cosponsor of this resolution and I close my remarks with a personal wish for Coach "Bear" Bryant that he have continued good health, happiness, and success.

The PRESIDING OFFICER (Mr. MATTINGLY). The Chair asks the Senator from Alabama if he will allow the Senator from Georgia to be a cosponsor of the resolution.

Mr. HEFLIN. We will certainly allow the Senator from Georgia to be a cosponsor. I ask unanimous consent that the name of the distinguished Senator from Georgia (Mr. MATTINGLY) be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

● Mr. BUMPERS. Mr. President, I am honored to cosponsor the resolution introduced by the Senator from Alabama, Mr. HEFLIN, honoring Paul "Bear" Bryant for his many coaching accomplishments. Last Saturday, Coach Bryant surpassed the record for total victories by a college football coach held by Amos Alonza Stagg when the Crimson Tide defeated arch rival Auburn in a hard-fought game 28 to 17. His record after 43 years of coaching at Maryland, Kentucky, Texas A&M, and Alabama is a remarkable 315 wins, 80 losses, and 17 ties. This year's team will play Texas in the Cotton Bowl on January 1, 1982.

Mr. President, Paul Bryant was born in Moro Bottom, Ark., near the town of Fordyce. He acquired his now famous nickname of "Bear" in Arkansas at the age of 14 and recently told Jules Loh of the Associated Press the story, which appeared in the November 29, 1981, edition of the Arkansas Gazette.

> A carnival came through and they had this little ole scraggly bear. A man was offering anybody a dollar a minute to wrestle it. I got the bear pinned, holdin' on tight. The man kept whispering, "Let him up. Let him up." He wanted action. Hell, for a dollar a minute I wanted to hold him 'til he died. The bear finally shook loose and so did his muzzle. I jumped off the stage, the man took off and I never did get my money. All I got was some scars on my leg and a name.

After leaving Arkansas, "Bear" Bryant played football at the University of Alabama and after his graduation started on a coaching career. Although he never came back to coach in Arkansas, he coached at Maryland, Kentucky, Texas A&M, and since 1958 at Alabama. He has coached numerous All-Americans and All-Pros including Babe Parrilli, John David Crow, Leroy Jordan, Joe Namath, Ken Stabler, and Richard Todd.

Throughout his coaching career, "Bear" Bryant has conducted himself admirably and set a fine example for thousands of young men. He has contributed a great deal to the development of college athletics and, at a time when so many coaches and athletes were grabbing at the huge sums being offered by the professional teams, it is good to see a remarkable success story of a coach who stayed on the college level and worked with young men for so many years. Again, I am pleased to be a cosponsor of this resolution and I send my congratulations to Coach Bryant and his wife, Mary Harmon.●

IT ALL STARTED IN MARYLAND

● Mr. MATHIAS. Mr. President, I am pleased to join with the distinguished Senator from Alabama, Mr. HEFLIN, in sponsoring a resolution honoring and commending Paul W. "Bear" Bryant.

It is especially satisfying for me to take part in this much deserved tribute because if it were not for the State of Maryland this commemoration might not

be taking place. At least it would probably be sometime in the future. Back in 1945, the administration at the University of Maryland had the judgment to hire a young man, still in his naval uniform and who had been an assistant coach at Alabama and Vanderbilt, to guide the Maryland Terrapins as their head football coach.

At Maryland, "Bear" Bryant compiled a record of six wins, two losses and one tie. The first of his 315 coaching victories came against Guilford College by a score of 60 to 6. Six thousand fans witnessed this first winning game. A player on that Guilford team recently recalled his memories of the game for Sports Illustrated. He said:

The thing I remember is that the crowd sang "Maryland, My Maryland" after each touchdown, even the four they called back. By the end of the first quarter I knew all the words.

Well, Mr. President, they sang "Maryland, My Maryland" many times that season and people have been singing his praises ever since at the University of Kentucky, Texas A&M University, and the University of Alabama.

The University of Maryland had the vision to give him his first head coaching job but it could not keep him. The University of Kentucky made Coach Bryant an offer he could not refuse. Upon hearing of his leaving, 2,500 University of Maryland students staged a protest. Coach Bryant had to talk them back into the classrooms. I believe those students then had an idea of what was to come.

We can all take pride in "Bear" Bryant's accomplishments, not only in what he has done on the playing fields but in the contributions he has made to his players, his school, his community and his Nation. His quest for excellence in all facets of life is an inspiration to us all.

We in Maryland are proud that we were part of the opening chapter of one of the greatest stories in the history of American sport. We only wish we could have kept him a little longer. We have, though, kept a bit of Coach Bryant here, for the present football coach at the University of Maryland, Jerry Claiborne, was once one of his assistants.

Mr. President, I urge that the resolution honoring Paul Bryant be favorably accepted.●

● Mr. FORD. Mr. President, I am extremely pleased to join in sponsoring this resolution to honor Alabama Coach "Bear" Bryant on reaching the remarkable milestone of 315 victories which makes him the winningest coach in the history of college football.

I think the record should show in no uncertain terms that 60 of those victories came when Coach Bryant was at the University of Kentucky between 1946 and 1953 and it cannot be denied that it was in our State where he established his winning reputation.

Coach Bryant still has many friends and admirers in Kentucky where he is warmly remembered and we are just as proud of him as we can be. Indeed, there are a good many Kentuckians who wish the Bear had never left because any State would be proud to have him coaching at one of their universities.

On behalf of all Kentuckians, I extend congratulations to "Bear" Bryant on this impressive achievement. We are delighted to see this well-deserved good fortune come his way, and we wish him many more years of personal happiness and success.●

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 252) was agreed to.

The preamble was agreed to.

The resolution, with its preamble, reads as follows:

S. RES. 252

Whereas Paul W. "Bear" Bryant is head football coach and athletic director at the University of Alabama;

Whereas this native of Arkansas has previously coached at the University of Maryland, the University of Kentucky, and Texas A&M University during his thirty-seven-year career;

Whereas he has coached football teams that have won or shared six National Championships and twelve Southeastern Conference Championships;

Whereas he has been named Southeastern Conference Coach of the Century and National Coach of the Decade and has received countless other honors and awards;

Whereas on November 28, 1981, he won his 315th game, surpassing the record for most victories by a head coach in college football, long held by the late Amos Alonzo Stagg; and

Whereas it is appropriate and fitting to recognize him on the occasion of this accomplishment: Now, therefore, be it

Resolved, That the Senate honors and commends Paul W. "Bear" Bryant for his achievements in, and contributions to, college athletics in the United States.

SEC. 2. The Secretary of the Senate shall transmit a copy of this resolution to Paul W. "Bear" Bryant; University of Alabama; University of Maryland; University of Kentucky; Texas A&M University; and the mayors of Moro Bottom, Arkansas, and Fordyce, Arkansas.

The PRESIDING OFFICER (Mr. MATTINGLY). As a Senator from the State of Georgia, the Chair states to the Senator from Alabama that he has placed me in a very difficult position today with the Georgia Bulldogs.

[Laughter.]

Mr. HEFLIN. In reply to the Chair, I would like to point out that the University of Georgia football team is coached by Vince Dooley, an Alabamian.

The PRESIDING OFFICER. I thank the Senator for recognizing the special status of Coach Dooley.

Mr. HEFLIN. If we go down the list of the top-ranking teams today, we find that Clemson and Georgia, No. 1 and 2, are either coached by "Bear" Bryant proteges or Alabamians.

I would say in a joking manner that I fully realize that whether it is on the floor of the Senate or in other matters, other people always have inferiority complexes when Alabamians are involved.

The PRESIDING OFFICER (Mr. MATTINGLY). I now return to my capacity as Presiding Officer.

Mr. LONG. Mr. President, I should like the RECORD to show that the Senator from Louisiana voted for the resolution.

We, too, commend "Bear" Bryant, one who speaks of winning and playing by the rules, but taking advantage of the rules. He is a great American who believes in discipline and hard work.

RECOGNITION OF SENATOR BENTSEN

The PRESIDING OFFICER. Under the previous order, the Senator from Texas (Mr. BENTSEN) is recognized for not to exceed 5 minutes.

A SKILLED LABOR CRISIS

VI. SKILLED LABOR TRAINING IN JAPAN AND GERMANY

Mr. BENTSEN. Mr. President, this is the sixth in a series of speeches I am devoting to a review of our shortage of skilled labor. When I began this review back in September, I placed a question mark behind the phrase, "a skilled labor crisis." It was my expectation then to gather data from a variety of sources in assessing whether our Nation, in fact, faces a shortage of skilled workers.

It did not take me long to remove that question mark. Virtually every credible source of data and opinion I solicited confirmed that our Nation does, indeed, confront a serious shortage of skilled workers. This shortage is a current problem, not just a prospective future one. It is a widespread one, as well, reaching from the hospital operating room, the backroom of brokerage houses, the factory floor, and the navy yard, to the computer room.

LABOR SHORTAGES AND INFLATION

The shortage is projected, based on Labor Department data, to total at least 2.5 million jobs this decade. And it threatens to become even worse. Our efforts to rebuild our vital defense sector holds the threat of sharply exacerbating this skilled labor shortage and generating a tidal wave of wage competition for skilled craftsmen and technical personnel.

More alarmingly, labor shortages could hamper this Nation's efforts to enhance our defense capabilities by delaying the delivery of key military components or their effective use and maintenance once delivered.

Shortages which emerged during the Vietnam war buildup added over 1 percentage point to the Consumer Price Index. The linkage today between wage or price changes in one sector and general wage levels—reflected in the widespread explicit or implicit adoption of COLA's—is far stronger now than 15 years ago. Consequently, the impact of skilled labor bottlenecks on inflation will likely be far greater than during the Vietnam period. It is important to note, as well, that the conventional types of goods and services required for that war

are far less prone to inflation and shortages than the high technical goods and services which will be demanded as our civilian and defense sectors expand this decade.

If our economy attains even a semblance of the robust growth projected for it by the administration in the coming years, any defense-related shortages and wage competition will be magnified. And the inevitable pattern of reduced overall labor force growth this decade will generate further pressures on scarce skilled labor supplies and wages.

The upshot, Mr. President, is that we face a shortage of skilled labor which could become an enormous inflationary force over the next several years and a barrier to our efforts to rebuild our defense capabilities. Rising skilled labor costs will be reflected in rising production costs and prices for everything from health care, autos, and dishwashers to desk calculators. The close linkage now between general wage levels, even in labor-surplus occupations, and such prices will result in these rising skilled labor costs rapidly being reflected in all wages and generating a wave of cost-push inflation.

Let me stress, Mr. President, that skilled labor choke points and inflation are not inevitable in the years ahead. Our economy is in a recession now and may experience a prolonged period of stagflation before regaining robust growth. This breathing spell can be utilized to identify and ease our skilled labor shortage and enable our Nation to meet its defense commitments.

As I have noted in earlier talks, we face two options in dealing with that shortage: The refocusing of our Nation's training programs toward skills in critically short supply, and the widespread application of labor-saving devices—an option which will aggravate the shortage of skilled personnel in some occupations initially. These options are not mutually exclusive.

SKILLED LABOR TRAINING PROGRAMS IN JAPAN AND GERMANY

In the balance of my speech today, I will focus on the first option in reviewing the government labor training systems in Japan and West Germany. We have looked to these nations in recent years for insights in dealing with our capital formation and productivity problems. I believe they offer fertile ground. For insights on how we may best deal with our shortage of skilled workers as well.

At my request, the Congressional Research Service prepared a white paper entitled, "Occupational Skill Training in Japan and Germany." It was authored by Mr. Thomas Gabe, analyst in social legislation. Before submitting it for the RECORD, let be briefly summarize its major findings.

JAPAN

The Japanese labor training system reflects the unique lifetime relationship among at least the larger employers and their generally male workers, and features a tight link between wages and age. That system is under pressure today because of the aging of Japan's work force and the resulting wage pressure on production costs.

Despite the role of Japanese women as a flexible labor source—subject to abrupt hiring and layoffs as demand fluctuates—Japanese men of middle age and older are increasingly subject to unemployment. Their age and related wage costs put them at a disadvantage in competing with younger workers for new jobs or for existing jobs when payrolls are shrinking.

Compared to our Government training system, the Japanese target a larger share of their efforts at these older workers. A major emphasis is given to retraining such workers, especially those from distressed industries. This Japanese training system features subsidy payments to employers conducting the retraining which are financed, in part, with employer contributions to their unemployment compensation program—a fund traditionally under far less fiscal pressure than our own compensation program.

Compared to our education system, a much greater emphasis exists in Japan on vocational education at the high school level, with two of every five students receiving vocational schooling.

GERMANY

West Germany has avoided major unemployment among experienced workers by adjusting the number of foreign workers. As in Japan, unemployment insurance contributions by German employers is a major source of funds for the training of workers. The German public education system is utilized far more as a training tool than our own, as well, with as many as 7 out of every 10 high school youths in vocational programs.

Mr. President, I ask unanimous consent to have a paper, entitled, "Occupational Skill Training in Germany and Japan," by the Congressional Research Service, printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

OCCUPATIONAL SKILL TRAINING IN GERMANY AND JAPAN

(A White Paper Prepared for Senator LLOYD BENTSEN)

OCCUPATIONAL SKILL TRAINING IN JAPAN

Introduction

Occupational training in Japan must be viewed in light of established employer-employee relations, as well as changing economic and demographic circumstances.

In Japan the employer assumes many of the "social welfare" functions that have been delegated to government in many other countries. While the same statement could be made about the United States, and many other Western countries, the extent of enterprise-based social policy is much greater in Japan and is generally bolstered by the government. In Japan, most training outside of school is provided by the firm. The government provides support for such training on a limited basis under conditions of extenuating economic circumstance. Government supported training outside the firm is modest.

Economic climate

Following an initial period of high unemployment after World War II, the economic situation within Japan has been characterized by periods of rapid to moderate economic growth, low unemployment, and recurrent structural problems. With the import of new technology and high consumer demand for durable, leisure, and luxury goods, Japan experienced unprecedented economic growth beginning in the mid-1950's and extending through 1973. From 1955 to 1960, the real annual average rate of growth was 8.5 percent, 10.0 percent from 1960 to 1965, and 12.3 percent from 1965 to 1970.[1] In 1955, the unemployment rate was 2.5 percent, and from 1961 to 1974 never strayed above 1.5 percent. More recently, following the 1973 shock in oil prices, Japan's rate of economic growth has declined to the more moderate level of 5 to 6 percent per year. Unemployment had increased to about 2.13 percent in 1977.[2]

As noted by the Organization for Economic Co-Operation and Development,[3] in spite of the generally tight labor markets in post-war Japan, there appears to be very little mobility of workers between firms. Under tight labor market conditions, one might expect that skilled labor could easily be bidded away from competing firms. However, the practice of lifetime employment and seniority based compensation—typifying a substantial portion of the labor market—and the nature of training, greatly minimizes inter-firm labor mobility in Japan. As a result of minimal labor turnover in the firm, employers are able to invest heavily in training of workers with little fear that those investments will be lost.

EMPLOYER-EMPLOYEE RELATIONS

Japan as a "dual economy"

Japan may be characterized as a "dual economy".[4] The lifetime employment and seniority based compensation system has never been universally applied in Japan. Only about half the employees in Japan are employed in enterprises that practice these policies.[5] In general, these policies are limited to the major firms within the modern sectors of the economy, and the government. Other industries, in less productive sectors of the economy, adjust their demand for labor more upon changes in product demand within the economy.[6] Typically, the principal enterprises in the modern sectors of the economy invest heavily in training workers and attempt to hoard their trained workforce. Other firms generally provide less training to workers, and tend to adjust the size of their workforce to changing demands in the economy through layoffs.

Private support of training under the lifetime employment system

Employer-employee relations throughout much of Japan have been characterized by a system of lifetime employment and seniority based compensation. This system dates back to the period of high unemployment in Japan that preceded World War II. The system was most prevalent in government-owned factories and major private firms during this period. The system arrived at by mutual, tacit agreement between management and labor protected workers from outside competition; at the same time it provided the firm with a stable workforce.

Under the system, new workers agree to take jobs at initially low wages. Many employers supplement low wages with company provided benefits, such as housing and transportation to and from work. The employee can expect his/her wages to increase with age, being more a function of seniority in the firm than a reflection of productivity. Gen-

Footnotes at end of article.

erally, once hired, the employee stays with one firm until reaching the age of mandatory retirement—usually between the ages of 55 and 60. The employer generally prefers to hire untrained persons directly out of school, with the expectation that they will stay with the enterprise until reaching the age of mandatory retirement. In turn, the employer provides both general and firm-specific training without fear that these investments would be lost as a result of workers going to other firms.

The nature of training

Within enterprises practicing life-time employment policies, the majority of new hirees come directly out of school. Firms compete to hire the best graduates, and graduates compete to be hired by the most prestigious firms. Firms generally look for graduates who have high intelligence, proper attitudes, and general development potential, rather than specific skills. Once hired, the firm provides training which tends to be firm-specific rather than general in nature. Workers are taught about the history of the company, organizational structure, and the production process related to the firm's products. A team approach is emphasized, with workers being expected to not only learn their own jobs, but the jobs of workers up and down the production line. This type of training is not generally transferable to other firms, nor can it be provided in a general vocational school. Such an approach is seen as reinforcing work group and company loyalty and reducing the routinization of work, thereby assuring minimal turnover.

Pressures for change

Skill Shortages

Up until the 1974–1975 recession, there had been a general shortage of skilled production workers in the Japanese economy. Since then, the slower rate of economic growth has eased the skilled worker shortage somewhat. As a result of the large proportion of young people who have opted to go on to college, employers had been faced with reduced supplies of labor for production workers. In response to the surplus of workers in the managerial ranks, many firms have reduced hiring of college graduates in recent years.

Changing Demographic Conditions

Japan has been undergoing a major demographic transition since the 1950s. Falling birth rates and increased longevity have transformed Japan into a rapidly aging society. The International Labor Organization predicts that by the year 2025, the proportion of population age 55 or over in Japan will reach 29 percent, and 18 percent for the 65 and over age group—the highest of any country in the world.[7] These figures compare with 28.9 percent and 17.2 percent for the U.S., respectively.[8]

The rapidly aging workforce is placing increased stress upon the lifetime employment, early retirement, and seniority based compensation system in Japan. Workers who reach the age of mandatory retirement (55 to 60) may have several years of useful worklife remaining. However, given the aging population, in general, and the aging workforce, in particular, many firms are finding that the seniority based compensation system is becoming prohibitively expensive, as the total wage bill automatically increases each year as a strict function of the age structure in the enterprise. In addition, the swelling in the upper managerial ranks has created bottlenecks, inhibiting promotion of younger workers. As a result, there appears to be little direct incentive for employers to retain older workers. Once having left a firm, middle-aged and older workers experience a difficult time finding re-employment. In addition, many of these workers find that their skills are outmoded, or are not readily transferable to other firms. Unemployment among middle aged and older workers is a particular area of concern for policy makers.

INTERGENERATIONAL SUPPORT OF EDUCATION

The lifetime employment and seniority based compensation system may have an indirect effect upon the provision of education and training, by promoting the intergenerational support of education in Japan. Because income growth so closely parallels the life cycle, families may find that they are in a position to make more substantial investments in their children's education than they otherwise might. The seniority based compensation system is sometimes cited as a major reason why college enrollment has increased so dramatically in Japan in recent years.[9] In 1975, 37.8 percent of high school graduates were going on to universities or two year junior colleges; this compares to about 10.3 percent in 1960.[10]

GOVERNMENT TRAINING POLICY

The Japanese government's training policies generally focus on four levels—the educational system, the provision of training at public vocational training centers support for privately provided training under extenuating economic circumstances, and support to promote the employment of special groups.

Education system

The Japanese Government requires that youth receive nine years of compulsory education. Upon graduation from a secondary school, at age 15, a youth may choose to work, go on to a government financed upper secondary school, or go to a public vocational training center. In 1976, over than 90 percent of secondary school graduates chose to go on to upper secondary school.[11] They had the choice of three types of schools at the upper secondary level—general education, vocational training, or a combination of the two. In 1973, about 41 percent of the students at the upper secondary level were enrolled in vocational courses.[12]

Provision of training at public vocational training centers

The Japanese Government provides vocational training outside the general educational system on a limited basis. In 1979, 421 vocational training facilities were in operation throughout the country, with an annual enrollment of approximately 230,000 trainees.[13] The majority of these centers are funded and operated by the 47 prefectural governments. The training provided by these centers is free, and training, commuting, and lodging allowances are available to recipients of unemployment insurance benefits. In 1980, about one third of the trainees were enrolled in general training courses, designed to prepare participants for initial employment. Placement from the courses tends to be concentrated in smaller firms, where training opportunities are not generally available. The remaining two thirds were enrolled in upgrading training and Occupational Capacity Redevelopment Training.[14] Upgrading training may last from a few days to six months. Occupational Capacity Redevelopment Training, a retraining program designed primarily for the unemployed normally lasts for six months, but may extend up to one year for displaced workers from depressed industries. The upgrading and Occupational Capacity Redevelopment Training programs primarily address the training and retraining needs of middle aged and older workers.

Government support for private training

The Japanese government provides training subsidies to workers and employers under extenuating economic circumstances. One program provides training support to industries during periods of economic downturn, whereas the other provides support for the reconversion of redundant workers in industries that are depressed due to structural causes.

Both of these measures were put in place since the 1973 oil shock. The replacement of the 30-year-old Unemployment Insurance Law with the Employment Insurance Law of 1974 signals the Japanese government's promotion of a "positive employment policy"—a policy designed to achieve the goals of moderate and steady economic growth, stable prices, and full employment.[15]

Countercyclical training subsidies to private industry

In the effort to prevent unemployment and temporary layoffs during periods of economic downturn, the Japanese Government provides training grants and subsidies to certain employers designated by the Minister of Labor. Funding for the program comes from the Employment Stabilization Fund System. The Fund, established in 1977, is financed from contributions made by employers and employees and general revenues under the Employment Insurance (formerly the Unemployment Insurance) law. Thanks to many years of tight labor markets, the Fund has accumulated a large surplus. The grants and subsidies paid out under the Fund are in basic recognition and support of the lifetime employment system, encouraging employers to retain and train workers during economic downturns, rather than to restort to layoffs.

Subsidies are made to employers who have conducted education or training for their employees and have continued to pay normal wages during the business adjustment period.[16] Subsidies cover one half the normal wages (two-thirds of the normal wages for smaller enterprises) for up to 75 days. In addition, a lump-sum grant is awarded to enterprises to offset a proportion of the direct expenses incurred in providing education or training. In cases where employers must convert their operations to adjust to economic conditions, employers may receive subsidies for education and/or training for up to 150 days. In 1979, less than half of the funds budgeted for these subsidies were used by employers.[17]

Training subsidies for structurally depressed industries

The Japanese Government extends special assistance industries under the 1978 Law for Temporary Measures to Rehabilitate Specific Depressed Industries. As of 1980, 39 industries were designated as "depressed" under this law. The majority of depressed industries were concentrated in textiles, fishing and related industries, mining, smelting, and refining of ore, shipbuilding, and plywood manufacturing.[18]

Under this law, employers are provided grants and subsidies to retrain workers they hire from structurally depressed industries.[19] In addition, workers designated under this law are provided extended unemployment benefits and retraining allowances. As an incentive to find employment, displaced workers are provided a bonus (i.e., a share of their unpaid unemployment benefits) if they secure employment prior to the expiration of their benefits. Employers who hire displaced workers from specific depressed industries may secure a subsidy equal to one half the normal wage (two-thirds for middle and small enterprises) for the first six months of employment. In 1979, less than 10 percent of the funds budgeted for these grants and subsidies were used by employers.[20]

Footnotes at end of article.

Other programs

The large proportion of older workers in the economy, combined with the seniority based wage system and mandatory retirement provisions are placing particular pressures on the Japanese labor market and employment security system. Once having left a firm, middle-aged and older workers experience a difficult time finding employment in the Japanese labor market; in 1977, among job applicants age 55 and over, there were ten applicants for every opening.[21] Many firms, already overburdened with the costs of a seniority based compensation system, are not willing to hire middle-aged and older workers, since under the system, they would have to be paid in accordance to their age. In addition, many of these workers find that their skills are outmoded, or are not readily transferable to other firms. Unemployment among these groups within the Japanese economy is a particular area of concern to policy makers.

The Japanese government encourages employers to provide vocational counseling and training to workers who are approaching retirement so that they may acquire the necessary training and knowledge necessary to secure re-employment. The government assumes the costs of such training, regardless of whether it is provided by the enterprise or vocational school.[22]

The Japanese Government provides special incentives to employers to hire middle aged and older workers. Employers who hire middle aged and older workers, without replacing other workers in the process, are eligible for a subsidy equal to one-half of normal wages (two-thirds for medium and small enterprises) for three months for workers aged 45 to 55, and for six months for workers aged 55 to 65 years.[23]

In addition to subsidies for hiring older workers, the Japanese Government provides subsidies for hiring the physically and mentally handicapped, widows, and persons on probation. The government also operates public works projects in areas where mass unemployment occurs.

OCCUPATIONAL SKILL TRAINING IN GERMANY

Vocational skill training in the Federal Republic of Germany is supported by the government through its compulsory education system and an active manpower policy. Each of these will be discussed below, after first describing the economic climate in Germany.

ECONOMIC CLIMATE

Except for a brief period following World War II, Germany has been able to effectively eliminate unemployment, at least by U.S. standards. The unemployment rate displayed a near steady decline from 7.2 percent in 1950 to 1.3 percent in 1960, with the exception of a temporary pause at 3.7 percent in 1957 and 1958. During the 1960s, and until 1974, the unemployment rate hovered around 1 percent, except for a brief recession in 1967 and 1968 when it increased to about 2 percent. During the 1974–1975 world wide recession, induced by the rapid rise in oil prices, Germany's unemployment nearly reached 4.7 percent, but has dropped and held steady at about 3.5 percent since then.[24]

Foreign workers have played an important role in labor market adjustment processes within the German economy. Prior to the 1974–1975 recession, foreign workers augmented an otherwise diminishing labor force. As a result of early retirement and prolonged education among the young, the employment rate in Germany fell from 60.1 percent in 1962 to 53.6 percent in 1976.[25] Over this period, the native population grew from 55.9 million to 57.6 million. At the same time, the foreign population grew from 0.9 million to 3.8 million, largely as a result of foreign "guest workers."

Over the last several years, it could be argued that Germany has "exported" much of its unemployment through contracting its use of foreign workers.[26] In November 1973, in anticipation of a slow down in the economy, Germany stopped immigration of foreign workers from outside the European community and tightened the extension of work and residence permits. As a result, the number of foreign workers decreased by some 700,000 from September 1973 to September 1977, the equivalent of a 2.7 percent reduction in the active labor force.[27]

GERMAN EDUCATION SYSTEM

Under German law, 12 years of education is compulsory. Educational and vocational paths are selected very early in life. By the time a child is ten years old, after just four years of elementary school, parents and children, in consultation with teachers, must select the type of secondary school the child will enter. Once a choice has been made, parents and children are usually bound by the decision through the remainder of their educational and vocational careers.[28]

Three types of schools are available. Enrollment is on a competitive basis. The Gymnasium provides an academic curriculum up to age 18 in preparation for a university education. The Realschule offers a technical course of study resulting in an intermediate degree at age 18 and then possible entrance to an upper level technical school. The Hauptschule provides a basic course of study up to age 15. At age 15, the student typically becomes employed as an apprentice or unskilled laborer. Statutory day-release from work allows the youth to attend school on a part-time basis until reaching the age of 18. In 1974, 19 percent of secondary school students attended Gymnasium, 12 percent were in Realschulen, and 41 percent in Hauptschulen.[29] The other 28 percent attend Berufschulen, which are part-time vocational schools, which essentially carry on the work of the Hauptschule. Consequently, 70 percent of German youth are in vocational tracks.

The Berufschule

The Berufschule, or vocational, trade, or apprenticeship school, is an adjunct to the full-time school system. It is part of what is commonly referred to as the "Dual System," in which the youth receives part-time instruction in a vocational school (usually for 6 to 12 hours a week), and works the rest of his/her time as an apprentice.[30] The Berufschulen draw most of their students from the Hauptschulen—in 1974, 81.8 percent came from Hauptschulen, 17.2 percent from Realschulen, and 0.3 percent from Gymnasium.[31]

Typically, a student would enter a Berufschule at age 15, after having passed the lower secondary school exam. Although the law does not require passing the exam for entrance to a Berufschule, it has become the common practice.[32] In 1976, about one quarter of the Hauptschule students failed to pass the exam. Some Berufschulen offer remedial courses for these students. In addition, the Federal Employment Institute, under the Federal Minister of Labor and Social Affairs, makes funds available to charitable organizations, local authorities, and employers to offer remedial courses. Upon entering the Berufschule, the youth enters into an apprenticeship agreement, or training contract, which must be mutually agreed upon by the youth, the youth's parents, the school, and the employer.

Vocational training provided through the Berufschule is sometimes criticized as providing too narrow a specialization, by training students in a particular craft rather than in a broad occupational field. In 1974, some 500 different training schemes existed.[33]

The Organization for Economic Co-ordination and Development claims that the vocational schools are in a state of crisis.[34] Per pupil expenditures in vocational schools lag behind what is spent in other schools. The system is short on teachers, and actual teaching time is less than required by law. There has been little coordination between industrial training and academic schooling.

The structure and health of the economy affects the amount and type of training opportunities available to students. This is reflected in a number of ways. For example, only about 16 percent of the companies in Germany provide education and training. The companies that have training and education facilities generally tend to be large. However, about half of the youth in training work for small companies.[35] In 1976, about 240,000 youth were working in jobs that did not have facilities for vocational training.[36] Some employers argue that they provide adequate training in spite of the lack of specific training facilities. They back up their claims by noting "high success rates" of trainees in "Handwerk" (craft skills) examinations.[37]

Several means of addressing some of the problems mentioned above have been proposed (we don't know if these have been implemented). One measure would establish a system of grants and taxes imposed on companies. Companies which increased their apprenticeships would receive a grant. Companies would be taxed when the demand for training within their industry exceeds the supply of training positions. A second measure would expand the number of training positions through "extracompany" or "group training centers."[38] Further details are not available on these proposals.

MANPOWER POLICY

The Federal Republic of Germany has assumed an active manpower policy stance, in conjunction with economic and social policy, to strike a balance between the multiple, competing, objectives of full employment, price stability, increased production, and a healthy balance of payments.[39] Efforts to promote these goals are embodied in the Employment Promotion Act of 1969.

THE EMPLOYMENT PROMOTION ACT OF 1969

The principal focus of the Employment Promotion Act of 1969 is to prevent employment problems from occurring, as opposed to merely counteracting problems once they arise. Specific functions authorized under the Act include: vocational counseling, job placement, job counseling, promotion of vocational training, special assistance to the hard-to-employ (handicapped), payments to maintain work during temporary shortages of work resulting from seasonal variations and bad weather, payments to create employment, and the provision of unemployment compensation benefits as a supplement when suitable job vacancies do not exist or when vocational training opportunities do not exist. For purpose of this discussion, we will focus primarily upon vocational training.

Administration

The Federal Employment Institute (Bundesanstalt fur Arbeit) is responsible for carrying out the provisions of the Employment Promotion Act. The Institute is a self-governing public corporation, subject to government supervision. Membership on the corporate governing council is equally divided between worker's representatives, employers, and public corporations. The Federal Minister of Labor and Social Affairs has the

---

Footnotes at end of article.

power to put specific rules and regulations under the Employment Promotion Act into effect, if, after one year's notice, the governing council has not already done so. The Institute's budget requires approval of the Federal Government. Activities conducted by the Institute are mainly financed through the unemployment insurance system fund. Contributions to the fund are based upon 3 percent of gross wage or salary income, shared equally between employers and workers. Direct contact with the public is made through 146 local offices.

Education and training provisions

The Employment Promotion Act has a number of provisions to support education and training. In addition to initial training, the Act provides for further training and education, and retraining. These provisions recognize the changing nature of work, resulting from integration of new technology and changing demand for goods and services in the economy. In addition, these provisions—for training, further training, and retraining—would appear to address problems inherent in the existing educational system. In particular, support for vocational education and training in later life may be one means of compensating for the near irrevocable education and career decisions which occur so early in life under the existing education system.[40] Calls for reform of the education system have been loud in recent years, but change has been difficult to effect.

Adult training

The 1969 Law established the right of each citizen to be given individual assistance in obtaining further training or retraining. Until 1976, the law provided generous financial assistance to gainfully employed adults to retrain to make up for obsolescent skills, to assist in the transfer to more secure jobs, and to acquire additional education to further knowledge within their current vocation. In 1971, occupational training schemes accounted for about 30 percent of the Federal Institute's total expenditure.[41] Specific provisions included the defrayal of direct education and training expenses, as well as an allowance equal to up to 90 percent of the participant's last net income.[42] "Settling-in grants," an on-the-job training subsidy to employers, could pay up to 60 percent of a worker's wage for up to one year.[43]

With the onset of the 1974–1975 recession, the German Government introduced more restrictive measures for extending financial assistance for further training and retraining for adults. Beginning in 1976, financial support is extended to those applicants who have been working for at least five years (including training periods). Regulations governing the type of training which qualifies for financial support have also been tightened. Reimbursement rates vary depending upon whether a course is considered "necessary" or "reasonable" by the Institute.[44] The training allowance for a course deemed to be "reasonable" amounts to 58 percent of the applicant's last net income, while it is 80 percent for a course deemed to be "necessary". With the introduction of the more restrictive provisions, enrollment for continued training in 1976 dropped by 50 percent over previous years.

Training for the Hard to Employ

Since 1976, there has been an increased emphasis upon training for the long term unemployed (i.e., persons unemployed for one year or more). Employers who hire the long-term unemployed are eligible for 80 percent wage subsidy for up to two years.[45] Work Councils, supported by the Protection Against Dismissals Act,[46] help to assure that workers who are hired under the subsidy are not subsequently discharged, or that other workers are not subsequently displaced by the subsidized workers.

Youth Training

As of 1976, training for youth, provided by the Federal Employment Institute, was relatively small in comparison to adult training and retraining programs. Stingl[47] reports that in 1976, the Institute provided training to 27,800 youth in 858 courses. This compares to about 150,851 adults in training and retraining courses in that same year—260,362 adults in 1975.[48] Without more recent data, it is difficult to say whether savings from the recent reductions in adult training and retraining are being redirected toward youth.

Mr. BENTSEN. Mr. President, let me conclude this speech by noting that my next talk in this series will review the implications for our skilled labor shortage of the application of robotics.

SENATOR HART'S SPEECH ON THE THREAT OF NUCLEAR WAR

Mr. PRYOR. Mr. President, I wish to call to the attention of my colleagues a speech delivered recently by the distinguished Senator from Colorado (Mr. HART) at Cornell University on the subject of the prevention of nuclear war. I believe this subject and the comments made by Senator HART should have the attention of every Senator and, indeed, of every American.

I ask that the address made at Cornell University, Ithaca, N.Y. on November 11, 1981 be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR GARY HART

I am honored to be part of this nationwide convocation on the prevention of nuclear war. There is no more important issue before our society.

For nearly forty years, nuclear weapons have posed the gravest threat to our society; today, they are becoming an immediate threat to our survival.

For nearly forty years, nuclear weapons have had the power to render war unthinkable; today, there are those who think about a limited nuclear war—and think it can be won.

For nearly forty years, our nation has sought to lead the world away from the abyss of nuclear war; today we have managed—incredibly—to cast aside that sense of purpose.

Today there are almost no constraints on the nuclear arms race between the superpowers. The spread of nuclear weapons worldwide is unchecked. And major governments lack the will to pull us back from the edge of the nuclear abyss.

These developments are incompatible with the security of America; they are incompatible with the dream of America; and they are incompatible with the survival of America.

I would like to ask two questions. First, how many of you here today were alive when we dropped the Hiroshima bomb? Would you raise your hands? Now, the second question: How many of you remember air raid drills in your schools—huddling in basements or under your desks?

Very few of you remember. But American leaders who knew war—who led men in battle and saw men die—saw nuclear weapons tested and used and were awed. They thought nuclear arms would make war itself impossible. In General Douglas MacArthur's words:

". . . this very triumph of scientific annihilation—this very success of invention—has destroyed the possibility of war's being a medium for the practical settlement of international differences . . . Global war has become a Frankenstein to destroy both sides. No longer is it a weapon of adventure—the shortcut to international power. If you lose, you are annihilated. If you win, you stand only to lose . . . [war] contains now only the germs of double suicide."

Remember those words. And remember they were spoken at a time when the U.S. and Soviet Union, combined, measured their strategic weapons in the hundreds. Today, our two nations together have about 20,000 each more powerful than the Hiroshima bomb. Then, most were carried on slow-moving bombers that could be recalled. Now, most are on missiles—weapons on a hair-trigger. Now, 30 minutes or less lie between launch and irrevocable destruction.

Who can comprehend the meaning of tens of millions dead?

Who can comprehend millions more severely burned, unable to reach hospitals that, at best, might care for one thousand nationwide?

Who can comprehend still millions more blinded, wandering sightless in a post-attack world, simply because they looked up when the first flash came?

And who can comprehend rebuilding such a society—not just repairing physical injury, but restoring a sense of order in a world ruled by mobs, struggling over scraps of food, with no reason for human restraint?

Faced with this dark vision, no one should think lightly of nuclear war. Just as important, none of us can refuse to think about it at all.

If we refuse to think about it, we entrust our survival to think-tank theoreticians with pocket-size bomb damage calculators.

If we refuse to think about it, we entrust our survival to those who believe nuclear war can be neat and clean—who believe nuclear war would merely throw our economy back to the 1920s—who believe nuclear weapons permit such a thing as a surgical strike.

If we refuse to think about it, we entrust our survival to leaders who believe that limited nuclear war can be fought and won—and who might act on that belief.

The idea of limited nuclear war is an attempt to rationalize insanity.

Yet fantasies of limited nuclear war are embraced at the highest councils of our government. They are now driving our weapons decisions—like the decision to build the neutron bomb which could lower the threshold of nuclear war. They are fragmenting our NATO alliance while the Soviet threat in Poland and Afghanistan demands more than ever that we stand as one. They are allowing the Soviet Union to pose as a leader for peace, and to portray us as an obstacle to peace.

And, while a few leaders indulge in these fantasies, other nations dream other nightmares. No longer are there two nations that possess the power of ultimate destruction; now there are six. In a decade, there may be ten or twenty or more. And can anyone say with confidence that Iraq or Libya or Pakistan will show restraint in the use of a nuclear weapon?

And what of the terrorist groups now active in many of the world's nations? Nuclear terrorism is the new nightmare that haunts us—not nation making war on nation, but an isolated terrorist group imposing its will on the world.

Not armies of scientists working with ultrasecret technologies, but a few individuals building a nuclear bomb with some basic physics and a few pounds of plutonium.

Not weapons hurled thousands of miles on complex rockets—but one container in an abandoned warehouse in an American or European or Israeli city.

This is the ultimate nuclear nightmare—and, too soon, we may drift into it, never to awake.

So it is time to wake those who believe nuclear war simply can never happen. It is time to wake those who ignore the lessons of past civilizations—civilizations which, like us, dreamed they would last forever.

Such belief today is more than harmless dreaming—it is sheer arrogance.

It is sheer arrogance to believe the United States and Soviet Union can increase their nuclear forces beyond any rational level, and still expect other nations to forego these weapons themselves.

It is sheer arrogance to talk of exploding a nuclear bomb as a demonstration of strength, and expect our allies and adversaries not to be concerned.

It is sheer arrogance to believe that arms can be piled on arms without consequence—this on a globe where once distant countries are today's neighbors, where the weapons we have today will be the weapons others have tomorrow.

It is sheer arrogance to believe we can promote the spread of nuclear materials around the globe and not one day see the Fifth Horseman of nuclear terrorism ride upon some American or European or Israeli city.

All this is sheer arrogance and it is dangerous arrogance. So it is time to reawaken all our leaders to their most solemn responsibility—the prevention of nuclear war.

It will take a supreme effort of national and innternational will to carry us safely to the twenty-first century. If we are to make this effort, we must first banish three pervasive errors.

The first error is that controlling nuclear weapons amounts to being soft on national security. Arms limitations enhance our national security. They are checks on our adversaries, not rewards to our friends. And to the precise extent arms control agreements limit the size of the Soviet force, they are essential to our national security.

The second error is that unilateral disarmament holds our best hope for averting nuclear war. In my view, such a course would lead to the war we seek to prevent. It would encourage dangerous miscalculations by adversaries we seek to deter. The profound paradox of our time still stands—the very terror and certainty of these weapons is necessary to prevent their use.

The third error is that the spread of nuclear weapons throughout the world is an issue separate and distinct from the superpower arms race. In fact, the two are intimately related. We cannot demand restraint from other nations while we act without restraint ourselves. Each time a new country joins the nuclear club, efforts at worldwide arms control are seriously complicated and the threat of nuclear terrorism is increased.

I would like to stand before you and offer a magic formula to end the nuclear arms race and prevent the outbreak of nuclear war. The simple truth is that there is no simple plan. We are dealing with decades of mutual suspicion. We are dealing with a powerful technological momentum that drives both sides. And we are dealing with the gruesome desire of many countries to assert their national pride with deadly weapons.

So far, the struggle to overcome these obstacles has been an unequal fight, for we, as a nation, have not confronted the problem of nuclear war. Fewer than one thousand Americans in government and universities are working actively to reduce nuclear arms. One thousand times their number are working to build them.

It is time to apply the full strength of our nation to the byzantine nuclear threat. There are common-sense steps to be taken—steps that will once more put us on course toward peace.

The first step is to direct our nation's military policies to the prevention of nuclear war.

This means judging our weapons by a new standard—will they increase or decrease the risk of nuclear war.

It means improved nuclear command and control so we never use nuclear weapons in ignorance or error.

It means building verifiability into our weapons so we can negotiate arms control agreements based on mutual knowledge, not mutual trust.

It means better intelligence collection so our national defense decisions rest on information, not speculation.

And it means strong conventional armed forces, so nuclear weapons are the last line of defense, not the first.

The second step is to resume serious negotiations with the Soviet Union. And we must reorient the purpose of those negotiations—away from the numbers game that has become an end in itself and back to the original goal, the prevention of nuclear war.

Reducing the numbers of arms is not an unimportant goal, but it is insufficient. It must be buttressed by measures that pull the two sides apart, in space and in time, to reduce the incentive to use these weapons in some future crisis. Europe provides a good example. If the coming negotiations on nuclear arms in Europe only limit the numbers of medium-range systems on hair trigger alert, then they will have failed.

For, whatever the numbers, those missiles are on a hairtrigger. Their short flight time provides a powerful incentive for shooting first and asking questions later. To remove that hair-trigger, we must negotiate to move Soviet missiles out of range of Western Europe. In return for this, we could consider not placing our own missiles on European soil. To use these weapons, each side would have to move them within range of Europe. This would provide a cooling-off period—a firebreak, if you will—and lessen the chances of nuclear war.

These measures will never be achieved until we decide we must talk—and talk seriously.

That word "seriously" is fundamental. For officials in both governments may devise proposals that sound like progress, but are really constructed to prevent any progress at all. And our discussions are doomed to remain discussions—unless both sets of leaders are committed to reducing the chance of war.

Unfortunately, we haven't even negotiated on strategic arms with the Soviets since the SALT II Treaty was signed in 1979. And the current administration does not plan to resume talks on strategic limitations until

next spring. This is too long to wait. It's time—now—to resume arms negotiations. Whatever the difficulties of reaching agreement, the dangers of not trying are worse.

The third step on a course toward peace is a tough, determined policy to prevent the further spread of nuclear weapons. Our ability to develop such a policy rests on our willingness to stop our international trade in nuclear technology.

For three decades, we have tried to maintain a distinction between peaceful and military uses of nuclear energy. The fact is, no such distinction exists. There is only a thin line of technology. And we and other world nuclear suppliers are edging closer and closer to that line.

For example, today's nuclear reactors have produced about 140 tons of plutonium—enough to make 28,000 Nagasaki-sized bombs. So far, most of that plutonium is locked in spent nuclear reactor fuel. But the technology to unlock it exists, and several nations, including Libya, are trying to buy it.

What assurances do we have that the separated plutonium would be used in conventional nuclear plants—and not in weapons? None.

And what assurances do we have that plutonium will not find its way to terrorists bent on nuclear blackmail? None.

Yet most plans for nuclear energy envision spent fuel reprocessing and breeder reactors—which produce more plutonium than they use as fuel—as standard elements of the nuclear fuel cycle.

Our policy of nuclear exports make us and the other exporting nations—the "reliable suppliers" of our own potential destruction. By continuing that policy, we are squandering the brief moments left to prevent the further spread of nuclear arms.

At a minimum, we and the other nuclear suppliers must recognize that the world's interest in peace, security, and survival far outweighs the economic benefits of nuclear trade. Our first step is clear: we must agree to stop exporting technologies and materials that can be used to make nuclear bombs. We should set an example for the rest of the world.

The fourth, final, and absolutely essential step is to marshal our economic and political strength to the cause of peace and human progress around the world. Blustering rhetoric and saber-rattling are no substitute for a foreign policy aimed at diminishing the risks of a dangerous world. It will take active, courageous diplomacy—in the Middle East, in Central America, in southern Africa, and elsewhere, to help defuse the regional conflicts that can explode into broader confrontations. And it will take an affirmative American effort, together with the efforts of like-minded nations, to address the world's human needs—its need for food, its need for health, its need for hope. Left unattended, these unmet human needs are the seeds of war.

Twenty-four years ago, to this week, General Omar Bradley told another school convocation:

"If I am sometimes discouraged, it is not by the magnitude of the problem, but by our colossal indifference to it. I am unable to understand why—if we are willing to trust in reason as a restraint on the use of a readymade ready-to-fire bomb—we do not make greater, more diligent, and more imaginative use of reason and human intelligence in seeking an accord and compromise which will make it possible for mankind to control the atom and banish it as an instrument of war."

If today's convocations here at Cornell and elsewhere can begin to alter this "colossal indifference," then we will have moved toward a safer world. For if you are forced to think about nuclear war—to contemplate its likelihood and its consequences—then you, your family, your university, your community, your nation, will be compelled to act.

Today, a day to honor those who have given their lives for this country, it is appropriate to think about our personal visions of this nation. We each have these visions, our own ideal of what we want this country to stand for and accomplish. But I believe these personal visions share at least one element in common—that the purpose of America is peace, a secure peace.

With that purpose, we are here today. Without it, we will fail. And in such purpose there is hope.

RECOGNITION OF SENATOR COCHRAN

The PRESIDING OFFICER (Mr. ANDREWS). Under the previous order, the Senator from Mississippi (Mr. COCHRAN) is recognized for not to exceed 15 minutes.

THE VOTING RIGHTS ACT

Mr. COCHRAN. Mr. President, I have been addressing this body for several weeks now about legislation I have introduced, S. 1761, to amend the Voting Rights Act of 1965.

The purpose of this amendment is to assure the nationwide protection of voters' rights by making available a preclearance procedure in every State. Political subdivisions would be required to apply for a declaratory judgment in local Federal district court for the preclearance of any change in election or voting laws. The United States would be the named defendant, and process would be served upon the Attorney General. The Department of Justice would have the normal 60-day period to answer and interpose an objection if it believes the change is discriminatory. All interested persons or groups would be notified of the action. The bill also provides for an expedited proceeding, including a priority setting in district court and an automatic stay on appeal.

At the time I introduced this bill, I pointed out that the proposal was developed by William C. Keady, chief judge for the Northern District of Mississippi, and George C. Cochran, who is on the faculty of the School of Law at the University of Mississippi, in an article to be published soon in the Kentucky Law Journal, Volume 69, No. 4, 1980–81.

Mr. President, the Keady/Cochran article, entitled "Section 5 of the Voting Rights Act: A Time for Revision," provides an extensive historical background of the development of the act and, in particular, section 5. It discusses the operation and impact of section 5, well-documented with statistical data. Finally, it develops the new preclearance proposal, introduced now as S. 1761.

Mr. President, I ask unanimous consent that excerpts from this article, with footnotes and exhibits being omitted, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SECTION 5 OF THE VOTING RIGHTS ACT:

A TIME FOR REVISION

(By William Colbert Keady)

The Voting Rights Act of 1965 represents significant legislation which, notwithstanding certain limitations, has given life to the fifteenth amendment. Experience under the Act, and in particular Section 5, shows that despite the assault upon our federalism, affected jurisdictions have not suffered from its enactment but have in fact been strengthened politically on account of greater electoral participation on the part of minority voters. Furthermore, there is every reason to believe that the beneficial effects of this legislation would insure to the advantage of all jurisdictions to which it would be applied. The time has come to lay aside arguments concerning which region of our country has the worst record of excluding minorities from the political process. The Republic, given its historical pursuit of equality, can have no greater source of strength in the future than that deriving from the nationwide eradication of discrimination in matters of franchise.

The purpose of this article is not to laud the Voting Rights Act as ingeniously conceived legislation for preventing disenfranchisement of minorities; nor is it to condemn Congress for enacting and maintaining this regional legislation based in large measure upon findings made in 1965. It is also not the authors' intent to become ensnared in the ongoing dialogue concerning matters such as substantive interpretations given Section 5 by the courts and the Attorney General. Furthermore, it is not the authors' wish that this discussion have the taint of past efforts which utilized the rhetoric of "nationwide application" as a vehicle to rid Section 5 of its vitality. Rather, we believe there is much to be learned from the past sixteen years and that this experience, if correctly evaluated, clearly justifies the continuance of Section 5's preclearance requirement, a requirement, however, which should be administered by the judicial system created under Article III of our Constitution.

Thus, this article is designed to proffer two explicit propositions: (1) Congress should amend Section 5 to provide for nationwide application; and (2) Section 5's procedural mechanisms should be revised to discard both a seldom used judicial remedy and a cumbersome administrative procedure and to replace them with a judicial remedy in the United States District Courts under conditions guaranteeing expeditious resolution of Section 5 preclearance requirements.

I. THE OPERATION AND IMPACT OF SECTION 5

As originally enacted, Section 5 prohibited certain states and their political subdivisions from enacting or seeking to administer "any voting qualification or prerequisite to voting, or standard, practice, or procedure with respect to voting different from that in force or effect on November 1, 1964" without advance federal approval. The Act was amended in 1970 to extend to political units which maintained a "test or device" with respect to voting and in which less than fifty percent of the eligible voting population registered or voted in the 1968 election. In 1975, the Act was further broadened to include jurisdictions with more than five percent language minorities which, as of November 1, 1972, had election materials printed in English only and in which less than fifty percent of the voting age population registered and voted in the 1972 presidential election.

With a legislative history indicating that the term "procedure" was considered "to be all-inclusive of any kind of practice" relating to voting, the United States Supreme Court has, beginning with *Allen* v. *State Board of Elections* in 1969, given the Section broad and wide-ranging scope. Since the Act was designed to preclude "the subtle, as well as the obvious, state regulations which have the effect of denying citizens their right to vote because of their race," Section 5 scrutiny is triggered if the change or modification has "a potential for discrimination." Thus, the purpose for enacting a change in

voting is irrelevant to a determination of whether the state or subdivision must comply with Section 5, and federal preclearance must be had even if the legislation or other change was enacted for the purpose of complying with the Act. Section 5 preclearance must be met whether the change is one in polling places, candidate qualifications, boundary alterations, reapportionment, redistricting, annexations, changes from ward to at-large elections, alterations in procedures for casting write-in ballots, or even with respect to a requirement that public employees take unpaid leaves of absence when campaigning for elective office. Indeed, there would seem to be few state actions which relate to the electoral process that would not be subject to the proscriptions of Section 5.

Pursuant to Section 5, voting changes are not given effect until the political unit in question receives a declaratory judgment in the United States District Court for the District of Columbia "that such qualification, prerequisite, standard, practice, or procedure does not have the purpose and will not have the effect of denying or abridging the right to vote on account of race or color." Alternatively, the state or political subdivision may submit the proposed change to the Attorney General and enforce the new voting practice if no objection to the proposal is entered within sixty days after submission. If neither action is taken prior to implementation, private parties or the Attorney General may bring suit before a local three-judge district court to enjoin enforcement. In the latter instance, the sole issue to be addressed is whether the enactment is subject to Section 5; the district court is not empowered to determine whether the change has a discriminatory purpose or effect.

The Act itself, in conjunction with a Section 5 preclearance requirement which is both "unusual, and in some respects . . . severe," has produced startling results in the jurisdictions to which it applies. An analysis of black voter registration in the six states covered by Section 5 since its inception reveals . . . dramatic increases. . . .

* * * * *

1978 data shows that the South fares not significantly worse, and in some instances better, than any area of the nation with regard to the difference between black and white voter registration. . . .

* * * * *

Furthermore, preliminary information concerning 1980 registration indicates that while 8.4 percent fewer blacks than whites registered throughout the entire country, the registration difference was only 6.9 percent in the South.

The extent of black voting strength is perhaps best reflected in the numbers of black elected officials within the jurisdictions subject to Section 5. From 1974 to 1980, there was an increase of 63.5 percent in the number of black elected officials nationwide. In four of the six states that have been covered by Section 5 since 1965, however, the increases were much higher.

Indeed, in 1980, Mississippi had the highest number of such officials of all states in the nation, and Louisiana was second. If the analysis is directed toward per capita black elected officials, i.e., ratio of black elected officials to black population, it is significant that three of the six affected states rank among the nation's ten highest in this regard. Finally, the positive impact of Section 5 is perhaps best demonstrated by the startling fact that "a majority of white [congressional] representatives from the American South supported" extension of the Voting Rights Act in 1975.

The preclearance mechanism has undoubtedly served to effectuate the right of minority voters to participate in the electoral process by identifying and preventing both obvious and subtle attempts to prevent electoral participation solely on the basis of race. Moreover if preclearance were eliminated, it is probable that local and state governments would reinstate voting procedures which would irreparably harm black citizens and other minorities by impinging, directly or indirectly, upon their right of suffrage. The manner in which preclearance is currently implemented, however, should be cause for concern. The requirement should and must be extended to the remainder of the United States. In addition to retaining this requirement which has proved so effective in a limited portion of our country, such action would serve to insure that the proscription of disenfranchisement provided by the fifteenth amendment becomes a reality for minority voters nationwide.

II. PRECLEARANCE IN THE DISTRICT COURT FOR THE DISTRICT OF COLUMBIA: DESIRE FOR UNIFORMITY AND MISTRUST OF SOUTHERN JURISTS

The principal rationale offered for the original decision in 1965 to limit jurisdiction of Section 5 declaratory judgment actions to a three-judge district court in the District of Columbia was to insure uniformity of interpretation. Although not a single suit had been filed in the court seeking a declaratory judgment concerning the purpose or effect of a voting change, the uniformity justification was again relied upon five years later when Section 5 was renewed as originally enacted. Congressional critics, however, began to emphasize the weak underpinnings of the rationale. Senator Ervin, for example, unsuccessfully seeking to divest the court of plenary jurisdiction by means of amendment, argued:

There were many specious reasons given at the time of passage of this bill for denying all courts jurisdiction except the District Court of the District of Columbia. One was that we needed uniform interpretation. That was a specious reason, because we have 10 separate and district U.S. courts of appeals sitting in the 10 circuits handing down, in some cases, different interpretations of the law and those interpretations are ultimately made uniform by appeals to the Supreme Court of the United States.

By the end of 1974 only five suits had been filed, resulting in three published opinions. Despite meager judicial activity, proponents for retention of the District of Columbia court as the only viable judicial avenue for preclearance maintained that "the United States District Court for the District of Columbia [is an] expert in the area, ha[s] developed familiarity with the impact of discriminatory voting systems," and "has built up a degree of expertise on the Voting Rights Act that is invaluable." The response of legislators to suggestions that Section 5 jurisdiction be expanded to all United States District Courts because of minimal utilization of the District of Columbia forum, however, revealed an assumption implicit in the Act as expressed by Senator Tunney of California:

"I might say, in all honesty . . ., I think that in the area of civil rights there is a great deal of peer pressure on judges in the South. . . . I think there is a lot of peer pressure, and I would only have to point to the fact that recently the Supreme Court unanimously reversed a three-judge court in Mississippi that had approved a reapportionment measure . . . ."

The response by Senator Morgan of North Carolina to Senator Tunney's implicit attack upon the competence and integrity of Southern jurists was direct and emotional:

"For the Senator from California . . . to stand here and say that the judges—to indict the Federal judiciary in the South, is beyond my imagination.

"And for the Senator to say that just because the Supreme Court reversed a decision of a three-judge panel in Mississippi is an indictment of the Federal judiciary in the South which, again is beyond my comprehension, and I resent it . . . I resent it."

During the House debates, Representative Kindness introduced an amendment to divest the District of Columbia court of sole jurisdiction. His argument that there was "no particular expertise built up" by that court was successfully countered by responses citing the "need for uniformity" and remarks making reference to the Supreme Court reversal of the three-judge court in Mississippi. There was, however, yet another justification proffered which, until that time, remained undisclosed. As articulated by a major advocate of retaining Section 5 without amendment.

"[T]he Department of Justice desires to centralize all litigation about this matter right here in the District of Columbia. . . . The Department of Justice in this and other areas of national importance feels that they should build up a body of jurisprudence right in the District of Columbia and it is they, more than the civil rights group, that really want to locate this here, rather than the regional aspects."

An examination of the relevant statistical data evinces the speciousness of this explanation and those that preceded it. During the years 1975 through 1980, only eighteen suits for declaratory relief were initiated, resulting in seven published opinions. Thus, after fifteen years of experience with the Act, only twenty-three suits have been filed, ten of which resulted in published opinions. It is therefore apparent that the quest for "uniformity" has never been realized, and the resulting "expertise" justification with respect to adjudicating "purpose or effect" transgressions can only be considered a myth.

More important, the pattern established by covered jurisdictions of avoiding the District of Columbia court during this sixteen-year period demonstrates that there is not, in fact, a functional judicial remedy for those situations where these jurisdictions have either refused or been unable to submit to the preclearance process of the Department of Justice. Such factors as time, distance, expense and other logistical burdens, or a notion of the futility of invoking such a judicial remedy may, collectively or individually, compel affected jurisdictions to refrain from utilizing an isolated segment of the judicial system. Practically speaking, therefore, judicial review is not presently a feasible alternative. Consequently, the legislative processes of over 7,000 political subdivisions are now subject to the virtually unreviewable decision-making process within the Office of the Attorney General of the United States. As we shall see, the history and current status of this administrative process demonstrates the compelling need for its elimination.

III. ADMINISTRATIVE PRECLEARANCE: THE BIRTH AND EVOLUTION OF A CONGRESSIONAL AFTERTHOUGHT

As originally proposed, preclearance was to be limited to declaratory relief before a three-judge court in the District of Columbia. In the wake of hearings before a House Subcommittee, however, several legislators expressed concern over the probability of delays if this procedure were to be the sole avenue of relief for jurisdictions subject to Section 5. Since validly enacted laws would be suspended pending declaratory relief, the consensus of opinion was that if such "drastic effects must be visited" on covered states, "resolution of this class of cases should be handled expeditiously [sic]."

Testifying before the Senate Judiciary Committee, Attorney General Katzenbach recognized the tensions which result from state laws being held in such a lengthy

state of suspended preclearance and proffered a remedy in the following dialogue:

"Senator ERVIN. It seems to me that is a drastic power which can hardly be reconciled with the federal system of government. . . ."

"Attorney General KATZENBACH. I think it is quite a strong power, Senator. The effort is to prevent this constant slowing down process which occurs when States enact new laws that may clearly be in violation of the 15th amendment, but you have to go through the process of getting judicial determinations of that. It takes a long time. In the interval the purposes of the act are frustrated.

"Now, there may be better ways of accomplishing this. I do not know if there are. There are some here I can imagine, a good many provisions of State law, that could be changed that would not in any way abridge or deny the right; . . . except for the fact that some members of the committee, I think, including yourself, have had difficulty with giving the Attorney General discretion on some of these things—perhaps this could be improved by applying it only to those laws which the Attorney General takes exception to within a given period of time. Perhaps that would remove some of the burdens."

Attorney General Katzenbach's suggestion of vesting the Attorney General with such discretion apparently impressed Congress for the committee bill incorporated the 60-day administrative preclearance provision which—without further debate on the issue—became a permanent and the most important segment of the Voting Rights Act. Its inclusion may be best described as an "afterthought, . . . a practical way to avoid the onerous task of preparing and filing a lawsuit in the District of Columbia." It soon became apparent, however, that such administrative preclearance was fraught with difficulties which were not and could not have been anticipated in 1965.

The 1970 congressional renewal hearings provided a forum for discussion of problems encountered during the first five years of the Section's operation. The major criticisms centered around administrative burdens resulting from the unexpected number of submissions to the Department of Justice and the potentiality that political considerations might enter into the Department's decision-making process. With regard to the former, Assistant Attorney General David Norman, one of Section 5's original drafters, expressed doubts as to the "effectiveness" of administrative preclearance because of the Attorney General's inability to apply purpose or effect criteria to current submissions, ever-increasing demands on limited personnel to make extensive, independent investigations of all submissions, and the deluge of inconsequential changes submitted pursuant to the expansive interpretation accorded the Act in Allen.

Prior to the Supreme Court's broad interpretation of Section 5 set forth in Allen, neither the Department of Justice nor the affected jurisdictions were certain of the parameters of the Section. The immediate impact of the ruling was therefore significant. In 1968, the year prior to the decision, there were only 110 submissions for preclearance to the Department; for 1970 that number had more than doubled to 255.

Ostensibly as a response to these administrative burdens, Attorney General Mitchell presented a Nixon Administration bill to amend Section 5 to abrogate preclearance, both administrative and judicial, and vest the Department of Justice with sole power to invoke the jurisdiction of local three-judge courts nationwide when there was "reason to believe" that a "standard, practice or procedure with respect to voting . . . has the purpose or effect of denying or abridging the right to vote" on the basis of race. Mitchell stressed the inefficiencies of administrative preclearance and contended that the Department not only was encountering difficulties in making informed judgments with respect to discriminatory effects but was also unable, at that time, to monitor and secure submission of all changes.

Furthermore, the Attorney General argued that the need for conducting extensive investigations prior to making a determination hindered the Department in its effort to perform the tasks required of it under Section 5. Thus, Mitchell's testimony can be perceived as an attempt to establish two points: (1) the impropriety of vesting what is essentially a judicial function in an administrative body not accompanied by procedural or due process safeguards; and (2) the idea that no sensitive lawmaker "would . . . have [designed Section 5] as it [is] structured, because . . . the processes provided under which the Attorney General must make a decision are not adequate. They result in arbitrary decisions without sufficient information."

Congress found Mitchell's contentions unpersuasive, perhaps in large measure on account of suspicions of legislators that considerations of a purely political nature served as motivation for the Administration's proposal. The tenor of the Nixon Administration and its perceived hesitancy to enforce vigorously the Voting Rights Act served to bring to mind views expressed in 1965 in opposition to the Act:

"[W]e view with much concern the broad discretionary powers placed in the hands of the Attorney General. . . . Without suggesting any criticism of the present incumbent, we foresee a multitude of opportunities for political manipulation by an Attorney General who is inclined to do so. This is especially true since in recent times several Attorneys General, Republican and Democrat, have been closely tied to the political campaigns prior to their taking office. Of all the grants of authority to the Attorney General . . ., including the ability to consent to the entry of declaratory judgments . . ., it does not require a great deal of imagination to see that the authority to approve or disapprove State laws stands out as the power most subject to abuse."

Such concerns surfaced in the disapproval of the Department's handling of Section 5 one year later when the House Civil Rights Oversight Subcommittee held hearings in response to complaints that "the Attorney General has failed . . . to carry out the intent of Congress, and has disregarded recent Supreme Court decisions protecting the right of all Americans to exercise their right to vote." At the outset, fears of political manipulation were voiced in light of the fact that no suits had been filed with the District of Columbia court, and it appeared more than possible to Subcommittee members that covered jurisdictions had reason to believe they would receive more "sympathetic consideration" from the Attorney General. David Norman, who one year earlier expressed concern as to Section 5's effectiveness, was again the Administration's chief spokesman.

Norman countered the legislators' suspicions by explaining that any maladministration resulted from the increased burdens upon the Department arising from the broad construction of Section 5 mandated by Allen and the fact that many submissions raised complex issues dealing with "reapportionment, redistricting and . . . annexation[s]" which would "best be treated in the courts." Responding to the latter point, Congressman Wiggins recalled that administrative preclearance "was intended to permit an expeditious, prompt response on behalf of a State submitting a relatively minor problems and thus avoid unnecessary court delays" while it was "contemplated that complicated issues . . . would be resolved in the District Court for the District of Columbia." Conceding that Wiggins' understanding "might have been discussed around the halls of Congress," Norman noted that "Congress didn't authorize the Attorney General to decide that this thing is tough and, therefore, it ought to go into court."

As a solution to the problem, he noted that the Department was considering proposing an amendment to Section 5 providing for an initial clearance of submissions before hearing examiners, with judicial review in a court of appeals under procedures authorized by the Administrative Procedure Act. Subsequently, however, a representative of the Civil Rights Commission expressed his disapproval of this proposal on the ground that it would "create a very time-consuming, very dragged-out administrative procedures."

At the close of the hearings, the House Subcommittee could arrive at only one solution—to force political subdivisions to engage in the "onerous task of preparing and filing a lawsuit in the District of Columbia." This proposal mirrored that of the Director of the Civil Rights Commission, who suggested that "when questions [of preclearance] get that complicated . . . the Attorney General should just interpose an objection and allow the [covered] jurisdiction to go to court in the District of Columbia and resolve it in [that court]."

Such an approach, however, presented the Subcommittee with a dilemma inasmuch as this procedure could be conducive to even greater delay and therefore contrary to the Act's purpose. This problem was resolved by the determination that the burden should be placed upon the submitting authority since "[c]overed jurisdictions [are] supposed to avail themselves of the faster route to preclearance only when the submitted changes [are] readily assessable as nondiscriminatory." Finally, the Report concluded that the Attorney General had failed to implement properly the preclearance procedure and that complaints of the Act's unenforceability would subside if the burden of proof were placed squarely on the shoulders of the submitting jurisdiction. The Attorney General's regulation placing the burden of proof upon affected jurisdictions utiliizng the administrative preclearance procedure, as in declaratory judgment suits in the District of Columbia court, was subsequently upheld by the Supreme Court in *Georgia* v. *United States*.

* * * * *

Concern with the efficacy of administrative preclearance outlined above remain viable today. An examination of data from the past six years reveals a steady increase in the rate of submissions accompanied by a constant decrease in the percentage of objections.

* * * * *

Indeed, the deluge of submissions provoked the following analysis by Justice Powell:

"[N]o senior officer in the Justice Department—much less the Attorney General—could make a thoughtful, personal judgment on an average of twenty-five preclearance petitions per day. Thus, important decisions made on a democratic basis . . . are finally judged by unidentifiable employees of a federal bureaucracy, usually without anything resembling an evidentiary hearing."

As noted earlier, the limited judicial review afforded covered jurisdictions has resulted in a restricted utilization of that alternative. Furthermore, administrative review of Section 5 submissions often takes place in the face of approaching elections whose occurrence is contingent upon the Department's determination. These realities combine to render crucially important the decisions made by these "unidentifiable em-

ployees" of the Justice Department. This process is equally critical to the interests of minorities in light of the plenary authority afforded the Attorney General's decision. Under the Supreme Court's decision in Morris v. Gressette, the decision of the Department is not subject to review. With respect to a decision not to object to a proposed electoral adjustment, "it matters not whether the Attorney General fails to object because he misunderstands his legal duty . . .; because he loses the submission; or because he seeks to subvert the Voting Rights Act" for, under all circumstances, the decision is unreviewable.

With the Department's decision-making process now virtually immune from judicial intervention, it is critical that the procedures employed by the Department in performing the preclearance function be closely evaluated. As a congressional "afterthought", this delegation of authority is practically without legislative history. It is nonetheless indisputable that present administrative practices are markedly divergent from those which could have been reasonably foreseen by Congress in 1965.

The Department has adopted the same standards for review as those employed by the District of Columbia District Court in declaratory judgment actions. As such, the administrative preclearance procedure now requires review of the multitude of political, social, economic and legal criteria employed by that court to determine whether the purpose/effect standard has been met. To amass pertinent information and evaluate its content, the Department maintains within its Voting Rights Section a "submission unit" which has primary responsibility for the preclearance process. This unit consists of one attorney, a paraprofessional director and eleven paraprofessionals, sometimes referred to as paralegal analysts, and is instructed to look for "suspicious type changes" which include "at-large elections, reductions in the number of polling places, changes in the location of polling places and redistricting." Among the staff's responsibilities is investigation of motive and impact, which in turn is largely accomplished by "telephone calls to on-site persons." Information independent of the submission is gathered from minority interest groups and other interested individuals within the submitting jurisdiction, and in turn assimilated in a decision-making process relying upon "the preparation and analysis of . . . demographic and legal information [which] is in the hands of paraprofessionals who possess neither demographic/statistical skills nor legal training." Thereafter, the paralegal assistants make the "initial (and normally upheld) determinations with respect to whether or not the proposed change has a discriminatory purpose or effect."

A recent review of the submission unit's performance by the Government Accounting Office (GAO) revealed that "59 percent of [sampled] changes . . . did not have all data required by Federal regulations." In addition, the inefficiency of the unit was found inasmuch as "some submission files could not be located and data inaccuracies . . . limited the use of the Department's computer system which maintains data on identified changes." Indeed, a GAO representative testified that staff members "have no way of managing the data they get in from the jurisdictions; who reported—who gave their objections, who submitted submissions, who made changes that they didn't submit."

Utilization of a "permanent registry" (a compilation of individuals and groups interested in submissions) and other techniques for obtaining relevant information from minority groups was likewise found inadequate. After noting that a review of 271 randomly selected submissions showed that only fifty-five percent contained comments by interested groups or persons, the Report commented upon the followup with respect to those groups or persons: "[T]he Department's [own] records showed that individuals or groups commenting were informed of the review decision in less than 1 percent of the cases sampled.

"Consequently, minority groups and individuals may not have adequate information to detect changes implemented despite the Department's objections." Similarly, responses from a sampling of minority interest groups as to their impressions of the effectiveness of Section 5 revealed the following: thirty-five percent had no knowledge of Department preclearance procedures; ninety percent were not on the mailing list, and over half were unaware of its existence; twenty-five percent knew of significant changes that had not been submitted; and eighty percent had rarely or never been consulted by Department representatives. Indeed, "[t]his sense of removal from the decision process was reinforced by the minority respondents' belief that [Department] approval of changes opposed by minority leaders was a more important problem than a covered jurisdiction's failure to submit.

Given the fact that an immense number of submissions are received by the Department and must be reviewed by a small number of personnel within only sixty days, each passing day becomes critical. Although in *Georgia* v. *United States* the Supreme Court agreed with the Department's argument that the 60-day period may be tolled by a request for additional information, the process has been described as "hectic, with letters usually being mailed at the last possible moment," and the request for additional information is often reserved as the Department's "trump card." The GAO Report made corroborative findings as follows:

"[I]n about 6.8 percent of the submissions reviewed, a Department decision was not rendered until at least 100 days from the initial receipt of the submission.

"Despite [the requirement that submissions be handled expeditiously] over 50 percent of . . . requests [for additional information] were made on the 60th day after receipt of the initial submissions, over 70 percent were made at least 55 days after receipt, and only 2 percent within 30 days.

"In over 50 percent of the cases reviewed, the Department did not notify jurisdictions of its decision until at least 56 days after it had complete information. Notification was given within 30 days for fewer than one out of every six changes."

In addition to the GAO Report, several reported decisions confirm the fact that the Department has encountered difficulties in complying with the time limitation. Not only have objections been imposed on the last day, but the Department has found it necessary to argue, unsuccessfully, that Georgia allows tolling periods for more than one request for additional information.

Although it has expended a great deal of professional energy in other areas, the Department remains plagued by the continuing serious problem of covered jurisdictions failing to preclear all voting changes. The GAO Report's conclusion on this issue is unmistakably clear:

"The Voting Rights Act has been in effect for over 12 years, yet there is little assurance that covered States and localities are complying with the act's preclearance provision. We found that the Department of Justice had limited formal procedures for determining that voting changes were submitted for review as required by the act or for determining whether jurisdictions implemented changes over the Department's objection."

The Report also reveals that the Federal Bureau of Investigation "identified 102 unsubmitted changes [on behalf of the Department] of which 60 were still unsubmitted as of October 1976. Moreover, although "[the] Attorney General objected to 257 of the reported 13,433 submissions . . . the Department has not initiated formal monitoring procedures for making sure that jurisdictions do not implement a voting change over the Department's objection." A study paralleling that of the GAO indicates that perhaps the GAO Report even understates the problem. Continuing activity in the lower courts dealing with unsubmitted changes and a compilation by former Texas Representative Barbara Jordon listing sixty counties and 170 Texas cities which have never submitted a change evince the fact that the problem of unprecleared changes is a significant one.

There is also a growing sense of frustration by those who perceive that the required adversarial and investigatory nature of the Department is becoming increasingly debilitated by "professional" relationships established between Department attorneys and local officials. Those who take this point of view perceive a negotiating process between "fraternal professionals" which, while conducive to Section 5 compliance, results in enforcement at a "suboptimal level." The problems posed by this relationship are indicated in this discussion of the process:

"[T]he almost unanimous selection by covered jurisdictions of the administrative procedure option . . . when they seek to comply with the preclearance requirement is indicative of their preference for the kinds of outcomes which are obtainable through the lawyer-bureaucrat bargaining process. These enforcement practices when coupled with the inability of the Department of Justice to detect many of the unsubmitted voting changes, or to follow up effectively to make certain that jurisdictions do not implement changes to which the Department had [sic] objected, suggest an enforcement pattern in which state and local governments retain a considerable amount of discretion over the manner in which they exercise their reserved power to conduct elections."

The Civil Rights Commission lends credence to this conclusion when it states that while it is "evident that minorites still need the protection of the Voting Rights Act," the unfortunate "lack of enforcement by the executive branch of Government" remains a problem.

The nationwide aspects of voter discrimination have also affected the Department's activities in the last five years. Responding to a portion of the critique by the GAO as to the manner in which it utilizes its professional resources, the Department pointed out that since "Section 5 does not reach all jurisdictions . . ., litigation is required to challenge *many* dilutive apportionment plans." It noted that four constitutional dilution suits had been filed since 1976, that sixteen were under "serious investigation" and that a study had been completed of "40 northern and western states to uncover dilution problems." As a result, an investigation of "three northern cities" was soon to be undertaken.

IV. THE PROPOSAL

The most salient conclusions to be derived from the foregoing examination are easily summarized. First, the present avenue of judicial preclearance is totally inadequate. Second, the administrative preclearance alternative has sufficiently served the interests of neither covered jurisdictions nor minority citizens. Third, both methodological weaknesses and political vulnerabilities of the administrative remedy render the decisions of the Attorney General highly suspect from the viewpoint of covered jurisdictions and minority citizens alike. Fourth, as statistics have shown, an ever-increasing rate of submissions for preclearance can be expected in the future. This burden will remain in-

surmountable if the Department continues in its role as the only viable avenue for preclearance, a state of affairs incompatible with the expeditious, considered treatment envisioned by the formulators of the remedy. Fifth, the problem of unsubmitted changes continues unabated and the Department appears unable to devise a monitoring mechanism capable of assuring compliance with the Act. Finally, the question whether covered jurisdictions implement electoral changes despite objection from the Attorney General remains unanswered.

The Department was surely correct when, in responding to the GAO Report, it argued that too much was being expected from the Voting Rights Section and that the Act, as presently structured, "relies to a considerable extent on voluntary action by the covered jurisdictions" as well as "private lawsuits [for] effective enforcement." Indeed, such conclusions merely restate in another form a critique made by a staff attorney nearly a decade ago who, after reviewing the judicial construction given Section 5, concluded that "the Attorney General [was] playing a role in [its] enforcement . . . far beyond that originally envisioned."

Despite the serious flaws evident in this procedure, however, they in no way detract from the fundamental proposition that the social benefits generated by the preclearance requirement clearly outweigh its present inadequacies. Indeed, the mere presence of preclearance has a deterring effect on public officials who, but for its existence, would be far less concerned with avoiding discriminatory actions resulting in impediments to the effective utilization of the franchise by minorities.

It is the authors' proposal that, with the exclusion of states or political subdivisions having a de minimis percentage of minorities, Section 5 be amended to provide for nationwide application and that political units be required to bring a declaratory judgment action in local United States District Courts for preclearance of electoral alterations. The amended statute would provide that any state or political subdivision desiring to implement a voting change having a "potential for discrimination," be required, prior to such implementation, to file a complaint naming the United States as a defendant in the United States District Court for the judicial district in which the submitting jurisdiction is located. The relief sought would be identical to that currently found in Section 5 proceedings, namely, a declaration that the proposed change does not "have the purpose and will not have the effect of denying the right to vote on the basis of race or color." The burden of proof would continue to fall upon the submitting political unit.

Upon filing the complaint, appropriate notice would be required to inform interested parties other than the United States that the political unit is proposing a change within the scope of Section 5. This notice should take two forms: first, publication in local newspapers for three consecutive weeks; and second, actual service of the complaint upon interested persons or organizations who could have their names placed in a "permanent registry" to be kept in the office of each district court clerk. Any person residing within the political subdivision or any organization existing therein desiring to object to the proposed voting change would be allowed to intervene as a matter of right within sixty days after publication or receipt of the complaint.

Appended to the complaint should be that information now required by regulation issued by the Attorney General. The United States would be allowed sixty days to answer, with a tolling of the period occurring after one request for additional information. This tolling period would also apply to private parties, and any supplemental information provided to the Department would be served on those persons or organizations receiving the complaint. If the United States fails to answer, and if no person or organization intervenes within the specified period, the court would enter an uncontested judgment allowing the jurisdiction to implement the proposed change. The rendering of such judgment would not, however, preclude subsequent constitutional challenges. Obviously, the judgment could be set aside as provided in Federal Rule of Civil Procedure 60(b), in which event the action would be calendared for trial as though the allegations of the complaint had been controverted in the first instance.

Preclearance actions would be given a priority setting in the district court, with a statutory right of mandamus available to insure promptness, e.g., sixty days after the Section 5 issue is joined. Decisions adverse to the United States or intervening parties should be automatically stayed upon filing notice of appeal, with an expedited appeal granted as a matter of right. Expedited appeals should also be granted to submitting jurisdictions desiring review of adverse Section 5 decisions.

Moreover, if the defense should include constitutional counterclaims, the Section 5 portion would be separated from other issues which may be reserved for later determination. In any case, resolution of the Section 5 issue would be appealable by the aggrieved party on an expedited basis as an interlocutory order. Where the appellant or appellants are private parties, a cost-free transcript would be provided. Appellate courts should handle Section 5 appeals on a priority identical to that currently afforded criminal cases.

The authors are convinced that the proposal and suggested guidelines for its implementation would facilitate more expeditious and thoughtful resolution of the questions surrounding Section 5 changes in voting matters. In the first place, it is likely that many petitions filed under the revised procedure, absent any objection, can be disposed of summarily. In such cases, federal preclearance would be expeditously obtained, with the political unit free to implement the voting change upon reasonable notice to the public. The proposed amendments would also allow a local district court to determine all statutory and constitutional issues in one lawsuit, something that is now forbidden by Section 5. Moreover, if the latest Department of Justice compilations are empirically sound (51 objections out of 7,340 submissions in 1980), the minimal increase in caseload for the federal judicial system which this proposal would bring about is surely a small price to pay for a procedure which insures more meaningful participation by affected minorities in the electoral process.

Resolution of Section 5 conflicts would be further expedited under this proposal since the burdens heretofore placed upon the Department will be shared with those most affected by the Act, namely, minority voters. Given the broad provision for intervention of outside parties, the protection of minority interests will no longer hinge upon determinations made by "unidentifiable employees" within the office of the Attorney General. Moreover, with the United States retained as a defendant, the expertise and experience of those attorneys in the Voting Rights Section can be employed where they are most needed: in complex matters such as annexations, reapportionment and redistricting which "account for over two-thirds of . . . Section 5 objections." Finally, the provision of an automatic stay coupled with the right to an expedited appeal renders any decision adverse to the United States or intervening minority parties by a "biased forum" totally meaningless since no change can be implemented until it receives appellate approval.

An award of attorneys' fees is also critical to effective implementation of the proposal. Since "Congress depends heavily upon private citizens to enforce the fundamental rights involved," the 1975 amendments included an incentive for private parties to bring meritorious actions by allowing a court to assess a reasonable attorney's fee in such actions. This provision derives from the recognition that "[f]ee awards are a necessary means of enabling private citizens to vindicate these Federal rights." The Committee studying the proposed amendments found that "fee awards are essential if the Constitutional requirements and federal statutes . . . are to be enforced. We find that the effects of such fee awards are ancillary and incident to securing compliance with these laws, and that fee awards are an integral part of the remedies necessary to obtain such compliance."

As the Second Circuit noted:

"Attorneys' fees are awarded to recompense those who by helping to protect basic rights are thought to have served the public interest. A principal purpose of the legislation is to encourage people to seek judicial redress of unlawful discrimination.

"In short, imposition of full attorneys' fees is a useful and needed tool of the court to fully protect plaintiffs' rights as American citizens and voters. . . ."

It must be noted, however, that the attorneys' fees provision is a two-edged sword inasmuch as fees may be imposed against a private party, or his attorney, if intervention is found to be "frivolous, vexatious or brought or maintained for harassment purposes." The attorney fee provision therefore operates to make certain that frivolous litigation will be minimal while at the same time encouraging the initiation by private parties of well-founded claims of discriminatory disenfranchisement.

Finally, this proposal contemplates that the problem of noncompliance with the Act be addressed in traditionally equitable terms, thus forcing political units to realize that such failures to obey the law inevitably pose threats of dire consequences both to the political unit and its citizens. Furthermore, it would seem that this problem will diminish because of two considerations. First, as noted earlier, there is presently minimal participation by minorities in the preclearance process as currently structured by the Department of Justice. Under the proposal, a substantial measure of participation by minorities in the process should result in a "brooding presence" ever ready to raise the noncompliance issue in a readily-accessable forum. Second, familiarity with the local district court as the forum in which all disputes may be resolved by traditional means as opposed to the current alien and distant administrative remedy should enhance participation in the preclearance process.

V. CONCLUSION

The federal judiciary has historically been the guardian of the constitutional rights of all citizens. In that capacity, no more important business concerns the courts than the vital function of shielding from unlawful state action every citizen's right of franchise. It is time—indeed long past time—to invoke the full authority of federal judges throughout the United States in an effort to realize the fundamental objectives of Section 5. The process of administrative preclearance represents an unfortunate failure on the part of the Congress to utilize that segment of government traditionally vested with the duty of preserving federal rights. The time for change is now.

ROUTINE MORNING BUSINESS

The PRESIDING OFFICER. Under the previous order, there will now be a period for the transaction of routine morning business, for not to exceed 5

minutes, with statements therein limited to 2 minutes each.

Mr. BAKER. Mr. President, I ask unanimous consent that the time for the transaction of routine morning business be extended until 11:45 a.m. under the same terms and conditions.

The PRESIDING OFFICER. Without objection, it is so ordered.

NATIONAL PETROLEUM COUNCIL'S REPORT ON U.S. ARCTIC OIL AND GAS

Mr. MURKOWSKI. Mr. President, yesterday the National Petroleum Council (NPC) met to discuss and review its report entitled "U.S. Arctic Oil and Gas." The NPC then presented the report to the Secretary of Energy, per the request of that office of April 9, 1980. On that date, the Secretary of Energy requested that the NPC undergo a study of the U.S. Arctic in terms of resource assessment, available recovery technology and environmental impacts of hydrocarbon exploration. Secretary of Energy, James Edwards and Secretary of the Interior, James Watt were present this morning and praised the NPC for the results contained in their report on the Arctic.

Today I am applauding the NPC for their efforts on this much needed assessment of our Arctic energy potential. Specifically, Mr. President, I think it to be extremely significant that the NPC estimates that there are 24 billion barrels of oil and 109 trillion cubic feet of gas yet to be discovered in the U.S. Arctic. There has been further speculation by some members of the NPC that one-half of the undiscovered hydrocarbons in this country may be found in the Arctic, both onshore and offshore.

As I stated before the Senate on April 29, 1981, it is my intention to make the development of a national Arctic research policy one of my priorities in the 97th Congress. The NPC report simply reinforces the need for such a policy. The report recommends that continued private and public Arctic research is necessary and important to the national interest and should be encouraged. The NPC report also recommends that Federal and State governments should provide necessary assistance to local communities and governments in understanding and planning for the significant community development that will accompany oil and gas development in the Alaskan Arctic.

Mr. President, on July 31, 1981, I introduced S. 1652, the Arctic Research and Policy Act of 1981. The purpose of that legislation is to create mechanisms necessary to develop and implement an Arctic research policy. I have been anxiously awaiting the NPC report in light my interest in this issue. Having studied the report recommendations, I am pleased that the industry shares many of my concerns relating to energy development in the Arctic. I am looking forward to working closely with the NPC, the scientific community, and the Native community in the Arctic to make a stable and sound Federal Arctic research policy a reality.

Mr. President, I ask unanimous consent that a summary of the NPC report be printed in the RECORD at this point.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF NPC REPORT

On April 9, 1980, the National Petroleum Council (NPC), a federal advisory committee to the Secretary of Energy, was requested by the Secretary to undertake a comprehensive study of Arctic area oil and gas development.

In requesting the study, the Secretary of Energy specified that:

"The study should include: resource assessment information; an engineering economic analysis for exploration, development, and production activities; a state-of-the-art presentation on the adequacy of available recovery technology and prospects for innovative technology required by the harsh Arctic climate; an assessment of the environmental impact of Arctic oil and gas operations and of the available mitigating measures; a comprehensive review of the adequacy of the existing oil and gas transportation infrastructure and proposals for improving this situation; and a discussion of any international jurisdictional questions that may affect Arctic area development."

The complete text of the Secretary's request letter and a description of the National Petroleum Council are provided in Appendix A.

To assist in its response to the Secretary's request, the NPC established the Committee on Arctic Oil and Gas Resources under the chairmanship of Robert O. Anderson, Chairman of the Board, Atlantic Richfield Company. Jan W. Mares, Assistant Secretary for Fossil Energy, U.S. Department of Energy, served as Government Cochairman of the committee. The committee established a coordinating subcommittee and seven task groups to provide coordination and technical advice for the committee. Rosters of these study groups are included in Appendix B.

The broad membership of these groups includes representatives of both major and independent petroleum-related companies; federal, state, and local governments; the academic community; the environmental movement; organized labor; consultants; and Alaskan native organizations. As might be expected with such a diverse membership, all participants do not necessarily endorse each finding and recommendation; however, this report represents a consensus of the participants' views.

GEOGRAPHIC AREA OF THE U.S. ARCTIC

In discussions with representatives of the U.S. Department of Energy during the early stages of this study, the Arctic area referenced in the Secretary's request letter was defined as seabed and subsoil under the resource jurisdiction of the United States north of the Aleutian Islands offshore and land territory north of the Brooks Range onshore. Accordingly, the terms "U.S. Arctic" or "Alaskan Arctic" as used in this report includes the Bering Sea, a sub-Arctic region.

Due to differences in physical environment, operational requirements, and industry's expertise in the Arctic, three geographic regions, as shown in Figure 1, were defined for the purposes of this study. Region I, onshore Alaska north of the Brooks Range, is composed of the coastal plains and the foothills of the Brooks Range. Region II, the Bering Sea, includes a broad continental shelf less than 650 feet (200 meters) in water depth; however, the southwest portion of the region falls off rapidly to extreme water depths. This region is characterized by seasonal ice and severe storms. Region III, the offshore area north of the Bering Strait, includes the Beaufort and Chukchi Seas. This region also has a continental shelf that falls off gradually to 650 feet in depth and more rapidly to greater depths. The majority of this region is characterized by multi-year ice with ice ridges that may reach a thickness of 150 feet (45 meters), although the area very near the coast may be ice free for as much as three months a year.

TASK GROUPS

Seven task groups were established to provide specialized expertise for the development of this report. Experts in the areas of jurisdictional issues, resource assessment, exploration, production, transportation, environmental protection, and economics provided the data and support for this report.

The Jurisdictional Issues Task Group defined, for the purposes of this report, the territorial and seabed and subsoil limits of the United States in the Arctic area, applying principles embodied in international agreements and in the Draft Convention on the Law of the Sea. The Task Group also identified areas of state/federal dispute, native claims, and land withdrawal that may affect oil and gas operations in the Arctic.

The Resource Assessment Task Group made estimates of the conventionally recoverable undiscovered oil and gas resources in the Arctic, utilizing the expert opinions of 17 organizations or individuals that responded anonymously to the NPC Assessment of Arctic Oil and Gas Potential questionnaire. An independent public accounting firm aggregated the survey results for 20 geologic, geographic, or jurisdictional areas. Using Monte Carlo techniques, the Task Group provided resource assessments for the total Arctic area and the three regions previously described.

Petroleum operations in the Arctic were examined by three Task Groups: Exploration, and Transportation. Each of these task groups developed a comprehensive review of all factors related to Arctic operations, especially the limitations of conventional methods and the opportunities for the development of innovative techniques to be used in the Arctic. These task groups also developed cost data on Arctic operations and examined the effect of the Arctic environment on the timely development of oil and gas resources.

The Economics Task Group utilized the output from the other task groups to determine the economic attractiveness of selected areas and to calculate their economically attainable resources. In addition, the sensitivity of these results to changes in key parameters such as timing were evaluated, and total capital requirements were estimated.

The Environmental Protection Task Group examined the Physical and biological environment in which petroleum operations may occur, noted the effect these operations may have upon the environment, examined the risk avoidance and mitigation techniques that can be employed to protect the Arctic environment, and identified environmental data needs. In addition, the impact of operations upon Alaskan native populations as well as legislative and regulatory contraints to oil and gas development were studied.

The work of these seven task groups is the basis for this report and many of their findings have been incorporated into it. The working papers submitted by the individual task groups for the use of the Coordinating Subcommittee are available from the office of the National Petroleum Council. A listing and abstracts of these working papers are presented in Appendix G.

FINDINGS AND RECOMMENDATIONS

FINDINGS

It is the Committee's judgment that oil and gas production from undeveloped areas in the U.S. Arctic could make a significant contribution to the nation's future energy supply. This judgment is based on the analyses set forth in this report and on the

expertise of the study participants, and is supported by the following findings:

Substantial undiscovered oil and gas resources are believed to exist in the Arctic regions of the United States. The total potentially recoverable undiscovered oil and gas resources in the U.S. Arctic are estimated to be approximately 24 billion barrels of oil and 109 trillion cubic feet of total gas, or a total of 44 billion barrels of oil and oil-equivalent gas.

It is also estimated that there is a 1 percent probability that the total undiscovered recoverable resources in this area could exceed 99 billion barrels of oil and oil-equivalent gas; there is an estimated 99 percent probability that the total undiscovered recoverable resources will exceed approximately 13 billion barrels of oil and oil-equivalent gas. These resources constitute a significant portion of total U.S. undiscovered oil and gas. It is felt that the Arctic Slope and the Bering, Beaufort, and Chukchi Seas all contain basins with significant promise.

The basic technology is available to safely explore for, produce, and transport oil and gas in most of the U.S. Arctic. Industry experience in the North Slope area, Cook Inlet, Gulf of Alaska, Canadian Arctic, North Sea, and in other cold, hazardous, or deep-water areas provides the basis for the design, construction, and operation of systems in Arctic regions. Proven technology exists for onshore operations.

Proven technology and sufficient information and technical expertise for advanced design work is available for the industry to proceed confidently with operations in water as deep as 650 feet in the southern Bering Sea and to about 200 feet in the more severely ice-covered areas of the northern Bering, Chukchi, and Beaufort Seas. These capabilities will allow development of prospective areas in all of the northern Bering Sea, most of the southern Bering Sea, and well out into the ice-covered areas of the Chukchi and Beaufort Seas.

Long lead times are required prior to production in the Arctic because of its harsh climate, remote location, and the large scale of the projects. Depending on the location, at least 9 to 14 years will be required for planning, permitting, exploration, development drilling, design work, facility construction, and transportation system construction. These timing projections are felt to be near the minimums under improved business and regulatory conditions; even in an emergency, development could be accelerated by only a few years because of the unalterable physical obstacles.

Economic analyses indicate that it will be attractive for industry to develop U.S. Arctic oil and gas if sufficiently large resources are found to support the costly development, production, and transportation systems that are required to operate in the region. Oil and gas operations in the hostile environment of the remote Arctic regions will be much more costly than those experienced in other climates. A significant cost associated with developing large resource volumes will be the major new transportation systems, either marine or pipeline, required to move the oil and gas to the market. Based on the assumptions used in these analyses, it appears that 18 to 21 billion barrels of the 24 billion barrels of potentially recoverable undiscovered oil will be economically recoverable.

Of the 109 trillion cubic feet (TCF) of potentially recoverable natural gas and natural gas liquids, 68 TCF is non-associated and 41 TCF is associated, i.e., produced with oil from the same reservoir. Under the assumptions used in these analyses, 10 TCF of non-associated gas will be economically recoverable. At a 10 percent rate of return criterion, 22 billion barrels of oil and oil-equivalent gas are estimated to be economic. Certain key assumptions made and bases established in these economic analyses must be kept in mind in interpreting the economic findings since they have significant effects on the analyses and could yield low-side estimates.

In this study, the more complex economics of associated gas were not evaluated, nor were the economics of the incremental use of the Trans-Alaska Pipeline System or the proposed Alaska Natural Gas Transportation System considered. The volume of economically recoverable gas would likely increase substantially if existing or planned production and/or transportation systems are in place and available at the time of development, since the analysis assumes grass roots investments are required for all oil and gas production and transportation.

Some individual companies, utilizing their own internal assumptions and assessments, have considerably more optimistic estimates of economically recoverable gas. An optional portion of the NPC resource assessment survey requested participant estimates of the economically attainable resource. Limited responses suggest that 14 billion barrels of oil, 34 TCF of non-associated gas, and 20 TCF of associated gas, or a total of 24 billion barrels of oil and oil-equivalent gas, would be economically recoverable. This total is very similar to that obtained by the detailed analyses in this report.

Pre-exploratory resource assessment or economic analysis, while useful, should not be given undue weight in the decision to open a basin for leasing. Until a considerable amount of exploratory drilling is conducted in each and every basin, any assessment of potential resources or economically recoverable resources and whether the resources will be oil and/or gas must be taken as a preliminary estimate.

Several promising sedimentary basins extend across international boundaries both to the east and to the west. The boundary with the Soviet Union is defined by the Convention of 1867; no agreement exists as to the continental shelf boundary with Canada. No promising areas were identified beyond the seabed and subsoil under the resource jurisdiction of the United States as they are defined by the Draft Convention on the Law of the Sea.

Year-round oil and liquefied natural gas tanker operations to ports south of the Bering Strait are feasible and practical. In severe ice areas north of the Bering Strait, year-round tanker operations can probably be established, but the ability to maintain a continuous uninterrupted schedule is uncertain. Significant interruptions of tanker arrivals would require additional facilities if continuous production from a field is to be maintained. The cost of these facilities or the loss of revenues resulting from production cutbacks would reduce the amount of economically recoverable oil and gas in marginal areas.

Many benefits can accrue to Alaskans from the oil industry's activities in their state. Some of the income from lease sales, royalties, and taxes will provide additional support for government programs. Industry operations have provided employment, a source for emergency medical aid, and communications. Industry personnel and equipment have been used for rescue operations, and company personnel are usually active in their local communities.

Native interests exert an important influence over oil and gas development in the Arctic. Through their native-owned corporations, Alaskan natives control more than 40 million acres of land throughout Alaska that they wish to see developed in a manner that will meet their social and financial goals. Subsistence activities, particularly hunting and fishing, are of vital importance in preserving their cultural heritage and integrity. The oil and gas industry must be responsive to these interests.

Impacts from oil and gas development on the lifestyle of the Alaskan native population can be anticipated, managed, and made beneficial by improvements in communication among all parties involved and by careful long-term joint planning. It is in both the communities' and industry's best interests to develop good practical planning capabilities in order to prepare for future petroleum developments. Such planning is necessary to help alleviate citizen concern about their lifestyle and livelihood and to maximize opportunities for these citizens resulting from the development activities while avoiding adverse impacts.

The Arctic environment is important and sensitive, but impacts from the development of oil and gas resources can be minimized or avoided. The ecology in this region, both onshore and offshore, is important. Although accelerated activities in undeveloped areas will require an extension of existing information and technology, no problems are perceived that are beyond the demonstrated capability of the industry to solve. Prudent designs and methods of operation will allow oil and gas development to co-exist with commercial fisheries, recreational activities, and subsistence needs that are dependent on biological resources.

A complicated regulatory system created by federal, state, and local governments to control oil and gas activities has delayed and added to the cost of Arctic oil and gas development. This system is made more complex by overlapping jurisdictions, by limited coordination between agencies, and by the lack of a clear federal policy regarding Arctic development. There appears to be unanimous agreement by all affected parties that this regulatory system needs to be redesigned.

RECOMMENDATIONS

To assist the nation in realizing the oil and gas potential of the U.S. Arctic, the federal government should implement and maintain a clear, comprehensive policy for Arctic oil and gas development. This policy should be responsive to the national need for domestic resources, consistent with national energy policies. Expedited development of oil and gas resources and multiple use of Arctic lands, both onshore and offshore, should be an integral part of this policy, consistent with local needs and concerns. State and local governments should be encouraged to support this policy. Accordingly, the Committee makes the following specific recommendations:

A stable lease schedule offering federal Arctic lands for private exploration and development should be established, with all areas both onshore and offshore having oil and gas potential included in the schedule. Areas with the greatest potential should be scheduled for early leasing. Scheduled lease sales need not be delayed until comprehensive information on physical and biological environmental conditions is available, or until specific site information is available; such information can be developed well in advance of any significant onsite work. Adequate provisions exist under present law to allow withholdings of tracts with potentially significant environmental problems until mitigating measures are developed.

The leasing system should be made responsive to the unique conditions encountered in the development of oil and gas in the U.S. Arctic. Each lease sale should include a sufficient amount of acreage to justify necessary operating systems. Acreage offered for the first sale in a frontier area should cover all major exploration prospect features in the entire basin or area of interest so as to expedite the evaluation of prospective areas. The primary lease term for OCS leases should be at least 10 years because remote operating areas combined with hostile climate require lengthy lead time

preparations. An automatic "suspension of production" provision should become a part of leasing policy so that marginal discovered resources can be retained by the lease owner until economic transportation can be justified.

A comprehensive exploratory drilling effort extending to all areas thought to have undiscovered resources should be undertaken by industry to define the true oil and gas potential of the U.S. Arctic. Several resource assessments of the type prepared for this report have been completed by others. Additional similar analyses will not enhance real knowledge of the region's resources until the promising areas have been leased, tested by drilling, and important new data are obtained.

A specific existing agency should be designated the responsibility for expediting permitting actions in the Arctic. A common procedure should be established to ensure that both its own permits and those of other involved agencies are expedited. The most important way to accelerate and improve efficiency is to streamline and simplify the laws and regulatory processes relating to leasing and permitting. Overlapping responsibilities of regulatory agencies should be eliminated. Such changes would allow government to be more pragmatic in its decision making. Statutes and procedures that unnecessarily delay operations or are not applicable to the Arctic should be modified or eliminated. Deadlines should be set for procedural requirements and for approvals. Such initiatives should be aimed at expediting energy development while fully responding to substantive environmental and socio-economic needs.

Government agencies with legislated responsibilities for conducting operations in support of exploration, production, and transportation activities in the Arctic should be organized and staffed to meet in a timely manner those responsibilities. Some of these responsibilities include search and rescue, oil spill surveillance, weather and ice forecasting, structure accreditation, vessel inspection, preparation of environmental impact statements, and surface and air navigational aids.

Continued private and public Arctic research is important to the national interest and should be encouraged and supported where necessary. Research and development in Arctic technology for operations in hostile environments will lead to evolutionary improvements in operating systems. Efforts to enhance knowledge of ice conditions, ice properties, and ice forces should be stressed. Biological research and monitoring should be continued. Federally funded research programs should focus on collection and characterization of fundamental data and testing programs of broad issue. Timely and rapid dissemination of information obtained by government agencies should be required.

The federal and state governments should provide necessary assistance to local communities and governments in understanding and planning for the community development that will evolve with oil and gas development. Particular attention should be given to determining the most efficient means of funding comprehensive and continuous planning efforts.

Sources of funding should be identified for government and community programs and activities related to development of oil and gas in the U.S. Arctic. Both lease sales and production royalties provide substantial sources of funds directly attributable to oil and gas industry activities. A portion of these direct revenues could be used to ensure that appropriate governmental support is provided. Stability of funding is required for effective execution of these programs.

More detailed findings and recommendations can be found in the chapters of this report.

Arctic oil and gas exploration began in Alaska with the U.S. Geological Survey's (USGS) surface work in 1901. In 1904, oil seeps were found on what is now the National Petroleum Reserve-Alaska (NPRA). This 23.6-million-acre area was designated the Naval Petroleum Reserve Number 4 (NPR–4) by Executive Order in 1923, and some geological mapping occurred shortly thereafter. From 1944 until 1953, the Navy, in conjunction with civilian drilling contractors, conducted an extensive geological mapping and exploratory drilling program on the NPR–4. Renewed government exploration in the NPRA was undertaken in the 1970s. Commercial quantities of oil and gas were not found.

During 1949 and 1950, in an effort to develop a natural gas fuel supply for the Navy's Barrow Camp, several test wells were drilled in the vicinity. These South Barrow wells were the first development wells drilled and completed in the U.S. Arctic. They furnished proof that hydrocarbons could be produced in the Arctic region.

In 1968, the Prudhoe Bay oil field was discovered east of the NPRA. After this field was discovered, two alternate transportation options were considered: tanker movement through the Northwest Passage, and pipelining across Alaska to an ice-free port. The pipeline option was chosen on the basis of reliability, and pipe was ordered. The design called for a 48-inch-diameter line with a potential capacity of 2 million barrels per day, initially equipped to deliver 1.2 million barrels per day across an 800-mile route from Prudhoe Bay to an ice-free terminal in Valdez, Alaska.

Opposition to the pipeline by environmentalists and disputes over land ownership led to a series of legislative, environmental, and judicial hearings that delayed the start of construction for five years. Construction of the Trans-Alaska Pipeline System (TAPS) began in April 1974, and the pipeline was completed and went into service in mid-1977. Upon completion of TAPS, the field was placed on continuous production.

During the early 1970s an extensive research and development program was carried out by industry to solve the many problems associated with oil operations in the Arctic. The success of these programs is attested to by the fact that some 350 wells have been completed, and oil is being produced and transported at a rate of 1.5 million barrels per day. A total of approximately 2 billion barrels of oil have been moved to market as of the end of 1981. A second, smaller field, Kuparuk, is now being developed, and production is expected to commence in 1982.

Development of the Prudhoe Bay field and construction of TAPS and the Valdez terminal were conducted under the most rigorous design and quality control specifications ever imposed upon onshore petroleum operations. Successful operation of this system has been achieved and it represents a model for future land pipelines and terminals.

RESOURCES

An evaluation of the potential oil and gas resources in the sedimentary basins of the U.S. Arctic was made based on a review of published information, USGS data, and a survey of the study participants. It was established that as of August 1980, 16.5 billion barrels of recoverable oil and oil-equivalent gas had been discovered on the North Slope of Alaska. Of this total, 10.2 billion barrels are oil and 35.4 trillion cubic feet (TCF) are gas. An additional 44 billion barrels of undiscovered recoverable oil and oil-equivalent gas resources are expected to be present in the Arctic. Of these total undiscovered resources, it was estimated that 24 billion barrels will occur as oil, and the remainder will consit osf 109 TCF of gas and natural gas liquids. Of this gas total, 68 TCF are expected to occur as non-associated gas and 41 TCF should be associated with oil production.

Although there are at least 10 highly prospective areas, the largest resources are estimated to occur in the Beaufort Shelf and the Navarin Basin Shelf. It was also concluded that there is a 1 percent chance that the total quantity of undiscovered recoverable oil and oil-equivalent gas could exceed 99 billion barrels, and a 99 percent chance that it could exceed 13 billion barrels. These undiscovered resources may constitute as much as 40 percent of the total undiscovered recoverable oil and gas resources remaining within U.S. jurisdiction.

Basins appearing to have a low potential should not be ignored. Additional basic geological information could cause significant revisions, either upward or downward, in the estimates. Confirmation of these estimates can be achieved only by extensive leasing and exploratory drilling.

TECHNOLOGY

Large-scale Alaskan North Slope operations and extensive experience in the Cook Inlet, the Canadian Arctic, and the North Sea have demonstrated that, with an economic incentive, the petroleum industry can rapidly develop sufficient technology to safely conduct exploration, design and operate production facilities, and provide transportation in cold, remote, and ice-covered regions, both onshore and offshore. The fundamental techniques of exploration, production, and transportation in Arctic regions are not significantly different than those used elsewhere. The novel problem is the design and operation of systems that can cope with severe sea ice.

Continuing research, development, and engineering programs will provide basic information and technology for successful site-specific designs. Technological advances that have the greatest economic potential relate to improving the ability to operate exploration, drilling, production, and transportation systems efficiently during all seasons. This requires coping with low temperatures, poor visibility, storm waves in the Bering Sea, and particularly, the extreme sea ice conditions in the Chukchi and Beaufort Seas.

Exploration technology in the Arctic requires that the usual geological techniques be modified to accommodate weather and specific environmental concerns, but no unique methods are needed or employed. The same is true for geophysical work, although seasonal considerations more generally control the use of heavy geophysical equipment on the tundra and affect the accessibility of offshore areas containing sea ice. The drilling of an exploratory well in the Arctic differs from drilling in other climates in that special techniques have been developed for drilling safely in permafrost areas.

Offshore drilling sites must be located in areas free of sea ice or must have a platform or island as a drilling base able to withstand the moving pack ice. Remote locations make logistical support of operations very difficult. These considerations lead to substantially higher costs than those encountered in less hostile regions. Most of the future geological and geophysical technology that will improve exploration will not be Arctic-specific but will be applicable in all areas.

Production technology for Arctic regions requires similar considerations of weather, and climate, especially in the design, construction, and installation of production

facilities under adverse conditions. Installations and operations must be designed for permafrost, both onshore and in some offshore locations. Offshore structures for drilling, production, storage, and loading that will successfully resist sea ice are a major requirement. It should be possible to develop safe designs for offshore production islands or platforms within the time period required to lease, explore, and delineate a major oil or gas field.

Additional information on sea ice and its associated problems is being obtained through research programs. These research programs should be continued, as they are needed to compel novel designs and will lead to more cost-efficient operations. Modular construction in temperate climates with transportation of large modules to the sites is a proven method of reducing construction costs.

Transportation technology for oil in Arctic regions has been successfully developed for onshore pipelines, as demonstrated by TAPS. Marine transportation has not reached the same level of development. Appropriate tankers and icebreakers can be designed to provide year-round reliable operations to ports south of the Bering Strait handling either crude oil or liquefied natural gas. Marine vessel operations north of the Bering Strait appear less reliable, and there is a need for more icebreaker experience in this area before tankers are considered an attractive transportation system. Marine pipeline operations in the Arctic should be similar to operations in the North Sea and Cook Inlet, but will be more difficult and demanding because weather and logistics are more severe. As in the case of exploration and production, extended knowledge of the characteristics, conditions, and dynamics of sea ice is needed to optimize and ensure reliability in Arctic marine operations.

ECONOMICS

Limited economic evaluations of the Arctic oil and gas resources were made based on assessments of potential resources, costs, and schedules for operations developed in this study. These evaluations demonstrate that large reserves are required to support the high cost of oil and gas field development and associated transportation systems. When transportation systems can be shared by producing areas, significantly improved economics are obtained.

The economic resource base was calculated by combining the reserve evaluations with the resource assessments. Estimates of the capital investment required for exploration, production, and transportation facilities were developed and the sensitivity of the economics to various factors were evaluated.

In evaluation of the oil resources, the economic resource base analysis showed that when applying a 10 percent return as an investment criterion and deleting presently infeasible areas, the total risked mean assessment was reduced from 24 billion barrels to 21 billion barrels. At a 15 percent return it was reduced to 18 billion barrels of economically recoverable oil. The analysis indicates little opportunity for a 20 percent rate of return to be achieved. These results assume that grass roots investments are required for all oil production and transportation and that no incremental use of the TAPS line would be possible at the time of development.

Evaluation of non-associated gas resources showed that when applying a 10 percent return criterion, the risked mean assessment of 68 TCF of potentially recoverable non-associated gas is reduced to 10 TCF of economically recoverable gas. In no case was a 15 percent rate of return shown to be achieved. No evaluation was made of the more complex economics of producing associated gas, which could improve the prospects of gas development. Gas transportation from the North Slope was evaluated only on the basis of transporting LNG by tanker from different ports. No case comparable to the proposed Alaska Natural Gas Transportation System (ANGTS) was developed, nor were evaluations of the economics of the incremental use of the ANGTS line developed. Use of this system could substantially increase the economically recoverable gas.

Although considerable variation was shown in the economics for different areas, the uncertainties inherent in estimating all factors in frontier basins, especially the undiscovered resource base, suggest that none of the prospective basins should be excluded from early leasing and exploration.

IMPACTS

While benefits of oil and gas operations have been demonstrated, it is inevitable that substantial oil and gas development in the U.S. Arctic regions will have some impact on rural Alaskan populations and on the surrounding environment. The experience of the petroleum industry in recent years demonstrates that such impacts can be managed in a beneficial manner with minimal adverse effects on the environment.

The Arctic area contains about 45,000 inhabitants located in six regional centers and about 60 small villages. This population is distributed over thousands of square miles along the northern and northwestern coasts of Alaska from the Alaskan/Canadian border through the Aleutian Islands. Because oil and gas development is likely to occur only at a few specific points, many of the native villages will not directly experience the impact of development.

In the few communities that would be directly affected, expansion will occur in community structure, shoreline resources, local labor markets, and housing. Employment and business opportunities will evolve that could benefit those who choose to participate. In order to maximize these opportunities and minimize any adverse impacts, it is necessary to develop adequate long-term planning and good industry/native relationships.

Environmental impacts can be minimized or avoided in the Arctic by operating practices that have been and continue to be developed by the oil and gas industry in their operations throughout the world, particularly at Prudhoe Bay, the TAPS corridor, the Cook Inlet, the North Sea, and the Canadian Arctic. The Arctic environment is both fragile and biologically important; however, the risk of significant disturbance can be minimized. Accelerated activities in new geographic areas will require an extension of existing technology. However, no problems are perceived that are beyond the projected capability of the industry. As discoveries of oil and gas are made, additional site-specific data will be developed, and research, development, and information gathering will continue. With this information and a continuing commitment to good practices by industry, environmental impacts should be negligible and oil and gas development can proceed safely and successfully in the Arctic.

REGULATION

Both the leasing of prospective areas and the permitting of operations in the Arctic are under government control. A multitude of statutes, regulations, and policies have been developed at federal, state, and borough levels, resulting in an elaborate series of regulatory constraints that have increased costs and delayed all aspects of oil and gas development. A major impediment to Arctic development would be removed if these policies and procedures were simplified and expedited.

The aggressive leasing program undertaken by the State of Alaska has made the present Prudhoe Bay development possible. Most of the rest of the area onshore is under federal control and has been closed to development for many years. A limited program to open a portion of the NPRA is under way, but most of the highly prospective North Slope area under federal jurisdiction is still unavailable for exploration activity. The offshore leasing schedule as of July 1981 does not offer some of the most promising areas until 1984 or later. Acceleration and simplification of leasing for these areas would allow oil and gas development to proceed more effectively.

The complicated regulatory system that has been imposed on the industry needs a complete redesign with the permitting and leasing agencies operating under a clear federal policy to expedite Arctic development. Revisions in statutes, regulations, and policies at all levels of government are necessary to accomplish such a simplification. Specific recommendations for such revisions are made in this report.

THE NATIONAL KNIFE MUSEUM

Mr. BAKER. Mr. President, I would like to take this opportunity today to recognize the National Knife Museum which opened this year in Chattanooga, Tenn.

The National Knife Collectors Association is proud that the museum opened its doors free of debt, a shining example of free enterprise at work. Because of its location in historic Chattanooga, the museum will become a major attraction.

Although I am not a knife collector, I understand from a well-known authority that knife collecting is quite an enjoyable hobby. That authority is President Ronald Reagan, who has an extensive knife collection.

Mr. President, I commend the National Knife Collectors Association for their enthusiasm and dedication to their avocation.

MAXIMUM ALLOWABLE RATES FOR USE OF PRIVATELY OWNED AUTOMOBILES

Mr. MATHIAS. Mr. President, I wish to announce that as of December 6, 1981, the maximum allowable rate for use of privately owned automobiles is 20 cents per mile instead of the current 22½ cents per mile. I ask unanimous consent that a copy of a letter I have sent to all senatorial offices explaining this order be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE COMMITTEE ON
RULES AND ADMINISTRATION,
Washington, D.C., December 3, 1981.

DEAR SENATOR: This is to inform you that the Administrator of General Services has, under the provisions of Section 5707 of title 5, of the United States Code, issued regulations which have decreased the maximum allowable rate for use of privately owned automobiles from 22½ cents per mile to 20 cents per mile for all travel on and after December 6, 1981.

Under the authority vested in this Committee by subsection 1 (n) (1) 8 of rule XXV of the Standing Rules of the Senate and by section 68 of title 2, United States Code, the above decreased rate is hereby made effective for Senate travelers for all travel on or after December 6, 1981.

Please note that the rates for use of privately owned motorcycles and privately owned airplanes will continue to remain at 20 cents per mile and 45 cents per mile respectively.

Your attention is also called to the fact

that, as in the past, the above rates are the maximum allowable rates and that it is the responsibility of each Senator and Chairman to set such rates as will most nearly compensate the traveler for necessary expenses.

Sincerely,

CHARLES McC. MATHIAS, Jr.,
Chairman.

HUNGER STRIKE OF ANDREI SAKHAROV AND YELENA BONNER

Mr. MOYNIHAN. Mr. President, Andrei Sakharov and his wife, Yelena Bonner, have today entered the 13th day of their hunger strike in support of the right of Yelizaveta Alekseyeva to emigrate from the Soviet Union to join her Russian-born husband in the United States. As one expected would be the case, they remain steadfast in their commitment to do everything possible, to give all they have, to the cause of liberty, the right to emigrate, the freedom to love and marry as one wishes.

Today's New York Times informs us about the isolation, the loneliness and the relentless intimidation the Sakharovs have experienced since their banishment to the city of Gorki last year, and which has led now to the hunger strike as an ultimate protest.

The Wall Street Journal also comments today, in an editorial, on the hunger strike by Dr. Sakharov and Miss Bonner, and makes the point that the Sakharovs' protest "involves an almost purely private matter."

It is, of course, a private matter whether a 26-year-old woman may marry a young man of her choosing. That is precisely why the issue is of such monumental public import—because the Soviet system does not permit private lives. That is the fundamental meaning of totalitarianism. It does not permit one's thoughts to be one's own, does not allow people to live where they want or do as they wish, except at the pleasure of the State.

Now we learn, our attention drawn to the fact by Dr. Sakharov's heroic action, that the Soviets will not allow a marriage between two young people who love each other because the stepfather of the young man has challenged, and embarrassed, the State.

The significance of this vile persecution, at this time, cannot be overstated. For we are witnessing not merely further harassment of the family of Andrei Sakharov, an historic champion of human rights and civil liberties, but a demonstration of just how lightly the Government of the Soviet Union regards its own formal international commitments and treaty obligations.

That the Soviet Union should engage in such flagrant and outrageous violation of the spirit and the letter of the 1975 Helsinki accords, which guarantee the rights of people in Eastern Europe to emigrate freely and communicate across borders, at the very moment the Soviet Union is sitting down with the United States at Geneva to negotiate about strategic arms reductions in Europe, leads one to question just how seriously they will treat any agreement that may result from these talks.

Why would the Soviets abide by an agreement to dismantle nuclear missiles, if they cannot fulfill a commitment to allow their own people to travel, to communicate, to emigrate?

Mr. President, I am pleased to note that the Department of State is acting precisely in accordance with the expressed wishes of the Senate with respect to the Soviet harassment of Dr. Sakharov. Senators of course recall the unanimous adoption, on November 24, of a resolution associating the Congress "fully and completely with the hunger strike protest by Andrei Sakharov." Yesterday's New York Times reports that the Department is "angrily protesting" the treatment of Dr. Sakharov, and that Under Secretary Walter Stoessel has personally brought the Senate resolution to the attention of Soviet officials.

I ask that there appear in the RECORD at this point the articles to which I have referred.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Dec. 4, 1981]

FOR ISOLATED SAKHAROVS, 12TH DAY OF FAST

(By John F. Burns)

Moscow, December 3.—After a decade together at the heart of the human rights struggle in the Soviet Union, Andrei D. Sakharov and Yelena G. Bonner have grown accustomed to the isolation and intimidation that descend on those confronting the system.

But the distinguished physicist and his wife have never been as alone as they are now, sequestered in a drab apartment in the sealed city of Gorky, far from their families, with no telephone, staking their lives on a challenge that could end tragically if neither they nor their Kremlin adversaries concede.

TAKING ONLY MINERAL WATER

This morning, the couple entered the 12th day of a hunger strike. With only mineral water to sustain them, they are acting in support of a 26-year-old Moscow woman, Yelizaveta Alekseyeva, who has been barred from emigrating to join Alexey Semyonov, a 25-year-old student at Brandeis University in Boston.

Mr. Semyonov, who is Miss Bonner's son by a previous marriage, emigrated from the Soviet Union four years ago and was married to Miss Alekseyeva in the United States by proxy. The Sakharovs regard her as a victim of a vendetta by the state security police, the K.G.B.

In a telegram to Leonid I. Brezhnev, the Soviet leader, Dr. Sakharov said on the eve of his fast that his action had been forced on him by the separation of Miss Alekseyeva and his son-in-law, "the cause of which is I think their close relationship with me."

From other messages, and from conversations the physicist has had with the few friends and relatives he is permitted to see in his administrative exile in Gorky, it seems plain that his motives go beyond emigration for Miss Alekseyeva, to the core of his own struggle for dignity and justice under Soviet law.

Miss Alekseyeva comforts herself with the thought that Dr. Sakharov could not have been dissuaded. A slim woman of Oriental features—her father, a retired lieutenant colonel, is a Buryat Mongol—she was able to visit the physicist earlier this year in Gorky, the Volga River city that has been his place of exile since early 1980.

Since the fast began, she has gone to the local post office here each day by pre-arrangement to dispatch a telegram to the Sakharovs. She prepays for the response, allowing them to keep their vow not to leave their Gorky apartment as long as the fast continues.

For a few days, the system worked. But since Nov. 25, Miss Alekseyeva has learned from friends in Gorky, her telegrams have not gone through. Two days ago, by slipping a message to a friend, the Sakharovs were able to get word through that they were "holding on cheerfully." The telegram produced a bubble of hope, but the feeling that the couple might have embarked on a road with no return soon asserted itself.

"In the broadest sense, this is a struggle for human rights and legality, not just for my right to leave," Miss Alekseyeva told a group of visitors, including two American diplomats who have been visiting her daily at Miss Bonner's apartment here since the fast began.

"For two years now, Andrei Dmitriyevich has been trying to resolve his problems without resorting to extreme measures," Miss Alekseyeva continued, using his first name and patronomic, Russian-style. "He has written twice to Brezhnev and several times to the Academy of Sciences; he has appealed to friends abroad, and he has demanded a proper trial."

She paused, glancing around the apartment, its shelves and display cases crammed with the books and mementos that the Sakharovs chose to leave.

"But you know," Miss Alekseyeva said, picking up her thoughts, "none of this has changed anything, and he feels now that he has exhausted the possibilities. For him, a hunger strike is the only logical step left."

BANISHED SINCE JANUARY 1980

Dr. Sakharov's exile came without warning on Jan. 22, 1980, when security agents stopped his car on a Moscow street, hauled him off to the airport and flew him to Gorky. The action was taken without recourse to the courts, which have the power to banish.

At the same time, he was stripped of his awards, which include the Stalin Prize and the distinction of a threefold title of Hero of Socialist Labor, all given for his nuclear weapons research.

Now 60 years of age, with a weak heart, he faces the prospect of living out his life in a city that offers little to the taste of one of the most celebrated scientists the Soviet Union has produced. Worse, his routine in the Shcherbinki district in Gorky, six miles from the city center in a new housing project overlooking a busy highway, is punctuated by the harassment of K.G.B. agents.

Although the Soviet press said at the time of his banishment that Gorky, a metropolis of 1.4 million people, had been chosen out of "humane considerations" as a place where he could pursue his research, the doors of the city's academic institutes and defense research establishments that could have employed his talents remain closed.

WORKING ON NATURE OF UNIVERSE

He pursues his inquiries into the nature of the universe in the four-room apartment assigned to him, with nothing to fall back on but the books his wife brought from Moscow.

By order of the Presidium of the Supreme Soviet, the nominal legislative arm of the Government, the physicist is being watched around the clock, with a guard at a desk outside his apartment and a police post nearby.

Only a handful of visitors are allowed, two of them Gorky residents, and they are subjected to searches. Visiting other residents of the city has become impossible, since any contact with the couple invites trouble with the police. Even shopping or walking in the park are difficult because the security police make a habit of entering the apartment while the couple are out and searching through their belongings.

The attentions of the K.G.B. are pervasive. Agents on foot or in unmarked cars follow the couple wherever they go, keeping an eye on Miss Bonner when she exercises her freedom to travel to Moscow. On one occasion, when the physicist went to the station to see his wife and his 80-year-old mother-in-law board a train, an agent drew a gun and motioned him away from the car.

RADIO A LIFELINE TO OUTSIDE WORLD

The couple's lifeline to the world outside, as for many Russians, is their short-wave radio. This proved a limited asset when they encountered an electrical interference inside the apartment, making it difficult and sometimes impossible to pick up broadcasts.

In one of his early messages to foreign reporters here, Dr. Sakharov compared his circumstances in Gorky to being in a "gilded cage." But from his own descriptions, and from those of his visitors, the analogy applies only if the Sakharovs' life in Gorky is compared with what they would have encountered if they had been tried, convicted and banished to a remoter region.

Even in Gorky, exile seems calculated to induce strains. After years of living in secret weapons research centers, constantly followed by bodyguards, Dr. Sakharov might be better prepared to deal with the anxieties than others. But some clue to the effect can be taken from interviews in his early days as an activist, when he cited the pleasures of being back in Moscow, amid colleagues, family and friends.

[From the New York Times, Dec. 3, 1981]

WASHINGTON TALK

The State Department is quietly and angrily protesting the treatment of Andrei D. Sakharov, the dissident Soviet physicist and Nobel Prize winner who is on a hunger strike in the industrial city of Gorky. Mr. Sakharov, who started his protest on Nov. 22, is pressing the Soviet Government to allow the woman who married his stepson by proxy to join her husband, who is a graduate student at Brandeis University.

Last Friday night, Walter Stoessel, the Under Secretary of State for Political Affairs, called in the Soviet minister-counselor, Alexander A. Bessmertnykh, and "took him to task" over the treatment of the ailing Dr. Sakharov, according to a State Department official. Mr. Stoessel also sought to present a copy of the unanimously approved Senate resolution expressing strong support for Dr. Sakharov and protesting Soviet "harassment and persecution" of the 60-year-old scientist, Mr. Bessmertnykh declined to take the copy.

In sponsoring the Senate resolution, Daniel P. Moynihan said of the Russians: "What are we to think of their real intentions at the arms talks in Geneva if they allow Sakharov to die rather than give an exit visa to a girl in her 20's?" He added: "This would also put a stop to scientific exchanges. I can't imagine any self-respecting American scientist setting foot on Soviet soil if the Soviets allow Sakharov to die."

[From the Wall Street Journal, Dec. 4, 1981]

THE SAKHAROVS' HUNGER STRIKE

Andrei Sakharov and his wife, Yelena Bonner, are said to be holding up well in the second week of a hunger strike that has worried and possibly puzzled his many admirers. Dr. Sakharov distinguished himself first in the Soviet Union's nuclear weapons development and then in its fledgling human rights movement. His call for international peace and domestic justice brought him the Nobel Peace Prize. He has been called one of the greatest moral figures in the long tradition of Russian intelligentsia. It must be some truly cosmic concern, one might think, that has driven him to threaten his health with such an extreme gesture. But no, his protest involves an almost purely private matter.

Dr. and Mrs. Sakharov are fasting because the Soviet government refuses to allow his stepson's wife, Yelizaveta (Liza) Alexseyeva, to emigrate. Liza was betrothed to Yelena Bonner's son Alexei Semyonov, when he left the Soviet Union three and a half years ago for Brandeis University; they were married last summer by proxy under the laws of Montana. These two people in their twenties have become pawns in the Soviet campaign against its most illustrious dissident.

Dr. Sakharov's response shows a great deal about his special character. Unlike many of history's titans, his concern for humanity hasn't deadened his love for human individuals. His friends marvel at his "great heart" for the suffering of strangers, but even more at his concern for those nearest to him. The case of Liza may be especially urgent because he feels himself responsible for her problems.

His conduct in this case shows why other dissidents hold him in such awe. It also casts a sharp light on the nearly universal careerism and opportunism of Soviet life. Sakharov's reputation for decency has spread so widely in the Soviet Union that the regime scarcely dares to strike him down directly. The government instead has imposed an internal exile unsanctioned by its own courts and countless indirect harassments such as the treatment of Liza Alexseyeva. According to the Sakharovs, the KGB is even spreading gossip that the hunger strike is Yelena Bonner's way of doing in her husband. The wonder of this protest is not only that the Sakharovs are acting with such simple morality but that their government is being so petty.

(Later the following occurred:)

Mr. MOYNIHAN. Mr. President, the Associated Press reports from Moscow today that Soviet authorities have hospitalized hunger-striking Nobel Peace Prize winner Andrei Sakharov and his wife, Yelena Bonner. This is according to today's edition of the government newspaper Izvestia.

Earlier today I made a statement and placed in the RECORD a series of reports from Moscow about the Sakharovs' hunger strike, which was on November 24, the occasion of the unanimous adoption of a resolution by the Senate calling on the Soviet authorities to desist from the villainous behavior which had prompted the strike.

This has not happened; they have not ceased their persecution of Andrei Sakharov and his family. Indeed, they have now escalated the harassment by removing Sakharov and his wife from their home.

All the Sakharovs have asked is that a young woman be given an exit visa as is the presumed right of any Soviet citizen under the Helsinki accords. They did not do so. They have not done so.

They have now taken this Nobel Peace Prize winner and his wife to a government hospital. What is happening there we cannot know. We can only fear the worst.

As I said earlier today if the situation does not improve the Soviet authorities will have demonstrated clearly they do not understand what would be the inevitable consequences in their relations with the West, in negotiations with the United States, in their ties to the scientific community in the United States and the West if Sakharov should die or if Miss Bonner should die.

Clearly they cannot understand the consequence of relations with this body if a unanimously adopted resolution is so easily dismissed. The Soviet minister who came to the Department of State on Friday night a week ago did not even accept a copy of our resolution. He claimed to know of the matter and not to need one.

I remind the Senate that, of all his many achievements in various fields, Sakharov has said he is most proud of the test ban treaty of 1965. What more ominous event could occur at the outset of the new round of strategic arms negotiations than for the man who personifies cooperation between the United States and the Soviet Union in nuclear arms matters to be forced to a hunger strike and taken to a government hospital. It will inevitably affect those negotiations.

We wish Andrei Sakharov and Yelena Bonner well. We admire their courage. We hope theirs is not a doomed effort.

I shall now read in the RECORD the Associated Press article to which I have referred:

Moscow (AP)—Soviet authorities have hospitalized hunger-striking Nobel Peace Prize winner Andrei Sakharov and his wife, the government newspaper Izvestia reported today.

It said the two were taken to the hospital "to prevent any complication in their state of health."

An earlier telegram from the Sakharovs had said the fast was aggravating Sakharov's heart ailment, and friends had warned that the hunger strike could end in Sakharov's death.

Sakharov, 60, and his wife began their hunger strike Nov. 22 in the city of Gorky, where Sakharov was exiled in January 1980 for criticizing Soviet Government policies.

The hunger strike was designed to protest the refusal of Soviet authorities to allow Liza Alexseyeva to emigrate to the United States. She was married by proxy last year to Mrs. Sakharov's son by a previous marriage.

On Thursday, a family friend was barred from traveling to Gorky to visit the Sakharovs.

Sources said the friend, Maria Petrenko-Podyapolskaya, was first told at the train station that no tickets were available for the 240-mile journey to Gorky, then told it was "not necessary to go there."

She was one of 10 Soviet dissidents and Jewish activists who signed a petition this week calling on scientists around the world to appeal to their governments to support Sakharov.

The Sakharovs were last heard from Tuesday. A telegram received from them then said: "We're not bad. We keep our spirits up. We keep to the regimen."

Earlier this week, informed sources said another of Sakharov's friends was detained by plainclothes police outside the Gorky apartment building where the fast had been going on.

Mr. BAKER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. TOWER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

DEPARTMENT OF DEFENSE APPROPRIATIONS, 1982

The PRESIDING OFFICER. Under the previous order, the Senate will now resume consideration of the pending business, H.R. 4995, which will be stated by title.

The legislative clerk read as follows:

A bill (H.R. 4995) making appropriations for the Department of Defense for the fiscal year 1982, and for other purposes.

The Senate resumed consideration of the bill.

the PRESIDING OFFICER. The Senator from Alaska.

Mr. STEVENS. Mr. President, it is my understanding that the Senator from Texas has an amendment that we can consider at this point. I would like to have it laid down and then make certain that my conclusion is correct, as far as the Senator from Mississippi is concerned.

Mr. METZENBAUM. I am sorry, Mr. President, but I could not hear the Senator from Alaska.

Mr. STEVENS. I ask that the Chair recognize the Senator from Texas so he can lay down his amendment and then we will await the arrival of the Senator from Mississippi.

Mr. METZENBAUM addressed the Chair.

The PRESIDING OFFICER. The Senator from Texas is recognized.

Mr. METZENBAUM. Mr. President, I object and demand recognition.

UP AMENDMENT NO. 750

(Purpose: To permit multi-year contracts for weapons systems with termination liabilities which do not exceed $100 million)

Mr. TOWER. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

Mr. METZENBAUM. Mr. President, I rise to a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. METZENBAUM. Is the Senator from Ohio correct that one Member on the floor may not yield to another Member for any such purpose?

The PRESIDING OFFICER. The Senator from Ohio is certainly correct. The Chair recognized the Senator from Alaska. Following that, the Chair recognized the Senator from Texas for the purpose of offering an amendment. The Senator from Texas was on his feet before the Senator from Ohio.

Mr. METZENBAUM. I have no objection to the Senator from Texas being recognized independently. It is my understanding that the Senator from Alaska was yielding the floor to the Senator from Texas.

The PRESIDING OFFICER. That is not what——

Mr. STEVENS. Mr. President, I merely said I suggested that the Chair recognize the Senator from Texas for the purpose of getting his amendment down so we could await the arrival of the Senator from Mississippi. That is all I said. I did not yield; I merely suggested.

Mr. METZENBAUM. May I make an inquiry of the manager of the bill?

Mr. STEVENS. I will be happy for the Senator to make inquiry.

The PRESIDING OFFICER. The Senator from Texas has the floor.

Mr. TOWER. Mr. President, I do not yield the floor at this time.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Texas (Mr. TOWER) proposes an unprinted amendment numbered 750.

Mr. TOWER. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 63, line 9, delete the period and insert the following in lieu thereof: "unless the cancellation ceiling for such contracts is $100 million or less."

Mr. TOWER. Mr. President, I suggest the absence of a quorum and ask unanimous consent that the time be charged equally to both sides.

Mr. METZENBAUM. Objection.

Mr. STEVENS. There is no time limitation.

The PRESIDING OFFICER. There is no time limitation.

Mr. TOWER. I am sorry. I thought there was a time limitation.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MATHIAS. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mrs. HAWKINS). Without objection, it is so ordered.

Mr. MATHIAS. Madam President, a parliamentary inquiry. What is the pending business?

The PRESIDING OFFICER. The amendment by the Senator from Texas.

Mr. MATHIAS. I ask unanimous consent that the pending amendment be temporarily laid aside, so that I may call up my amendment which is at the desk, and that when I have completed action on that amendment, the pending amendment then be the pending business.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

AMENDMENT NO. 649

Mr. MATHIAS. Madam President, I call up my amendment which is at the desk.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Maryland (Mr. MATHIAS) proposes an amendment numbered 649:

On page 28 after line 11 add: "None of the funds appropriated by this Act shall be made available for the Sea Launched Cruise Missile Program.".

Mr. MATHIAS. Madam President, I send to the desk an amendment to my amendment, in the nature of a technical amendment, deleting the words "Sea-Launched Cruise Missile Program," and substituting in lieu thereof the words "Sea-launched Nuclear Tomahawk Land Attack Missile."

The PRESIDING OFFICER. The Senator has the right to modify his amendment. Does the Senator wish to modify the amendment?

Mr. MATHIAS. Yes, I modify my amendment.

The PRESIDING OFFICER. The amendment is so modified.

The modified amendment is as follows:

On page 28 after line 11 add: "None of the funds appropriated by this Act shall be made available for the Sea-Launched Nuclear Tomahawk Land Attack Missile.

Mr. MATHIAS. Madam President, one feature of President Reagan's stategic nuclear program announced on October 2 has not received either sufficient public or sufficient congressional attention: The decision to "deploy several hundred nuclear armed sea-launched cruise missiles on general purpose submarines beginning in 1984."

This decision has literally been eclipsed by other features of the President's package. But the negative implications of this deployment for arms control and for our long range national security have not been discussed. It is an omission which could come back to haunt us in the years ahead. It is perhaps an omission which we can do just a little to rectify today.

Rear Adm. William A. Williams III, in testimony prepared for the Senate Foreign Relations Committee on October 30, said that these sea-launched cruise missiles, or SLCM's, would "provide additional survivable nuclear forces for the strategic reserve force." He went on to say that "the latter role could be pivotal in the post war balance and struggle for recovery."

I will not dwell on what this last statement might mean with respect to Reagan administration plans for nuclear warfighting, though it does seem to suggest that the administration believes that somehow one side or the other can come out ahead in a postnuclear war situation.

I do want to make the point that we have already deployed thousands of highly survivable nuclear warheads on our ballistic submarines. With the Trident program, we will be adding in the 1980's to our capabilities in this area.

I do not believe that the administration has made a convincing military case for its SLCM decision. Indeed, it has made almost no case at all. But most importantly, the administration has given little indication that it has weighed the very clear arms control drawbacks to this SLCM deployment de-

cision against the rather tentative military advantages of going ahead.

Arms control depends on the ability of each side to verify with a high degree of confidence the number and capabilities of the weapons being limited by any agreement. In both SALT I and SALT II, the United States pressed for provisions intended to safeguard our ability to monitor Soviet compliance with treaty provisions through our own independent means, including satellite surveillance.

Verification has always been more our problem than that of the Soviets. Our open society and public debate permits the outside observer to know with a good deal of confidence what our weapons deployments consist of. The Soviet Union, on the other hand, is not so forthcoming.

Cruise missiles by their very nature create verification problems. They are relatively small and easily transportable. It is impossible to verify by national technical means, such as satellite surveillance, their range or whether they are conventionally or nuclear armed.

SALT II addressed the verification problem with respect to air-launched cruise missiles in a way acceptable to both sides. Ground-launched cruise missiles are on the negotiating table in Geneva at this moment. But the SLCM problem remains, and it is a serious one.

We will shortly begin placing several hundred nuclear-armed, long-range, land-attack cruise missiles on attack submarines and on surface ships. Once they are in place, it will be impossible for the Soviet Union to determine by national technical means which submarine or which ship is armed with the SLCM's. All or submarines and all our ships will become potential nuclear launch platforms in Soviet eyes. This situation may temporarily be militarily attractive for us, but the benefits could be fleeting.

At present, the Soviet Union lags behind the United States in cruise missile technology. Their cruise missiles are crude in comparison to ours. However, we have found too often in the past that our lead in a given weapons technology can be erased by Soviet gains in the same area.

Once Soviet technology has progressed to the point where they can duplicate our relatively small cruise missiles, we could have a serious problem. The day may not be too far off when we will have to consider every Soviet fishing trawler operating off the Great Banks as potentially nuclear armed.

Clearly if both sides were to engage in a massive deployment of long-range, nuclear-armed cruise missiles at sea, then President Reagan's search for an arms control agreement incorporating deep verifiable cuts in nuclear arsenals would become a practical impossibility. There would be little possibility of verifying with any confidence the nuclear arsenals of the other side.

I believe that the Reagan administration, in its search for readily available solutions to our perceived strategic nuclear inferiorities, has not yet considered the arms control implications of this particular decision. As is too often the case on major decisions, the unintended effects of the decision may prove to be more significant than those contemplated by the decisionmaker at the moment the decision was taken.

I believe, however, that the President still has an opportunity to call on the Soviet Union to join us in mutually controlling this new technology before significant deployments, difficult to retract, are undertaken.

In 1969, then Senator Brooke of Massachusetts made a determined effort to get us to negotiate with the Soviet Union to halt the MIRVing of ballistic missiles. His call went unheeded. We had a technological advantage over the Soviets that we were determined to exploit. But that technological advantage was shortlived. It lasted only for a brief span of time.

Now that advantage is gone and our land-based forces are vulnerable to the Soviet MIRVed ICBM's. That is the origin of the famous window of vulnerability.

So let us not repeat the same error with sea-launched cruise missiles, and let us at least make a conscious effort to see whether control is possible.

Mr. STEVENS. Madam President, I hope that the Senator would not pursue this amendment. He has raised once again a voice of reason on the floor of the Senate dealing with an important strategic weapon that is in our arsenal. The strategic arms reduction talks, the START talks are commencing.

I am certain that the Senator realizes that our current plans for the use of the cruise missiles do not violate any arms control agreement and that although the SALT II protocol would have permitted these weapons to be used to a range of 600 kilometers, that would have expired on December 31 of this year, and would not have had any impact on the surface-launch cruise missiles that might be deployed as the Senator mentions.

The Tomahawk money is here in the bill. The administration is dedicated to a full-scale discussion with the Soviets on the weaponry involved. That certainly is within the scope, as I understand it, of the talks that are going on, and I hope that the message that the Senator from Maryland has given the Senate and has sent to the administration will be heeded, and this is one of the weapons that will be considered in the arms control negotiations. But we would not want to unilaterally make that decision here. I hope the Senator will not want to see that happen either.

Mr. MATHIAS. I, of course, appreciate what the distinguished chairman of the Defense Subcommittee of the Appropriations Committee is saying. I am as sensitive as he is to the need for maintaining our strategic weapons at an adequate level.

It is a fact, of course, that as a matter of law the arms control implications of a new weapons development must be assessed by the Arms Control and Disarmament Agency.

These particular weapons being strategic in character would ultimately be the subject I presume, as the Senator says, of a new SALT negotiation or a START negotiation, or whatever name it may be given. But we are not up to the table on strategic arms negotiations yet. I think that is why it is so important for us to go very carefully here.

If this were money for deployment I might feel more urgent than I do now since we are talking only about research and development.

Will the chairman of the Defense Subcommittee assure the Senate that he will make sure that the law is complied with and that the arms control implications of this new weapon system will be fully explored before we get too far down the—I started to say too far down the road, but maybe since we are talking about a naval weapon before we are too far into the water?

Mr. STEVENS. I say to my friend that I think that the administration's strategic modernization program does envision the ultimate deployment of sea-launch cruise missiles in the future if they are not the subject of the arms control agreement.

As I indicated the arms control agreement that was previously negotiated but not ratified would have covered cruise missiles to the extent that they exceeded 600 kilometers but even that provision would expire on December 31 of this year and it would have no impact on the plans that were in effect then to deal with the use of these surface launch cruise missiles from the water.

Mr. MATHIAS. What the Senator said is absolutely right and I agree with him. That is why I think we need to have this moment of caution right now, and all I am asking the Senator is his assurance that the law will be complied with and that the arms control implications will be studied and that that study will be made available to Congress.

Mr. STEVENS. I can assure the Senator that that is our goal, which is to see to it that that law is complied with and that we do have the results of the studies.

I also assure the Senator, however, that it is my understanding that the administration's strategic modernization program is for the purpose of demonstrating our resolve to restore and modernize our defense forces in the event the arms control negotiations do not bring about meaningful mutual reductions in strategic arms, and, as I understand, missiles of this type would be subject to that negotiation.

Mr. MATHIAS. I have no problem with that. All I want to be sure is, when we look at the array of weapons which we want to deploy in order to maintain our strategic position, that we be able to choose those that are best suited for that purpose and those which do not have unintended consequences as the MIRVing decision did 12 years ago.

Mr. STEVENS. The Senator raises a very valid point.

I think that the Senator from Texas, as the chairman of the Armed Services Committee, may wish to make some comment concerning compliance with the existing law, but it is my understanding from the testimony that we had before the subcommittee the Secretary has stated that it is the intention of the ad-

ministration to proceed with the procurement and the ultimate deployment of these sea-launched cruise missiles; that is, of course, subject to the negotiations that will take place in the interim.

Mr. TOWER. If the Senator will yield, let me say to the Senator from Maryland that we always have and will continue to give careful consideration to the arms control implications of any weapon system we set for authorization. That is our policy and will continue to be our policy.

Mr. MATHIAS. I appreciate that assurance from the distinguished chairman of the Armed Services Committee, and that is the reassurance I was seeking. I think it is particularly important in this case, and I did not mean to imply there would be any deviation from the standard policy of the committee and of the administration. But I do believe that this is a watershed decision that requires extra care.

Mr. HART. Madam President, will the Senator from Maryland yield briefly?

Mr. MATHIAS. I am happy to yield to the Senator from Colorado.

Mr. HART. Madam President, I wish to add a word of support to the issue that the Senator from Maryland has raised in two regards.

The Senator from Colorado is a strong advocate of cruise missile technology whether launched from the air, land, or sea. I think it is both a tactical and strategic weapon of the future.

In terms of strategic concerns I, frankly, favor the air-launched cruise missile over the manned penetration bomber. I have supported that in the past. On the other hand, as a strong supporter of the SALT II treaty and the SALT process, I think the Senator is to be commended for raising a serious concern here.

The reason this Senator and others have urged the administration to get on with or to continue the negotiating process is I think partly contained in the Senator's concern here—that technology is beginning to outrun our ability to negotiate limits on it. While on the one hand we believe our strategic forces must be modernized, on the other hand it is the policy of this Government, this administration, to seek limitations on strategic systems. That is going to be harder in the 1980's than it was in the 1970's. In the 1970's it was harder than it was in the 1960's primarily because of increased weapons sophistication, guidance systems, and all the rest of it.

I think all that says to us in the Senate is that we have to do better. We have to think harder and more clearly about arms control implications of these new weapons and how to, on the one hand, modernize and, on the other hand, seek viable limitations.

So I identify myself with the concerns of the Senator from Maryland and I share them.

● Mr. DURENBERGER. Madam President, the strategic arms package announced by President Reagan last October was greeted with the applause and support it deserves. The President's decision to cancel the so-called racetrack basing system which had been devised by the Carter administration for our MX missiles saved us from huge budget outlays, massive arms control problems, and the possibility of major environmental damage. The decision to build a modified version of the B–1 bomber—a decision which has been ratified by this body—will provide us with a risk-free modernization of our strategic Triad. And the attention which has been paid to our command, control, Communications, and intelligence (C3I) systems is perhaps the most vital element of the overall package, for as the GAO recently noted, it is these systems which are most in need of improvement and modernization.

It is perhaps understandable that amidst so much attention to so many bold and sensible decisions, the President's decision to deploy nuclear-armed cruise missiles aboard our fleet of attack submarines received relatively little comment. This is an important decision with potentially vast consequences, yet there has been virtually no discussion about it here in the Senate.

As a recently completed book by the Brookings Institution makes clear, we have not yet thought through the military and arms control consequences of cruise missiles. This is particularly true with the nuclear land-attack Tomahawk cruise missile. It makes considerable sense to deploy antiship cruise missiles with conventional warheads. The air-launched cruise missile has become a vital component of our bomber modernization programs. But the decision to employ nuclear land-attack cruise missiles aboard our attack submarines must raise some questions.

As my colleagues know, the chief function of our attack submarines is to conduct antisubmarine warfare. Related missions include reconnaissance, convoy escort, and antishipping duties. The attack submarines are stretched thin, but they are absolutely vital to our naval strength. They can make up for the heavy mission load which we impose on them only by flexibility and freedom of maneuver. Anything which would potentially degrade their existing missions must be examined closely.

In the short term, each nuclear-armed cruise missile placed aboard an attack submarine displaces a conventional weapon, such as a torpedo. Down the road, of course, there are plans to supplement the torpedo tubes of our attack submarines with vertical launching tubes for the cruise missiles. Nonetheless, there is a potential constraint on the weapons capacity of our attack submarines if we decide to deploy land-attack cruise missiles aboard them.

More importantly, however, once nuclear-armed cruise missiles are deployed aboard these boats, they become part of our single integrated operations plan (SIOP)—the command and control system which governs our nuclear forces. A necessary element of the SIOP is regular and ongoing communications between our forces and the National Command Authority. We have accounted for this with our strategic nuclear submarines. But we have not yet accounted for it without attack submarines. If they are forced to remain in regular contact with the National Command Authority, they lose freedom of maneuver and they risk detection by antisubmarine forces. In other words, integration into the SIOP could seriously degrade the effectiveness of our attack submarines.

Finally, of course, we are proposing to deploy nuclear-armed cruise missiles which are relatively limited in range. This means that if they are to be released, the submarines which fire them will be forced to move closer to the shoreline. Yet the entire thrust of our fleet ballistic missile modernization program has been to extend, not to diminish, the range of our nuclear weapons.

For instance, the C–4 missile, commonly known as the Trident I, has a substantially greater range than the C–3 Poseidon missile. This will permit the submarine which deploys it to operate farther away from Soviet territory, vastly increasing its survivability. And survivability will increase once again when the D–5 Trident II missile comes into the fleet. These programs make considerable sense, for they stabilize the nuclear balance. But I must question a nuclear arms program which runs entirely contrary to the logic of our SLBM modernization programs, as the sea-launched cruise missile program would do.

If there are substantial military or operational grounds on which to question the nuclear-armed land attack missiles, there are equally substantial arms control grounds. We are all familiar, of course, with the difficulties of verification raised by dual purpose weapons. While it bears notice that the Soviets have deployed nuclear-armed cruise missiles aboard their submarines for many years. this does not necessarily mean that we should seek a comparable capability. When we do so undercuts the primary military function of our attack submarines and further complicates verification problems.

But the chief arms control problem raised by these weapons relates to our so-called theater nuclear forces. The NATO alliance has established a clear policy aimed at ending the threat posed by Soviet intermediate range missiles such as the SS–20, the SS–4 and the SS–5. That policy, announced in December 1979, requires a two-track approach. First, the alliance will proceed with plans for the deployment of comparable missiles, the extended range Pershing II and the ground launched cruise missile. Second, we will seek arms control talks. This decision was both ratified and given further life by the President's recent statement concerning the so-called zero option. His statement and our negotiations deserve the support of all peace loving people.

Fundamental to this policy, however, is the credibility of our intentions to go ahead, if necessary, with the deployment of land-based missiles. The key word here is land-based, for it is only in this mode that the alliance and the Soviets alike can be assured of our willingness to maintain a spectrum of deterrence.

The deployment of cruise missile configured for a nuclear land-attack mission, however, provides a tempting escape valve for those who would wish to

evade their responsibilities under the 1979 NATO decision. This has always been the fear of those connected with the theater nuclear force modernization decision, and it led Gen. Bernard Rogers, our commander in Europe, to express his grave concerns about the cruise missile decision. We cannot afford an escape valve, for it will undercut both the solidarity of the alliance and the prospects for successful negotiations.

Madam President, I have only briefly touched upon some of the potential problems raised by a decision to go ahead with this deployment. And I have not even discussed the questions we must consider regarding the utility of a so-called "strategic reserve." What possible purpose can several hundred more nuclear weapons serve as a "reserve?" Why should not our efforts go more toward the modernization of our severely-strained general purpose forces, rather than toward creating reserves of nuclear weapons?

As I say, I have touched only briefly on these questions. I fervently hope that this will not be the last time we raise this important policy issue. And I strongly commend my colleague from Maryland, Mr. MATHIAS, for raising it now—in this important setting.●

Mr. MATHIAS. I thank the Senator from Colorado for his remarks and for his understanding and comprehension of this very difficult and complex question.

Madam President, in the light of the assurances which the Senator from Alaska, the manager of the bill, has given and the assurances that the Senator from Texas, the chairman of the Armed Services Committee, has given that the arms control implications will be studied and that in particular the verification aspect will get proper attention. And further, in view of the fact that the funds we are discussing are not for deployment, but rather for research and development, with which I am essentially sympathetic, I will now withdraw the amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

Mr. STEVENS. Madam President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. STEVENS. That brings before the Senate the Tower amendment, does it not?

The PRESIDING OFFICER. The Senator is correct.

UP AMENDMENT NO. 750

Mr. STEVENS. Madam President, I am authorized to state to the Senator from Texes that the Senator from Mississippi joins me in recognizing this as a technical amendment to the multiple year contracting provision and we are prepared to accept it on the basis of this statement.

Mr. TOWER. I thank the Senator from Alaska.

Madam President, section 909 of the fiscal year 1982 Department of Defense Authorization Act, which was passed by the Congress several weeks ago, permits the Department of Defense to enter into multiyear contracts for weapons systems provided that the Department of Defense determines:

First. That the use of such contracts will promote the national security of the United States and will result in reduced total costs under the contract;

Second. That the minimum need for the property to be purchased is expected to remain substantially unchanged during the contemplated contract in terms of production rate, procurement rate, and total quantity;

Third. That there is a reasonable expectation that throughout the contemplated contract period the Department of Defense will request funding for the contract at the level required to avoid contract cancellation;

Fourth. That there is a stable design for the property to be acquired and that the technical risks associated with such property are not excessive; and

Fifth. That the estimates of both the cost of the contract and the anticipated cost avoidance through the use of a multiyear contract are realistic.

Madam President, the Senate and the House Armed Services Committees are looking for meaningful and innovative ways to achieve savings in the procurement of very costly weapons systems. This multiyear contracting provision may well be the most significant step that Congress has taken in recent years to achieve savings by procuring property at a more efficient and thus a more economic production rate. Keep in mind that this multiyear contracting concept may only be used for the procurement of programs which have demonstrated technical and cost stability; it cannot be used by the Department of Defense to bind Congress to a procurement of weapons systems which are not technologically mature, and which have not demonstrated cost stability.

Section 769 of this Defense appropriations bill provides that "no part of any appropriation contained in this act will be available to initiate multiyear procurement on contracts for major weapons systems except as specifically provided herein." For many years, the Department of Defense was authorized to enter multiyear contracts provided the cancellation ceiling of such contracts did not exceed $5 million. The effect of the provision contained in this Defense appropriation bill, however, would restrict the authority that the Department of Defense has had for many years to enter into certain multiyear contracts at a time when Congress is attempting to expand the use of multiyear contracts to, first, achieve sizable savings through more efficient production rates; second, provide stability to our defense industrial base; and third, acquire weapons systems in a more timely manner.

My amendment simply makes the provision contained in the Defense appropriations bill consistent with the provision contained in the fiscal year 1982 Department of Defense Authorization Act. For these multiyear contracts containing cancellation ceilings in excess of $100 million, the Department of Defense would have to satisfy each of the criteria which I previously discussed and, in addition, would be required to give a 30-day prior notice to the Senate and House Armed Services Committees as well as the Senate and House Appropriations Committees.

Madam President, again I want to make it clear that this amendment does nothing more than make the provision reflected in this Defense appropriations bill consistent with that provided in the Defense Authorization Act, fiscal year 1982. I, therefore, urge my colleagues to simply reaffirm the endorsement to the multiyear contracting concept that they gave several weeks ago when they voted in favor of the fiscal year 1982 Defense authorization bill.

Let me simply make reference to section 769 of the Defense appropriations bill which provides that:

No part of any appropriations contained in this act will be available to initiate multiyear procurement on contracts and major weapons systems except as specifically provided herein.

My amendment simply makes the provision contained in the appropriations bill consistent with the provisions contained in the fiscal year 1982 Department of Defense Authorization Act.

I will make it clear that it does no more than that and makes it consistent with a provision in the authorization act that this body has already endorsed by a vote of some 90 to 1.

I have discussed the matter with Senator STENNIS myself and I am told it is acceptable.

Mr. STEVENS. We accept the statement to that effect. This makes it consistent with the authorization bill, and I ask for the adoption of the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Texas.

The amendment (UP No. 750) was agreed to.

Mr. TOWER. Madam President, I move to reconsider the vote by which the the amendment was agreed to.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

AMENDMENT NO. 650

(Purpose: To express the sense of the Senate with respect to a program for the elderly in the eighties)

Mr. METZENBAUM. Madam President, I call up my amendment pending at the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The bill clerk read as follows:

The Senator from Ohio (Mr. METZENBAUM) proposes an amendment numbered 650.

Mr. METZENBAUM. Madam President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the end of the bill insert the following:

It is the sense of the Senate that the Congress give priority attention to all official recommendations of the White House Conference on Aging in achieving the goal of establishing a far-reaching program for present and future generations of older Americans, including recommendations to—

(1) safeguard current eligibility condi-

tions, retirement ages, and benefit levels in the social security program;

(2) broaden opportunities for older workers to remain active voluntarily in the labor force;

(3) assure older individuals an income sufficient to maintain a minimum level of dignity and comfort;

(4) ensure that all Americans have access to adequate health care;

(5) take interim steps to improve health care for older individuals;

(6) make available an adequate number of federally assisted housing units to meet the needs of the elderly;

(7) complete comprehensive service delivery systems for older individuals at the community level; and

(8) strengthen the Federal commitment to gerontological research, education, and training.

Mr. METZENBAUM. Madam President, this amendment is offered on behalf of myself, Senator ROBERT C. BYRD, Senators PELL, RIEGLE, EAGLETON, DODD, RANDOLPH, BURDICK, FORD, KENNEDY, MELCHER, SASSER, BAUCUS, MOYNIHAN, BRADLEY, DIXON, MITCHELL, LEVIN, HEINZ, COHEN, HATFIELD, TSONGAS, BIDEN, HAWKINS, and PRYOR. In addition, I ask unanimous consent that Senator WILLIAMS be made a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. METZENBAUM. Madam President, this amendment is supported by the Leadership Council of the White House Conference on Aging which consists of the following organizations:

American Association of Homes for the Aging,

Association Nacional por Personas Mayores,

Association for Gerontology in Higher Education,

Concerned Seniors for Better Governments,

Gray Panthers,

Legal Research and Services for the Elderly,

National Association of Area Agencies on Aging,

National Association of Mature People,

National Association of Meals Programs,

National Association of Nutrition and Aging Services Programs,

National Association of Retired Federal Employees,

National Pacific Asian Resources Center on Aging,

National Retired Teachers Association,

American Association of Retired Persons,

National Senior Citizens Law Center,

Older Women's League,

Retired Members Department/United Auto Workers,

Social Security Department/AFL-CIO,

Urban Elderly Coalition,

Western Gerontological Society,

National Association of State Units on Aging,

National Caucus and Center on Black Aged,

National Council on the Aging,

National Council of Senior Citizens, and

National Indian Council on Aging.

Having said, Madam President, it is obvious this is an amendment which has widespread support. It is, in effect, a sense-of-the-Senate resolution offered as an amendment to the pending bill.

The argument will be raised and will be made of why would you offer such an amendment to the defense appropriations bill? I can think of no more logical reason, and I think it is a perfect answer, to say that when we are spending a week on the floor of the U.S. Senate passing a bill that provides $208.5 billion for defense purposes, an amount that is $37 billion higher than the aggregate in the 1981 bill, an amount that is $7 billion over, almost $8 billion over, the budget request of the President of the United States, who could claim that we ought to be so indifferent to the concerns of the senior citizens, that we could be inhumane and have that lack of compassion, that we could not find the time to indicate that the Senate also has a concern for the aged citizens of this country who have made our growth and our strength so possible?

This is our way of saying that "We have not forgotten, we are aware of what you have been doing down the street at the White House Conference on Aging." We are saying that those who participated in that conference should be commended for their efforts despite that which the press has reported to have been many obstacles put in their way, despite the efforts of some to politicize the process at the White House Conference on Aging. We here in the Senate on a bipartisan basis are saying in this amendment, "We care, we are concerned, we feel, we know of your problems, and we share the concern that you have for those problems."

The argument has been made, and I was not there and I cannot prove it, but the argument has been made that this was an effort to politicize the elderly in the conference. What we are saying here is not anything more than, "We, the Members of the United States Senate, do feel that what has been going on down the street is a matter of concern to all persons, the Senate, the House, and that we will address ourselves to the issues as they came out of that conference."

The conference approved hundreds of recommendations. This resolution highlights eight. It highlights eight because it is those eight that need priority attention, and we will be saying that we want to give that priority attention to the actions of the conference, and particularly to those eight which are somewhat all-encompassing.

Now, the fact is that previous conferences of the White House on aging have been responsible for major vital legislation for the elderly. Some of that legislation which has been effective is medicare which came out of the 1961 conference, medicare which provided health care to millions of older Americans, and out of that same 1961 conference, 20 years ago, Federal and State programs for the elderly such as social services, senior centers, and counseling programs. So much of what they recommended 20 years ago has now become the law of the land and accepted as a part of our everyday life.

Then, 10 years later, the 1971 conference came to the conclusion that the mandatory retirement age should be raised from 65 to 70 so that older Americans could continue to use their expertise and their experience for the benefit of our society, and Congress has reacted with respect to that subject and has acted favorably.

The 1971 conference recognized that senior citizens have a problem of being fed, that they get hungary, that they are not able to get food for themselves, and so they addressed themselves to nutritional programs such as home-delivered meals, Meals-on-Wheels, making it possible for the poorest of the elderly to receive the basic nutritional requirements to sustain life.

What we are saying here is in this bill with $208.5 billion, a bill that in all likelihood the Senator from Ohio will support, we also did not fail to indicate our concern about what was going on down the street.

The Senator from Ohio is not unrealistic about the efforts that some will make with respect to this pending amendment. There are many motions that can be made. You can make a motion to table my amendment or our amendment. You can raise the issue of germaneness, you can move to refer the matter to committee, you can move, perhaps make some other different kinds of motions.

But whatever the motion may be there will be a rollcall vote on it and the rollcall will be saying in effect, "If you want to express your point of view, if you want to indicate your concern, if you have some feeling for those who have been meeting down the street, then this is the way to do it, and you will vote against laying it on the table or whatever the motion may be."

The vote will say, "This is our expression, this is our statement. You may win a vote, but the fact is this is the opportunity that we give you to say that you care, to say that you are concerned."

So I will not belabor the point. I will not speak at great length because the issue is clear. Will we or will we not in the U.S. Senate make a statement, indicate a concern, indicate that we are prepared to act and to do something about all the actions that have been taken down the street this week, and that is all the issue is.

It does not deal with some of the hard-knock substantive questions that may be involved as these issues progress through the Senate or the House. It deals with the general approach to the problems that face these senior citizens of this country. Either you are with the senior citizens in indicating concern or you are against them, and that is what the vote will indicate.

Madam President, I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is not a sufficient second.

Mr. METZENBAUM. Madam President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Madam President, I ask for the yeas and nays on the pending amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

THE ELDERLY IN THE EIGHTIES

Mr. ROBERT C. BYRD. Madam President, today I am pleased to join in cosponsoring the pending measure which has been offered by Mr. METZENBAUM.

Madam President, the 4-day, once-in-a-decade, White House Conference on Aging has drawn to a close. The Congress authorized this conference with the mission to develop "a comprehensive, coherent national policy on aging together with recommendations to implement the policy."

The 1981 meeting carried with it a past tradition of being a nonpartisan meeting to develop recommendations on issues affecting and impacting elderly Americans. The last two conferences have had important results which have affirmed our national character and commitment in meeting the needs of our aging population.

The 1961 conference paved the way for enactment of medicare. Passage of the Older Americans Act sprang from the recommendations of the 1971 conference.

This year, however, the spirit and tradition of the conference has been somewhat marred by delegate discontent under a heavy shadow of White House politics. There have been unsettling decisions in the hiring and firing of conference committee staff. The conference has had three executive directors, including one Republican who lasted only 2 months in the job.

In the fall, the Republican National Committee polled conference delegates on their views of the administration's budget cuts in social security retirement benefits, medicare, nutrition funding for the elderly, and housing assistance for the aging, as well as the President's general handling of the economy.

Unexpectedly, the administration moved to appoint 400 new delegates to the conference. A significant number of these delegates were placed in what many consider key committee positions. As an extra measure, Secretary Schweiker exercised strong and final say over conference rules. Those final rules greatly limited opportunity for debate and dissent.

The 1981 meeting has taken place somewhat in a vacuum. We know that the President asked, more than 2 months ago, that a Presidential commission be formed to study social security financing issues. The administration has yet to let us know what such a commission will be: Who will serve and under what conditions the commission will meet. After the conference delegates return to their homes, away from Washington, I expect that we will begin hearing the details of this commission.

When the President signed his Federal budget-cutting bill into law last August, he cut medicare costs and raised elderly Americans' personal health care bills. In recent months, we have heard consistently that the August medicare "reforms" were just the tip of the iceberg, and that more entitlement reform legislation is expected to reduce the size of the Federal budget. The legislation will reportedly include proposals to further reduce the cost and size of the medicare program.

It is unfortunate that we do not have any details of these proposals and we did not have them prior to the conference on aging, because delegates to the meeting voted, many times over, to expand medicare coverage and protection.

Conference delegates sought to assure retirement income security for all Americans. They sought to insure better job opportunities for older workers. The delegates were committed to improved health care protection for older Americans and access to adequate medical care for all Americans.

The resolution offered by the Senator from Ohio (Mr. METZENBAUM), cosponsored by myself and others, simply expresses support of the Senate for general principles endorsed by many conference delegates. I commend these delegates for their spirit and dedication in pursuing the discussion of national goals at the conference. I urge all Senators to vote for the pending resolution.

Mr. DODD. Madam President, I believe the Senate should act affirmatively on this amendment endorsing an eight-point national program for older Americans to serve as a basis for substantive legislation during this decade.

Madam President, this eight-point program was drafted by the leadership council of aging organizations and approved by the vast majority of delegates to the White House Conference on Aging which ended yesterday. It covers major areas of concern to older Americans including social security, jobs, annual incomes, health care, housing, community services, and aging research.

By sending us their plan for legislation, our senior citizens have once again demonstrated expert leadership. As I have stated many times before, my senior constituents in Connecticut have never failed to provide me with good ideas about ways to solve the problems facing them. The same has been true on a national level with respect to the White House Conference on Aging. White House aging conference delegates in 1961 helped Congress begin to formulate plans for medicare. In the same manner, those in 1971 suggested ways for Congress to improve the social security system by establishing supplemental security income.

By calling upon us to establish a national program for older Americans in the 1980's, the White House aging conference delegates remind us of two important facts. First, senior citizens tend to be poorer, on average, than other Americans. Second, they tend to rely more heavily than younger Americans on Government social service and income-maintenance programs.

Madam President, I do not have to remind my colleagues of the reasons why older Americans deserve the assistance of their Government in obtaining adequate health care, job opportunities, nutrition, and housing. Our senior citizens have worked all their lives to help make the United States the great Nation it is today. They helped establish the very hospitals, factories, farms, community nutrition and service centers, schools and housing projects we so often take for granted.

Older Americans not only deserve our assistance because of what they have contributed to this country in the past, Madam President, but also because of what they can contribute in the present and the future. We need the help of all our citizens, both younger and older, in solving the many problems which face us today. Thus, if we fail to do all in our power to enable older Americans to participate as full, productive members of our society, we not only cheat them but we also cheat ourselves.

We hear a great deal these days about cutting out waste and mismanagement in Government. Yet I can think of no greater mismanagement than wasting the talent of our senior citizens by failing to provide them with access to jobs and necessary support services.

Madam President, anthropologist Margaret Mead, once said that "the best way to live is in three-generation communities where * * * young and old can share in each other's diversity, both living close to the past and close to the future." I urge my colleagues to adopt this amendment as a means of bringing us closer to such a community life in th's country.

Mr. DOLE addressed the Chair.

The PRESIDING OFFICER. The Senator from Kansas.

Mr. DOLE. Madam President, I read the resolution offered by the distinguished Senator from Ohio, Senator METZENBAUM, and just addressed by the distinguished minority leader, Senator BYRD.

As one committee chairman who has a major responsibility to review many of the 600 recommendations made by the White House Conference on Aging, which terminated, as everyone knows, yesterday noon—it seems to me that by singling out one, two, or in this case eight areas for priority consideration by Congress, we could very well do a disservice to the other 592 recommendations.

Even though I understand these eight would in effect cover everything that the White House conference may have considered in a general way, it just seems to this Senator that, in addition to not being well-timed, it catches many of us who have the responsibility for legislative follow-through a bit off guard in the sense that we have not had a chance to focus on the 600 recommendations. This Senator is not even certain the 600 recommendations are available for us to review. We might want to address all 600.

I do know one recommendation this Senator would not include in any review, and that would be general funding of social security. That was one of the areas of great debate at the White House Conference on Aging.

As I said in a statement a couple of days ago, as far as this Senator knows there is no support for that in the Senate Finance Committee—maybe 1 or 2 members out of 20. There is very little support for that in the House Ways and Means Committee, which is controlled by members of the Democratic Party. However, that still became the big issue of the whole White House Conference on Aging. One way to destroy the social security system is to start funding it with general revenues, for a number of good reasons and finally for the reason that we do not have any general revenues.

This is why we just went over a $1 trillion debt a couple of weeks ago. This is why we are trying to cut spending up and down the line in Government and to get a handle on some of the problems we have, because we have been overspending for the last 20 years.

However, this Senator would indicate that all of us commend the delegates who participated in the White House Conference on Aging. All of us are aware of some of the charges made that there was an effort to "stack" the White House conference. I think the facts are that there was an effort to balance the White House conference. I think it was pretty well stacked to start with, with organized labor and with Carterites left over from the previous administration. Still, there was an effort to balance the White House Conference on Aging. Unfortunately, the media focused on the negative aspects, and most of their time was spent showing somebody who was dissatisfied with what was going on in the conference.

There were a number of outstanding people at the conference, and they should be congratulated for their significant contributions. Many held different views. Some came from organized labor; some came from business; some came from agriculture; and some were housewives. In the opinion of this Senator, they performed a great service.

So rather than to attempt to just single out four, five, six, seven, or eight areas, I will offer a substitute for the amendment by the distinguished Senator from Ohio, on behalf of Senator HEINZ, Senator HAWKINS, Senator COHEN, Senator DANFORTH, Senator MATTINGLY, and maybe others as we progress here, which would commend all the delegates and commend the President and Secretary Schweiker and all the observers who participated in the White House Conference on Aging. It was a very important event.

We would also indicate that it is the sense of the Senate that the appropriate committees of Congress, including the Special Committee on Aging, should give their early and careful consideration to the more than 600 recommendations of the conference—and I say "more than 600" in the event there might be 610 or 620. We should somehow make certain that we address the concerns of every delegate who offered a resolution, of every delegate who offered a recommendation, and not try to single out four, five, six, seven, or just the eight in the Senator's resolution, which may be broad in scope. It would seem to this Senator that the substitute which I will offer at the appropriate time will cover, in addition to what the Senator from Ohio suggests, every recommendation. We should address every recommendation. Whether we agree with it, or reject it, or approve it, we ought to give careful consideration to everything that happened during the White House Conference on Aging.

Mr. LONG. Will the Senator yield?

Mr. DOLE. I yield.

Mr. LONG. Madam President, I commend the chairman of the committee for making that suggestion. I ask unanimous consent that my name be added as a cosponsor to the resolution.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LONG. Madam President, I think the only fair thing to do is to see that all these various suggestions be considered—especially the whole 600 that were theoretically approved when this was agreed to. All those people who came before the conference to make their suggestions and who got their proposals put in from their committee ought to have an opportunity to come before the various committees, be witnesses before the committee that has jurisdiction, and explain their point of view. Obviously, we cannot do all these different things—some we might be able to do, and some we might not be able to do.

But the way I read the report of the White House conference, they had just one vote. Of course, that was controversial, too. But there were so many different provisions. I think if that conference had done justice to all those 600 recommendations themselves, they would have put us to shame, while we talk about just staying past midnight with our business. They would have been around the clock for a week to try to discuss it if the whole conference was to consider all 600 recommendations that are contained in what they were supposed to have voted on.

So it is very appropriate. That is why we have committees, so that a committee can look at all these different recommendations and suggestions and see which ones are worthy of enactment or worthy of recommending to a legislative body and those that should not be recommended. Because, obviously, we cannot do all of those things.

I agree with the Senator that among the various suggestions that are not in the Metzenbaum amendment, as it stands at this moment, there might be some extremely meritorious proposals that would claim an even higher priority than some of those that are suggested by the Senator.

So I think that we ought to have time to know what we are doing and we ought to proceed on the theory that our funds are not unlimited. Because, as much as I would like to, we do not have enough money to do as much for all the fine elderly people in this country as we would like to do.

We cannot do as much in the way of health benefits, we cannot do as much in the way of disability benefits, we cannot do as much with cash benefits as we would like to do for the elderly citizens of America. So we have to do the best we can.

It is only when one studies this thing at considerable length and with some good advice that can be had from people in all walks of life—in labor, in business, among the elderly, the minorities, and all of those—that we can get the best advice to the Senate.

I agree with the chairman of the committee and I support his position.

Mr. DOLE. I appreciate the remarks of the distinguished Senator from Louisiana who, I might add, as a member or chairman of the Senate Finance Committee, has probably initiated more constructive programs for senior citizens than anyone who has ever served in this body.

I think he is exactly correct.

Madam President, we had delegates from my State who made recommendations. I am sure that the recommendations are in the group of eight. I would not want to slight anyone from Kansas who came all the way back East and participated for 4 days in a White House conference by voting for a resolution that may have ignored their work. These may all have been from Ohio. The Senator from Kansas is not aware of where they originated.

The Senator from Kansas attended a reception sponsored by my colleague, Senator KASSEBAUM, for the 48 Kansas delegates. They were from different parties, different backgrounds, different vocations, different professions, different occupations, but they are concerned about the same issues—the future of medicare, the social security system, and 100 other things.

UP AMENDMENT NO. 751

Madam President, it would seem to me that the amendment I will now send to the desk in the nature of a substitute would make certain that we do not overlook or omit the efforts of anyone who may have attended the conference, including the Secretary of HHS, including the President of the United States, who attended the conference, made a speech, and received an outstanding reception from all the delegates. We should include every delegate and every observer who attended any function.

Madam President, I ask for the immediate consideration of the substitute.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Kansas (Mr. DOLE), for himself, Mr. LONG, Mr. HEINZ, Mrs. HAWKINS, Mr. COHEN, Mr. DANFORTH, Mr. MATTINGLY, Mr. COCHRAN, Mrs. KASSEBAUM, and Mr. JEPSEN proposes an unprinted amendment numbered 751 in the nature of a substitute to amendment numbered 650:

In lieu of the language proposed to be included by the Amendment, insert the following:

It is the sense of the Senate that Congress should commend the more than 3,500 delegates and observers to the 1981 White House Conference on Aging, as well as the President and the Secretary of Health and Human Services, for the important contribution they have made to establishing goals and priorities for improving the well-being of older Americans.

It is further the sense of the Senate that the appropriate committees of Congress, including the Special Committee on Aging,

should give early and careful consideration to the more than 600 recommendations of the Conference.

(By unanimous consent names of the following Senators were also added as cosponsors: Mr. PRESSLER, Mr. ROTH, Mr. GORTON, Mr. CHAFEE, Mrs. KASSEBAUM, Mr. KASTEN, Mr. JEPSEN, Mr. GRASSLEY, Mr. PERCY, Mr. HATCH, and Mr. HATFIELD.)

Mr. DOLE. Madam President, I present the following remarks also in support of the amendment in the nature of a substitute.

There has been a very significant happening here in Washington this week—the White House Conference on Aging has been taking place and the conferees have completed action on over 600 recommendations of 14 conference committees. For some time, we have been looking forward to this conference and the input that we would be able to receive from senior citizens and those concerned with the problems of our Nation's elderly. It is the hope of the Congress that we can give prompt and careful consideration to the recommendations that emerge from this conference.

At a time when increasing numbers of our citizens are age 65 or over—and living longer and more active lives due to advances in the field of medicine—we should focus on the unique problems affecting our older Americans. At the same time, we should recognize the potential contributions that they are capable of making to our society after retirement. There is much to be learned from the experience of those who have played an active role in creating part of our Nation's history.

Services to our Nation's elderly have greatly increased the quality of life that those over 65 have to look forward to, but the major problem remains that of eroding economic power. We now have such Federal programs as social security, medicare, and the variety of programs incorporated in the Older Americans Act, such as employment programs, congregate meals and Meals on Wheels. The challenges that presented themselves when these programs evolved have given way to other challenges in providing assistance to older Americans.

The state of our Nation's economy has a direct impact on those who live on fixed incomes. Over the past decade inflation has ravaged the hopes and dreams of those who have worked all their lives to save for retirement. In the past they have found themselves trying to keep one step ahead of a general economic erosion. Effective economic policies are the key to solving this problem, and the elderly have been the immediate recipients of the administration's efforts to turn the corner of inflation.

Madam President, when our country became an independent Nation, every 50th American was age 65 or older—about 2 percent of our total population at that time. At the beginning of 1980, there were an estimated 25 million older Americans, comprising over 11 percent of our population. Today every ninth American is a senior citizen.

Back in 1961, the first White House Conference on Aging helped to generate information concerning older Americans, and bring their problems to the attention of those who were in a position to do something about them.

In 1965, two of the major recommendations—medicare and the Older Americans Act—were enacted by the Congress. The current Congress plans to listen to older Americans as well.

Madam President, it is the hope of all of us that we will be able to give timely and careful attention and consideration to the recommendations that have emerged from the input of 2,200 delegates and 1,200 observers from all 50 States, who have shared concerns during this week. We commend them on their efforts and dedication to improving the lives of our Nation's elderly, and for taking constructive steps to bring to our attention the unique social and economic needs of older Americans.

Most of all, we thank our older citizens for what they have contributed to the greatness of this country, for the sacrifices they have made and continue to make, and for the values they have taught us through their patience and experience.

The PRESIDING OFFICER. The Senator from Maine.

Mr. COHEN. Madam President, I rise in support of the resolution just submitted by the Senator from Kansas which expresses the sense of the Senate that Congress should give serious consideration—early and careful consideration—to all official recommendations of the White House Conference on Aging.

Madam President, upon leaving this historic conference yesterday, one of the Maine delegates—the Senator from Kansas talked about the delegates from Ohio and Kansas—made a comment to a member of the press that "although each delegate arrived with pet projects and pet peeves, everyone made an effort to compromise and get along. These resolutions are goals for the decade."

This 71-year-old delegate noted that perhaps some new program might not come about or develop immediately, but, "I am optimistic for the future."

Another delegate observed that the conference reflected a true consensus. Delegates managed to pass meaningful resolutions to carry out the wishes of those who came to try and help shape that 5-day-long event.

Madam President, my intention in cosponsoring this resolution is to assure that the 600 resolutions which over 2,000 delegates reported yesterday be given serious consideration and not simply forgotten as we move into the Christmas season and move toward adjournment for that period of time.

I would like to point out there has been some suggestion that once again this has somehow been a stacked operation, a partisan affair, that Republicans have not been in support of that.

But the record is quite different. The record shows that medicaid and medicare were programs enacted under the Republican administration.

The Older Americans Act program was enacted and supported under the Republican administration. It is not a partisan issue.

The previous White House Conference on Aging resulted in a number of recommendations which addressed many of the problems which face older people: poverty, failing health, isolation. For the first time, those issues were addressed.

After the 1961 conference, the conference approved medicare, the Older Americans Act, and then years later, while in the second conference, Congress went ahead and approved the first cost-of-living adjustment in the Social Security Act followed shortly thereafter by a 20-percent increase for all beneficiaries.

So these conferences have very important consequences for the future of our older people.

This year's conference focused on the effectiveness and feasibility of these programs as they relate to older people today, as well as a broad range of issues.

That is what the Senator from Kansas and I talked about—the need to look at the broad range of the issues—including the role of Government in the lives of older Americans, opportunities in the private sector, older Americans as a continuing resource, concerns of older women, family and community support services, and a number of other topics addressing the range of needs of the elderly in areas of employment, volunteerism, and concerns of security, whether in the home or on the streets.

Some of these issues we have already started to address.

I might say that as a member of the Special Committee on Aging, I served also with Congress CLAUDE PEPPER in the House in 1974. I was one of the original members of that committee when it was created over there, and it worked very closely and in a spirit of bipartisanship with Congressman PEPPER and others, as the chairman of our own committee has, Senator HEINZ.

We have already started to address many of these issues in our own committee during the past year. There will be other opportunities for fresh ideas and new debate in the decade ahead.

Some time ago, Lawrence Frank wrote in "New Goals of Old Age:"

We are not making sufficient demands upon older people. What they want is not idleness and freedom but an opportunity to do something with their lives that will make them significant.

This reminds me of the time when the actor Will Geer came before the House Select Committee on Aging and he made perhaps the most impassioned and most impressive speech that I ever heard when he called for us to remove the mandatory retirement of people who reach the age of 65.

He got up and said, "A person has got to have a pulpit to pound on, and if he doesn't have that pulpit to pound on, you take away that person's reason for living and success in life."

Given that kind of testimony, and that kind of leadership in the House and Senate we were able to remove mandatory retirement limitations at least for the Federal workers, and increase it in the private sector.

I think that is the kind of spirit which

has been captured in the 1981 White House Conference on Aging, and that which the delegates and the observers dedicated themselves to during the last few days to achieve these very objectives.

I believe it is up to us to act, and to do so in a spirit of hope and confidence for our older Americans, to address their needs and concerns as they have been expressed to us in the White House conference, and to do so in a way which I think truly reflects the bipartisan spirit in which they went about conducting their own business.

I urge support of the resolution offered by my colleague.

● Mr. HEINZ. Madam President, I am pleased today to cosponsor this sense of the Senate amendment requesting Congress to give early and careful consideration to the official recommendations of the 1981 White House Conference on Aging.

History shows that the 1961 and 1971 White House Conferences on Aging pioneered public policy for the elderly in this country. In reality, those conferences produced dramatic changes that enhanced the well-being of millions of older Americans to a continued life of dignity and self-respect.

This conference and the decade ahead will be no less significant. I believe that the collective efforts of the delegates to the 1981 conference have produced positive resolutions in support of policies designed to endow older persons with more genuine opportunities for self-fulfillment.

As an honorary cochairman of this event, I had the privilege to address the delegates and observers who assembled here this past week, and share with them some of my own concerns on the public policy issues which we face as a nation. I had the added opportunity to speak to many of these outstanding individuals personally, and to listen to the thoughtful concerns that they brought to Washington.

When Congress authorized the 1981 White House Conference on Aging in 1978, it acknowledged that dramatic demographic and societal changes have made it necessary for new national policies to be developed. I believe that this conference largely has succeeded in suggesting such new directions and concerns. Resolutions to lead us to these new policies have been developed and hold the key to continued full participation for the elderly in many aspects of American life including: income security, employment, health, housing, and scores of other important programs.

Madam President, much work has gone into this conference. Activities began years ago and were designed to allow people of all ages, all walks of life, all areas of the country, and all religious and ethnic groups to present their views. The delegates, observers, members of the Leadership Council of Aging Organizations, volunteers, and scores of other similarly dedicated individuals have poured out their energies in discussion and debate during this past week. Their efforts must be recognized and reaffirmed.

The resolution before us is an affirmation of our resolve to continue the work started by these outstanding individuals. As they return to their homes all across this great Nation, let them be assured that their initiatives to propose thoughtful, creative, and meaningful policies for older Americans in this next decade have been recognized and are deeply appreciated by this Congress.●

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Kansas.

Mr. METZENBAUM. Madam President, the Senator from Ohio sought recognition and was standing first.

Mr. DOLE. I think we were pretty close. All I want to do right now is to ask for the yeas and nays on the substitute.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. DOLE. Madam President, I ask that Senator COCHRAN be made a cosponsor of the substitute.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOLE. Finally, I want to thank the distinguished Senator from Maine, Senator COHEN, and Senator HEINZ, and the staff of the Special Committee on Aging for their efforts and their concerns.

I would also say that many of these recommendations which have been made are under study right now by the Senate Finance Committee, and most likely in several other committees in the Congress. They are not all brandnew ideas that suddenly just came to Washington. The Finance Committee staff and some of the subcommittee staffs, the Labor and Human Resources Committee, and others, I am certain, are working on, or at least addressing some of these concerns at the present time.

As I understand it, the one big concern expressed across the board, regardless of party, or regardless of past affiliation, or whatever, was concern for the social security system. They want to preserve the social security system. They have a right to expect Congress to do that. I would hope that one of these days Congress will take that responsibility. So far this year, we have not accepted that responsibility.

I am not certain if the White House Conference on Aging had been asked to commend Congress that the resolution would have passed, because, if they are really concerned about social security they probably would have had a resolution chastising Congress for not carrying out our responsibilities. The Senator from Kansas accepts, certainly, part of that responsibility.

It would seem to me that this was the big issue at the conference. There were a lot of others with reference to housing, income security, transportation, nutrition, medicare, and health care of all kinds. These are all matters under consideration. Crime, as far as senior citizens are concerned, is under consideration by the Judiciary Committee.

I believe the broad approach, with all respect to the distinguished Senator from Ohio, is much better than trying to narrow this down to seven or eight items, even though I understand they are broad-brush items.

I would hope that we could proceed to vote on the substitute, unless there is some gimmick that the Senator from Ohio has left. Then we can go on to the defense appropriations bill, which is really what we are here for.

Mrs. HAWKINS. Mr. President, I was presiding at the time of the debate on the amendment of the Senator from Kansas, and I would like to associate myself with his remarks. Florida is a State with a large percentage of aging. I have also worked with Senator HEINZ who has been on the Select Committee on Aging. We discussed this yesterday. It is unfortunate that Senator HEINZ cannot be here today. Senator COHEN has taken a lead in dealing with the complex questions facing the health care delivery system and social security, both of which affect the elderly so deeply.

It is very important that Congress carefully consider the 600 recommendations made by this conference because their previous work was so impressive that the Congress and the President adopted their findings into law. Recommendations made by delegates to the 1961 conference resulted in the creation of two landmark health care programs for our elderly, medicare and medicaid. And recommendations adopted at the 1971 conference, stressing the need for the elderly to remain independent and useful members of society, led to the passage of the Older Americans Act. This act provides the elderly with employment opportunities, nutritious meals and other services which help our senior citizens to retain their independence and pride.

In many ways, the third conference on aging had the most difficult agenda to consider. As columnist William Buckley stated:

> The principal problem socially during the next twenty or thirty years is not going to be the problem of overpopulation, nor Soviet recklessness nor nuclear war, but the problem of caring for our aged.

I believe he is right because the elderly will represent a sharply increasing percentage of the American population. In part, this is a testimonial to the success of the medicare and medicaid programs which have lengthened the lives of millions of Americans along with advances in medical technology.

A recent health report published by the Department of Health and Human Services points out that great strides made in reducing deaths from heart disease and stroke have lowered the mortality rate for older Americans. Increased longevity has expanded the elderly population from 9 million in 1940 to 24.7 million in 1979. So, in the past 25 years, the number of Americans over 65 has grown twice as fast as our population as a whole.

Today more than 24 million people are over 65, including the President of the United States, representing 11 percent of our population. At the beginning of the next century, over 32 million Americans will be over age 65. This growth will place tremendous strains on our health care system. For example, only 5 percent of the elderly today live in nursing homes, but with the number of those 85 and over increasing, utilization

of nursing homes is forecasted to double by the turn of the century.

Increased longevity also creates special challenges for policymakers working to insure that the elderly retain their financial independence. Protecting the solvency of the social security system, the private pension system, and providing tax incentives to enlarge retirement savings will test the ingenuity and creativity of American democracy profoundly in the years ahead.

As a Senator representing a State with the largest proportion of elderly in the Nation, I will continue working to implement the policies called for under this sense of the Senate resolution, and I applaud the conference delegates for helping the Nation focus on our most "important social problem," the care of our elderly.

I urge the adoption of the Dole amendment.

● Mr. DENTON. Madam President, I rise in support of the Dole resolution commending the work and dedication that marked the proceedings of the 1981 White House Conference on Aging. As the chairman of the Senate Subcommittee on Aging, Family and Human Services, which has jurisdiction over the legislation authorizng this conference, I am looking forward of reviewing the Conferernce's recommendations—recommendations that can have a major impact in the shaping of a national aging policy for the 1980's.

These conferences on aging have been most productive in identifying the needs of older Americans and stimulating public and private sector programs and policy initiatives. With a rapidly changing society and the presently projected demographic changes in an era of economic reappraisal, it is time to again consider the adequacy of our social institutions in terms of their effectiveness in assessing and responding to the implications of an aging American population.

I am delighted to join with my colleague, the senior Senator from Kansas in congratulating the conference participants, especially those who are themselves senior citizens and many of whom came to the Conference at their own expense. In their lives, these senior citizens have acquired a wealth of knowledge in many areas, and are only too willing to share that knowledge if given the opportunity to do so. Through discussions at forums such as the White House Conference on Aging, we can explore policies that will make best use of this vast experience as well as address many of the problems faced by our Nation's elderly.

I can assure Senator DOLE and my other colleagues that the subcommittee I chair will look carefully at the recommendations which have been adopted.●

UP AMENDMENT NO. 752

Mr. METZENBAUM. Madam President, I send to the desk a perfecting amendment to the original amendment of the Senator from Ohio.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Ohio (Mr. METZENBAUM) proposes an unprinted amendment numbered 752 to printed amendment numbered 650:

Insert the following at the end:

It is the further sense of the Senate that Congress commend the more than 3,500 delegates and observers to the 1981 White House Conference on Aging for the important contribution they have made to establishing goals and priorities for improving the well-being of older Americans.

It is the further sense of the Senate that the respective Committees of the Congress should give early and careful consideration to the 600 recommendations of the Conference.

Mr. METZENBAUM. Madam President, the amendment I have sent to the desk as a perfecting amendment to my amendment picks up some of the fine ideas that my good friend from Kansas has expressed. I am never one to reject a good idea.

I think it makes the point that the resolution should give commendation to all the recommendations of the conference.

It also would retain intact the eight points that have been matters of major priority, which are in the original resolution and which represent months of work by the national elderly leadership, and they incorporate the major issues of concern at the conference.

I also think there is merit to the suggestion—I believe it is excellent—that the appropriate committees of Congress should certainly give their early and careful consideration to the matters recommended by the conference, all 600 of them. I cannot think of any better way to express our point of view than to do that.

I am happy, therefore, to offer my perfecting amendment to my amendment, and I hope it will be agreed to, and then there will be no need for the substitute amendment.

The PRESIDING OFFICER (Mr. SYMMS). The Senator from Idaho.

Mr. McCLURE. Mr. President, the Senator from Ohio has a right to modify his amendment, even though the yeas and nays have been ordered on his amendment. I would have no objection if he would desire simply to modify his amendment to include the perfecting amendment. I would raise no objection if he would like to do that at this time.

Mr. METZENBAUM. The Senator from Ohio would like this yeas and nays with respect to the perfecting amendment and the basic amendment, and I as for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. MOYNIHAN. Mr. President, yesterday marked the final session of the third decennial White House Conference on Aging. The history of such Conferences is distinguished. The first, held in 1960, produced medicare. The second, in 1971, resulted in increased social security for retired persons and extension of the retirement age to 70.

The final product of this Conference adds little to the reputation of the White House Conference on Aging. Rather than proposals for important legislative initiatives, the legacy of this Conference is a memory of political manipulation and the rancorous dissent that it caused.

I do not make such statements lightly, and I very much regret that I am compelled to do so. But the facts show that the administration was not content to let the Conference proceed unless the delegates were favorably inclined to the administration's policies.

By September, 1,800 delegates to the Conference had been nominated by Governors and Congressmen. In September, the Republican National Committee polled a sample 920 of those delegates to determine their views of the Reagan administration. Subsequently, Secretary Schweiker added 400 delegates to the conference. It cannot be coincidental that these were assigned to the committees on social security, health policy and general economic well-being, the very issues which polled delegates believed the administration was mishandling. This politicization of the Conference led Representative CLAUDE PEPPER, chairman of the House Committee on Aging, to accuse the administration of trying to "pervert and prostitute" the Conference to prevent it from criticizing "the disastrous impact that President Reagan's social security and budget proposals would have on the elderly."

Had this been the only problem with the Conference on Aging, it would have been quite enough. But the administration was not content with packing the Conference with its allies. It insisted on manipulating the rules as well.

The plenary group was divided into 14 committees, each of which reports a set of recommendations to the conference as a whole. Because of rules set unilaterally by Secretary Schweiker, delegates to the Conference could not vote on each of the 14 sets of recommendations. They merely had one vote, yes or no, on all 14. Under the Schweiker rules, therefore, recommendations approved by a majority of one committee—about 7 percent of the Conference—could not be altered in any way by the other 93 percent.

To term this undemocratic is to understate its import. The administration quite clearly distrusted the conference members. Recall that the new delegates were sent to the committees on social security, health policy and general economic well-being. Recall also the recommendation approved by the social security committee on Tuesday that would oppose benefit cuts for those now receiving social security but that was approved only after it was amended to delete a reference to workers who have not yet retired. As the Washington Post of December 2 put it:

As amended, the resolution reflects the administration's position.

No one will have the chance to voice disagreement with this specific resolution or with any of the social security resolutions. Each delegate can register his or her approval of the entire package only. Had the administration believed the White House Conference a forum for policymaking and deliberation, this would not be the case. Sadly, the Conference is to be a showcase for the "universal" agreement with which senior citizens view White House policies. It is false accord, arrived at by methods unworthly of the U.S. Government and surely unworthy of its leaders.

This is why I am proud to be a cosponsor of the amendment introduced by the distinguished Senator from Ohio, which makes clear that America's senior citizens are not political pawns but a vital part of society with important needs.

(Later the following occurred:)

● Mr. MOYNIHAN. Mr. President, earlier this afternoon I exchanged remarks with the distinguished senior Senator from Kansas (Mr. DOLE), about President Reagan's speech before the White House Conference on Aging. Senator DOLE stated that he had not read the President's address. So that he and other Senators may have an opportunity to read President Reagan's speech, I ask that it be inserted in the RECORD.

The speech follows:

[From the New York Times, Dec. 2, 1981]

EXCERPTS FROM REAGAN'S SPEECH TO THE WHITE HOUSE CONFERENCE ON AGING

Following are excerpts from a transcript of President Reagan's address yesterday to the White House Conference on Aging, as recorded by The New York Times:

A speaker usually tries to establish in his own mind some relationship between himself, and his audience. Or, put another way, why he or she is addressing a particular group.

Well, I could say, "It is traditional for the President to address the White House Conference on Aging." But there is, in my case, a better answer: We are of the same generation. We have met to counsel together on matters of mutual interest.

It is right that each generation looks at the preceding one and is critical of its shortcomings. We were when it was our turn, and as a young generation will challenge our mores and customs, will question our values as we did before them when we were young. But as the years pass we learn not to cast aside proven values simply because they are old. At least we should learn that, if civilization is to continue.

A few years ago in the rebellious 60's and early 70's, we did see a discarding of basic truths. It was a time when at least a part of the generation of our sons and daughters declared that no one over 30 could be trusted. One wonders what they think, now that they themselves have passed that 30-year mark.

Our generation has made mistakes and possibly fallen short at times.

NEED APOLOGIZE TO NO ONE

But we need apologize to no one. Only a few times in history is a single generation called upon to preside over a great period of transition. And our generation, yours and mine, has been one of those rare generations. We have gone literally, in our lifetime, from the horse and buggy to journeys to the moon.

We have known four wars and a great worldwide Depression in our lifetime. We have fought harder, and paid a higher price for freedom and done more to advance the dignity of man that any people who ever lived.

Having said what I have maybe you can understand my frustration over the last couple of years, during the campaign and now in this office I hold, to be portrayed as somehow an enemy of my own generation.

Most of the attack has been centered around one issue, Social Security. There has been political demagoguery and outright falsehood, and as a result many who rely on Social Security for their livelihood have been needlessly and cruelly frightened. Those that did that frightening either didn't know what they were talking about or they were deliberately lying.

In October of 1980, as a candidate, I pledged that I would try to restore the integrity of Social Security and do so without penalty to those dependent on that program.

I have kept that pledge and intend to keep it, both parts of it. We will not betray those entitled to Social Security benefits, and we will, indeed we must, put Social Security on a sound financial base.

HE CITES RESULTS OF POLL

A recent poll showed that 59 percent of the people were willing to pay a higher tax in order to be sure of Social Security's continuation. Almost as many, 54 percent, have expressed mistrust and a lack of confidence that the program will be there when their time comes.

Well, let me take up that matter of increased tax. The answer to the problem isn't that simple. We already have an increase. It was passed in 1977 and I don't think very many people are aware that it calls for a series of increases (one in this coming January) and several more automatically over the next five years.

The payroll tax has increased 2,000 percent since 1950 and even with the increases yet to come, the accumulated deficit could still be $111 billion in the next five years.

In 1982 the maximum tax will be $2,170.80, matched of course by the employer. For the self-employed, that payment will be $3,029.40. The 1980 top rates are 6.7 percent and 9.35 percent for the self-employed on the first $32,400 of earnings. Both the rates and the amount of earnings taxed will go up in the several increases that are already scheduled.

When the program started in 1936 it was $20 a year: 1 percent of $2,000; 30 years ago there were about 16 workers for each recipient. Now there are only 3.2 and in the next 40 years that is projected to be only 2.1.

I am not pointing out these facts because I want to scare anyone.

I AGREE WITH PEPPER

I agree with what Congressman Claude Pepper has said, that this country is big enough and able enough to provide for those who have served it and now have come to their time of retirement.

What we can't afford is supporting, as disabled, people who are not disabled or educating from Social Security funds young people from families of affluence and wealth.

I had hoped our proposal would have been taken as a beginning point for bipartisan solution to the problem. I was led to believe it would.

Social Security can and will be saved. It will require the best efforts of both parties and of both the executive and legislative branches of Government. Its future is too important to be used as a political football.

For this reason, I have established a bipartisan Task Force on Social Security Reform.

We want the elderly needy, like all needy Americans, to know that they have a Government, and a citizenry, that cares about them and will protect them. Their basic human needs must be met with compassion as well as efficiency. This, too, is a goal that I have set for our Administration.

This Administration is dedicated to the kinds of programs and policies that will allow the vast majority of older Americans to continue to live independent lives. This is not just a matter of economic common sense; it is a matter of basic human dignity.

Here, as elsewhere, the state of the aging is bound together with the state of the nation. We cannot have a healthy society without a healthy economy.

Young and old alike, Americans have suffered too long from the combined burden of runaway inflation and an ever-heavier tax burden.

This destructive cycle has fed on itself. The same taxes and inflation that directly undermine the earning power of individual Americans also drive down productivity and economic growth nationwide.

EVILS OF INFLATION AND STAGNATION

Because of the graduated tax rate, each 10 percent increase in inflation pushes tax receipts up 17 percent. The taxpayers have that much less money to spend. Washington has that much more to squander, and the economy suffers another blow from the twin evils of inflation and stagnation.

The only way to put an end to this disastrous cycle, a cycle that hits Americans on fixed incomes the hardest, is to make real cuts in spending and taxes.

And this Administration has made a beginning. It's only a beginning, but the initial signals are encouraging.

The inflation rate, as measured by the Consumer Price Index, has fallen from 12.4 percent in 1980 to 9.6 percent in the first 10 months of this year. And last month's figures marked the lowest rate of increase in 15 months. If we could hold to last month's increased cost, we would be down to a 4.4 percent inflation rate.

There was also improvement at the wholesale level, with prices rising at a 7.5 percent annual rate, down from 11.8 in 1980. Now this is especially important because a decline in wholesale prices now usually means further relief for the consumer as wholesale goods reach the retail market down the line a ways.

Interest rates have also begun to drop. The prime lending rate, at 16 percent, has reached a 12-month low. Some banks have already dropped to below 16. A year ago they were at 21½.

Now these are only early signs, but they are all positive indicators that our economic policy is beginning to work.

RUNAWAY GOVERNMENT SPENDING

None of this relief from taxation and inflation would be possible if we ignored the problem of runaway Government spending.

This Administration is serious; we have cut back the increased rate of Government spending.

We're convinced that the nation's economy cannot heal itself unless the Federal Government begins to put its own house back in order.

But while cutting spending, we have safeguarded services to those poor and elderly who depend on the Government.

In the field of health care and human services, Federal spending is actually up, by over 15 percent in 1981 and about another 10 percent in 1982. Elderly Americans making up 11 percent of our population will receive 28 percent of the Federal budget in this present fiscal year 1982.

Ours is a generation rich in experience as well as in years. We've been tried and tested, and we've also benefited from a surge of human progress that our parents and our grandparents could never even have imagined.

I HAPPEN TO BE AN OPTIMIST

Now I happen to be an optimist; I believe attitudes toward the elderly are getting better, not worse.

And the polls seems to bear this out. One recent survey revealed that 65 percent of the younger workforce now rejects the notion of requiring older workers to retire. This is a dramatic turnaround from just seven years ago. Then a plurality of younger workers took the opposite view.

So, as some Americans grow older, America itself seems to be growing a little wiser, and a little more tolerant.

You know Cicero said, if it weren't for elderly citizens correcting the errors of the young, the state would perish.

In those days of the "generation gap" that I mentioned earlier it was almost as if our young rebels saw the generations as horizontal. Each generation separated from the others like slices from a sausage.

Humankind is vertical. Each generation sees farther than the one before because it is standing on the shoulders of those who have gone before.

I look forward to receiving the results of your work here in this conference.●

Mr. McCLURE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. McCLURE. Am I correct in stating that the order that would be followed would be the vote upon the perfecting amendment, whether that is adopted or rejected, and the next vote, unless something else intervenes, would be on the substitute?

The PRESIDING OFFICER. The Senator is correct.

Mr. McCLURE. And the final vote would then occur on the amendment as amended, if amended by either the perfecting amendment or by the substitute?

The PRESIDING OFFICER. The Senator is correct.

Mr. McCLURE. Mr. President, I will yield in a moment to the Senator from Kansas.

I should like to indicate, as manager of the bill, what is abundantly obvious, and that is that the bill is really a matter of defense and therefore not a matter of particular concern, in terms of the contents of the amendment, to the Defense Appropriations Subcommittee.

I do note that the perfecting amendment of the Senator from Ohio, as sent to the desk, is intended, I suppose, to be a gratuitous insult to the Secretary of Health and Human Services and a gratuitous insult to the President of the United States. I hope Senators keep that in mind as they vote on the perfecting amendment, because it is the language of the substitute offered by the distinguished Senator from Kansas and supported by others, with the exception of the commendation to the President of the United States and the Secretary of the Department, that is directly affected in the conference.

Mr. DOLE. Mr. President, I move to table the perfecting amendment, and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to table the perfecting amendment. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from New Mexico (Mr. DOMENICI), the Senator from Arizona (Mr. GOLDWATER), the Senator from California (Mr. HAYAKAWA), the Senator from Pennsylvania (Mr. HEINZ), and the Senator from Wyoming (Mr. WALLOP) are necessarily absent.

I further announce that, if present and voting, the Senator from New Mexico (Mr. DOMENICI) would vote "yea."

Mr. CRANSTON. I announce that the Senator from Delaware (Mr. BIDEN), the Senator from Arkansas (Mr. BUMPERS), the Senator from Arizona (Mr. DECONCINI), the Senator from Louisiana (Mr. JOHNSTON), and the Senator from Michigan (Mr. RIEGLE) are necessarily absent.

I further announce that, if present and voting, the Senator from Michigan (Mr. RIEGLE) and the Senator from Arizona (Mr. DECONCINI) would each vote "nay."

The PRESIDING OFFICER. Are there any other Senators in the Chamber who wish to vote? Are there any Senators in the Chamber who wish to change their vote?

The result was announced—yeas 54, nays 36, as follows:

[Rollcall Vote No. 452 Leg.]

YEAS—54

Abdnor	Gorton	Percy
Andrews	Grassley	Pressler
Armstrong	Hatch	Quayle
Baker	Hatfield	Roth
Bentsen	Hawkins	Rudman
Boren	Helms	Schmitt
Boschwitz	Humphrey	Simpson
Byrd, Harry F., Jr.	Jepsen	Specter
	Kassebaum	Stafford
Chafee	Kasten	Stennis
Cochran	Lavalt	Stevens
Cohen	Long	Symms
D'Amato	Lugar	Thurmond
Danforth	Mathias	Tower
Denton	Mattingly	Warner
Dole	McClure	Weicker
Durenberger	Murkowski	Zorinsky
East	Nickles	
Garn	Packwood	

NAYS—36

Baucus	Glenn	Metzenbaum
Bradley	Hart	Mitchell
Burdick	Heflin	Moynihan
Byrd, Robert C.	Hollings	Nunn
Cannon	Huddleston	Pell
Chiles	Inouye	Proxmire
Cranston	Jackson	Pryor
Dixon	Kennedy	Randolph
Dodd	Leahy	Sarbanes
Eagleton	Levin	Sasser
Exon	Matsunaga	Tsongas
Ford	Melcher	Williams

NOT VOTING—10

Biden	Goldwater	Riegle
Bumpers	Hayakawa	Wallop
DeConcini	Heinz	
Domenici	Johnston	

So the motion to lay on the table UP amendment No. 752, was agreed to.

Mr. McCLURE. Mr. President, I move to reconsider the vote by which the motion to lay on the table was agreed to.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Kansas.

Mr. DOLE. I yield to the Senator from Ohio.

Mr. METZENBAUM. Mr. President, the Senate has spoken. We now have pending a substitute motion of the Senator from Kansas for my original amendment, and we also have pending—in connection with which there also has been a rollcall ordered.

Mr. President, I am prepared to accept the Dole amendment without a rollcall and then to pass the amendment as substituted without a rollcall, and I am prepared to ask for vitiating the rollcall votes.

Mr. LONG. I object.

Mr. DOLE. I object.

The PRESIDING OFFICER. Objection is heard.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Ohio.

Mr. METZENBAUM. Mr. President, I have already indicated I was prepared to accept the Dole substitute and vitiate the vote. Under those circumstances, if there is a vote on it I would urge all Members in the Senate to vote for it. But I would also say that the Senator from Ohio will be willing to vitiate the vote with respect to the passage of the amendment or with respect to the Dole amendment, the Dole substitute. I do not think we need two rollcalls. I do not think we need to take up the time of the Senate. Whichever is agreeable to the Senator from Kansas is agreeable to the Senator from Ohio. I would urge all Members of the Senate to vote in the affirmative for the Dole substitute as well as for the Metzenbaum amendment as substituted.

Mr. DOLE. Mr. President, will the Senator yield? I would suggest that we vote on the substitute and vitiate the vote on the Metzenbaum amendment.

Mr. BAKER. Mr. President, I would recommend that. I hope we can do that.

Mr. MOYNIHAN addressed the Chair.

The PRESIDING OFFICER. The majority leader is recognized.

Mr. BAKER. I yield the floor.

Mr. MOYNIHAN. Mr. President, before we vote I wonder if I could engage the chairman of the Finance Committee and the Senator from Ohio and even the majority leader in saying that there was one event in the White House Conference on Aging which struck a jarring note, and I regret to have to say that to the Senate.

The President came himself to the Conference. It was a gracious gesture on his part, and he spoke about social security. He said at one point in his remarks that "There have been people trying to tell you the social security system is in trouble, trying to panic you into thinking it is not fiscally sound." He then said "Those persons are either misguided or they are lying."

I wonder if the Senator from Kansas would not share my feeling that this was an unfortunate choice of words. I do not doubt the choice was made by a speech writer—it is not the way the President himself speaks. But if anyone has been talking about the world's largest bankruptcy—about to occur on October 1, 1982—I believe it has been the Director of the Office of Management and Budget. If there is any fault on the part of some others—and I would be among them—it is that we have perhaps not pointed to the fiscal difficulties facing the social security system with a sufficient sense of alarm.

Now we learn from the President himself that persons who were alarmed were somehow possibly lying trying improperly to panic the millions of Americans who depend on social security. Would not the chairman agree that such a term might well be stricken from the record if

we are going to have any success with the 15-person committee the President has proposed to deal with this matter?

I ask because I have been nominated by the Democratic leader to be on that committee, and I would be proud to serve on it, proud to work with any President on a matter of such importance to the Nation. I would hope, however, that a word such as "lying" would not come between us in our efforts to cooperate in a large purpose. That is a question, my question, although an extended question.

Mr. DOLE. I certainly would agree it was an outstanding appearance by the President at the White House Conference on Aging. I think he did a tremendous job—he even got a cheering, standing ovation. I was so taken with the ovation he received, and his reception, that I dd not listen to what he said. [Laughter.]

I will promise the Senator from New York I will look at his entire speech today and comment sometime over the weekend—if I may drop you a note.

Mr. MOYNIHAN. I accept that because I know the Senator from Kansas to be a man of perfect honor and propriety.

I doubt that he would have ever allowed a speechwriter to write that speech for him.

Mr. DOLE. I have said a few things myself that I probably should not have said.

Mr. MOYNIHAN. You did not have a speechwriter.

Mr. DOLE. I did have. That was the problem.

Mr. MOYNIHAN. I thank the chairman.

Mr. BAKER. Mr. President, I hope that we may be in a position now to agree on a vote on the substitute and vitiate the yeas and nays on the underlying amendment.

The PRESIDING OFFICER. Is there objection?

Mr. BAKER. Would the Senator from Ohio agree with that?

Mr. METZENBAUM. Yes, I agree.

Mr. BAKER. I make that request.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. PERCY. Mr. President, I had the pleasure of meeting the Illinois delegation on Sunday night. They went in with a great deal of concern. However, overall these proceedings went well as a result of the hard work and effort put in by all the delegates.

I am pleased to cosponsor the amendment offered by the Senator from Kansas (Mr. DOLE) to commend the delegates and observers to the White House Conference on Aging who just yesterday completed their 4-day conference in Washington. As a member of the Aging Committee, I look forward to reviewing the more than 600 recommendations developed. I agree wholeheartedly with my colleagues that the review of these proposals by the Congress should be given top priority. I know that will be the case for the Aging Committee under the distiguished leadership of Senator HEINZ, its chairman, and Senator CHILES, the ranking minority member.

I must say that prior to the opening of the Conference, I was very concerned by allegations that conference rules and delegate selections were part of an attempt by the administration to limit in some way free debate on the issues. One of my major concerns was that debate over the allegations would take important time away from the business of the Conference itself—to make recommendations that would result in the development of a "comprehensive, coherent national policy on aging."

I joined several members of the Aging Committee in expressing our concerns in a letter to the President. On Sunday, before the Conference convened, I met with the Illinois delegation, many of whom echoed similar concerns. Subsequent reports, however, convinced me that despite a somewhat uneasy beginning, all views were being debated and voted on in the committee sessions and almost all delegates and observers felt they were being given the opportunity for input into the Conference recommendations.

Surely, the final recommendations of the Conference are evidence of this. They span a wide range of viewpoints on all the issues and I believe the work of the Conference was highly productive.

I have not had the opportunity to review in any detail the committee resolutions, but from reports that I have had I am pleased by many of the recommendations. I strongly support elimination of the social security earnings test and age restrictions on employment. I agree there is a definite need for programs that train older workers and for more innovative approaches to work that suit the needs of older workers who want to work, like flextime and job-sharing. These are just a few of the recommendations which have a great deal of merit, and there are many more.

Mr. President, last May I had the privilege to address the Illinois White House Conference on Aging in Champaign-Urbana. In my remarks, I cited some of the achievements that grew out of past White House Conferences on the Aging—great achievements such as medicare, the Older Americans Act and the Age Discrimination in Employment Act, all measures I strongly supported.

We have made great strides since the first White House Conference in 1961. But as I pointed out in my address in May, the continued acceleration of the aging of America, presented new problems and challenges to the delegates of the 1981 Conference.

As we have seen, solutions to some of these problems will not be easy; there will be disagreement and a great deal of debate. But I am confident that the 1981 meeting has presented us with an excellent foundation for meeting the challenges of the future, and again, I commend the more than 3,000 delegates and observers who devoted their time and talents to this historic Conference.

As a member of the Special Committee on Aging and a cosponsor of the Dole substitute, I urge its adopton.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Kansas (Mr. DOLE). The yeas and nays have been ordered and the clerk will call the roll.

The bill clerk called the roll.

Mr. LEVIN (when his name was called). Present.

Mr. STEVENS. I announce that the Senator from New Mexico (Mr. DOMENICI), the Senator from Arizona (Mr. GOLDWATER), the Senator from California (Mr. HAYAKAWA), the Senator from Pennsylvania (Mr. HEINZ), the Senator from Texas (Mr. TOWER), and the Senator from Wyoming (Mr. WALLOP) are necessarily absent.

I further announce that, if present and voting, the Senator from New Mexico (Mr. DOMENICI) would vote "yea."

Mr. CRANSTON. I announce that the Senator from Delaware (Mr. BIDEN), the Senator from Arkansas (Mr. BUMPERS), the Senator from Arizona (Mr. DECONCINI), the Senator from Louisiana (Mr. JOHNSTON), and the Senator from Michigan (Mr. RIEGLE) are necessarily absent.

I further announce that, if present and voting, the Senator from Michigan (Mr. RIEGLE) and the Senator from Arizona (Mr. DECONCINI) would each vote "yea."

The PRESIDING OFFICER. Are there any other Senators in the Chamber wishing to vote?

The result was announced—yeas 88, nays 0, as follows:

[Rollcall Vote No. 453 Leg.]

ANSWERED "PRESENT"—1

Levin

NOT VOTING—11

Biden	Goldwater	Riegle
Bumpers	Hayakawa	Tower
DeConcini	Heinz	Wallop
Domenici	Johnston	

So Mr. DOLE's amendment (UP No. 751) was agreed to.

Mr. STEVENS. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. GORTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The

question recurs on the amendment of the Senator from Ohio, as amended.

The amendment (No. 650), as amended, was agreed to.

Mr. METZENBAUM. Mr. President, I move to reconsider the vote by which the amendment, as amended, was agreed to.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. STEVENS. Mr. President, the Senator from Nebraska has an amendment on which I believe we might negotiate a time limitation. It is my understanding that he would be willing to have a 20-minute time limitation, with 10 minutes on each side. Am I correct?

Mr. EXON. The Senator is correct.

If the Senator will yield, this Senator would also request that no amendment to my amendment be in order. That would expedite the matter.

Mr. STEVENS. Mr. President, I make that request, that no amendments to the amendment of the Senator from Nebraska be in order, and that there be a 20-minute time limitation.

Mr. EXON. And that there would be an up-or-down vote.

Mr. STEVENS. I agree. There will be an up-or-down vote on any amendment with a time limitation.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 753

(Purpose: To provide funds to meet the Army requirements for ammunition)

Mr. EXON. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Nebraska (Mr. EXON), for himself, Mr. HOLLINGS, Mr. MITCHELL, Mr. NUNN, Mr. GLENN, Mr. LEVIN, Mr. PRYOR, Mr. BUMPERS, and Mr. ROBERT C. BYRD, proposes an unprinted amendment numbered 753.

On page 18, line 4, strike "2,338,400,000" and insert in lieu thereof the following: "2,438,400,000".

Mr. STEVENS. Will the Senator yield for just one moment?

Mr. EXON. I yield.

Mr. STEVENS. Mr. President, during my brief absence from the Chamber, the Senator from New Hampshire (Mr. RUDMAN) will manage the bill on this side of the aisle.

Mr. EXON. Mr. President, the time agreement on this amendment is short, so I will be brief. My amendment restores $100 million to the Army's ammunition procurement account for fiscal year 1982.

During this debate, a number of us have offered amendments to correct what we consider to be some of the deficiencies in the funding provided for readiness-related functions in the committee's bill. Unfortunately, of all of these amendments, the only one the Senate has adopted is one to spend $88 million to bring an old World War II battleship out of mothballs. In some cases, we have even been told that our proposals would have only restored the fat in the Defense Department budget request.

Mr. President, I can assure my colleagues that there is not only no fat in the funds provided in this amendment, but, indeed, the funds are critically needed to restore Army ammunition stockpiles. The facts of the matter are that the amount provided does not provide any fat. There is not even any muscle with it.

The Army's current mobilization requirements call for us to have on hand a 180-day war reserve supply of ammunition. Our stocks now on hand only total about 25 percent of this requirement.

This, Mr. President, is only a 40-day supply in a shooting war. It is a ridiculously low figure.

The budget amendments for fiscal year 1982 submitted by President Reagan in March would have begun the process of building our ammunition stockpiles to a 60-day requirement by the end of the next 5 years. I should point out that this would still be only one-third of what the Army says it will need. Unfortunately the October budget cuts in the Defense Department demonstrated that the current Pentagon leadership is guilty of the same mistakes that they have criticized their predecessors for: When they needed to make some budget cuts, one of the first places they went was the Army's ammunition account. Let us not fall into the trap of becoming preoccupied with all of the exotic weapons systems to the detriment of the basic necessities our troops would need to survive.

Now, Mr. President, the Pentagon will no doubt say that they can still reach their objective of a 60-day war reserve stockpile of ammunition at the end of the 5 years based on the fact that they will make up for these cuts in the next couple of years.

However, Mr. President, the Navy has been telling us that we cannot reach a 600-ship Navy by just planning to buy ships in the third, fourth, and fifth years of the current 5-year program, and the same holds true for building up our ammunition reserve.

The Army shortfalls of ammunition are a well-documented fact that we cannot ignore any longer.

Certainly, in a defense budget of over $208 billion, we can begin the process of funding the programs we need to sustain our combat capabilities. We desperately need this program to sustain our ground forces in the most probable type of conflict in which they will have to survive.

Senator HOLLINGS earlier tried to restore the full $148 million needed to fully fund the Army's orginial request for ammunition. My amendment restores only $100 millon of the amount cut by Defense Department in the October budget cuts.

I plead with my colleagues to support this extremely important amendment.

Mr. President, I reserve the remainder of my time.

Mr. RUDMAN. Mr. President, we will have very little to say about this amendment offered by the Senator from Nebraska. We have discussed this in some detail over the last couple of days. I believe the facts are reasonably well known. I will just hit two salient points.

First, so that the record is clear, this appropriation does contain $780 million over the fiscal year 1981 funding level for this account. This figure, in fact, is $56 million over the budget request of the President.

With respect to the statement of the Senator from Nebraska about time to build up ammunition supplies, that is certainly true. But compared to many of the high technology programs we have, this is something that—particularly with the Government owning some of the depots that manufacture these munitions—could be turned around in emergency fairly quickly.

It is our view that although there is some merit to this amendment, we are dealing with a $208 to $209 billion defense budget, and we believe the time has come to put a cap on it. We hope the amendment will be defeated.

Mr. EXON. I yield myself 2 additional minutes, and after that I will be prepared to yield back the remainder of my time.

Mr. President, the statements that have just been made in opposition to this amendment are ones we have heard on many occasions.

I think it is very serious, when we talk about the fact that if we get into a shooting war, we have some facilities somewhere that we could quickly turn around to produce ammunition.

Regardless of the amounts contained in this bill for ammunition, the statements I made a few moments ago about only a 40-day supply of ammunition still stands as fact.

I emphasize for my colleagues that even if my amendment is adopted, we still will not be back to the Army's 5-year plan for achieving a 60-day stockpile of ammunition. And the real mobilization request is to have 180 days on hand. Therefore, the goal of 60 days is only one-third of what is actually needed.

What we are talking about here is the woeful state of ammunition stockpiles for our soldiers right there on the ground—the men who will be eyeball-to-eyeball with the enemy. We have shortchanged them for too long and this amendment is only one small step in the long process to begin getting our fighting men what they need to survive.

Ammunition is not glamorous and it does not make headlines. It is not good "show and tell" like some of the amendments and weapons we have been debating here. But we certainly do not want our men in the field to run out of ammunition if they are called upon suddenly to fight.

Mr. President, either we continue to brush aside these unglamorous amendments that go right to the heart of our military readiness, or, we adopt this amendment and begin the long process of building up the sustainability of our forces in the event of a national mobilization.

The choice before the Senate is clear. I

urge my colleagues to support this amendment.

Anyone who voted to bring an old battleship out of mothballs obviously has his priorities confused, if he cannot also support this amendment for basic readiness.

I am prepared to yield back the remainder of my time, if the other side is prepared to do so.

Mr. RUDMAN. Mr. President, I certainly agree with the priorities of the Senator from Nebraska about bringing battleships out of mothballs, and I am pleased to advise him that I do not vote for that, either.

This particular appropriation of $780 million over the fiscal year 1981 funding level is a 50-percent increase. We think that is more than adequate.

Does the Senator from Nebraska wish a rollcall vote on this amendment?

Mr. EXON. Yes.

Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER (Mr. COHEN). Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. RUDMAN. Mr. President, I yield back the remainder of my time.

Mr. EXON. I yield back the remainder of my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment of the Senator from Nebraska.

On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. TOWER. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from New Mexico (Mr. DOMENICI), the Senator from Arizona (Mr. GOLDWATER), the Senator from California (Mr. HAYAKAWA), the Senator from Pennsylvania (Mr. HEINZ), the Senator from Vermont (Mr. STAFFORD), the Senator from Alaska (Mr. STEVENS), and the Senator from Wyoming (Mr. WALLOP) are necessarily absent.

Mr. CRANSTON. I announce that the Senator from Delaware (Mr. BIDEN), the Senator from Arkansas (Mr. BUMPERS), the Senator from Arizona (Mr. DECONCINI), the Senator from Louisiana (Mr. JOHNSTON), the Senator from Massachusetts (Mr. KENNEDY), and the Senator from Michigan (Mr. RIEGLE) are necessarily absent.

I further announce that, if present and voting, the Senator from Arizona (Mr. DECONCINI) and the Senator from Michigan (Mr. RIEGLE) would vote "yes."

The PRESIDING OFFICER. Are there any other Senators in the Chamber who have not yet voted who desire to cast a vote?

The result was announced—yeas 37, nays 49, as follows:

[Rollcall Vote No. 454 Leg.]

YEAS—37

Armstrong	Cranston	Heflin
Baucus	Dixon	Hollings
Bentsen	Dodd	Huddleston

NOT VOTING—14

Baker	Goldwater	Riegle
Biden	Hayakawa	Stafford
Bumpers	Heinz	Stevens
DeConcini	Johnston	Wallop
Domenici	Kennedy	

So Mr. EXON's amendment (UP No. 753) was rejected.

Mr. RUDMAN. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. HATFIELD. I move to lay that motion on the table.

Mr. LEVIN addressed the Chair.

The PRESIDING OFFICER. The Senator from Michigan.

UP AMENDMENT NO. 754

(Purpose: To add funds to continue operation of B–52D bombers in fiscal 1982)

Mr. LEVIN. I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The assistant legislative clerk read as follows:

The Senator from Michigan (Mr. LEVIN), for himself, Mr. HOLLINGS, and Mr. NUNN, proposes an unprinted amendment numbered 754.

Mr. LEVIN. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 24, line 20, strike out the figure "$14,044,298,000" and insert in lieu thereof the following: "14,106,398,000".

Mr. LEVIN. Mr. President, I am joined by Senators HOLLINGS and NUNN in offering this amendment. I understand it is going to be accepted.

The purpose of this amendment is simple and straightforward. It is to add $62.1 million to the bill to enable the Air Force to continue operating the three B–52D squadrons as originally planned.

The Appropriations Committee itself recognized that they should not be phased out prematurely, and the Appropriations Committee added back to the President's budget request the $18.9 million in operations and maintenance funds needed to continue operating these squadrons through fiscal 1982.

I believe inadvertently or otherwise, but I believe inadvertently, the committee overlooked the need for the additional $62.1 million for the spares and modifications to retain this still needed component of our strategic nuclear bomber force in active service.

The B–1, let us remember, is not going to enter the force until 1986 or 1987, and this funding will allow the B–52D's to continue into that period as originally planned.

The actions by the Appropriations Committee in adding back the operations and maintenance funding is an important indication that these aircraft play a useful role in our strategic deterrent, and that they should not be retired prematurely.

The House and Senate Armed Services Committees, in their conference report on the Fiscal 1982 Defense Authorization Act expressed grave doubts about the proposal to retire the B–52D's.

On page 108 of the conference report, we stated:

Conferees expressed their concern regarding the planned phase-out of the B–52D force during a period of increasing vulnerability for U.S. strategic forces. The conferees understood that the timing of the currently planned phase-out would not impair eventual continuation of the existing B–52D force should the planned phase-out be reconsidered before the end of fiscal year 1982. The conferees agreed to further study this matter in conjunction with the fiscal year 1983 budget request.

This body should restore these funds now because sufficient information exists to more than justify this restoration in funding to maintain our strategic strength.

The House Appropriations Committee did appropriate the $62.1 million to maintain our B–52D's. In its report, the House committee gave the following strong justification for its action:

B–52D RETIREMENT

Considering that these aircraft have recently been reskinned and recently received modifications to update their inertial guidanc systems, and considering the capability of these aircraft to deliver significant numbers of conventional bombs, the Committee believes that the retirement of these aircraft is imprudent and recommends an increase of $62,100,000 to keep them in the active force. An increase of $18,900,000 is also included in the "operation and maintenance" account, for the continued operation of these aircraft.

The Senate Appropriations Committee, in its report acknowledged these recent improvements to the B–52D's and recognized the desirability of keeping them operating in fiscal year 1982. It said:

B–52D retirements.—The amended budget included the recommendation to retire three B–52D aircraft squadrons and a combat training squadron. In view of recent improvements to these aircraft, the Committee recommends restoring $18.9 million to retain operation of these aircraft through this fiscal year.

By the admission of every spokesperson we have heard, the strategic program before us has been offered only as an "interim" solution to what the administration believes is a serious window of vulnerability.

But to achieve this "interim" solution—a solution which begins 5 years from now and arguably provides marginal, additional protection for a grand total of another 5 years—the American people are being asked to pay a terrible price.

It is not only a price in terms of dollars. It is also a price in terms of security.

Gen. Bennie L. Davis, the new head of the Strategic Air Command (SAC) admitted that the net effect of adopting the administration's program would be to weaken the defense of the United States for the next 5 years. This is due in part because of the proposed earlier-than-planned retirement of B–52D's. We will be worse off for the next 5 years than we are now. I have never heard of closing a window by opening it wider.

Early retirement of the B–52D's was done simply to find money to fund other parts of the administration's strategic program, according to SAC Commander Davis. He said so in the following exchange with me on November 4, an exchange in which he also acknowledged we were foreclosing our option to deploy more Cruise missiles:

Senator LEVIN. We are retiring the B–52D's earlier than you would like?

General DAVIS. Earlier because I don't have another capability.

Senator LEVIN. We are retiring them earlier now for fiscal reasons.

General DAVIS. That is right.

Senator LEVIN. Not for engineering reasons.

General DAVIS. No.

Without our amendment, the B–52D's might have to be retired years before the planned end of their useful lives.

The $62.1 million in spares to be added by this amendment would support the training flying hours and alert requirements to keep these B–52D's in operation.

General Davis stated that the administration's strategic program actually opens, rather than closes, the administration's well-publicized "window of vulnerability" on November 4, in the following exchange with Senator NUNN:

Senator NUNN. I understand that and I know we all have to concern ourselves about the budget and there may be a legitimate argument that we stretch out, but aren't we in effect, whatever the reason and whatever the budgetary pressures, are we not in effect extending the window of vulnerability for a longer period of time by reason of the phase-out of these B–52s and Titans?

General DAVIS. In terms of absolute numbers, certainly you lose capability. In terms of some items that I have proposed, like let's consider keeping a couple of squadrons of D's in longer and the fact that you have a fairly long phase-out period for Titan IIs, you lose an increment of capability. There is no question about that.

Senator NUNN. We are really going down in capability in the next four or five years, isn't that correct?

General DAVIS. But it is not precipitously.

Senator NUNN. But it is a gradual reduction in capability over the next five years?

General DAVIS. In absolute terms, yes.

In a response for the record. General Davis went even further by stating:

Phasing out the B–52D and Titan will result in fewer weapons committed to the SIOP (nuclear war plan), reduced target coverage and less megatonnage. . . .

He presented only one option for lessening the impact of these reductions in our deterrence capabilities—increasing the alert rates for our B–52G and H force—but then stated this could not be done until 1985. In the interim, the so-called window of vulnerability would open wider.

In addition to weakening us, premature retirement of the B–52D's would represent a unilateral concession to the Soviets in the arms control arena, just as we are beginning talks in Geneva and are contemplating resumption of strategic arms limitation talks next year.

These B–52D's still represent the capability to drop significant nuclear megatonnage on the Soviet Union, Mr. President. They are "real" airplanes and thus true bargaining chips in any arms negotiations, in contrast to the B–1B, which will not be able to threaten the Soviets for many years.

We should not give up the B–52D's without getting something in return for them at the bargaining table, and my amendment preserves their value as bargaining chips as well as their potent military capability.

Lastly, Mr. President, I would point out that, before the President's October budget revisions, both the Senate and House Armed Services Committees recognized this dual military and arms control utility of maintaining the B–52D's and authorized sufficient funds in their versions of the fiscal 1982 Defense Authorization Acts to prevent their premature retirement.

The President saw the value of the B–52D's by seeking these funds in the first place.

The full Senate and House of Representatives approved these funds—the full $62.1 million was in the House bill. The Senate endorsed the $50 million authorization recommended by the Armed Services Committee.

It was only after the President slashed his defense budget in October and eliminated this funding for the B–52D's that both committees reluctantly agreed to this reduction and stated their concerns.

Mr. President, the full $62.1 million should be appropriated to keep our B–52D's operating. The addition is a relatively modest one to maintain our strategic capabilities and with it we can keep some 75 aircraft flying. At less than $1 million per B–52D, and in light of the recent improvements to these aircraft to make them more effective, that is a prudent and cost-effective investment in American military strength.

I urge adoption of my amendment.

Mr. RUDMAN. Mr. President, I think the Senator from Michigan has accurately stated the situation. We are going to have to keep these operating until such time as the B–1B is deployed, and the subcommittee is willing to accept the amendment offered by the Senator from Michigan.

The PRESIDING OFFICER. Is there any further discussion or debate?

Mr. LEVIN. I thank the Senator.

The PRESIDING OFFICER. If not, the question is on agreeing to the amendment of the Senator from Michigan.

The amendment (UP No. 754 was) agreed to.

Mr. RUDMAN. Mr. President, for the information of Senators, we have approximately three more amendments that we expect we will have record votes on. Hopefully, if those who are offering those amendments will come to the floor, we should be able to proceed with those within the next hour.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. SPECTER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROBLEMS OF SENATORS WHO HAVE TO VOTE ON CLASSIFIED MATTERS

Mr. SPECTER. Mr. President, as we have a moment before the sponsors of the next amendment appear, I would like to take this opportunity to comment about some of the proceedings late last night with respect to the absence of information on a matter which was pending on the Senate floor when a great many of the Senators were called upon to vote, and I would like to comment generally on the issue of secrecy as it relates to judgments which have to be made by Senators.

This is obviously an important and a complex question. Those of us who have been elected to this body have a very heavy responsibility to vote on issues involving billions of dollars as, for example, on this current bill which encompasses some $205 billion, and there are sums of money within this bill in a classified or secret category where moneys are being appropriated and where the facts are not before those of us who are called upon to vote.

There has been a custom evolved over the years where only a limited number of Senators are privy to these classified projects, and it raises a substantial question in my mind as to the propriety of what is, in effect, a delegation by the elected U.S. Senate to a very small number in this body to pass upon judgments which involve very substantial sums of money.

The proceedings last night are illustrative when the Senator from Georgia (Mr. NUNN) proposed an amendment which would add $187.5 million to the category known as Air Force R. & D. Mr. NUNN starts off saying, as reported in the CONGRESSIONAL RECORD of yesterday at S14455:

First of all, I can say to my colleagues that this is a classified program.

Then he discusses it for a bit and then says:

Beyond that, Mr. President, that is all that I am able to say at this point in time.

I would say that I think it is a very important program, otherwise I would not be urging its support at this stage.

The senior Senator from Texas (Mr. TOWER) then makes a comment:

Mr. TOWER. Mr. President, it is unfortunate that this program cannot be discussed, because I think it is of extremely great merit. I am certain that if my colleagues could be further enlightened on it, they would support it.

I believe it is asking too much to call for support of a matter where the Senate might be supportive if the Senate were

to be further enlightened on it, when the Senate is not enlightened on it. The next comment is:

I might say that I hope they will take this amendment on faith.

which, in my judgment, is not appropriate to do consistent with the oath which we have taken in the discharge of our duties as U.S. Senators.

The senior Senator from Ohio (Mr. GLENN) then continues in the same vein:

I urge everyone to vote for the amendment. That is about all anyone can say about it at this point. But it is a very important amendment.

Then the junior Senator from Michigan (Mr. LEVIN) makes a comment about—

Mr. LEVIN. Mr. President, I am familiar with this program, also. I simply want to add my voice in support of it. There is nothing one can say about it, other than that we had somebody in room S-407 the other day for many, many hours available to answer questions. Many of us were able to get up there and talk to him about it.

I, for one, was not aware that the amendment was going to come up, not aware of the proceedings in S-407, and those who were, I think, mostly were from the Armed Services Committee or in other words had access to the special briefing which was going to come to pass at that point.

When the motion to table was made by the senior Senator from Alaska (Mr. STEVENS) I personally felt there was insufficient information needed to cast a vote on whether or not to table, but at least a tabling motion resulted in the appropriation not being made, and that was the basis for my voting in favor of tabling.

I made a parliamentary inquiry as to whether a Senator can vote present and still retain the record of having voted, and was informed that probably not, that a present vote was doubtful as even having expressed a judgment in a voting context.

I intend to pursue the matter further, Mr. President, to see where the ramifications of this issue lead not only on this subject but also on other classified matters.

But I for one feel that once here Senators ought to be trusted presumptively and as well as from an evidentiary base, that we are worthy of the trust and know what it is we are voting upon or if there is some policy consideration which requires a different treatment, it ought to be explicit and we ought to be dealing with it in a specific way so that it is known what we are doing here and to whom we are delegating our responsibilities and whether or not that is appropriate.

If there is a contention that the national interest requires secrecy, then a judgment should be made on that basis, or it may be that the consequences of secrecy are more damaging than the risks of disclosure.

But these, to me, in my way of thinking, are all considerations which require a great deal more of elaboration than has been presented on this record illustrated by the exchange last night.

Mr. TOWER. Will the Senator yield?

Mr. SPECTER. Yes.

Mr. TOWER. If I might respond to the Senator, I fully appreciate my distinguished colleague's frustration. And it is unfortunate that we are called on to make a legislative decision under these circumstances.

We are both blessed and cursed by living in an open society, one in which the Government is responsive to the popular will. I think, of course, the benefits outweigh the disadvantages substantially. But, in fact, when confronted by a powerful adversary that is indeed a closed society that can protect its secrets, we do suffer a disadvantage, particularly when you consider the fact that the adversary has a very, very powerful military machine that probably now exceeds our own in terms of overall capability.

It is very difficult for us to keep secrets. The Russians can buy a copy of Aviation Week for maybe $2.50—I think you have to subscribe for it, you cannot buy it on the newstand—but they can get more intelligence out of that than we could get in the way of comparable intelligence if we spent a billion dollars. So we do suffer a certain disadvantage in being an open society with a Government whose actions are always accountable to the popular will.

I think we must recognize that and, in fact, permit certain trusted members of the legislative branch to have access to highly classified information without insisting that everybody have access to it. Because every time you add one person into the secrecy net you increase not arithmetic but geometric the chances that sensitive information is going to be revealed to the adversary. And this has happened. Unfortunately, the Congress leaks like a sieve. We have been, even ourselves, unable to contain classified information and we have suffered for it.

Again, I would say to the Senator from Pennsylvania what I said yesterday. There is a certain amount that has to be taken on faith. And I hope that that can continue to be the case. Even if we went into executive session here with 100 Senators and threw out of the Chamber all of the staff members that do not have access to this information or are not cleared, there would still be a good prospect of a leak.

Let me say to the Senator from Pennsylvania that the reason the Russians are closing the technological gap on us so rapidly is because they have gained access to our ways of doing things, to our high technology, and gained it by virtue of the fact that we are an open society and do publish everything. And that is why we are having to spend billions upon billions of dollars to try to rehabilitate our own military capabilities.

I would hope that the Senator from Pennsylvania would not press this to the extent that we make classified information more widely available. As I say, you do have to take certain things on faith. All of us do. Very often I am not up to speed on a matter that pertains to taxation, and so I ask my good friend, BOB DOLE, the chairman of the Finance Committee, for his advice on what I should do. Perhaps I am not up to speed on an agricultural issue. I ask my good friend, JESSE HELMS, the chairman of the Agriculture Committee, what I should do. Perhaps I am not up to speed on a particular aspect of appropriations. I ask MARK HATFIELD for advice. We do that. We act on faith with each other around here. And certainly, if there is any area on which we should act on faith, it is in the area of classified military material.

May I say that we in the Senate and the House act on blind faith when we delegate away so much legislative authority to executive branch departments or agencies or regulatory bodies. We have delegated away more authority over the last 40 years than probably the founders of the Constitution ever thought, we should have as legislators in the first place. If the Senate wants to reclaim its authority in any area, it ought to be in the field of domestic affairs, which should be sharply distinguished from external affairs, where we have delegated away the authority to regulatory authorities of this country.

I wish I could hear as many complaints on the way the Senate has done so much on faith in delegating its authority to faceless bureaucrats than I do in the Senate not properly availing itself of classified information.

I did not mean to get on the soapbox, but I want to try to put things in perspective. And I say again to the Senator from Pennsylvania, I apologize—I did not bring it up—but I apologize anyway for the fact that this issue did come up in open session of the Senate and Senators were required to vote blind. But I would say that that should not be used as the basis for insisting on classified material being more broadly available.

Any Senator—any Senator—can insist, almost, I think, without fail, on making classified information available to him should he choose to do so. Many Senators choose not to do so. There are certain matters that I am aware of that I do not choose to be briefed on thoroughly.

As a matter of fact, in the old days, the way we worked around here, intelligence matters were handled largely by the chairman and the ranking minority member of the Armed Services Committee. Richard Russell and Leverett Saltonstall used to be the only two people in the Senate that really knew about sensitive matters in the Intelligence Committee. We decided that was not enough; that more Senators and more Congressmen should have access. In the process, we have seriously denigrated the intelligence-gathering capability of this country and at once our ability to preserve our own secrets.

So what I am saying is that I sympathize with the Senator from Pennsylvania, I share his sense of frustration, but also, at the same time, to try to implore him to understand why we cannot always, even in a closed session of the Senate, get into very intimate details about matters that, if they become known to our adversaries, would militate strongly against the security interests of the United States of America.

Mr. SPECTER. I thank the distinguished Senator from Texas for those illuminating comments.

I agree totally with his castigation of the delegation of blind authority to regulatory agencies or executive branches. And while the delegation to other Senators is of a different type, it involves the same kind of a concern as to the appropriateness of any kind of delegation.

When the distinguished Senator from Texas refers to inquiries which he makes to Senator DOLE or Senator HELMS or Senator HATFIELD on matters within their purview of expertise, I think that is exactly correct; that I would suspect that if the Senator from Texas pursues with Senator DOLE some of the underlying facts on the decisions on finance, that Senator DOLE would respond giving him details or Senator HELMS on agriculture or Senator HATFIELD on appropriations.

Mr. TOWER. It is really a very poor analogy, because in fact there is no analogy to what we are talking about.

Mr. SPECTER. Well, with all due respect to the Senator from Texas, I disagree. The amendment was up yesterday and in the cloakroom I made inquiry of the Senator from Texas about the substance of it and was told, in perfectly good faith, and I accepted it at that time, that it was not susceptible to disclosure.

Mr. TOWER. What I am saying is I made a poor analogy, because in fact there is no absolute analogy.

Mr. SPECTER. In that respect, I will not disagree with the categorization of the analogy.

I am concerned with a couple of the things which the Senator has said and I would look to pursue briefly, since we have a window here until someone returns for the next amendment.

When the Senator made the comment that things have to be left to "certain trusted Members" of the Senate, I believe, I certainly would like to believe, that there is no category of "certain trusted Members" of the Senate which is in distinction to other Members of the Senate who are not trusted. And I am concerned with the conclusion, which I know the distinguished Senator from Texas reaches with a lot of authority and a lot of experience.

Mr. TOWER. If the Senator would yield, let me say it is not a matter of one Senator's being trusted over another. It is a matter of dealing with information on a need-to-know basis. As you know, in the intelligence community everybody is departmentalized so that various elements of the community do not, in fact, know what other elements are doing. And there is very good reason for that. So there is a certain departmentalization.

The fact is, it is not a matter of one Senator being more trusted than another. It is a matter of one Senator having a greater requirement to know than another.

Mr. SPECTER. The difficulty I have with that is the need to know when matters are coming before this body to vote for them. I was coming to the conclusion of Congress leaking like a sieve, which, I understand, is based on substantial experience, the Senator having experienced his 20th anniversary in this body not long ago.

Mr. TOWER. I was the vice chairman of the spoof one, as it was called, of the Select Committee on Intelligence. We bared the secrets of the intelligence community and hamstrung the efforts of our intelligence community for several years. They are only now beginning to recover. We lost the confidence of other friendly intelligence communities over the world in our efforts to democratize the business of gathering intelligence.

We made a mistake. I should not like to see us repeat these mistakes.

I am well aware of the people's right to know. The people have a right to know a great deal. At what point does the people's right to know come in conflict with the people's right to be secure to the extent that secrecy can afford them security?

Mr. SPECTER. I would think that if the 100 Members of this body were trusted with a secret, it could be retained.

Mr. HART. Will the Senator from Pennsylvania yield?

Mr. SPECTER. I yield.

Mr. HART. One of the hazards of staying on the floor is occasionally some interesting debate occurs. When that happens, one has trouble staying out of it.

Mr. RUDMAN. Will the Senator yield for a moment?

Mr. HART. Yes.

Mr. RUDMAN. For the information of Senators on the floor, I want to announce that at the conclusion of the two next amendments, which they are about ready to present, we will be able to have passage of this bill.

Mr. HART. Getting back to the subject, I joined with the Senator from Texas on the Select Committee to Investigate Intelligence Operations. I would want to register a little bit of a caveat to the statement he made. It was in response to an observation, I think, about leaking like a sieve.

What is important to know, however, about the committee, and it was an ad hoc select committee, is that it handled an enormous amount of very secret information for a year and a half. I think one would be hard pressed to find one leak out of that committee.

We did issue a report. The view of the Senator from Texas on that report was that it had all of those negative ramifications and apparently no positive ramifications. Historians and participants in that can disagree about what the results of the investigation were.

But if the subject of the investigation at that time was whether a Senator or group of Senators can handle highly classified material in a responsible way, I would use the select committee, or the Church committee, as an example of how that could happen. I frankly think that the oversight committee, which has been a direct result of that investigation, has been very responsible in that regard. That does not go to the specific issue of whether all Senators should have access to all information, but it does go to the issue of whether some Senators can, over a period of time, handle very classified information and do so responsibly.

I think both the Church committee and the Oversight Committee proved that they can.

Mr. TOWER. May I say to the Senator from Colorado that I think the successor committee did a better job than we did. That is a confession. But I think, in fact, they learned from our experience. I think we did get into some areas that we publicly probably should not have done, but I think our successor committee learned from our experience. They are not a chip off the old block but they are an improvement.

Mr. HART. I would only say it was revealed that one of the main concerns was the assassination of world leaders. I would believe that if the intelligence community or the U.S. Government undertook to assassinate foreign leaders in the future, it should be exposed.

Mr. TOWER. I may suggest to the Senator from Colorado that I am not sure that we got all the facts on the assassination business.

Mr. HART. I thank the Senator from Pennsylvania.

Mr. SPECTER. I do have a couple more comments to make before yielding the floor. I shall be very brief.

The comments of the senior Senator from Colorado suggest that Senators can be trusted and that we could have the information and it not be leaked. I think on the "Congress leaks like a sieve," that is a subject that we ought to take up and do something about. That should not be the starting point for not having the necessary information available when we vote.

I was very interested in the comments by the Senator from Texas when he said that "any Senator can insist, almost" on getting information. I will be inquiring to see how far a Senator can go, what the parameters of "almost" may be.

Mr. TOWER. I think I would remove that "almost." The Senator has a great deal of power if he should insist. I would not encourage a Senator to do so unless there was a good reason to know.

Let me say this: When we go into closed session here and talk about classified matters, I do not think the Senate Chamber can be well swept, that what we say here can be really contained in these halls. There are certain staff who have to be retained here.

I am not saying that individual Senators may go out and talk. That is not what I am saying. But sometimes they talk to their staffs, unwittingly, and sometimes things just seep out. But, in fact, this is not a very secure place to talk about highly classified matter.

As a matter of fact, I think we have already talked too much here in open session about certain matters that had best be left to closed doors indeed.

Mr. STENNIS. Will the Senator yield to me for a comment on the subject matter?

Mr. SPECTER. I yield.

Mr. STENNIS. I thank the Senator.

Let me preliminarily say that I think the Senator is entirely within his rights in this inquiry he is making. It is a con-

stitutional right. But at the same it is very, very difficult to handle. I know for 20 years we have had this matter and we have pursued it in various ways. Things have finally worked out.

I would like to relate some facts on that, if I may.

I understand from other Members that they have several amendments that they are ready to proceed to. Under those circumstances, we will talk about this some more a little later.

I have some remarks I want to make on the bill, on the merits of the bill, when these amendments are considered. I just mention that now.

I was going to try to get the floor. However, I will yield to the leader who is about to offer some amendments.

Mr. SPECTER. As a concluding statement, and I think I still have the floor, the Senator from Texas said that he hopes I would not press to the extent of making classified material available. I certainly do not intend to press for any classified material to be available. I had some doubts as to whether I pressed on making material available to this Senate, which I will explain at a later time with the Senator from Texas and the Senator from Mississippi.

I very much appreciate the candor of the remarks this afternoon. I yield the floor.

Mr. PRYOR addressed the Chair.

The PRESIDING OFFICER. The Senator from Arkansas.

Mr. PRYOR. Mr. President, until the distinguished Senator from West Virginia comes back to offer his amendment, and I know all of us are anxious to proceed with the amendments and ultimately pass the Defense Appropriations Act of 1982, I would like to say that I am very pleased to note in yesterday's RECORD that Chairman WILLIAM ROTH, the distinguished Senator from Delaware, the chairman of the Governmental Affairs Committee, has stated that he will hold hearings on the independent inspector general bill sometime in the early part of the year.

It is my belief, it has been my long-held conviction, that we do need in the Department of Defense an independent inspector general to be the watchdog over this $208 billion we are about to appropriate.

I must say that my good friend from Missouri, Senator EAGLETON, has been a moving force in the past on the creation of the independent inspectors general in other areas of our Government. It is now time to move forward with the creation of an independent inspector general in the Department of Defense.

In 1978 Congress created the Office of Inspector General at most Federal Departments. Thanks to the leadership of the Senator from Missouri (Mr. EAGLETON), the Congress took one of the most cost-effective and sensible actions in our country's history.

Then, in May of this year, the House of Representatives at the urging of the distinguished chairman of its Government Operations Committee, Congressman JACK BROOKS of Texas—passed legislation creating an Inspector General in the Department of Defense.

We now have the opportunity to build on that important action. The American people want a Department of Defense that is plainly subject to the same controls as those in other Government agencies. We have an Inspector General at the Agriculture Department with 880 staff members who keep an eye on less than $20 billion. But we have no Inspector General at the Pentagon to watch over $208 billion.

We do have auditors and inspectors within the Defense Department. In fact, we have 18 separate organizations, and 18,000 people in various services who handle small parts of the puzzle. This situation is fragmented, however, and as a result no one is fully responsible or accountable.

Nowhere in Government is a responsible and totally independent Inspector General needed more than at the Defense Department. We need someone, Mr. President, who is "mean as a junkyard dog," to use a phrase of the present administration. We need someone who is not a family pet or a house puppy. It should be a person who has enough independence and power to strike fear in the hearts of anyone tampering with tax dollars—whether the wrongdoer is military, civilian, contractor, or lobbyist.

And we need someone soon, Mr. President. Already money has been lost. We will soon approve major spending increases. Yet all indications from the Defense Department are that any future Inspector General should be different from those at other agencies. The Pentagon feels that an exception should be made, and that any function along this line should be carried out by one of their own.

Let me illustrate this position by referring to the testimony of William H. Taft IV, General Counsel to the Defense Department, at a Senate hearing last June 18:

> Those provisions which establish the independence of the Inspector General in the Department of Defense are completely inconsistent with the hierarchal commander, subordinate relationship that is at the heart of any military organization and is embodied in the chain of command. . . . These provisions do not encourage the individual to work with the Secretary as part of his team. In our view, the Secretary of Defense must have the ability to terminate any review process or investigation that the Inspector General may initiate which would jeopardize national security.

We must invest in an Inspector General for the Defense Department the resources and authority to perform the job the taxpayer needs and deserves.

I was going to be joined earlier in this debate by Senators METZENBAUM and HEFLIN in an amendment for the creation of an independent inspector general. But because we now see that this hearing will be held before the Governmental Affairs Committee, I am very pleased to report that it looks like we are going to make progress on the legislation. I appreciate the efforts of the distinguished Senator from Delaware, the chairman of the committee.

Mr. ROBERT C. BYRD. Mr. President, I have two amendments. I want to accommodate Senators who wish to board airliners for places outside the city.

The first amendment I have would add $250 million to the bill for accelerating the advanced technology bomber. I would be willing to take 5 minutes on my side and be prepared to vote on that amendment.

I have a second amendment, which is a sense of Congress resolution, dealing with a stronger U.S. Navy. I am prepared to vote on that amendment; and if I could have 15 minutes, I would be prepared to vote.

If we could agree that there would be an up-and-down vote on each amendment, I would take 5 minutes on the first amendment, no more than 15 minutes on the second, and would have the two votes either back to back or have one vote and have the second vote follow the second speech.

Mr. RUDMAN. I thank the distinguished minority leader. I believe that will be a good way of handling these two amendments.

I ask unanimous consent that we have discussion on both amendments, followed by back-to-back votes, in accordance with the suggestion made by the distinguished minority leader. The time will be equally divided.

Mr. ROBERT C. BYRD. Would this allow me 5 minutes on the first and 15 minutes on the second?

Mr. RUDMAN. That is correct.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. ROBERT C. BYRD. The understanding is that I will have 5 minutes for my own use on the first and 15 minutes for my own use on the second. Is that agreeable?

Mr. RUDMAN. That is correct, I believe we are talking about 10 minutes equally divided, and 30 minutes equally divided. We will not be using all of our time.

Mr. ROBERT C. BYRD. And votes will occur up and down on both.

Mr. RUDMAN. That is correct.

Mr. ROBERT C. BYRD. I thank the Senator.

Mr. President, the first amendment I shall send to the desk proposes to add $200 million to the amount already in the bill for accelerating the advanced technology bomber, or "Stealth" bomber program. It does not transfer any money from the B–1 program. It is an add-on and is intended as an add-on, and no Senator should interpret it as related to the B–1. I am not taking funds away from the B–1. The Senate has already endorsed the administration's decision on the B–1.

I will not take the time of the Senate to repeat all the arguments that were made just a few days ago on my amendment which would have added $250 million. If the Senate had added $250 million, the figure would have been commensurate with the figure the House has in the bill, and there would have been no conference item to resolve. But as it is, the figure is $250 million in the House portion of the bill and zero, so far as the base I am talking about, in the Senate bill; so that in conference, the

figure could come out $250 million or it could come out zero, insofar as the base is concerned from which I am operating, or it could come out somewhere in between.

If the amendment I now offer is adopted, then the conference item will be that of resolving the difference between the $200 and $250 million. So here are the main points:

First, this is the top-of-the-line technology which promises to give America new leverage with the Soviet Union in the strategic area. We must nurture it on an accelerated track. The administration has said it intends to do so. But, as I have already indicated, the funding level in the bill is some $250 million below that in the House bill.

Second, we must insure that, if we go with the B–1, funding for Stealth is not sacrificed and that the program is not unduly stretched out because of the funding for the B–1 program.

Surely, all Senators can agree to that proposition. It is essential to bring the program on line, so that an initial operating capability [IOC] be available in the early 1990's. I believe that if we keep the program on the fast track, it is within the ingenuity of our scientists and engineers to deliver an operational squadron around 1990.

There has been a welter of confusing information on when the B–52H will no longer be able to penetrate Soviet airspace with assurance. There has been a shifting series of statements by the Secretary of Defense and other officials on when the B–1, if we build it, will lose that penetration ability. But there has been really no controversy that the Stealth will present very great difficulties for the Soviets throughout the 1990's and into the next century. So, if we want to assure the success of that vital strategic mission, we dare not crimp this program.

Testimony by both the recently retired Strategic Air Commander, General Ellis, as well as the present Commander, General Davis, before the Senate has provided us with substantial evidence that the Stealth program will be delayed. Indeed, the very amount appropriated in this bill is such evidence. The amount I am proposing we add in this amendment itself is somewhat lower than I have been advised could be added and still not reach a maximum program.

The important principle we adopt when we vote for this additional money is that the Senate joins the House in refusing to underfund what is perhaps the single most important new strategic, highly classified program now under development. This is a commitment to American technological superiority, and to maintaining our technological edge.

I urge the adoption of the amendment.

UP AMENDMENT NO. 755

Mr. President, I send the amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from West Virginia (Mr. ROBERT C. BYRD), on behalf of himself, Mr. NUNN, Mr. LEVIN, and Mr. HART, proposes an unprinted amendment numbered 755:

On page 28, line 18, strike "$9,076,906,000" and insert in lieu thereof "$9,276,906,000."

Mr. RUDMAN. Mr. President, we have discussed the funding of Stealth on a number of occasions in the past 72 hours.

This, of course, is right on point with what the Senator from Pennsylvania, the Senator from Texas, and the Senator from Colorado were discussing a few moments ago.

This program is so classified that I am unable to state in open session the precise amount of funding that is carried in this appropriation.

I simply point out—and I will be very brief—that, first, this appropriation item has not been underfunded. It has been funded at a level requested by the administration, and not 1 dime of the money that was requested has been reduced by the Senate. It is true that the Senate chose not to adopt the House add-on of $250 million, feeling that the Air Force and the administration had a reasonably good idea of what they desired.

Second, there are many who feel that there is only a certain rate at which money can be absorbed. We do not believe that money can be put into this program at a faster rate than it is capable of being spent efficiently.

It is my understanding that we will have a rollcall vote on this amendment, following the next amendment offered by the distinguished minority leader, and we will then have the votes together.

I yield back the remainder of my time.

Mr. ROBERT C. BYRD. Mr. President, I ask for the yeas and nays on the pending amendment.

The PRESIDING OFFICER (Mr. HATCH). Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. ROBERT C. BYRD. Mr. President, it is my understanding that the distinguished manager of the bill on the other side wishes to have the two votes back to back.

Mr. RUDMAN. That is correct. Our understanding and our unanimous-consent request was that we have both votes at the conclusion of these two amendments.

The PRESIDING OFFICER. The Senator is correct.

Mr. RUDMAN. Will the distinguished minority leader agree to a further unanimous-consent request, that the second rollcall vote be of 10 minutes duration?

Mr. ROBERT C. BYRD. It is perfectly agreeable to me.

Mr. RUDMAN. I make that request.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS addressed the Chair.

Mr. ROBERT C. BYRD. Mr. President, will the Senator from New Hampshire retrieve his time and yield some to the Senator from Mississippi?

Mr. RUDMAN. Mr. President, I ask unanimous consent that my previous yielding back of my time be rescinded, and I yield the remainder of my time to the distinguished ranking minority member of the committee.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. I will take only 2 minutes.

Mr. President, this amendment for $200 million is above the figure recommended by the President as being his needs. It is $200 million beyond the official recommendation in the President's budget. I do not think any compelling reason has been given, with all deference to the author of the amendment, as to why we should vote the additional money at this time or why we should go over the rule we have, which does have a meaning—that appropriations for these purposes are subject to a point of order unless they have been authorized.

I point out to the Members that until a few years ago, the Appropriations Committee had full control of the amounts that would be appropriated for any military purpose. There were one or two exceptions to that.

The proposal was taken up then, considered by both Houses, and was passed, and it has been followed generally until particularly this year.

I know, as a practical matter, that it has rendered a tremendous service. The Armed Services Committee, should we go back to the old rule, would be virtually decimated, without any real part in carrying out the authorization of this massive military program now, which, compared to the old days, is enormous and dominates, to a degree, the entire budget.

So I respectfully say that there has not been any real reason given as to why we should violate this safeguard of authorization. As a practical matter, the Department of Defense says, in effect, that they do not need the money.

So I certainly am going to vote against the amendment, and I hope that will be the voice of the Senate.

I yield the floor.

Mr. ROBERT C. BYRD. Mr. President, do I have any time remaining?

The PRESIDING OFFICER. The Senator has 4 minutes remaining.

Mr. ROBERT C. BYRD. I thank the Chair.

Mr. President, I say to my distinguished friend from Mississippi, the distinguished Senator who is the ranking minority Member, that the other day when he was away I called up this amendment. It was tabled. It was in the amount of $250 million. It involves a subject which he has indicated, and properly so, cannot be discussed on this floor. But at that time, I offered a lengthier statement which I thought was convincing and persuasive within the restrictions that we have to operate. But I must say that I have been advised by the Stealth program director that this amount of money can be effectively used if appropriated by Congress.

That is what I am attempting to do. The money in the amount of $250 million is in the House bill. I am simply trying to avoid putting that $250 million totally into conference. It could come out of conference as zero insofar as the base on which we are operating here is concerned. I am trying to raise the Senate figure up to within $50 million of the House figure so that in conference it will only be the $50 million to be resolved. So I say that the money is needed. It can be effectively used and I hope that the Senate will adopt the amendment.

So I yield back the time on that amendment.

The PRESIDING OFFICER. Is all time yielded back?

All time is yielded back. Under the previous order the Senator from West Virginia is recognized to offer another amendment.

UP AMENDMENT NO. 756

Mr. ROBERT C. BYRD. Mr. President, I send the second amendment to the desk and ask that it be stated by the clerk.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from West Virginia (Mr. ROBERT C. BYRD), for himself and Mr. HART, proposes an unprinted amendment numbered 756.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 71, following line 14, insert the following: Sense of the Congress Resolution on the Navy of the United States.

It is the Sense of the Congress that—

(1) a larger and stronger American Navy is needed as an essential ingredient of our armed forces, in order to fulfill its basic missions of (a) protecting the sea lanes to preserve the safety of the free world's commerce, (b) assuring continued access to raw materials essential to the well-being of the free world, (c) enhancing our capacity to project effective American forces into regions of the world where the vital interests of the United States must be protected, (d) engaging the Navy of the Soviet Union or any other potential adversary successfully, (e) continuing to serve as a viable leg of our strategic triad, and (f) providing visible evidence of American diplomatic, economic and military commitments throughout the world.

(2) In order to conduct the numerous and growing missions of the modern American Navy, a goal of a Naval inventory of approximately 600 active ships of various types by the end of the century at the latest, is highly desirable, the exact figure to be flexible to accommodate new designs as the specific details of our Naval missions evolve to meet various contingencies.

(3) The Secretary of Defense comply with Section 808 of Public Law 94–106, the Department of Defense Appropriation Authorization Act of 1976, which requires him to "submit a five-year naval ship new construction and conversion program . . . concurrent with the submission of the President's budget" each fiscal year, in order that the Congress may more properly appropriate the funds necessary to reach a 600-ship goal at least by the end of the present century.

Mr. ROBERT C. BYRD. Mr. President, it is my understanding that the vote will be on this amendment and that therefore there will be no amendment in order to the amendment. The vote will be on the amendment itself.

Is that agreeable to the ranking manager of the bill?

The PRESIDING OFFICER. The agreement was for an up-and-down vote precluding a motion to table but does not preclude any second-degree amendment.

Mr. RUDMAN. It is my understanding that the Chair has stated correctly my understanding. It is my further understanding the minority leader is asking whether or not we would enter into another unanimous-consent request barring further amendments.

Mr. ROBERT C. BYRD. Yes.

Mr. RUDMAN. I wish one moment to look at this amendment which I just received.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. STEVENS. Mr. President, I do apologize to my friend from Mississippi. He is correct and I should have cleared with him the requests that I received, but since we were trying to work this out it seemed to be just as easy to let the Senator from New York speak as to have a quorum call which could have confused it more.

I am trying to work out with the distinguished minority leader an amendment, I might say, and I would invite the Senator's attention to this as we have got it.

Mr. ROBERT C. BYRD. Mr. President, I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. Who yields time? If neither side yields time, time will run equally against both sides.

Mr. ROBERT C. BYRD. Mr. President, how does the amendment now read, may I ask the Chair or have the clerk begin the reading of the amendment?

The PRESIDING OFFICER. The clerk will read the amendment.

The legislative clerk read as follows:

On page 71, following line 14, insert the following: Sense of the Congress Resolution on the Navy of the United States.

It is the Sense of the Congress that—

(1) a larger and stronger American Navy is needed as an essential ingredient of our armed forces, in order to fulfill its basic missions of (a) protecting the sea lanes to preserve the safety of the free world's commerce, (b) assuring continued access to raw materials essential to the well-being of the free world, (c) enhancing our capacity to project effective American forces into regions of the world where the vital interests of the United States must be protected, (d) engaging the Navy of the Soviet Union or any other potential adversary successfully, (e) continuing to serve as a viable leg of our strategic triad, and (f) providing visible evidence of American diplomatic, economic and military commitments throughout the world.

(2) In order to conduct the numerous and growing missions of the modern American Navy, a goal of a Naval inventory of approximately 600 active ships of various types by the end of the century at the latest, is highly desirable, the exact figure to be flexible to accommodate new designs as the specific details of our Naval missions evolve to meet various contingencies.

(3) The Secretary of Defense comply with Section 808 of Public Law 94–106, the Department of Defense Appropriation Authorization Act of 1976, which requires him to "submit a five-year naval ship new construction and conversion program . . . concurrent with the submission of the President's budget" each fiscal year, in order that the Congress may more properly appropriate the funds necessary to reach a 600-ship goal at least by the end of the present century.

Mr. ROBERT C. BYRD. Mr. President, I yield myself such time as I may require.

Mr. President, I am offering a sense-of-the-Senate resolution on the American Navy. It has been obvious for a number of years that disturbing trends have beset our maritime capability. Our shipbuilding capacity has diminished over the years. Our commercial carriers cannot compete effectively with foreign carriers without subsidies, both in construction and operations.

Our fighting naval forces have decreased steadily. Today we have about 450 active naval vessels; 10 years ago we had about 700. In the meantime, the Soviet Union has changed the missions, composition, and size of its navy. The Soviet Union has about 1,000 combatant ships, well over double the U.S. number. Their forces are not strictly comparable to our own. They have not built the formidable aircraft carrier that we have.

Nevertheless, they have built a "blue-water" navy, able to operate on a sustained basis in the far-flung waters of the globe. They have steadily increased operations in our back yard, the Caribbean, and have slowly but surely developed a naval relationship with Cuba. They have formidable fleets in the Mediterranean, North Atlantic, and Pacific Oceans.

I think all Senators will agree that unmatched naval forces are not a luxury for the United States. We are an island nation, our principal allies in the NATO alliance all lie across the ocean; we have vital commitments in the Far East; we are trying to establish a viable naval presence in the Persian Gulf.

Our Navy has many functions. Traditionally, it has had to safeguard the sea lanes for American and free world commerce and assure continued access to raw materials essential to the health of the Western economies.

It has had to fulfill many military assignments, including serving as a viable leg of our strategic Triad, preparedness to engage any enemy naval force successfully, and conducting various operations in support of our diplomatic and military commitments around the world.

These functions are now being supplemented with new taskings to project effective and sustainable forces in new areas of the globe, new environments and not always with the nearby support of reliable allies.

In the face of these traditionally demanding requirements and new taskings, it was clear that renewed attention to the state of our Navy has been in order. I thought, Mr. President, that the very dramatic testimony of our new naval leaders during the opening months of the present Congress would bring some needed change. Both Navy Secretary Lehman and Chief of Naval Operations Admiral Hayward testified to an alarming deterioration of capacity in our Naval Forces.

Admiral Hayward, for instance, stated in Senate testimony on February 5, 1981, that:

For the first time in anyone's recollection, the U.S. Navy is unable fully to meet its peacetime commitments.

He said that:

Our margin of comfort is totally gone. We are operating at the ragged edge of adequacy

when it comes to our globally disposed Naval Forces. We have been able to manage only because our forces have not been subjected to the added stress of combat anywhere in the world.

The theme was that we have too few battle groups to cover too many commitments, too many oceans, too many contingencies. He went on to say that:

The situation today is so murky one cannot, with confidence, state that the U.S. possesses a margin of superiority. If we do, it is so cloudy and tenuous as to be unreliable—both as a deterrent and as assurance of our ability to prevail at sea in a conflict with the Soviets.

The Secretary of the Navy testified that over the last few years, the Soviet Union has built almost three times as many major warships as we. "During this period, they have constructed at least 18 classes of surface warships and submarines. In comparison, we are presently building seven, three of which derive from a single design."

The result of the steady imbalance of effort between us and the Soviets in this area leads to the assessment by the present Secretary of the Navy that "after more than a decade of these adverse trends, I believe that our former narrow margin of superiority is gone. I believe that in some circumstances the Soviets can militarily interfere with our access to vital requirements simultaneously and can reasonably be judged able to prevail in at least some of those areas."

It is true that the American Navy still possesses considerable advantages over the Soviet Navy. We still have greater than a two-to-one advantage in total tonnage. Our ability to operate is far superior in many important respects. Perhaps most importantly, we carry our air cover with us on our carriers.

But the Soviet Navy also possesses advantages that we do not have. For instance, 15 sorts of surface warships and submarines carry at least one kind of cruise missile. Soviet strategy seems designed to seize and secure initiative with a single killing salvo. Missile-carrying surface ships and submarines, moving without tactical formation, could trigger surprise preemptive strikes. We do not as yet have an effective defense against this threat.

Soviet naval developments are moving rapidly and should not be underestimated. Recently, the Soviets have launched a giant 30,000-ton ballistic missile submarine, dubbed the "Typhoon," one that is far bigger than its U.S. counterpart, the 18,000-ton Trident.

U.S. naval analysts have been repeatedly surprised by the size and ambitious designs of the vessels that are now fleshing out the Soviet Navy. They have also deployed the world's deepest-diving, fastest and only titanium-hulled submarine.

Indeed, intelligence sources have been quoted in the public press that the Russian submarine-building complex is the world's largest, producing at a rate of six to eight boats every year. We produce less than half that.

If they are behind in aircraft carriers, they will not be behind indefinitely. Although they have nothing to match our fleet of 12 supercarriers, they have already launched two smaller carriers, which are about one-third the size of our own, and are scheduled to commission two more within the next 3 years.

They handle vertical take-off and landing aircraft, a development some of our naval experts in the Senate believe the United States ought to investigate for our own carrier forces.

The administration stated on many occasions that one goal, one benchmark that we could use to revitalize our Navy, was to increase the pace of shipbuilding so that we had at least the minimum number of naval units available to try to meet our many commitments more adequately and without straining our resources to the bitter end. The administration talked about a 600-ship Navy.

Indeed, published reports indicated a 700-ship Navy was being looked at by sometime in the 1990's. According to a report in the Washington Star on March 28, 1981:

Secretary Weinberger was considering a plan that could initiate the most ambitious U.S. shipbuilding program since World War II—a program aimed at increasing the Navy's fleet to between 700 and 800 ships within 15 years.

According to that article, by Mr. John Fialka:

A Navy source said that, in light of the growing Soviet naval threat, the 700- to 800-ship Navy is under serious consideration.

He said:

The 600-ship Navy was merely used as a "benchmark," the minimum the Navy ought to have.

The Secretary of the Navy and others indicated that a 600-ship Navy, at least, would be a goal worth pursuing.

Mr. President, we do not have any real concept of what kind of Navy this administration is contemplating. How many ships? What kind of ships? Yes, we have a few ideas. We have endorsed the concept of bringing battleships out of mothballs as new multimission platforms. We are endorsing new supercarrier construction. But the details of the long-range naval plan have simply not been made available.

Mr. President, the details of such a plan are legally required to be submitted every year with the administration's budget submission. The legal requirement was laid down in 1977 in the Department of Defense Authorization Act, section 808. The Secretary of Defense must, according to that section, submit his revisions of the 5-year naval ship new construction and conversion program "concurrent with the submission of the President's budget." Each year, this 5-year revision has not been submitted to the Senate, by the present administration, so far as I am aware.

That is understandable, to some extent. The new administration needed time to get going. But it is now December. A new budget cycle is about to begin.

I hope that we have not established a precedent here. We expect to receive the administration's plan with the new budget—we would like to have it right now. But 1 year of grace in this area should not be taken as carte blanche to never give the Senate any sensible long-term plan in the naval area.

A 600-ship Navy is an adequate goal to start with. Some say it is too ambitious. Certainly it should be somewhat flexible because new designs will inevitably bring different numbers of types of ships, according to the needs and requirements of the new commitments we are entering into in the world. But as an approximate number to shoot for, 600 has generally been regarded as a good strong goal.

I am concerned that instead of moving toward that goal, however, we are not making any progress at all. The rhetoric concerning the need for new ships has not been matched by the hard realities in this bill. This bill provides for $9.2 billion in shipbuilding funds. I do not fault the subcommittee. The administration's revised budget request asked for some $1 billion less than that. But put this in perspective. Studies done in the Senate indicate that the funds needed to achieve a 600-ship Navy by the year 1992 would amount to about $25 billion per year, every year. Even if we were to defer our 600-ship goal to the year 2000, more than $18 billion per year would be needed.

This is if the general mix of ship types that are currently in our inventory is carried forward. I think we should be creative, we need new designs, but we certainly need many more of the general types of ships that we are currently operating.

If we are to achieve the goal of a 600-ship Navy by 1992, the annual cost in 1982 constant dollars, according to the Armed Services Committee staff study, will be about $25.5 billion, of which about $19.5 billion would have to be dedicated to battle group and convoy-related ships, and $6.0 billion to strategic submarines, amphibious and support ships.

If we are to stretch our 600-ship goal to the year 2000, then about $18.5 billion per year would be needed, of which $12.5 billion would go to the battle group and convoy-related ships and $6.0 billion to strategic subs, amphibious, and support ships.

We could go into considerable detail on this, but there are some very serious problems which must be overcome to reach our goal. The aircraft carrier inventory, for instance, will require 11 replacements or service life extensions in 13 years, a very ambitious and expensive program.

Second, the nuclear attack submarine building program will have to be increased from the present rate of 2 to 5 per year. Third, the cruise guided missile destroyer forces present a very formidable challenge. To meet the 1992 schedule, we would have to build 10 per year versus the current rate of 3.

How much is in the bill before us for Navy shipbuilding? The figure is $9.2 billion. This is only about one-half the money needed if we want a 600-ship Navy by the end of the century. The current administration's program is not substantially different from the previous program.

Last year, we authorized 18 new construction Navy ships, 11 of them combat ships. This year, it is 17 new construction ships, 8 of them combat ships, as well

as the refit of 2 battleships. For a 600-ship Navy, we would need somewhere around 25 battle group and convoy-related ships alone, not counting submarines, amphibious ships and supporting ships and aircraft.

The resolution I am offering is very straightforward. It recognizes the expanding commitments we are calling upon our Navy to make, its multitude of roles, and expresses support for an expanded Navy of approximately 600 ships by at least the year 2000, which is a flexible goal depending on new designs and the specific details of our naval missions as they evolve to meet new contingencies. It asks the Secretary of Defense to comply with the law in submitting his new changes to the naval shipbuilding program concurrent with the administration's budget submission.

This is a modest resolution. The goal endorses the program we all believe reflects the administration's thinking and has broad congressional support. It asks that the necessary details be provided to the Congress as is mandated by the law.

I ask for the adoption of the amendment.

Mr. President, I ask unanimous consent to modify the amendment in the following fashion: Line 24. after the words "Authorization Act of 1976," strike the remainder of line 24. the entire line 25. the entire line 26, and the words on line 27 "fiscal year.".

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered. The amendment is so modified.

Mr. STEVENS. Mr. President, I commend the minority leader for submitting this amendment at this time. I consider it to be an amendment which expresses support for the bipartisan goal of a 600-ship Navy.

Since 1977, the administration commenced submitting the 5-year shipbuilding plan. In 1982, the Carter administration came forward with a new 5-year plan. In March, the administration submitted a budget amendment which involved a change in the profile of the plan for future years in some regard.

I am informed that in January 1982 the administration does plan to submit its 5-year shipbuilding program to accompany the fiscal year 1983 budget. The Department of Defense has, in my opinion, complied with existing law which provides that after the submission of a 5-year plan, as was required in 1976 for the fiscal year 1977 year, the Secretary of Defense "shall report to the Committee on Armed Services in the Senate and the House of Representatives any changes to such a 5-year program as he deems necessary for the current year and for succeeding years, based upon, but not limited to, the alterations in defense strategy in the United States and advances in technology."

The deletion that has been made in the amendment, through the modification offered by the minority leader, does make this resolution track the existing law and does comply with the announced intention of the administration as far as the 5-year plan is concerned.

Mr. President, let me sound a note of caution. The Senator is correct. There is $9.2 billion in this bill for new shipbuilding. There is substantial money for ship conversion and modification. But the amount of money that is in this bill ought to be a warning, because it is the tip of an iceberg. In this bill there is $2.4 billion in operation and maintenance funds for steaming hours. Now, that item has been under attack and I believe it is a justifiable difference of opinion. But it is not necessary to have complete, full-time steaming hours on existing vessels in order to be prepared.

What we must do is what this amendment indicates, and that is direct our efforts toward rebuilding our Navy. We are in the situation where only 20 percent of the Russian Navy is more than 20 years old; 80 percent of the U.S. Navy is more than 20 years. So this amendment strikes at the heart of one part of the administration's modernization program; that is, the modernization program as far as the Navy is concerned and the commitment to a 600-ship Navy by the end of the present century.

We can do that if we do not put too much money into operations and too much money into modernizing old vessels and put more money into the acquisition of high technology new vessels.

As the Senator's amendment notes, the specifics of 600-ship Navy by the year 2000 must remain flexible and must adapt to technological change. I believe that the bill we have presented—and I stated this at the outset of this on Monday, the outset of the consideration of this bill—is a resounding endorsement of this administration's goal of a 600-ship Navy.

I am pleased to see the Senator from West Virginia come forward, almost in a Vandenberg-like spirit, to say this is a bipartisan goal. We are happy to be in the position to accept this amendment and to urge every Member of the Senate to endorse it. It does comply with existing law and it does track the announced intention of not only the past administration but of this new administration to modernize our Navy.

Mr. ROBERT C. BYRD. Will the Senator yield?

Mr. STEVENS. I am happy to yield.

Mr. ROBERT C. BYRD. Mr. President, inasmuch as the distinguished Senator has indicated a willingness to accept the amendment, I ask unanimous consent, in order to accommodate our colleagues who must be on airplanes soon, that the rollcall vote previously ordered on the second amendment be vitiated.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. ROBERT C. BYRD. I yield back my time.

Mr. STEVENS. Mr. President, I inquire if that means the only remaining vote on amendments would be the vote on the first amendment offered by the distinguished minority leader, the amendment to restore money to the Stealth program? Am I correct?

The PRESIDING OFFICER. That will be the only rollcall vote.

Mr. STEVENS. Has there been a rollcall ordered on final passage?

The PRESIDING OFFICER. There has not been.

Mr. STEVENS. Mr. President, I ask that it be in order to order a rollcall vote on final passage of the bill.

The PRESIDING OFFICER. It is in order at this time.

Mr. STEVENS. Mr. President, I ask for the yeas and nays on final passage.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask that the first rollcall vote not go beyond 15 minutes so as to accommodate our colleagues.

Mr. STEVENS. I believe that is in order. The matter has been adequately debated. I am prepared to yield back the remainder of my time and to announce that there will be a 15-minute rollcall and it will be terminated at the end of 15 minutes.

Mr. STENNIS. Will the Senator yield?

Mr. STEVENS. I do not yield back the remainder of my time. The distinguished Senator from Mississippi is entitled to time under that agreement.

ROLLCALL VOTE ON UP AMENDMENT NO. 755

The PRESIDING OFFICER. The question is on agreeing to amendment No. 755 offered by the Senator from West Virginia (Mr. ROBERT C. BYRD). The yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. STEVENS. I announce that the Senator from New Mexico (Mr. DOMENICI), the Senator from Arizona (Mr. GOLDWATER), the Senator from California (Mr. HAYAKAWA), the Senator from New Mexico (Mr. SCHMITT), and the Senator from Wyoming (Mr. WALLOP) are necessarily absent.

I further announce that, if present and voting, the Senator from New Mexico (Mr. DOMENICI) would vote "nay."

Mr. CRANSTON. I announce that the Senator from Delaware (Mr. BIDEN), the Senator from Arkansas (Mr. BUMPERS), the Senator from Arizona (Mr. DECONCINI), the Senator from Louisiana (Mr. JOHNSTON), the Senator from Michigan (Mr. RIEGLE), and the Senator from South Carolina (Mr. HOLLINGS) are necessarily absent.

I further announce that, if present and voting, the Senator from Arizona (Mr. DECONCINI) and the Senator from Michigan (Mr. RIEGLE) would vote "yea."

The PRESIDING OFFICER (Mrs. KASSEBAUM). Are there any other Senators in the Chamber wishing to vote?

The result was announced—yeas 36, nays 53, as follows:

[Rollcall Vote No. 455 Leg.]

YEAS—36

Baucus	Ford	Mitchell
Bentsen	Hart	Moynihan
Boren	Heflin	Nunn
Burdick	Huddleston	Pell
Byrd, Robert C.	Inouye	Proxmire
Cannon	Jackson	Pryor
Chiles	Kennedy	Randolph
Cranston	Leahy	Sarbanes
Dixon	Levin	Sasser
Dodd	Matsunaga	Tsongas
Eagleton	Melcher	Williams
Exon	Metzenbaum	Zorinsky

NAYS—53

Abdnor	Glenn	Murkowski
Andrews	Gorton	Nickles
Armstrong	Grassley	Packwood
Baker	Hatch	Percy
Boschwitz	Hatfield	Pressler
Bradley	Hawkins	Quayle
Byrd, Harry F., Jr.	Heinz	Roth

Cochran	Humphrey	Simpson
Cohen	Jepsen	Specter
D'Amato	Kassebaum	Stafford
Danforth	Kasten	Stennis
Denton	Laxalt	Stevens
Dole	Long	Symms
Durenberger	Lugar	Thurmond
East	Mathias	Tower
Garn	Mattingly	Warner
	McClure	Weicker

NOT VOTING—11

Biden	Goldwater	Riegle
Bumpers	Hayakawa	Schmitt
DeConcini	Hollings	Wallop
Domenici	Johnston	

So Mr. ROBERT C. BYRD's amendment (UP No. 755) was rejected.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from West Virginia (Mr. ROBERT C. BYRD).

The amendment (UP No. 756) was agreed to.

Mr. GRASSLEY. Madam President, on November 30, 1981, Senator HARRY F. BYRD, JR., the distinguished senior Senator from the Old Dominion State of Virginia, announced his decision not to seek reelection to the U.S. Senate. I received this message with great sadness, and yet am pleased that Senator BYRD's term of office does not expire until 1983.

Senator BYRD's detractors have attacked him on occasion for holding dear many principles which I also hold dear. During his service in the Senate he has remained a firm and persistent advocate for fiscal responsibility in government. In essence, the Senator has been a valuable friend of the beleaguered American taxpayer. I have sought to apply those same principles of Federal stewardship which Senator BYRD and my predecessor in the House, Mr. H. R. Gross, have so faithfully stood by throughout the years.

The present movement in Congress to bring Federal spending under control is in many ways so strong because of the groundbreaking, consistent, and tireless work of Senator BYRD and others.

I consider it a great honor to have worked closely as Congressman from the Third District of Iowa with Senator BYRD during the 95th Congress to gain passage of the so-called Byrd-Grassley amendment. That measure stated that:

Beginning with fiscal year 1981, the total budget outlays of the Federal Government shall not exceed its receipts.

Senator BYRD's careful and determined legislative work led to passage of that amendment to International Monetary Fund legislation. I very strongly approved of the inclusion of that amendment to balance the Federal budget in 1981 and was successful in stimulating a favorable House vote to include it in the final bill which became Public Law 95–435.

Passage of that amendment to balance the budget was a significant historic step. It was one of the first clear affirmations in recent years passed in the Congress to express a principle which the American people want and deserve to have applied in legislation—that the U.S. Government should not, and cannot without disastrous economic and social results, live beyond its revenues. In short in 1978 we were attempting to reestablish confidence in the economy and Senator BYRD's economic insight is even more valuable today.

The efforts in Congress today to reduce excess Federal spending and balance the Federal budget clearly build upon the foundation set by Senator HARRY F. BYRD's invaluable efforts during his terms in the U.S. Senate.

Mr. STENNIS. Madam President, we have had a genuine and an illuminating debate that has been clear cut, mostly crisp, and to the point. The pros and cons were most capably represented by Members who knew the facts and understood the subject matter.

I insisted that the bill be brought to the Senate floor, where it would be subject to debate and amendment in the regular way and would be the only subject matter up for debate at the time.

I am highly pleased that this situation has prevailed, rather than have the bill crammed in as a part of a continuing resolution, with all the distractions.

Madam President, all the major votes on amendments showed the solid support, with strong margins, in favor of every phase of our weaponry and all phases of military preparedness. This shows solid support for the President's position in his negotiations for meaningful limitations and restrictions on strategic weapons and related agreements. With this support, he will be able to negotiate from strength. The American people expect the President to be firm, which I have every reason to believe he will be. Actually, there is no real division between Congress and the people.

I greatly deplore the violations with this bill, in many instances, of the rule requiring express authorization for military weaponry and other items. This practice will gradually break and even destroy our committee system in the Senate. In a more normal year, we must return to a strict adherence to the system requiring authorizations.

Madam President, I commend those who have labored long and hard on this bill, especially the Senator from Alaska (Mr. STEVENS) and the Senator from Oregon (Mr. HATFIELD).

BUDGET-BUSTING DEFENSE APPROPRIATIONS BILL

Mr. PELL. Madam President, there are many excellent and long overdue initiatives in the 1982 Defense appropriations bill before the Senate today. There is much in this bill that I wholeheartedly support. I have concluded, however, that the overall level of spending in the bill is so excessive and unjustified by our real military needs that I cannot support final passage of this legislation.

This bill would appropriate a single year increase of 22 percent in our defense budget, from $171 billion in fiscal 1981 to $208 billion in fiscal 1982. The amount contained in the Senate bill is $11 billion more than approved by the House of Representatives and $8 billion more than requested by the President for military spending. I seriously question whether the Pentagon will be able to manage a single year increase of $37 billion without hasty, wasteful and unwise spending. In my view, $208 billion is an unconscionable level of defense spending unjustified by our present military needs and certain to contribute to the soaring Federal deficit that is at the root of our national economic crisis.

My vote against this bill is a reluctant one, because there is much in it that I strongly support. The committee has included $330 million in advance procurement for the Trident submarine program, a level I strongly support and one which I hope will be sustained in conference. This long lead funding is necessary to maintain the production of Tridents at the steady rate advocated by President Reagan. The Tridents are the most survivable and effective nuclear submarines ever built and I believe the committee has acted commendably in providing an adequate level of advance procurement funding in the absence of an authorization for the ninth and tenth Tridents.

Of particular importance to the future of the Trident program is the $239 million in the bill for research and development of the Trident II missile. I have previously urged the administration to accelerate the development of the Trident II and to consider a sea-based Trident II as an alternative to further development of the MX.

The Trident program is critical to our future national security, yet it should be noted that the amount of funding for the Trident program is less than 1 percent of the overall total of this bill.

The bill also contains $953 million for the construction of two additional SSN–688 *Los Angeles* class submarines. The continued production of attack submarines at the rate of two per year is strongly in our national defense interest, and I support this extremely important naval procurement.

I especially commend the committee for its inclusion of $300 million to supplement the capital improvements program of the Coast Guard. This initiative is a welcome recognition of the Coast Guard's role as member of our Armed Forces. This money will enable the Coast Guard to procure the vessels, aircraft and other equipment desperately needed to permit satisfactory performance of the enormously widespread military and civilian role the Congress has given to our "second Navy."

There are many other elements in the bill directed at conventional force modernization and improved readiness capability that are commendable and long overdue. The bill, however, is weighted down by more than $3.7 billion for the purchase of B–1 bombers and development of the MX missile. Both of these programs, in my view, are unjustifiable because of their immense long range costs and marginal addition to our national security. The value of the additional security we will supposedly be buying is not, in my judgment, equal to the enormous long term investment of tax dollars.

For these reasons, I have decided to oppose passage of this appropriations bill. There is much that is good in it and I am as mindful as any other Member of this body of the need for significant real growth in the defense budget. This bill, however, goes well beyond what is necessary for readiness to meet the current military threat, and for modernization of our conventional and strategic forces. A 22-percent in defense spending is foolhardy in light of the economic realities that confront us and is not a sane economic or military course for our country to follow.

Two weeks ago, the President vetoed a continuing appropriations resolution because it provided about $2 billion more in spending than he had requested for the entire Government. We are today acting on a single appropriations bill that is $8 billion above the amount requested by the President for one department of Government. If ever a bill were a budget-buster, this is it.

This appropriations bill now must be acted on by a House-Senate conference committee. I hope the conference committee will produce a bill that provides the increased funds really needed for a sound national defense, without the excessive budget-busting increases included in the bill now before the Senate.

FISCAL YEAR 1982 DEFENSE APPROPRIATIONS BILL IS $8 BILLION OVER BUDGET

Mr. PROXMIRE. Madam President, I intend to vote against this defense appropriations bill on budgetary grounds. Simply put, this bill exceeds the recommendations of the Reagan administration by about $8 billion. No one can accuse the Reagan administration of proposing a defense budget that is inadequate for our needs. The bill before us is a full $38 billion over the appropriations bill for fiscal year 1981. Now $38 billion is not an insignificant sum. It amounts to adding the entire Department of Labor budget to last year's defense appropriations. This is about a 22-percent increase over last year. No other budget has been so favorably treated. And perhaps no other budget needed such a large increase so that our military pay rates could be improved, our production rates accelerated and our modernization programs enhanced.

But to add an additional $8 billion to this mammoth sum, over and above the budget, is just too much to accept.

I understand the need to fund the already approved pay increase. I recognize the need to provide for a realistic inflation rate. But I do not accept the proposition that the President has submitted to the Senate a budget that is so woefully inadequate that we must add $8 billion to it. If increases are necessary for military pay and inflation, then we must find less critical areas to reduce spending at the same time. In a budget that has exploded by $38 billion in one year, surely no one can argue without some hint of discomfort that there is no room for more savings.

We cannot have two definitions of discipline in this country—one for the domestic agencies, the other for defense and foreign aid. If all Americans have been called on to sacrifice, then all agencies must share in the cost-cutting effort.

This bill gives the appearance that the Senate has a double standard—anything for defense without question but the most careful scrutiny of all domestic programs. In fact we should apply the same standards of questioning and investigation to the defense budget as the domestic budgets. We must be fair and evenhanded.

One of the worst aspects of this bill is the more than $100 million included in advance funding for potential overruns in the MX and the B–1. This precedent-setting provision removes any basis for discipline in defense contracting. It hands the contractors $100 million above the cost provided in the contract, above inflation—beyond what the President, the Secretary of Defense or the Air Force called for. Such a practice will hurt the budget and actually weaken our military by destroying the incentive to hold down exploding procurement costs.

Madam President, if this bill comes out of conference with the House at a level reasonably close to the President's request, and with the advance overrun deleted, then I will join in its final passage. But I cannot vote for this measure so far over budget and, at the same time, vote against other budgets over budget. There must be consistency in our budget process and that consistency demands that we treat all budgets alike. If they are over budget, they should be rejected by this body.

Madam President, it has been a long, grueling week, and while I could not vote for the final product, I commend my friends for their excellent handling of this bill. Indeed, I commend all my colleagues for the care and diligence with which they participated in this debate.

But I believe history will view it as a regrettable week because in this $208 billion bill, the largest appropriation for the Department of Defense in our history, we have shortchanged our defenses.

Instead of producing a balanced bill that would have carefully shored up the weaknesses in our strength—whether they were real or perceived—we have added to those weaknesses.

Instead of providing the President with the conventional manpower and equipment needed to project our presence into such vital areas of the world as the Persian Gulf, we have reduced those forces from the March budget and from the Senate authorization bill, before conference.

Instead of pushing ahead with the development and procurement of a major new weapon, the Stealth bomber, that uses the kind of advanced technology that has been the genius of America, we have taken actions which will slow that plane's development and instead build a 10-year-old bomber that will be obsolete within a few years after it is operational.

Instead of stopping the development of an MX missile until we know how it will be based, we are continuing to allow the missile to drive the basing mode and drive our strategic nuclear policy.

We have truly lost control over the MX missile. The missile size will decide the basing mode, instead of the basing mode affecting the missile's configuration.

Instead of forcing the administration to make a final decision on that MX basing mode, we shall continue to pour hundreds of millions into more studies. If studies could frighten the Russians, they would be quaking in their boots.

Also, this bill detracts from our strength at the same time it appropriates some $7 billion more than President Reagan requested. In fact, if the President is sincere in keeping the appropriations total within the guidelines he has established, he should veto this bill.

Many of us have not been very successful in having our ideas included in this bill.

What we have done successfully, however, is show that there is an alternative which says yes to readiness, yes to conventional strength, yes to rapid deployment, yes to the advanced technology bomber while saying "no" to second rate or wasteful nuclear systems.

I have no doubt of the sincerity of my colleagues who have succeeded in fashioning the kind of defense bill they wanted. I realize they believe they have fashioned a bill that will best protect the interests of the United States. I do doubt that the protection provided is the best protection or the most efficient protection.

I fear that by this bill we have distorted our Armed Forces by placing far too much reliance on the militarily inferior nuclear deterrent and far too little reliance on the conventional military strength that I think will be necessary to protect our national security without our having to resort to nuclear threats to deter aggression.

One of the most disappointing votes was the loss of the Proxmire amendment to strike the cost overruns actually built into the MX and B–1 by the bill.

The debate on this bill focused on militarily inferior and poorly conceived B–1 and MX nuclear systems against important military readiness needs.

Although the votes were lost, I believe the debate was useful. But the votes on those key issues being what they were, I cannot vote for final passage despite many good and needed other aspects of the bill.

Mr. LEAHY. Madam President, consideration of H.R. 4995, the fiscal year 1982 Defense appropriations bill, represents the first critical legislative test of the Reagan administration 5-year, $1.5 trillion defense plan.

The administration's plan is, by all accounts, extraordinarily expensive. If adopted in full, the $1.5 trillion defense program will have far-reaching effects on the Nation's economy and on nondefense Government services. It will place tremendous demands on our Nation's economic resources, effecting dramatic shifts in private sector investment patterns. If approved in full, it will force a wholesale reordering of national budget priorities.

The economic and spending priority issues raised by this bill, though vitally

important, must not be debated to the exclusion of critical defense policy questions. This bill in effect demands that we pass judgment, today, on a military strategy which will govern for decades our search for peace and security in this perilous age.

Madam President, I identify five fundamental questions which must be addressed as we shape the fiscal year 1982 Defense appropriation bill:

First. National security cannot be divorced from a vital and prosperous economy. Can the enormous Defense budget before us—$8 billion higher than the administration's September request—be financed without incurring enormous future budget deficits, and higher inflation and interest rates, and without substantially depressing the standard of living for millions of Americans?

Second. Will the commitment of vast funds for such programs as the B–1 bomber and deployment of MX missiles in hardened silos provide adequate long-term protection against the Soviet nuclear threat, and will expenditures here deflect funds needed to move ahead rapidly with the next generation of strategic weapons, such as the Stealth bomber?

Third. Do the proposed budget allocations provide sufficient support for force readiness, manpower and training, and supply requirements, or will these relatively "unexciting" components of an effective military establishment again be shortchanged at the expense of costly and untried strategic systems?

Fourth. Has every effort been made to eliminate cost overruns, and to reform wasteful procedures so frequently found within the Defense Establishment?

Fifth. Have we paid proper attention to the need for balance between nuclear and conventional forces, and to the implications inherent in the expansion of our nuclear deterrent on prospects for fruitful negotiations with the Soviet Union to curb the arms race?

Drafting a Defense appropriations bill which strikes the proper balance between competing economic and defense needs is never easy. Given the present budget squeeze, and faced with an alarming Soviet arms buildup, the task is particularly difficult this year.

On the one hand, I believe strongly, very strongly, that we must be unswerving in our commitment to a strong defense which will protect our Nation's vital interests. Our defense capability must assure our allies, and warn the Soviet Union, that we will not surrender our freedom or compromise the safety of the free world.

On the other hand, we must not, through excessive defense expenditures, compromise our Nation's economic strength and the well-being of the American public.

I believe the Reagan administration defense plan, at a cost of $1.5 trillion, upsets the proper balance between economic and defense needs, and exceeds the limits of an affordable military strategy.

The administration defense program cannot be evaluated in military terms alone. The national security implications of its effects on the economy, and on nondefense Government services, cannot be ignored.

The $1.5 trillion Reagan administration defense plan was first proposed in March when hopes for "supply-side" economic miracles were running high. The President acknowledged from the outset that his defense plan would be costly—that it would be financed, at least in part, by shifting Government funds from domestic program areas to our national defense. The loss of domestic services was to be minimized, according to the President, by the dramatic growth in Federal tax revenues expected from his supply-side tax cuts and economic policies.

What has happened since March?

The administration's forecast of 5.2 percent economic growth (real GNP) for 1982 has declined to 4.1 percent, to 2 percent, to 1 percent, and we are now mired in a deep recession with no recovery in sight.

The administration's forecast of millions of new jobs and 7-percent unemployment has been abandoned as the unemployment rate has soared to 8 percent. More Americans find themselves jobless today than at any time since the Great Depression of the 1930's.

Although interest rates have eased in recent weeks as the recession has deepened, mortgage rates and other interest rates remain well above last year's levels and well above the single digit levels forecast by the administration in March.

What are the implications of this dire economic news for the budget, and for our ability to afford the Reagan administration defense buildup? I believe the implications are critical, if not catastrophic. We are misleading the American public if we pretend we can afford this defense program given the many failings of current economic policy.

In March, the Reagan administration predicted budget deficits of $42.5 billion and $22.9 billion in fiscal years 1982 and 1983, respectively, and a budget surplus of $0.5 billion in 1984. These optimistic deficit projections were questioned by me and others who felt they could not be achieved given the administration's commitment to a $1.5 trillion defense budget and a $750 billion tax cut.

It is no surprise to me, therefore, that rising unemployment, high interest rates, and the current recession have combined to produce dramatically higher Federal budget deficit estimates.

To be more specific, the five leading private economic forecasters now believe a $90 billion deficit in fiscal year 1982 is more likely than the $43.5 billion deficit forecast by the administration in March. They predict a fiscal year 1983 deficit of $120 billion. And they believe the balanced budget the President has promised for 1984 will give way to a deficit of $130 billion more.

Madam President, without major change in the current administration's economic policies, without improvement in the $300 billion budget deficit outlook, I submit that we cannot afford a $1.5 trillion defense program. The high interest rates and inflation that result from deficit-financed defense spending of this magnitude would far outweigh the national security gains. The declining American productivity and competiveness in world economic markets which would result from the diversion of hundreds of billions of investment dollars into weapons stockpiles would undermine our economic strength and our national security.

The implications for domestic government services of a $1.5 trillion defense program at a time of soaring budget deficits are equally troubling.

In March, with rosy economic forecasts, the administration proposed an increase in the defense share of our national budget from 24 to 32 percent by 1986. The share of spending for the environment, for education, training, and employment, and for other nondefense needs would have been cut in half under the March budget proposals. As the economy has faltered and the deficit projections swelled, the pressure on the nondefense areas of the budget has intensified.

The President has not yet acknowledged the reality of the $300 billion deficit problem he has created. He has, however, reconfirmed time and again, his unwillingness to reconsider his $1.5 trillion defense plan or his $750 billion tax cut.

The implications of the President's current position are frightening. Either he must propose another $300 billion in domestic spending cuts—cuts which would literally dismantle the Government and break faith with the millions of Americans who depend upon Government retirement, health, housing, and food benefits. Or, he must accept huge deficits and the soaring interest rates and inflation that inevitably accompany such deficits. This is not a "zero sum game" we are playing. It is a negative sum game.

Madam President, the ongoing battle between Congress and the President over 1982 spending levels illustrates the painful tradeoffs between defense and domestic budget needs that have been virtually assured by the Reagan economic policies. Last week the President vetoed the $428 billion continuing appropriation resolution because it fell $2 billion short of his goal for 1982 spending cuts. The defense spending level recommended in the bill he vetoed was $196 billion. The Defense appropriations bill before us today recommends $208.5 billion for defense—some $12.5 billion more than the bill the President vetoed, and nearly $8 billion above his own September defense spending proposal.

Will the President veto this bill if we approve it in its present form? Will he sign this bill, and propose additional cuts of $8 billion or $12.5 billion in domestic programs? Or is the President willing to accept another $12.5 billion in budget deficits, as long as they are incurred in meeting defense, and not domestic spending requirements.

I do not know the answers to these questions. I do know that we are facing budget deficits in excess of $300 billion over the next 3 years. I do know that cuts in domestic programs beyond the

$31 billion already approved cannot be achieved easily or painlessly.

We must acknowledge these facts. We must acknowledge that soaring budget deficits, and growing public and congressional opposition to further domestic budget cuts, raise serious questions about our Nation's willingness and ability to support a $1.5 trillion defense budget over the next 5 years.

In 1982, faced with a deficit projection of $90 billion plus, can we afford a defense bill which is $8 billion above the President's request?

In 1986, when revenue loss from the Reagan administration tax cut reaches $255 billion a year, can we afford a defense budget of $350 billion?

I think not. We cannot overlook today's economic and budget realities. We must adopt a defense budget which is strong, and yet one which is affordable—one which will not bankrupt our economy and decimate Government services. We must avoid the tremendous waste that will follow if we ignore today's realities and embark upon a boom and bust cycle of defense expenditures.

History instructs us that societies can eventually weaken themselves as easily by neglecting the well-being of their people as by foregoing increased expenditures on armaments. I am distressed to think that the next generation of Americans may lack in education, in good diet and health care, and in access to basic human services that they need to sustain our political process and economic system. In such a case, it will do no good to compensate for such deferences by putting an enormous arsenal of destructive weapons at their command.

Madam President, the second of my major concerns with the spending bill is this: Does it allocate funds in a manner most consistent within our actual defense requirements?

I think not. Consider the examples of the B–1 bomber and the MX missile. Construction and deployment of these weapons will not, in my view, add substantially to our defense strength. And yet the cost of these weapons is enormous. I am convinced that the billions we would spend on the MX and B–1 are better spent on other more necessary, defense needs. I supported amendments to transfer these funds within the defense budget.

A brief commentary on the military worth of these weapons is in order.

First, a fundamental question: Is the B–1 bomber viable?

Advocates of the B–1 believe it would preserve maximum control over the decisionmaking process leading up to a nuclear exchange. This is so, they point out, because the B–1 could be used instead of missiles which we could launch but not then recall. Proponents of the B–1 believe it has performed well in tests and could be available for military use within 3 years.

Maintaining maximum control over the nuclear decisionmaking process is an important consideration, but I must take exception to claims that testing of the B–1 has proven its merits.

The B–1 is extraordinarily costly and projected costs are rising steadily. Estimates have gone from expensive—$200 million per aircraft—to outrageous—$400 million per plane in a single year. Many experts believe that the B–1 will prove to be a vulnerable aircraft. They believe its large size, its poor maneuverability at low altitude, and its electronic emissions make it easily detectable by enemy radar. The Pentagon recently conceded that after 1990 the B–1 bomber may no longer be able to penetrate Soviet air defenses—that pilots assigned to them would in effect be subjected to suicide missions.

Many of these aircraft would have only a couple of years of useful life as a penetration bomber. By proceeding with a $40 billion program to purchase 100 or more B–1 bombers, moreover, we are likely to siphon off funds needed for development of technology for the Stealth or other advanced penetration bombers.

By the Department of Defense's own admission, the B–1 bomber may be able to penetrate Soviet defenses no better than B–52's. It makes no sense to me to invest huge sums in a new strategic bomber which cannot meet defense requirements for more than a few years. It is small comfort to hear proponents advise that the B–1 will have a long afterlife as a conventional bomber. Why spend up to $400 million for such a plane when bombers which cost between $10 million and $30 million would do quite as well?

This bill also recommends that we proceed with another extremely expensive strategic weapons program—one which is equally limited in the number of years of enhanced defense capability it will purchase.

On October 21, 1981, President Reagan announced that he would abandon President Carter's proposal to deploy some 200 MX mobile missiles in 4,600 shelters to be built in Nevada and Utah. Instead, the President proposed to construct 200 missiles, of which 100 would be deployed during the next decade. The first group of missiles—between 38 and 50, would be placed in existing Titan and Minuteman silos.

Would such missiles in hardened silos survive a pre-emptive strike? The debate rages. Some experts doubt whether the United States or Soviet missiles systems would meet the expectations of pinpoint accuracy claimed by their creators. One theory is that launching one of the missiles in "real life" through the magnetic field over the North Pole will deflect missiles from their targets, and thus that East-West tests to demonstrate accuracy do not count for much. Others claim that silos hardened to 5,000 pounds per square inch would adequately protect missiles for the next decade. Reducing inaccuracies in bombing from 6,000 to 300 feet took 10 years, they point out, and further reductions will prove extremely difficult.

Other experts are not as quick to dismiss the threat of Soviet missiles. Intelligence technicians increasingly tend to accept reports that pinpoint accuracy claimed for Soviet inertial guidance systems are founded in fact. They suggest that we have no alternative to the Carter shell game proposal, unless we develop a feasible airborne missiles launch system, or bury the missiles in deep silos on the south side of our western mesas.

In fact, none of the proposed alternatives may work. Airborne and deep silo options have been rejected many times by the Pentagon. Hardening the silos may also prove futile. The Secretary of Defense has conceded that the advantages of hardening will be negated by improvements in Soviet missiles within 7 years.

Given these considerations, I believe we are ill advised to embark on this costly program. By pursuing this stopgap measure, we reveal the poverty of our strategic thinking on defense matters. We throw a great deal of money at an inadequate solution, and we deny resources urgently required to develop new and more durable strategic answers to our defense crisis. We should instead provide only such funds as are needed to continue to development of the MX pending agreement on an effective and affordable basing mode or limitations through a bilateral arms control treaty with the Soviet Union.

My third central concern with this defense bill involves the question of readiness. Simply put, are our military forces equipped to protect our vital interests around the world under a wide variety of possible combat conditions? Can we sustain a "theater" campaign for a year, or even a month, without running dangerously low on essential spare parts? Can our armed services handle our extremely sophisticated "big name" weapons effectively, avoiding numerous logistical problems stemming from their complexity and special uses? Can we deploy a credible force to defend our interests in the Persian Gulf or assist our friends in the Pacific? Could we do both simultaneously?

An unsettling amount of evidence indicates that we cannot do some of these things well and that some cannot be done at all.

We are all familiar enough with the horror stories about chronic shortages of spare parts and about inadequate budgets for training. We hear all too frequently of mechanical and performance problems with our newest generation of tanks and other tactical weapons. We have given in too often to the temptation to develop new weapons too sophisticated and too complicated for use under conventional war conditions. We have reduced the effectiveness of several key weapons systems while plunging ahead with plans to spend heavily on the "weapons of the future." It is intolerable that we must tear down new F–16's to obtain spare parts. It is unacceptable that we must tolerate breakdowns in the M–1 tank every 200 miles, that we must reduce the ammunition stocks of many military units to dangerously low levels, and that we ask our reserve forces to get along with worn-out equipment. It is intolerable that two-fifths of our advanced fighter aircraft are often out of service at any given time, and that the world's largest military vessel—the *Nimitz*—travels the seas 2,000 men under complement.

While we conjure up new ways to spend billions on the development and deploy-

ment of strategic weapons, we have scrimped on money needed for training personnel assigned to critical duties in our defense network. Some of the statistics concerning readiness are worrisome. The backlog in real property maintenance and repair funding has expanded sharply from $2.32 billion in fiscal year 1978 to a projected $3.55 billion by the end of fiscal year 1982. Real property maintenance, as the appropriations committee has aptly noted, has been neglected for so long, and the backlog is accelerating at such a rate, that if definitive action is not realized this fiscal year, allocation of funds for repair and maintenance of these resources in the future may no longer prove cost effective.

In 1981, we spent as much on cost overruns for new systems—$4 billion—as we did for the Army's central supply and maintenance program. For the projected cost of $400 million for a single B–1 bomber, we funded during fiscal year 1981 three-fourths of the Army's real property maintenance program in the United States, or the Navy's flight training program almost twice over. For the cost of four such proposed aircraft we ran the entire Marine Corps program in fiscal year 1981.

We are too ready to commit our limited resources to enormous new weapons systems, and far too reluctant to spend for the requirements of our armed services.

Fourth among my chief concerns with this appropriation bill is the persistence of defense waste and fraud.

I am deeply disturbed that our effort to increase our military strength has not been matched by a dramatic effort to cut waste, fraud and mismanagement in the defense budget. The waste and fraud amendment I offered would have eliminated just $200 million in waste from this bill, but it would have been an important first step.

Defense contractors have too often been encouraged to bid low on contracts with every assurance that price increases would later be allowed. Our military establishment has compounded the problem by "gold-plating," or inserting and paying for improvements after a contract has been awarded. Finally, there are simply too many instances in which contracts have been awarded without competitive bidding. Last year alone 37 major weapons systems under contract to the Department of Defense produced $4.3 billion in cost overruns. This translates into a 29-percent rate of increase per weapon after deducting the rate of inflation. This must stop.

Finally, and perhaps most important, I believe this bill fails to achieve the proper balance that must exist between conventional and nuclear forces. The implications are troubling for our national defense requirements, and for prospects of successful arms controls talks with the Soviet Union.

Can we project a credible conventional strategy in a war mercifully limited at the outset to conventional forces, or must we "go nuclear" to avoid the possibility of the defeat of our armies in Europe or Korea, or the loss of vital interests in other parts of the world? Evidence suggests that a serious imbalance exists between the Soviet bloc's enormous conventional forces in Europe and those under NATO's command. In neglecting our conventional strength, we raise the danger that we might be forced to "go nuclear" almost immediately to meet Soviet invasion challenges in Europe.

The President's effective and welcome speech on November 1, offered to forego deployment of 464 cruise missiles and 108 of the next generation of Pershing medium range missiles in Europe if the Soviet Union would remove 550 SS–20's, SS–5's, and SS–4's from their European launch pads. The President's offer marks a realistic inauguration to the Geneva arms talks which began this week.

Many of our allies and certainly the Soviet Union will conclude that one factor in the President's call for a substantial reduction in arms is his recognition that we cannot spend the enemy into submission.

The $1.5 trillion 5-year defense plan he has proposed was to be financed by a vigorously expanding economy: We are tumbling into recession. The industrial base which he is asking to manufacture an enormous range of new strategic weapons may not be able to do so—and, if it does, it will to the detriment of much of the rest of our industrial base. The marginal value of each new strategic weapon added to our already bloated arsenal of nuclear weapons and delivery systems is minimal. Worst of all, each new system we purchase for ourselves prompts an immediate and equal Soviet response, so that both superpowers opt for guns over serious domestic needs.

Of course, we cannot weaken our military power in the frail hope that the Soviet leadership will join us in a spontaneous move toward disarmament. This will not happen. We can, however, take steps to reduce the chance that we will raise the likelihood of nuclear war and undermine our economy in the pursuit of legitimate defense interests.

Modernization of our conventional forces is one important step we must take. Research and development should be accelerated. Our existing fleet of B–52 aircraft should be equipped with cruise missiles if necessary until more advanced bomber technology, such as the Stealth, is available. The construction of lighter submarines equipped with highly accurate short- and medium-range missiles should be considered before launching a new generation of large, expensive, and possibly less effective boats.

There are no easy answers, but we can and must dramatically improve the management of the Defense budget. We must keep our defense outlays in line with our economic resources. We must forego deployment of massive new strategic systems until we have a more compelling justification than has been put forward until now. We must look again at our readiness problems. We must get a handle on these egregious cost overruns. And finally, we must take a good hard look at the implications of accelerated defense spending on the prospect for our single most important task—the avoidance of a nuclear holocaust.

We enter a winter of increasing discontent about rising unemployment and a faltering economy, about valuable social programs abandoned or eviscerated, about the insensitivity of our political institutions to the Americans' fears of nuclear war. If production of the B–1 and deployment of the MX stand as hostages to a faulty assessment of our defense needs, the idea that we can spend the Soviets into second-class status reflects a misreading of history. A younger generation is demonstrating in Europe against nuclear madness, and our counterparts will join them soon enough. It will not be enough to take shelter behind a trillion dollar defense program, or to explain later that in fueling the arms race we meant only to insure our safety. A sense of proportion must be demanded. There is no better place to begin than with the Defense appropriations bill now before us.

Madam President, in conclusion, this bill presents the Senate with an impossible choice. There is no justification for spending $208 billion this year, and $1.5 trillion over the next 5 years on national defense. We are misleading the American public if we pretend we can afford a defense buildup of this magnitude given the current Reagan administration economic policies.

At the same time, the bill contains much which is essential to our national security and must be supported.

It is my strong hope that the conference with the House of Representatives, which has already passed a $196 billion Defense appropriations bill, will result in a bill which is affordable, and which is more responsive to the concerns I have raised on the issues of readiness, conventional and strategic balance, and Defense waste and fraud. While the Senate will pass a much larger Defense bill tonight, all of us know we must reach a dollar amount much closer to that of the House of Representatives.

I hope the President joins the conferees of the two bodies in working toward a final Defense bill that answers the real military security needs of our country—without seriously undermining the economic security of the Nation. It can be done so long as the Pentagon realizes it, too, has an obligation to give the taxpayers their money's worth. It can be done with a realization that the basic and proven defense systems are often more valuable than the exotic and unnecessarily expensive ones.

And last, it can be done when we realize that true security will come about for the United States—and the rest of the world—only when we have real, bilateral, nuclear arms reduction between the superpowers. I am convinced that virtually all my colleagues—of both parties—agree on these basic points.

Mr. BRADLEY. Madam President, I will vote in favor of the defense appropriations bill because I believe America needs to improve its military posture. I am also concerned, however, that the mix of programs funded in this bill is neither the best nor the most efficient means to achieve that goal.

Genuine improvements in military posture can be achieved only through a

sustained enhancement of our defense capability. This, in turn, requires a strategy for defense that serves our most important foreign policy and national security objectives.

This administration has yet to articulate such a strategy for defense. Without that, how can Congress judge whether this bill's allocation of our defense resources adequately serves our Nation's security interests?

To help the administration develop an effective defense policy, I offered an amendment that would have focused attention on the tough choices we must make in setting our defense priorities at a time of fierce internal competition for resources and fierce economic competition from abroad.

When our present alliances were formed, America did not need allies as much as they needed America. That situation has changed radically. Countries that used to be economically and militarily dependent on us are now our keenest competitors in international markets. In view of this shift, we must reassess our roles in, and responsibilities for, the defense of Western Europe, Northeast Asia, and the Near East. This reassessment should take place before we become committed to a particular set of defense programs and weapons systems.

It is clear that the United States no longer has enough resources to defend independently all Western interests that will be threatened by Soviet power in the late 1980's and early 1990's. Therefore, we must concentrate improvements in our military capability. Either we must do more to help our allies deter Soviet attacks in Western Europe and Northeast Asia, or we must do more to defend friends and assets in the Near East. To do that, the United States, its NATO allies, and Japan must agree on a redistribution of responsibility for defending our collective security interests in these regions.

The United States has belatedly recognized that we must give priority to securing a sustained flow of oil from the Persian Gulf to the industrialized democracies. America has a comparative advantage in deterring Soviet aggression in this region and in defending Western interests there. For this reason, we should concentrate our military improvements in the Near East. This means allocating a growing share of resources to the rapid deployment force which so far exists largely on paper only. It also means that Europe must contribute more to NATO, while Japan must assume a bigger role in Northeast Asia. In the absence of this redistribution of the collective defense burden, American forces will be spread dangerously thin.

The administration has not conducted a sharply focused analysis, and this appropriation bill reflects the absence of a coherent view of our vital interests and the factors most likely to threaten them in the coming decade. The bill funds additions to a hodge-podge of programs, unduly fattening some while starving others.

In particular, I am concerned about the readiness of our general purpose forces. This bill does fund substantial additions to readiness accounts. That is good. But I have doubts that those funding levels will be maintained. This bill uses inflation assumptions which, while more realistic than the President's, are still likely to seriously understate inflation in the defense sector. Nor do I believe Congress will increase defense spending to accommodate inflation. Rather, the Defense Department will have to absorb inflation within existing budget levels. If the past is any guide, they will respond to funding shortfalls, not by making the tough decision to cut certain programs and shut down production lines, but by shortchanging the readiness of our general purpose forces.

There already is a serious question about our forces' capacity for a timely, effective, and sustainable response to the most likely military threats. The reason is that we have historically underfunded essentials like spare parts, major overhauls and operation and maintenance activities. And we have subordinated readiness, mobility and sustainability to weapons procurement.

This trend must be reversed. Accordingly, I supported several amendments that would have insured improvements in the readiness of each of our Armed Services. And I voted to pay for these improvements by transferring funds from the B–1 bomber program. While persuasive arguments have been made for this bomber, I believe readiness must be at the top of our list of priorities. Without readiness, deterrence is a sham.

I also supported using funds from the B–1 program to accelerate development of our advanced technology bomber, the so-called Stealth. On the basis of extensive information which the Pentagon submitted to Congress, I have concluded that allocating more resources to Stealth will strengthen the U.S. strategic bomber program. The Stealth will be far more effective than the B–1 because its advanced technologies will make it virtually undetectable by radar and make Soviet air defense obsolete.

In a world of infinite resources we might go forward with two bomber programs. But in the real world, where resources are all too limited, there are large opportunity costs to pursuing both. The B–1 will cost between $20 and $40 billion. Given these costs, a decision to develop the B–1 is likley to end up delaying the deployment of Stealth or depleting the strength of our conventional forces.

Because all these amendments were defeated, we are left with a bill that places excessive emphasis on strategic nuclear programs at the expense of improving our conventional forces.

My concern with this bill's allocation of our defense resources is heightened by my concern for the well-being of our economy. Improving our military posture over the long haul requires a sound economic base and good prospects for future growth. This is essential to an enduring public acceptance of the costs of a sustained defense buildup. Without a consensus for more defense spending, we will be unable to avoid the cycles of boom and bust that have impaired readiness and increased costs in the past.

The amendment I introduced would have required the President to do four things: First, to anticipate the implications of both low economic growth and high inflation for the administration's defense policies and programs; second, to consider what alternative economic strategies the administration would pursue if we have a protracted recession or rampant inflation; third, to identify the adjustments to our military strategies, programs, and requirements that would be needed if the economy continues to perform badly; and fourth, to report these findings to Congress by January 31, 1982.

My purpose in offering this amendment was to insure that our economic policies will, in fact, allow us to finance the level of defense spending our national security requires. I do not believe the administration's present policies will do that. When the President's budget is fully implemented in 1986, he will have cut taxes by over $750 billion, raised military spending by over $180 billion, and cut civilian programs by no more than $130 to $140 billion. Even if he gets all these civilian cuts, which is unlikely, they still are not large enough to do the job. This means some tough choices in the months ahead. If the budget is to be contained even at levels previously held unthinkable, defense will have to be cut, more revenue will have to be raised, or there will have to be some combination of cuts and tax increases.

Our ability to make these choices wisely and to strike the right balance among competing economic and military claims will be greatly enhanced if we plan for them in advance. We should not indulge the dangerous illusion that we cannot afford the defense effort our security requires. At the same time, we must adopt the economic policies that will permit us to finance defense without causing inflation to surge.

I see little indication that we or the administration are willing to face up to these realities. We are planning for defense in an economic vacuum. And we have enacted fiscal and monetary policies that put our defense budget in jeopardy.

Despite these and other reservations—ranging from the total size of the budget to its component parts—I will vote for the defense appropriation bill. For all its shortcomings it does compensate for past deficiencies in funding key programs. While I might prefer a slightly different resource allocation within the defense budget, it does spend dollars on many personnel and weapons systems which are essential to our national defense. Therefore, on balance, I must support the legislation and I am hopeful that when we take up the 1983 budget and 1982 defense authorization and appropriation bills we will adopt a more thorough and more comprehensive approach to our national and economic security.

Mr. STEVENS. Madam President, I ask for third reading.

The PRESIDING OFFICER. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass? The yeas and nays have been ordered. The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from New Mexico (Mr. DOMENICI), the Senator from Arizona (Mr. GOLDWATER), the Senator from California (Mr. HAYAKAWA), the Senator from New Mexico (Mr. SCHMITT), and the Senator from Wyoming (Mr. WALLOP) are necessarily absent.

I further announce that, if present and voting, the Senator from New Mexico (Mr. DOMENICI) and the Senator from Wyoming (Mr. WALLOP) would each vote "yea."

Mr. CRANSTON. I announce that the Senator from Delaware (Mr. BIDEN), the Senator from Arkansas (Mr. BUMPERS), the Senator from Arizona (Mr. DECONCINI), the Senator from Louisiana (Mr. JOHNSTON), the Senator from Michigan (Mr. RIEGLE), and the Senator from South Carolina (Mr. HOLLINGS) are necessarily absent.

I further announce that, if present and voting, the Senator from Delaware (Mr. BIDEN), the Senator from Michigan (Mr. RIEGLE), and the Senator from Arizona (Mr. DECONCINI) would each vote "yea."

The PRESIDING OFFICER. Are there any other Senators in the Chamber wishing to vote?

The result was announced—yeas 84, nays 5, as follows:

[Rollcall Vote No. 456 Leg.]

YEAS—84

Abdnor	Ford	Mitchell
Andrews	Garn	Moynihan
Armstrong	Glenn	Murkowski
Baker	Gorton	Nickles
Baucus	Grassley	Nunn
Bentsen	Hart	Packwood

Hatfield	Pell	Tsongas
Levin	Proxmire	

NOT VOTING—11

Biden	Goldwater	Riegle
Bumpers	Hayakawa	Schmitt
DeConcini	Hollings	Wallop
Domenici	Johnston	

So the bill (H.R. 4995) was passed.

Mr. STEVENS. Madam President, I move to reconsider the vote by which the bill was passed.

Mr. TOWER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. STEVENS. Madam President, I move that the Senate insist on its amendments and request a conference with the House of Representatives thereon and that the Chair be authorized to appoint conferees on the part of the Senate.

The motion was agreed to, and the Presiding Officer (Mrs. KASSEBAUM) appointed Mr. STEVENS, Mr. WEICKER, Mr. GARN, Mr. MCCLURE, Mr. SCHMITT, Mr. ANDREWS, Mr. KASTEN, Mr. D'AMATO, Mr. RUDMAN, Mr. STENNIS, Mr. PROXMIRE, Mr. INOUYE, Mr. HOLLINGS, Mr. EAGLETON, Mr. CHILES, Mr. JOHNSTON, and Mr. HUDDLESTON conferees on the part of the Senate.

Mr. BAKER. Madam President, the Department of Defense appropriations bill was a difficult and lengthy consideration for the Senate. It occupied 5 days of the Senate's agenda, occupying over 40 hours of floor time, including 26 rollcall votes and 47 amendments.

The hardship involved in this bill is best known by the managers of the bill, the distinguished assistant majority leader Senator STEVENS, and the distinguished senior Senator from Mississippi, Senator STENNIS. I wish to extend my appreciation and gratitude to both Senators for their tireless efforts this week. Senator HATFIELD, the distinguished chairman of the Appropriations Committee, and Senator PROXMIRE, the distinguished ranking member, also contributed to the bill's passage, and they have my sincerest thanks as well.

This was an emotional and complicated measure; I am indebted to all Senators for their cooperation.

Mr. STEVENS. Madam President, I yield to the Senator from Texas.

Mr. TOWER. Madam President, as the chairman of the authorizing committee for this appropriation bill, I have rarely seen anything to equal in this body the skillful job the Senator from Alaska has done in the management of this bill. He has been evenhanded and even tempered. He has tolerated my presence here and my concern. He has done a splendid job. He has sustained in splendid fashion the policy of this administration of rehabilitating the defense capability of the United States of America.

Not only do the Members of this body, but everyone in the country, owes him a great debt and I commend him and thank him.

Mr. STEVENS. Madam President, I thank the Senator from Texas for that exaggeration. I do wish to say that the gentleman who is in the Chamber, the Senator from Mississippi, with whom both the Senator from Texas and I have served our apprenticeship, is the man who spent more time on this floor on defense matters, I think, than any other Senator in this decade, if not in this century.

He has guided us well and he has been of sound and firm counsel.

He is not only a firm friend, but a strong supporter. I think we are all indebted to him for the long hours that he continues to put in on defense matters, and I am grateful to him for his support.

Madam President, I yield to the Senator from Oregon.

Mr. HATFIELD. Madam President, I voted no on the defense appropriations bill, but I do not want it to be reflective of my view concerning the managers of the bill or the chairman of the Armed Services Committee, because these gentlemen, Senator STEVENS, Senator STENNIS, and Senator TOWER, have all labored diligently in a direction pursuing a philosophy and a policy they deeply believe in, and I respect and admire their perseverence.

I have been in the role of the adversary. I have been rolled over every time, but at the same time I can rise at this moment and say that they are good adversaries and they are men of great patriotism and men of great principle.

I just wish to pay my tribute to them in spite of the fact that I think the bill is wrong and I think their position is wrong, but they are indeed very outstanding Senators.

Mr. STENNIS. Madam President, if the Senator will yield to me briefly, I thank him very much for the sentiment.

I wish to highly commend the Senator from Texas, the Senator from Oregon, the chairman of our Appropriations Committee, the Senator from Alaska and others who contributed for the fine job that they have done. With the enormous massiveness of this bill, particularly this year with everything else upside down, it is an amazing thing that they have done here. They stayed with it and stayed on the merits.

I count it a privilege to work with them and thank them very much.

Mr. STEVENS. I thank the Senator.

Mr. President, I wish to call the Senate's attention to the fact that we do have a relatively new staff in the Defense Committee headed by Dwight Dyer who is not a stranger to this Chamber. He and his staff, Susan Shekmar, Sean O'Keefe, Wayne Schroeder, Norma Perna, and Mazie Mattson, have done an excellent job on this along with the minority staff, Fred Rhodes and Jane McMullan.

But I do think they deserve a great deal of credit for the detailed work that has gone into this.

I yield to the Senator from California.

Mr. CRANSTON. Madam President, I thank the Senator for yielding.

Madam President, I join in the commendations that have been expressed.

This has been a very difficult bill. This has been a very difficult week. At the same time, I am deeply troubled by one aspect of the debate that we have engaged in this week.

I am not being critical of those who have handled the bill or the leadership on either side of the aisle, and I am not critical of them in what I am about to say.

I jotted on paper what I want to say because I want to choose my words carefully.

During this week of debate the Senate descended into a rancorous partisanship on national defense issues, issues which have traditionally been debated and decided on their merits.

Partisanship on economic and social issues where Senators have deep philosophical differences is understandable, but national defense is different. Every Senator wants America to have a strong national defense. When Senators have disagreed on how best to achieve a strong national defense, those disagreements have seldom, if ever, been partisan in this body.

But for Democratic and Republican Senators alike to be proposing and voting on defense issues consistently on the basis of party is a dangerous trend for the dignity of the Senate and for the security of our country.

To allow the legislating of our defense program to degenerate into a partisan quarrel will inevitably weaken national defense itself.

I am not pointing the finger of blame at any Senators. The entire Senate, myself included, has been caught up in a partisan atmosphere.

To understand the genesis of that atmosphere you have only to look at two developments: First, there is the new practice, begun 3 or 4 years ago, of introducing amendments intended only for use in political guerrilla warfare against Senators who are radical rightwing targets.

Then came extremist organizations like NCPAC, distorting the true meaning of Senate votes and falsely accusing incumbent Senators of being opposed to a strong national defense.

Senators see colleagues who they know—they know—are totally committed to the best possible national defense assaulted by the big lie technique of charges of softness on national security. It is no wonder Senators have become angry and partisan. It has been a partisan and it has been an angry week, and we can blame the politics of rightwing campaign techniques.

I would just like to suggest to my colleagues that we reflect upon this, that we think about what is happening in this body. Again, the leadership on neither side of the aisle and the leadership handling this bill on neither side of the aisle has been responsible for what has occurred in this body. All of us to some degree are, and I just suggest we think about it, and we try to restore a commonality and an absence of partisanship on national defense issues that I fear is slipping through our fingers.

Mr. BAKER. Madam President——

The PRESIDING OFFICER. The majority leader.

Mr. BAKER (continuing). I cannot recall in my 15 years in the Senate a more partisan speech than that which I have just heard, and I regret it, for I disagree with virtually every word of it, and I would not have expected it from the distinguished minority whip.

We have negotiated in 5 days of debate, in 40 hours of deliberation, with 26 rollcall votes, a historic piece of legislation that may indeed set the tone and shape the form of the defense of this country for decades to come. It has been done with conscientious contribution of effort, of insight, of points of view and passion by Members on both sides.

But that, Madam President, is not partisanship. That, Madam President, is in the very best traditions of this body as a public forum for the determination and the formulation of the policies of this Nation.

If, Madam President, the reference is to the fact that in most of those amendments the majority prevailed, then I accept whatever blame the distinguished Senator from California may assign to me, for I have tried throughout my tenure here in these 10 months as majority leader to fashion Republicans into a functioning majority, a group that can work out their differences, that can compromise, and can stand together and support our administration on important issues. I believe we have done that and we have succeeded.

But that is not partisanship. That is the responsibility to govern. That is the mandate of the majority. That is what we understood when the Democrats were in a majority, and that is what I urge that my friend from California understand now.

Mr. HART. Madam President, I supported this legislation. I did so because it is the primary function of the bill to finance the national security interests of this country.

I did so with great reluctance, however, because of two issues. I think we have made a very, very serious mistake in going forward with a weapons system, the B–1 bomber, that was previously canceled, and I think we further complicated one of the most complicated issues in our whole national security structure, and that is the issue of a new land-based ICBM or MX system.

I do not think we clarified that. I think we made it more complicated, and I think both of those decisions will come back to haunt us.

Finally, Madam President, let me just say as a veteran of the campaign of 1980 at least part of what the Senator from California had to say here today is absolutely true. I know as a matter of confirmed fact in the Armed Services Committee of the U.S. Senate and on the floor of the U.S. Senate that votes were set up to be used against candidates in 1980.

I think that is deplorable, and I think the Senator is right on target. The degree to which that practice carried over to this bill I cannot say, but I do know that votes that were absolutely phony as they could be on defense issues were used against me, and I voted in the national security interests of this country when I cast those votes.

So the Senator's argument on that score is well-founded. Whether he is right in terms of its carrying over on this particular piece of legislation I do not know.

The PRESIDING OFFICER. The Senator from Nevada is recognized.

Mr. LAXALT. Madam President, I yield to the minority leader.

Mr. ROBERT C. BYRD. I thank the Chair and I thank the distinguished majority leader.

Madam President, I want to compliment the managers of the bill that has just been enacted, Mr. STENNIS and Mr. STEVENS. They have performed admirably and with a high sense of dedication and purpose. I personally commend and thank them

I also, however, take this moment to make a few observations in consonance with the remarks of the able minority whip, Mr. CRANSTON.

The actions of the majority Republican party in the Senate over the last 2 days on the Defense appropriations bill concern me that the program to rebuild America's defenses is in danger of being stillborn.

The early months of the present Congress witnessed a flood of rhetoric about how past Defense programs of the 1970's had been seriously underfunded, how the Soviets were outstripping us in every category.

More was urgently needed virtually across the board—from beans to bullets to battleships to ballistic missiles and bombers. There was widespread bipartisan agreement with this proposition, and we believe a broad national consensus to support it.

The first authorization bill for defense was passed in May and overwhelmingly endorsed the administration's funding levels.

We were concerned at that time that the necessary details of the programs—what kinds of strategic weapons systems, how large and what kind of Navy, what kind of a presence in the Persian Gulf, for instance—would be filled in in time. Now, it seems that we are being delivered a defense program which is not as advertised.

The strategic decisions—from early retirements of B–52's and Titan missiles, to deferring decisions on an MX basing mode, to an inadequate Stealth bomber program—are such as to lead one to believe the window of vulnerability is being opened earlier and that the current strategic program is fundamentally weak. It may well be weaker than the program proposed by the last administration.

In conventional forces, the original administration budget submission has been scaled down. We are reducing our presence in the Persian Gulf, our Navy may now never reach an adequate size, we have crimped down the readiness of the armed services. We will even be withdrawing troops from Europe.

It is unclear to me how this administration can say it will only negotiate with the Soviets from a position of strength, and allow this inadequate defense bill to become law.

We have attempted, by means of a series of amendments to bring this bill back up to a level closer to what the President originally proposed and the Congress endorsed in May. We have attempted to:

Increase our ability to project forces into the Persian Gulf by adding four new KC–10 tanker aircraft.

Maintain our naval forces at least at the level they were at last summer by insuring that enough money is available for Navy steaming hours.

Insure the major new technological breakthroughs represented in the Stealth aircraft program become reality by in-

creasing the funding for that program up to the level recommended by the program managers.

Reject the diminution in our Army and withdrawal of American troops from Europe just at the moment that sensitive negotiations have begun with Soviets in Geneva.

Add back the necessary money for various readiness functions, for example, ammunition, for the Army—at least closer to the level we endorsed last May.

Adequately fund the B–52 program.

All these amendments were rejected by the Republican majority in a display of complete partisanship. The Nation's defenses are being whipsawed by economic considerations rather than our security needs.

Our defense program is being made to pay for the mistakes of this administration's economic program. We will continue to try to reverse this trend and put into place a strong defense program which more adequately fills the national need.

ORDER VITIATING CONSIDERATION OF S. 881 AND SUBSTITUTING H.R. 4241 THEREFOR AT THIS TIME

Mr. BAKER. Madam President, I ask unanimous consent that the previous order entered in respect to S. 881, the Small Business Act, be vitiated, and that the Chair lay before the Senate H.R. 4241, the military construction appropriations bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LAXALT. Madam President, I yield to the Senator from Oregon.

HERBERT CLARK HOOVER DEPARTMENT OF COMMERCE BUILDING

Mr. HATFIELD. Madam President, I ask unanimous consent that the military construction bill be temporarily laid aside in order to take up another bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HATFIELD. Madam President, I ask unanimous consent that Calendar Order 395, a bill I have offered to designate the Department of Commerce Building in Washington, the District of Columbia, as the Herbert Clark Hoover Department of Commerce Building be laid before the Senate.

Mr. ROBERT C. BYRD. Madam President, reserving the right to object, and I do not expect to object, can we be assured that there will be no amendments offered to this bill?

Mr. HATFIELD. There are no amendments.

Mr. ROBERT C. BYRD. I thank the Senator.

The PRESIDING OFFICER. There being no objection, it is so ordered. The clerk will state the bill by title.

The bill clerk read as follows:

A bill (S. 657) to designate the Department of Commerce Building in Washington, the District of Columbia, as the Herbert Clark Hoover Department of Commerce Building.

The Senate proceeded to consider the bill.

Mr. HATFIELD. Madam President, this matter has been considered by the Senate committee. It is cosponsored by Senator CRANSTON of California, Senator HAYAKAWA, Senator MOYNIHAN from New York, Senator JEPSEN, Senator GRASSLEY from Iowa, Senator PACKWOOD and myself from Oregon.

The Senate and the Congress generally have taken time in our history to recognize the buildings of departments of our Government by naming them for people who have been most instrumental in giving them their greatest and finest and highest leadership.

We have designated the Department of Labor as the Frances Perkins Department of Labor Building. We have designated the Health and Human Resources building as the Hubert Humphrey Building. I think any objective historian will say that the man who developed the Department of Commerce in the history of this Nation more effectively than any other Secretary was Mr. Herbert Clark Hoover.

In fact, one of the great tributes was that all during the Roosevelt administration, and every administration up to Mr. Carter's, his portrait was still hung over the mantle of the Secretary of Commerce's office, personal office, recognizing his great contribution. Only in the Carter administration was it removed. It has now been placed back in that position of honor.

On this 107th anniversary of his birth, I am delighted to offer this bill and have this kind of sponsorship from the Senators from the four States in which he lived.

Madam President, I ask that the bill be adopted at this time.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill (S. 657) was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 657

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Department of Commerce Building at 14th Street and Constitution Avenue Northwest, in Washington, the District of Columbia, shall hereafter be known and designated as the "Herbert Clark Hoover Department of Commerce Building." Any reference in a law, map, regulation, document, record, or other paper of the United States to that building shall be held to be a reference to the "Herbert Clark Hoover Department of Commerce Building".

Mr. HATFIELD. Madam President, I move to reconsider the vote by which the bill was passed.

Mr. LAXALT. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HATFIELD. Madam President, I wish to thank the Senator from Nevada for his courtesy in yielding. I also wish to thank the majority leader and the minority leader for clearing the program for this action at this time and lift the 3-day rule.

MILITARY CONSTRUCTION APPROPRIATIONS, 1982

The PRESIDING OFFICER. The clerk will state the military construction bill by title.

The assistant legislative clerk read as follows:

A bill (H.R. 4241) making appropriations for military construction for the Department of Defense for the fiscal year ending September 30, 1982, and for other purposes.

The Senate proceeded to consider the bill which had been reported from the Committee on Appropriations with amendments.

Mr. LAXALT. Madam President, I am pleased to bring before the Senate H.R. 4241, the military construction appropriations bill for fiscal year 1982. This bill, as reported by the committee, has been carefully reviewed by the committee and contains projects which we believe are necessary and justified for improved living and working conditions for our military personnel as well as for the improved readiness posture so vital to our national security.

Madam President, as with most of the appropriations bills this year, the military construction bill was amended in March and again in September. It is interesting to note that the $7.3 billion request considered by the committee is $700 million below the administration's March budget. The committee has strongly supported these amendments, and the bill includes the changes which were requested.

The bill now before the Senate recommends $7,287,756,000 for military construction and military family housing in fiscal year 1982. The bill as reported is $12.9 million under the President's amended request and is $400.2 million over the House allowance.

Madam President, this bill contains an increase of $1.9 billion over the fiscal year 1981 appropriation. While this appears to be a rather significant increase over last year's bill, it is important to note that the military construction program in the recent past has been used as a balancing tool by the Defense Department in their budget preparations.

We must realize that without the facilities to house and feed our personnel, and without proper facilities to maintain our weapons systems and equipment the Department of Defense would be in a very bad situation. The committee has discovered that in some locations these conditions already exist—we must not let this continue. I believe that this bill is a step in the right direction toward meeting the needs of the military construction program.

Madam President, the bill as reported is within budgetary guidelines with regard to budget authority and outlays.

Madam President, the report that accompanies H.R. 4241, Senate Report 97–271, has been available to our colleagues since November 13. The report contains the detail of the committee actions including a project listing by location. I would, however, like to highlight a few areas which I believe are of significance.

MX missile—The committee considered an amended request of $30.3 million

for facilities to support the MX missile system. Of this request, $19.3 million was for planning and design and $11 million for a so-called MX headquarters at Norton Air Force Base in California. The committee has recommended the Norton facility because even without the MX in the multiple protective mode (MPS) there is a crying need for administrative space to support functions at Norton. The remaining $19.3 million has not been included in the Senate bill because it is the committee's feeling that adequate funds already exist from a previous deferral for any planning and design requirements for MX during fiscal year 1982.

Middle East, Persian Gulf and Indian Ocean facilities—The committee has strongly endorsed, as did the Armed Services' Subcommittee on Military Construction, the administration's request for facilities to support the rapid deployment force. Some $540.9 million is recommended for projects in Oman, Kenya, Somalia, Diego Garcia, Lajes, and Egypt. The national security interests of the United States are directly involved with the flow of oil from these regions of the world, and the United States must have the ability to deploy forces rapidly to the areas if the resources are threatened. The facilities supported in this bill will help to make such a deployment feasible.

Madam President, this bill also includes some $305.2 million for projects to support the Guard and Reserve forces. This represents an increase of $69 million from the budget request, but supports the committee position that the Guard and Reserve components play a vital role in the total force concept of our Armed Forces. The Guard and Reserve components have had enormous backlogs of deferred projects in the past, and this recommendation hopefully will help to reduce some of those requirements.

The family housing account within this bill is recommended at $2.4 billion. This amount is not solely for new construction, but for the day-to-day operation and maintenance of our family housing assets worldwide. This appropriation is vitally important to the quality of life of military personnel who, at times, must reside in locations which certainly do not meet the standard of living which they should be entitled to. The committee has restored $115 million cut by the House from the family housing account.

Madam President, the bill now before the Senate is considered by the committee on a line-item basis. There are approximately 1,000 individual projects which must be considered on their merit. As I said earlier, I believe that the recommendation before the Senate is a good one and solidly justified. It would take us days to detail the projects; therefore, I would ask for the support of my colleagues in passing this bill as reported. I will be pleased to answer any questions my colleagues may have on specific items.

Madam President, that concludes my opening remarks.

Madam President, I ask unanimous consent that the committee amendments be agreed to en bloc, and the bill, as thus amended, be regarded for the purpose of amendments as original text, provided that no point of order shall be considered to have been waived by agreeing to this request.

The PRESIDING OFFICER. Without objection, it is so ordered.

The committee amendments agreed to en bloc are as follows:

On page 2, line 9, strike "$1,029,519,000", and insert "$942,081,000";

On page 2, line 11, strike "$137,550,000", and insert "$139,700,000";

On page 3, line 4, strike "$1,404,883,000", and insert "$1,473,953,000";

On page 3, line 6, strike "$92,500,000", and insert "$83,700,000";

On page 3, line 19, strike "$1,407,565,000", and insert "$1,670,426,000";

On page 3, line 21, strike "$93,000,000", and insert "$89,200,000";

On page 4, line 13, strike "$251,004,000", and insert "$338,315,000";

On page 5, line 11, strike "$385,000,000", and insert "$345,000,000";

On page 5, line 18, strike "$62,925,000", and insert "$67,658,000";

On page 6, line 1, strike "$117,740,000", and insert "$105,140,000";

On page 6, line 8, strike "$59,277,000", and insert "$59,665,000";

On page 6, after line 6, insert the following:

MILITARY CONSTRUCTION, RESERVE COMPONENTS GENERALLY

For construction, acquisition, expansion, rehabilitation, and conversion of facilities for the training and administration of the Reserve components of the Armed Forces, $470,000, to be allocated by the Secretary of Defense for the Army Reserve, and to remain available until September 30, 1985.

On page 7, line 16, strike "$2,223,117,000", and insert "$2,338,536,000";

On page 7, line 20, strike "$260,635,000", and insert "$261,344,000";

On page 7, line 22, strike "$1,814,371,000", and insert "$1,949,581,000";

On page 8, line 9, strike ": *Provided*", through and including the end of line 12;

On page 13, strike line 3, through and including line 21;

On page 13, line 22, strike "120", and insert "117";

On page 14, line 4, strike "121", and insert "118";

On page 14, line 11, strike "122", and insert "119";

On page 14, after line 22, insert the following:

SEC. 120. It is the sense of the Congress that the administration should call on the pertinent member nations of the North Atlantic Treaty Organization and on Japan to meet or exceed their pledges for at least a 3 per centum real increase in defense spending in furtherance of increased unity, equitable sharing of our common defense burden, and international stability.

Mr. LAXALT. Madam President, at this time, I would like to express my thanks to the distinguished ranking minority member of the subcommittee, the gentleman from Tennessee (Mr. SASSER) for his assistance in the consideration of this bill. I am pleased to say that we have worked in close agreement throughout the time during which recommendations on the bill have been made. In addition, I especially want to thank Senator SASSER for his assistance during the hearings held earlier this year on the bill.

Madam President, I yield to the distinguished ranking minority member of the subcommittee, Senator SASSER, for any comments he may wish to make on the bill as reported.

Mr. SASSER. Madam President, I thank the distinguished chairman.

Madam President, I rise in support of H.R. 4241, the military construction appropriation bill. I wish to commend the chairman of our subcommittee, the distinguished Senator from Nevada (Mr. LAXALT) for the leadership that he has demonstrated throughout this year in our subcommittee, with regard to this bill.

Madam President, the military construction budget represents a relatively small percentage of the total Defense budget. But it is an important part of the Defense budget. For without the basic facilities and infrastructure, the Armed Forces cannot perform its mission.

The bill before us today is an historic bill. It represents one of the largest military construction budgets in history. But I would point out that the bill is still $12.9 million under the President's revised budget request.

Among the most important aspects of this bill are the provisions relating to construction in the Middle East/Persian Gulf/Indian Ocean region in support of the Rapid Deployment Force. The committee has provided $540.9 million, the full budget request, for these facilities in support of the RDF.

Madam President, this Nation has assumed a major responsibility for preserving the peace in this important region of the world. The funds in this bill will provide for construction of facilities in Oman, Kenya, Somalia, Diego Garcia, Lajes, Ras Banas, and Egypt. These facilities will provide necessary forward bases in the event the RDF is ever deployed to this region. The existence of these facilities and the ability of the RDF to be deployed efficiently to this region will be a deterrent to hostilities in the Middle East.

Madam President, as the United States assumes new defense responsibilities such as construction of these facilities in the Middle East, it becomes increasingly important that the costs associated with the common defense be shared fairly and equitably by our allies. I am pleased that H.R. 4241 includes a general provision, section 120, which I drafted, which expresses the sense of Congress that our allies should do a better job of providing additional financial resources to meet common defense commitments.

It is my feeling that our allies should be asked to provide a more equitable share of the mutual defense burden in view of the need for budget austerity in the United States and the pledge by our NATO allies to provide for a 3-percent real increase in defense spending. In addition, it should be noted that Japan alone would have contributed $2.4 billion more to the common defense if that nation had achieved a 3-percent real growth in defense spending in 1980.

The United States has assumed the burden of providing forward bases in the Middle East/Persian Gulf/Indian Ocean region in an effort to maintain peace in that vital area of the world. In view of the heavy dependence by our allies on Middle East oil supplies, I believe our

allies should be providing additional financial resources for the common defense in Europe and the Pacific to compensate the United States for the burden of constructing and maintaining these facilities in the Middle East region.

Madam President, I urge adoption of the military construction appropriation bill.

Mr. LAXALT. I thank the Senator.

Mr. JACKSON addressed the Chair.

The PRESIDING OFFICER. The Senator from Washington.

UP AMENDMENT NO. 757

Mr. JACKSON. Madam President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will state the amendment.

The assistant legislative clerk read as follows:

The Senator from Washington (Mr. JACKSON), for himself and Mr. GORTON, proposes an unprinted amendment numbered 757.

Mr. JACKSON. Madam President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 3, line 4, insert the following: under Military Construction, Navy strike $1,473,953,000 and insert in lieu thereof $1,475,813,000.

Mr. JACKSON. Madam President, the amendment I am offering provides appropriations to the Navy for the construction of five family service center projects at a total cost of $1,860,000.

Family service centers are aimed at providing support in order to respond to the changing and increasing needs of Navy service members—needs which when unmet, have been shown to have a major negative impact on retention.

Twenty years ago only 30 percent of military personnel were married. In today's Navy more than 55 percent of all personnel, and 80 percent of careerists are married. And the No. 1 reason married personnel leave the Navy is due to family problems.

Navy studies show that a spouse's attitude is a key factor in a member's decision to reenlist and that Navy life is inherently hard on family life.

Nearly half of Navy wives have reported difficulty in securing needed support services from the Navy. The reason for this difficulty at present is that existing services are inadequate in number as well as scattered.

The Navy has inaugurated a program to broaden the range of services provided. In recognition of the importance of this program, the Navy has dedicated some 600 people to execute the program at the local level. In order to perform these functions in the most efficient manner, it is self-evident that the various services should be provided from a central location. The Navy's family service centers will provide services in one location.

The Navy has conveyed to me the importance of this program and that every effort is being made to minimize construction costs by additions or alterations of existing buildings. This is the case for three of the family service centers located at Puget Sound Naval Shipyard, Bremerton, Wash.; the Naval Training Center, Great Lakes, Ill., and Naval Station, Pearl Harbor, Hawaii with estimated costs of $400,000; $240,000, and $360,000, respectively. The other two family service centers are located at: Naval Training Center, Orlando, Fla., and Naval Air Station, Alameda, Calif., with estimated costs of $580,000 and $280,000 respectively.

As a matter of fact, of the 22 sites that will have have a family service center in fiscal year 1982, only the 5 mentioned above require military construction. The remaining sites are able to use existing facilities to locate the various family service center components in one central location.

This year's request is a modest start. I feel very strongly that we should support this effort.

Madam President, this is in the authorization bill. It is in the budget. The committee was not able to act because the conference had not completed its work at the time they marked up the bill. I hope that the amendment will be agreed to.

Mr. LAXALT. Madam President, I thank the distinguished Senator from Washington, Mr. JACKSON, for his amendment. We have discussed this amendment and understand the need for these family service centers. The committee had not included the funds for the facilities at $1.86 million because they were not authorized by the Senate; however, the conferees on the military construction authorization bill have agreed to include the projects for fiscal year 1982.

We have no objection to the amendment.

Mr. JACKSON. I thank the Senator for his statement.

The PRESIDING OFFICER. The Senator from Tennessee.

Mr. SASSER. I have no objection, Madam President.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Washington (Mr. JACKSON).

The amendment (UP No. 757) was agreed to.

Mr. LAXALT. I move to reconsider the vote by which the amendment was agreed to.

Mr. JACKSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 758

(Purpose: To add $23,000,000 for the construction of an Airborne Warning and Control System (AWACS) facility at Tinker Air Force Base, Oklahoma)

Mr. NICKLES. Madam President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will state the amendment.

The assistant legislative clerk read as follows:

The Senator from Oklahoma (Mr. NICKLES), for himself and Mr. BOREN, proposes an unprinted amendment numbered 758.

Mr. NICKLES. Madam President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 3, line 19, strike out "$1,670,426,000" and insert in lieu thereof $1,693,426,000".

Mr. NICKLES. Madam President, today my colleague, Senator BOREN, and I are offering this amendment to reinstate $23 million to construct an AWACS alert facility at Tinker Air Force Base in Oklahoma. This project was requested by President Reagan and is included in the military construction appropriation bill as passed by the House of Representatives.

It is unnecessary for me to spend time informing my colleagues of the importance of the airborne warning and command aircraft. We are more than well aware of its supersophisticated computer systems capability in coverage of all air activity within its zone of coverage. I am proud that the AWACS program is assigned to Tinker Air Force Base in Oklahoma.

Since the program is relatively young, it is taking time to provide the necessary support system for the aircraft and crews. At present, there is no facility for AWACS crews while on alert. These crews must stay by their telephones at home and drive to the base when summoned. This appropriation will allow the construction of living quarters, briefing room, and offices.

An additional 10,000 square feet of aircraft maintenance is also included in this funding. All AWACS are maintained at Tinker Air Force Base regardless of deployment throughout the world. These airplanes return from NATO countries and Saudi Arabia for routine maintenance and overhaul.

One of the most important reasons for this amendment is to provide better protection for these aircraft which cost $125 million each. At this moment, these planes are parked wing tip to wing tip which makes them extremely vulnerable. A parking apron to allow the spreading out of the E–3A aircraft will be constructed if this funding is approved.

Madam President, I have a letter from Gen. Lew Allen, Jr., Chief of Staff of the U.S. Air Force, further corroborating the need for this amendment which I would like to read at this time.

Dear Senator NICKLES: On behalf of the Department of the Air Force, I appreciate and support your efforts to restore funding in the FY 82 Military Construction Appropriations Bill for the AWACS alert facility at Tinker Air Force Base.

This project, which has been authorized by both Houses and funded by the House of Representatives, will permit the Air Force to maintain an alert posture with these extremely important resources similar to that now maintained by our bomber forces within the Strategic Air Command. This will enhance both the survivability and the responsiveness of the AWACS aircraft.

I am mindful of the fact that the Senate Appropriations Committee deferred, without prejudice, funding of the project pending clarification concerning the shortage of AWACS crews. If funded now, the projected completion date for the facility is March,

1984. At that time, Air Force training programs will have produced sufficient ground, flight, and mission crews to satisfy our operational and alert commitments. For this reason, I consider it essential that the project be funded in the FY 82 program.

Sincerely,

LEW ALLEN, Jr.,
General, USAF Chief of Staff.

For these reasons, Madam President, Mr. BOREN and I bring this amendment to the floor and ask for the support of our colleagues.

Mr. BOREN addressed the Chair.

The PRESIDING OFFICER. The Senator from Oklahoma.

Mr. BOREN. Madam President, I rise to support the amendment offered by my colleague from Oklahoma and myself restoring funds for the E–3A alert facility at Tinker Air Force Base in Oklahoma City. As you know, the funds for this facility are included in the House version of the bill, and placing them in the Senate version will insure that this needed facility will be constructed.

The prime concern of the Air Force in this matter is the ability to provide a survivable command and control facility during wartime conditions. As stated in the military construction project report, this will be satisfied by having AWACS aircraft and crews standing a strategic air command type of alert. This facility, which includes a parking apron for 12 AWACS aircraft and 7 crews will support a sustained alert posture.

In addition, Madam President, it is vitally important that the AWACS aircraft, in which we have a great deal of investment, can be so deployed so as to minimize possible damage from strong adverse weather conditions which sometimes occur in Oklahoma.

Madam President, it is my understanding that the committee did not question the need for this project, but was concerned about the capability of the Air Force to maintain an alert posture in the face of a shortage of AWACS crews. It is true that the optimum ratio would be two crews for each aircraft and that at the moment the Air Force is somewhat short of filling that ratio. But I believe that Air Force goals in training will be met and that even allowing for attrition there will be sufficient crews to satisfy commitments.

Finally, Madam President, I want to commend my friend and colleague from Oklahoma, Senator NICKLES, for his diligent efforts on behalf of this project. His efforts have been instrumental in bringing recognition to the vital need for this project.

I join with him in urging the adoption of this amendment.

Mr. LAXALT. Madam President, the distinguished Senators from Oklahoma, both Mr. NICKLES and Mr. BOREN, have spoken to me several times about this amendment.

The committee had deferred this project for an AWACS alert facility at Tinker Air Force Base without prejudice. The action was taken because of concern over crew manning levels. In our report we asked the Air Force to report to us as soon as possible concerning the situation.

We have received information that clarifies the committee's concerns and gives solid justification for this $23 million facility.

We believe the project is valid and support the Senator's amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Oklahoma (Mr. NICKLES).

The amendment (UP No. 758) was agreed to.

Mr. LAXALT. I move to reconsider the vote by which the amendment was agreed to.

Mr. BOREN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HART. Madam President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 759

(Purpose: To add $3,400,000 for construction of a Naval and Marine Reserve Center at Wheeling, West Virginia)

Mr. ROBERT C. BYRD. Madam President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from West Virginia (Mr. ROBERT C. BYRD) proposes an unprinted amendment numbered 759:

On page 6, line 16, strike "$36,000,000" and insert in lieu thereof "$39,400,000".

Mr. ROBERT C. BYRD. Madam President, my amendment would add $3,400,000 for construction of a new Naval and Marine Corps Reserve Center at Wheeling, W. Va. The present facility was built in 1947 and is in very poor structural, mechanical, and electrical condition. Shifting soil conditions have caused severe settlement cracks and separation of some walls. The existing Reserve center is not structurally or spatially adequate to meet the training needs of the nearly full complement of 182 Navy and Marine reservists who train there. Even if expensive repairs were made to the existing structure, there is no assurance that further settlement damage will not occur. Furthermore, these repairs would simply improve a facility on a 2.6-acre site which is too small to accommodate the number of reservists who must train there with their equipment.

Madam President, my amendment would provide funds to build a new 25,000 square foot Reserve center. This project was recently approved by the conferees on the 1982 military construction authorization bill. This new center would include an assembly hall, conference room, classrooms, library, garage, offices, bathrooms, and adequate parking space for the reservists assigned there.

Madam President, because of the deplorable condition of the existing facility and because there is no nearby Reserve center which can serve the needs of the Navy and Marine Reserve units, I urge my colleagues to support my amendment.

Mr. LAXALT. Madam President, the distinguished minority leader has discussed this amendment with me, and we understand this Navy and Marine Corps Center at Wheeling, W. Va., has been included in the projects agreed to by the conferees on the military construction authorization bill. It is not a part of the House bill on military construction appropriations.

We will accept the amendment and take it to conference with the House.

Mr. ROBERT C. BYRD. Madam President, I thank the distinguished manager of the bill, and I also thank the distinguished Senator from Tennessee (Mr. SASSER), the minority manager of the bill.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment (UP No. 759) was agreed to.

Mr. ROBERT C. BYRD. Madam President, I move to reconsider the vote by which the amendment was agreed to.

Mr. LAXALT. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. LAXALT. Madam President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. LAXALT. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONSOLIDATED SPACE OPERATIONS CENTER

Mr. LAXALT. Madam President, on page 26 of our report on the military construction appropriations bill for fiscal year 1982, the committee had included report language concerning the consolidated space operations center (CSOC). This language was inserted at the request of Senator SCHMITT because of concerns he raised over the Air Force's planning process for this proposed facility.

The language states "that none of the planning and design funds targeted for this center be used for site specific design."

Madam President, at this point, I would like to clarify the committee's intent on this language.

The General Accounting Office is presently doing an investigative study into the site selection process for this proposed facility. The GAO report is expected to be accomplished on or about January 31, 1982. It is the intent of the Subcommittee on Military Construction, of which I am chairman, to review the GAO findings.

Madam President, the estimated design funds to be expended on this facility during fiscal year 1982 are about $7 million. The committee also understands that funding for the facility will be included in the Air Force budget request for fiscal year 1983 military construction appropriations. This is a project which I believe will be of vital importance to our

national security interests; however, it is also a very costly venture which must be carefully considered.

Let me state for the record, it is not the committee's intent to stop this project through the report language included. We expect that through the GAO report and committee hearings the facts and justification for CSOC and its site selection will be fully clarified. It is the committee's intent to complete all actions on this matter within 60 days after the GAO report is presented to the committee.

Mr. HART. Madam President, will the Senator from Nevada yield for a question?

Mr. LAXALT. I am happy to yield.

Mr. HART. Is it the intent of this bill to allow CSOC design work to continue at the site chosen by the Air Force, Colorado Springs, after a 60-day period has elapsed following release of the GAO report?

Mr. LAXALT. Yes, it certainly is.

Mr. HART. I thank the Senator.

Madam President, permit me to thank my able and distinguished colleague, the Senator from Nevada, as well as my colleague, the Senator from Tennessee, for recognizing the very vital importance of the consolidated space operations center.

The history of debate on this issue has always been characterized by strong bipartisanship, and I would just like to reiterate my support for the concept of a consolidated space operation, and for the diligent efforts put forth by the U.S. Air Force on this project.

There is no question that the United States needs a consolidated space center. As the Secretary of the Air Force, Vernon Orr, pointed out in a March 17 letter to the distinguished chairman of the Senate Armed Services Committee, the planned CSOC facility will encompass two major and vital mission elements for the Air Force: satellite control, and all Department of Defense Space Shuttle operations. Indeed, the consolidation of these operations into a single facility is an important step, as space becomes more and more crucial to our national security. Moreover, the need to move forward rapidly and forcefully with this operation cannot be overstated; we cannot allow ourselves to be placed in a position of inferiority in space operations.

Of course, Madam President, as would occur with virtually any Government facility of this size, CSOC has been a desirable facility for citizens and their representatives from many areas of the country. The Air Force was most certainly aware of the competition among Members of Congress, for instance, when it undertook its study of 12 potential locations for CSOC. The study, requested by the able chairman of the Budget Committee and monitored by the good friend and appointee of the President, Secretary Orr, concluded decisively that the best location for the facility would be near Peterson Air Force Base at Colorado Springs, Colo. As Secretary Orr noted in his letter to Senator TOWER on March 17:

Peterson Air Force Base was selected because of its unique operational advantages which accrue from proximity to related activities, i.e., the Space Defense Operations Center (SPADOC) activities of the North American Air Defense Command at the USAF Cheyenne Mountain Complex, the Aerospace Data Facility at Buckley Air Guard Base in Denver, the supporting contractors located in the Colorado Springs area, and the area's academic assets.

I should add that Secretary Orr's decision was characterized as "final" in that letter, leading to the awarding of contracts for design work on the space center. In fact, Madam President, the final design contract work on the site-specific location of CSOC was to begin just this week, on December 1.

Thus, it is extremely commendable of my colleagues today to reaffirm the importance of CSOC to our national security, and to reaffirm the value of the Peterson Air Force Base location for the facility. I join them in their wholehearted support for it.

Madam President, I ask unanimous consent that the full text of Secretary Orr's letter of March 17 to Chairman TOWER be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF THE AIR FORCE,
Washington, D.C.

Hon. JOHN G. TOWER,
U.S. Senate,
Washington, D.C.

DEAR MR. CHAIRMAN: This is to inform you and other interested Members of Congress of my final decision to locate the Consolidated Space Operations Center (CSOC) near Peterson Air Force Base, Colorado Springs, Colorado.

The CSOC will encompass two major mission elements: satellite control and Department of Defense Space Shuttle operations. The Satellite Operations Complex will perform communications, command, and control service functions for orbiting spacecraft. The CSOC will enhance the USAF's operational capability for satellite control, and by providing a second node in the satellite control network, increase the survivability of this important function. The CSOC will also perform as the Shuttle Operations and Planning Complex (SOPC), conducting Department of Defense Shuttle flight planning, readiness, and control functions. In this capacity, the CSOC will provide direct mission authority over Department of Defense Shuttle missions, respond to national priorities, and protect national security data.

The Colorado Springs area was identified as the preferred site out of twelve potential locations, with Kirtland Air Force Base, New Mexico, and Malmstrom Air Force Base, Montana, considered as final, alternate locations. All three locations meet the basic geographic, environmental, support, and resource siting criteria. However, Peterson Air Force Base was selected because of its unique operational advantages which accrue from proximity to related activities, i.e., the Space Defense Operations Center (SPADOC) activities of the North American Air Defense Command at the USAF Cheyenne Mountain Complex, the Aerospace Data Facility at Buckley Air Guard Base in Denver, the supporting contractors located in the Colorado Springs area, and the area's academic assets. Proximate location of CSOC and SPADOC will provide a foundation for significant, long-term operational efficiencies stemming from convenient, face-to-face planning as well as shared support assets. In this regard, SPADOC will be able to provide the CSOC with a link into the existing space surveillance and warning structure. The proximate siting of these two functions also offers flexibility to accommodate future, unfolding defense missions in the medium of space.

The Final Environmental Impact Statement was filed on February 13, 1981, with the Environmental Protection Agency. It concluded that the CSOC would cause no significant, adverse environmental impact at any of the final three candidate locations.

The CSOC will require a new technical facility totaling about 370,000 square feet, as well as about 100,000 square feet of support facilities. We expect construction to begin in Fiscal Year 1983. The total construction cost is currently estimated at about $150 million. The facility will be constructed on land acquired from the State of Colorado located approximately ten miles east of Peterson Air Force Base. When fully operational, the facility will be manned by approximately 1800 personnel, consisting of about one-third military and the remaining two-thirds a mixture of Department of the Air Force civilian and contractor personnel. Manning estimates are being refined through manpower studies now in progress.

If we can be of any further assistance in this matter, please let us know.

Sincerely,

VERN ORR,
Secretary of the Air Force.

Mr. LEVIN. Madam President, as a member of the Committee on Armed Services, I wish to discuss a matter of mutual concern with the distinguished chairman of the Military Construction Appropriations Subcommittee—the level and the quality of medical care provided our military personnel and their families and how this affects recruitment and retention of the All-Volunteer Force, and the ability of our Armed Forces to accomplish their mission.

I know my colleague from Nevada, who has important military installations in his own State and much experience studying national security issues, shares my concerns that inadequate military health care facilities and services increase the recruiting and retention problems of the Armed Forces, to say nothing of the undue hardships they cause our servicemen and servicewomen and their dependents.

Would the chairman agree with me that this is a serious concern and one which has a direct impact on the capabilities of our Armed Forces themselves and on the "quality of life" of our military personnel and their families, and thus on their willingness to continue to serve in the All-Volunteer Forces?

Mr. LAXALT. Yes; I agree, and this committee attempts to take every opportunity to consider justified military construction projects which contribute to keeping our military personnel healthy and to the quality of life of our military personnel and their families.

Mr. LEVIN. In that regard, does the chairman agree that investment of taxpayer dollars for the construction of needed and justified military health facilities such as clinics, probably pays for itself many times in saving the taxpayers from the need to increase spending to replace military capabilities lost due to health problems and for recruitment and retention of military personnel?

Mr. LAXALT. I agree.

Mr. LEVIN. With the chairman's indulgence, I now would like to discuss with him the recent and severe degradation in the provision of health services to military personnel and their families in the Detroit/Warren, Mich., area caused

by the closing of another Federal health facility in the region.

The unexpected closing of this Federal clinic is expected to cause the current workload at the Army health clinic at the Selfridge Air National Guard Base, Mt. Clemens, Mich.—already an inadequate, understaffed, overcrowded, and outdated facility—to more than double. An increase in patient visits of 1,370 monthly to the clinic is expected.

This increase will cause further hardships on the thousands of active duty personnel from all five services, and their families, and still more retired military and their dependents, who now must rely on the Selfridge clinic for health services.

To give my colleagues a sense of the problems experienced by these individuals in their attempts to obtain health care to which they are properly entitled, let me point out that the Army clinic at Selfridge is located in a building constructed in 1927—54 years ago—as one of the first military hospitals. Selfridge has grown considerably since those early days, and now has more than 40 separate commands, active and reserve, from all the services. These include the Air National Guard's 191st Fighter Interceptor Group, which stands daily, 24-hour "strip alert" as part of the air defense of the United States. Selfridge also is the location of more than 1,000 family quarters, most occupied by military personnel of the Army's tank automotive command (TACOM) in nearby Warren, Mich. TACOM is responsible for the development, procurement, deployment, and maintenance of our armored and mechanized forces, the combat backbone of our Army. Thus, the present Army health clinic plays an important role in supporting units charged with major military responsibilities. Yet the expansion of Selfridge, and time, have taken their toll and the present Army clinic clearly is incapable of providing adequate health care.

The Army is aware of the recent exacerbation of the problems at its Selfridge clinic, and the possibility of solving them through the construction of a new facility, perhaps with operation of the facility funded on a "joint service" basis. However, the recent worsening of the problems occurred after planning for the fiscal 1983 military construction program was almost complete, and I would expect a new clinic for Selfridge will not be in the Army program to be submitted to Congress next month.

I believe it would be helpful if the Congress could give some guidance to the Army about the need to consider solutions to the health care dilemma at Selfridge as soon as possible, and about the need to prepare whatever documentation and designs are necessary for the subcommittee to consider the possible addition of funding for the clinic to the fiscal 1983 program, and I would hope the distinguished subcommittee chairman would agree.

Mr. LAXALT. I would, Madam President.

Mr. LEVIN. It is my understanding that the Army receives funds each year for architect and engineer work required to support its military construction program. I would like to ask the chairman whether the study, planning, and design of a new health clinic at Selfridge would be an appropriate use of some of these funds during the next few months to support possible committee consideration of such a project during deliberations on the fiscal 1983 military construction program?

Mr. LAXALT. It would.

Mr. LEVIN. Madam President, would the chairman agree that such study and design activities for a new clinic at Selfridge would be helpful to his subcommittee in its consideration of the fiscal 1983 military construction program, and that the Army should initiate such activities?

Mr. LAXALT. Yes; and the planning and design of this facility at a 35-percent design level is necessary for the committee to give serious consideration to the project.

Mr. LEVIN. I thank the distinguished subcommittee chairman, Madam President.

Mr. LAXALT. Madam President, I ask unanimous consent to have printed in the RECORD at this point some revisions to the chart entitled, "Comparative Statement of New Budget (Obligational) Authority," which is located on page 4 of Senate report 97–271 which is the report to accompany the bill now before the Senate, the military construction appropriations bill. It has come to my attention that in the printing of the report, some numbers were inadvertently left uncorrected after the full committee action. These numbers are only comparisons and do not change any portion of the bill. This is a technical change.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

On page 4 of the Senate report 97–271, replace columns 7, 8, and 9 with following:

1981 appropriation (7)	Budget estimate (8)	House allowance (9)
+$55,847,000	+$41,981,000	−$87,438,000
+682,818,000	−3,847,000	+69,070,000
+733,201,000	−38,974,000	+262,861,000
+76,315,000	−15,785,000	+87,311,000
+95,000,000	−40,000,000	−40,000,000
+25,389,000	+20,658,000	+4,733,000
+15,440,000	+16,040,000	−12,600,000
+16,465,000	+20,665,000	+338,000
+3,000,000	+9,600,000	
+15,800,000	+2,700,000	
−3,272,000	+470,000	+470,000
+1,716,003,000	+13,508,000	+284,795,000
+228,705,000	−26,360,000	+115,419,000
(−16,659,000)		
−2,832,000		
+225,873,000	−26,360,000	+115,419,000
+2,000,000

Mr. LAXALT. I think we can move to third reading, Madam President.

The PRESIDING OFFICER. Are there further amendments to be proposed? There being no further amendments to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall the bill pass?

So the bill (H.R. 4241) was passed.

Mr. HART. Madam President, I move to reconsider the vote by which the bill passed.

Mr. LAXALT. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. LAXALT. Madam President, I ask unanimous consent that the Secretary of the Senate be authorized to make any technical and clerical corrections in the engrossment of the Senate amendments to H.R. 4241.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LAXALT. Madam President, I move that the Senate insist on its amendments and request a conference with the House of Representatives thereon, and that the Chair be authorized to appoint conferees on the part of the Senate.

The motion was agreed to, and the Presiding Officer (Mrs. KASSEBAUM) appointed Mr. LAXALT, Mr. GARN, Mr. MATTINGLY, Mr. HATFIELD, Mr. SASSER, Mr. INOUYE, and Mr. PROXMIRE conferees on the part of the Senate.

Mr. LAXALT. Madam President, I should like to thank my staff, Rick Pierce, and cerainly, my distinguished colleague from the State of Tennessee (Mr. SASSER) and his staff, Mike Walker, for helping us expedite what probably is the record processing of an appropriation bill in the Senate Chamber.

FISCAL NOTES AND FEDERALISM

Mr. SASSER. Madam President, during this time of budget austerity, it is imperative that we have truth in budgeting. My fiscal note legislation, S. 43 provides for a process of full and fair information about how changes in the Federal budget will affect the finances of State and local governments throughout the country.

In the last Budget Reconciliation Act, Federal aid to State and local governments was reduced by some $12 billion and many, many State and local governments have had a difficult time in getting complete information as to how these budget changes affect their finances, S. 43 would remedy that defect in our budget process.

I am gratified that this legislation has received approval by the Governmental Affairs Committee and is now pending on the Senate Calendar. I also commend the efforts of Congressman ZEFERETTI to move the companion bill, H.R. 1465, through the House of Representatives where it may be acted on by next week.

For the benefit of my colleagues I ask unanimous consent that a sheet presenting summary information on S. 43 be printed in the RECORD.

There being no objection, the infor-

mation was ordered to be printed in the RECORD, as follows:

SUMMARY INFORMATION ON S. 43, STATE AND LOCAL GOVERNMENT FISCAL NOTE ACT OF 1981

(1) S. 43, the State and local Government Fiscal Note Act of 1981, was introduced on January 5, 1981, by Senator Jim Sasser (D-Tennessee). The bill currently has 26 cosponsors and has been favorably reported by the Governmental Affairs Committee and reported without recommendation by the Senate Budget Committee. Companion legislation, H.R. 1465, has been approved by the House Rules Committee and that measure is expected to be passed by the House on the suspension calendar during the week of December 7th.

(2) S. 43 amends the Congressional Budget Act of 1974 to require that the Congressional Budget Office (CBO) prepare a "fiscal note" or cost estimate of the costs, if any, incurred by state and local governments in carrying out the requirements of all legislation reported from House or Senate committees. The "fiscal note" would be required for all federal legislation which, in the judgment of the Director of the CBO, is likely to cost state and local governments at least $200 million per year, or which is likely to have extraordinary fiscal consequences for a particular level of government or geographic region. The provisions of the legislation would be effective through September 30, 1986.

(3) The bill authorizes additional appropriations to CBO of such sums as may be necessary to pay for the costs incurred by CBO in complying with the bill's requirements—principally additional staff and development and maintenance of a State and local fiscal impact data base. CBO estimates the additional costs at approximately $650,000 per year for these purposes.

(4) Presently, CBO provides "fiscal notes" for the costs to the federal government of all reported bills. This legislation simply extends that concept to state and local costs, as well. This legislation has the endorsement of major state and local government interest groups, including the National Governors' Association, the National Conference of State Legislatures, the National League of Cities, the U.S. Conference of Mayors, the National Association of Counties, and the Council of State Governments.

(5) The "fiscal note" legislation will provide a means for assessing the impact of federal budget decisions on state and local governments. It is estimated that federal aid to state and local governments was reduced by some $12 billion as a result of the Omnibus Reconciliation Act of 1981. As a consequence, states are facing painful choices of either standing by while services to their citizens are reduced markedly or raising their own taxes. Local governments are facing the same dilemma, and many have been forced to increase local property and sales taxes. If the "fiscal note" concept as embodied in S. 43 is in place, state and local governments would be better prepared to understand the fiscal impact of bills like the Omnibus Budget Reconciliation Act of 1981, and Congress would be better informed concerning the impact of proposals it is considering.

LETTER FROM PRESIDENT REAGAN TO PRIME MINISTER FITZGERALD OF IRELAND

Mr. KENNEDY. Madam President, the Deputy Secretary of State, Judge William Clark, is in Dublin today for talks with Prime Minister FitzGerald and other leaders of the Irish Government.

A major part of the talks concerned the situation in Northern Ireland and the desire of the United States to help in every appropriate way to end the violence and achieve a peaceful settlement.

During the talks, Judge Clark delivered a letter from President Reagan to Prime Minister FitzGerald emphasizing the deep concern of President Reagan for peace in Northern Ireland.

In one of the most significant passages in his letter, President Reagan eloquently states his belief that a settlement can come only through "reconciliation between the two Irish political traditions and between Britain and Ireland."

In addition, President Reagan also took the opportunity in the letter to invite Prime Minister FitzGerald to lunch in the White House on St. Patrick's Day next year.

All of us who share the cause of peace in Northern Ireland welcome this latest statement by President Reagan, and I ask unanimous consent that it may be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LETTER FROM PRESIDENT RONALD REAGAN OF THE UNITED STATES TO PRIME MINISTER GARRET FITZGERALD OF THE REPUBLIC OF IRELAND, DECEMBER 1, 1981

DEAR MR. PRIME MINISTER: Let me take this opportunity to thank you for your kind invitation to William Clark, my Deputy Secretary of State, to visit Ireland.

In addition to reviewing the many issues we face together around the world, Bill will want to hear your views on Northern Ireland. The problems there are of tremendous concern to me, and I will continue to affirm the principles of my St. Patrick's Day Statement—support for just and peaceful solutions and condemnation of all terrorism and violence.

We believe a lasting solution can be found only in a process of reconciliation between the two Irish political traditions and between Britain and Ireland. The United States welcomes the efforts of the Irish and British governments in widening the framework of their cooperation to this end.

But as much as our hearts long for a settlement, it is not for the United States to chart the course others must follow. If the solutions are to endure, they must come from the people themselves. I wish to add a personal note of my support and encouragement for the efforts you and Prime Minister Thatcher have made in widening the framework of your cooperation to the achievement of that goal.

I am sorry that your schedule did not permit a visit to the United States this fall. But if it is possible for you to be here next March 17, I would be most honored if you could join me for lunch on that day.

Sincerely,

RONALD REAGAN.

NUCLEAR ARMS CONTROL IN EUROPE

Mr. KENNEDY. Madam President, this week in Geneva, the United States and the Soviet Union are engaged in negotiations to reduce nuclear forces in Europe. While these negotiations will undoubtedly be complex and challenging, they offer an invaluable opportunity to strengthen our collective security and reduce the risk of nuclear war.

First, the negotiations offer the opportunity to seriously pursue the dual track approach set forth in the NATO decision of December 1979. This decision to deploy two new types of land based missiles in Western Europe to offset Soviet intermediate-range missiles, including the new SS-20, was conditioned upon the pursuit of negotiations with the Soviets to reduce theater nuclear forces.

President Reagan's recent speech clarified an important point about this two-track approach: The negotiations are not intended merely as a complement to the planned American deployments. They could substitute for them altogether, depending on the extent of Soviet reductions of their own intermediate-range nuclear forces. Both the American and the Soviet missile build-up in Europe could be made unnecessary.

Second, these negotiations offer the opportunity to enhance the security of the Western alliance and to diminish the risk of nuclear war. NATO is committed to maintaining a stable balance of military forces in Europe. The negotiators must now do everything possible to reduce these forces, on both sides to the lowest possible levels.

Third, these negotiations offer the opportunity to get strategic nuclear arms control back on track. It is my hope that President Reagan's recent arms control initiative marks the beginning of serious negotiations not only on intermediate-range nuclear forces in Europe but also on strategic nuclear weapons and on conventional forces. Nuclear arms control in Europe will depend for its effectiveness on meaningful limitations of strategic weapons. In turn, a stable and enduring balance of conventional forces will reduce the risk of escalation to nuclear war.

Fourth, these negotiations offer the opportunity to improve our relations with our NATO allies. The Reagan administration's loose rhetoric on nuclear war and its seeming indifference to nuclear arms control created serious strains in the Atlantic alliance and fueled the largest antinuclear demonstrations in Europe since the 1950's. The deployment of nuclear missiles on European soil has become a major domestic political concern to the allied leadership. It is therefore an issue that could again threaten the cohesion of the alliance if the arms control option is not treated seriously and judiciously. I welcome the key role played by Chancellor Helmut Schmidt of West Germany in bringing East and West to the negotiating table in a remarkably constructive spirit, despite the East-West polemics of the past year.

United States and Soviet negotiators in Geneva must now seek answers to a series of questions which will define the terms of reference for the negotiations—and even determine their outcome. They will have to agree on the number of weapons possessed by each side, and on which weapons and which countries should be included in an eventual agreement. There are wide differences today on these basic issues, which must be resolved in order to achieve an arms control agreement.

These issues may take a long time to

solve. In the meantime, we should not rule out the possibility of negotiating more limited reductions of intermediate nuclear weapons as a first step toward more comprehensive reductions in Europe. The test should always be what steps we can take to enhance our security, increase stability and reduce the danger of nuclear war. Complete elimination of intermediate nuclear forces is our primary objective, but this should not rule out the possibility of smaller yet meaningful steps in this direction. I welcome President Reagan's statement on November 18 that:

We intend to negotiate in good faith and go to Geneva willing to listen to and consider the proposals of our Soviet counterparts.

Madam President, the administration must not let the important opportunities that I have discussed pass us by. While I welcome President Reagan's speech, one speech is no substitute for consistent policy. There have been legitimate and disconcerting questions regarding the Reagan administration's commitment to arms control. Before the speech, it seemed that the administration's policy was that arms alone could keep the peace with the Soviet Union. The administration should now demonstrate its commitment to the security, solidarity, and well-being of the Western alliance. It should vigorously pursue the reduction of nuclear weapons and the prevention of nuclear war in Europe and throughout the world.

THE GENOCIDE CONVENTION

Mr. PROXMIRE. Madam President, yesterday the Senate Foreign Relations Committee held a hearing on the Genocide Convention. This marks the fifth time over the last three decades that the committee has held hearings on this important human rights treaty.

No human rights convention has ever been subjected to the type of detailed scrutiny that the Genocide Convention has seen—line by line, word by word, syllable by syllable.

The Foreign Relations Committee has been scrupulously fair in reviewing every argument, every allegation, every concern raised by the opponents of the Convention and that hearing record—in 1950, 1970, 1971, 1977, and again yesterday—proves conclusively that many of the objections raised to the Genocide Convention are without foundation and that this convention is in America's best interests.

This treaty seeks to protect the most fundamental right known to man—the right to live.

It seeks to punish the most heinous crime known to man—mass murder. I know of no constitutional right to mass murder. It is a crime that deserves the outrage of every American and our firm condemnation and swift punishment.

Unfortunately, the opponents of this convention attempt to mislead their fellow citizens with hysterical charges that are simply not true.

The facts are clear.

This convention does not expand the authority of any international organization over our citizens; not in any way. It does not diminish American sovereignty one iota.

This convention with the safeguards recommended by the Foreign Relations Committee will never permit an American citizen to be taken from our country and tried abroad. Never.

This convention does not permit frivolous charges of "mental harm" for racial slurs or ethnic jokes—as repulsive as they may be. Only the permanent impairment of mental faculties, such as the forcible application of drugs, coupled with the clear intent to eliminate a national, ethnic, racial or religious group, would constitute genocide.

Madam President, this convention is very narrowly drawn and does not threaten the conduct of any American. Constitutional guarantees and freedoms always supersede treaties and no treaty can ever alter those rights and freedoms. If they could, I would be the first to oppose them.

It is time that we set the record straight, once and for all, and I ask unanimous consent that my testimony before the Senate Foreign Relations Committee as well as the text of the Genocide Convention be reprinted in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

TESTIMONY OF SENATOR WILLIAM PROXMIRE

Thank you, Mr. Chairman.

I particularly want to commend you for the priority you have given this important human rights treaty, since assuming chairmanship of this Committee. Your efforts here today are continuing a long and bipartisan tradition of support for the Genocide Convention, which has been marked by four reports to the Senate enthusiastically recommending ratification. The Committee's tireless efforts to restore America's proper role as a world leader on human rights will not go unnoticed when the Senate ratifies the Genocide Convention.

Mr. Chairman, you are right to be moving ahead now. This is an opportune moment.

First. We have a new Administration—in office nearly a year now—and it is time to get them on record. In announcing the appointment of Elliot Abrams as the State Department's new Human Rights Coordinator, Secretary Haig pledged to restore human rights as a priority within our foreign policy.

Second. We have a new international climate which firmly underscores the need for the United States to regain the high moral ground in our competition with those who wish us ill. We have yielded this ground all to cavalierly by smugly asserting that our own record speaks for itself. It is a luxury that we cannot afford if our diplomats are to speak out, and speak out forcefully, against the repressive actions of closed, totalitarian societies.

Third, we have a new Senate. Thirty-eight Members have been elected since your last hearings in 1977. Your own Committee reflects that change, Mr. Chairman. Only six of the current seventeen Members served on this Committee during the 1977 hearings and, only one, Senater Pell, was here when I testified during the 1970 hearings. A new hearing record will be helpful in dispelling any lingering arguments of the opponents of this Convention so that we can at long last proceed to ratification.

A TREATY TO PUNISH CRIMINALS

Mr. Chairman, in reviewing your earlier hearings, I was impressed by the great lengths to which your Committee has gone to consider every argument, allegation and concern raised by the opponents of this Convention. The accumulated testimony effectively refutes those arguments, demonstrating that the Genocide Convention, together with the Understandings recommended by your Committee, deserves our wholehearted support.

As I pointed out during my testimony in 1977, few treaties have ever received the type of detailed line by line, word by word, syllable by syllable scrutiny that the Genocide Convention has received.

That review has demonstrated that the Genocide Convention really has two aspects.

First, it is a human rights treaty, which seeks to protect the most fundamental right known to mankind—the precious right to live.

Second, it is an international criminal treaty. A treaty designed to ensure that all nations, consistent with their own Constitutions will do everything possible to prevent and punish criminals who attempt to commit the most heinous crime—the elimination of an entire national, ethnic, racial and religious group.

The history of the Genocide Convention is clear on that second point.

The fact that the Genocide Convention evolved from the outrage of all decent human beings to the monstrous actions of the Nazis in attempting to eliminate every man, woman and child of Jewish ancestry within their borders is apparent to everyone.

What is not as apparent is the fact that the Genocide Convention exists because the International Military Tribunal at Nurnberg determined that consideration of genocide was outside of the charter that established their Tribunal.

International reaction was swift. The General Assembly, with our support and encouragement, unanimously adopted a resolution declaring genocide an international crime. In the next two years, the Secretary General's office, the Economic and Social Council and a drafting committee, chaired by the United States delegate, John Maktos, labored to draft a Convention which would implement the General Assembly's resolution. In 1948 the General Assembly, with the enthusiastic support of the United States delegation, unanimously adopted the Genocide Convention and two days later the United States signed the Convention.

AMERICANS SUPPORT THE GENOCIDE CONVENTION

Mr. Chairman. since President Truman submitted the Genocide Convention to the Senate for ratification, this treaty has had the broad support of Americans across the country as well as their leaders.

President after President, Administration after Administration, have given this treaty their enthusiastic support—Republicans and Democrat alike, conservative and liberal alike.

This is not a partisan issue. It is not ideological.

The ranks of the Genocide Convention supporters cross party lines and ideological lines.

In fact, you will be hearing very shortly from the Ad Hoc Committee on the Genocide and Human Rights Treaties, a coalition of 52 labor, civic, religious and nationality organizations, representing millions of Americans across this country.

GENOCIDE CONVENTION IS IN THE INTEREST OF ALL AMERICANS

And why do they support the Genocide Convention, Mr. Chairman?

Because it will serve America's interests. The interests of our citizens, our voters, our taxpayers.

The benefits of this treaty are not elusive. They are real and concrete.

Let me just cite a few of the reasons for ratification.

First, ratification of the Genocide Convention will strengthen our hand in attacking

the gross violation of human rights by the Soviet Union and its allies. While the treaty itself is narrowly constructed, your 1970 hearing record makes it clear how this treaty will help.

Rita Hauser, a Republican respected on both sides of the aisle, and President Nixon's delegate to the Human Rights Commission, testified:

"We have frequently invoked the terms of this Convention as well as the provisions of this Universal Declaration on Human Rights . . . in our continued aggressive attack against the Soviet Union for its practices, particularly as to its large Jewish communities, but also as to its Ukrainians, Tartars, Baptists and others. It is this anomaly . . . (that) . . . often leads to the retort in debates plainly put, simply put, 'Who are you to invoke a treaty that you are not a party to?'"

The 1977 hearings provide other devastating examples:

"The Soviet Union, usually on the defensive when the issue of . . . human rights was proposed at the U.N., could and would charge the U.S. with hypocrisy. In January, 1964, for example, when the U.S. member of the Subcommission on Prevention of Discrimination, Morris Abram, advocated "forceful measures of implementation" in dealing with racial and ethnic discrimination, his Soviet colleague had but to remind the body that the U.S. was not even a contracting party to the Genocide Convention. . . .

Two years later, Abram . . . vigorously endorsed a Costa Rican proposal that would have marked a significant breakthrough in the area of international human rights enforcement. . . . The Soviet Union's response was devastating. Its representative pointed out that in view of the fact that Americans "resolutely refused to accept legal obligations" through ratification of human rights treaties, it was "almost indecent" and certainly "hypocritical" for the U.S. to advocate the establishment of special human rights institutions in the international field. Shortly afterward, Pravda drove the point home. . . . It was 'no accident', the Communist Party organ commented, that the U.S. had not ratified the Genocide Convention since "racial and national oppression is still very widespread in the United States of America."

Our representatives to the Helsinki Accord review conference make a similar point. That where the United States should be on the offensive, holding the feet of the Soviet Union and its allies to the fire to live up to their pledges on human rights, instead we spend our time apologizing for our record on ratification of human rights treaties.

Mr. Chairman, the time has long since passed when we can smugly sit back and assume that our human rights record—which I firmly believe is the finest in the world—speaks for itself. Why permit Communist nations, which all too often only give lip service to these obligations, to take the high moral ground in these debates? Mr. Chairman, they have no right to it and we are foolish to abandon it to them.

If the Vietnamese communists commit genocide against religious groups in Cambodia, I want the U.S. to tell the world about it without challenge to our human rights dedication from other communist nations.

If the Peoples Republic of China systemmatically commits genocide against the Tibetans, I want us to be free to condemn that action without the inevitable propaganda about our failure to pass the Genocide Convention.

If one day the Russians turn against one of their national minorities, and commit genocide, then the United States should be the world leader opposing that action. Nothing less should be expected from this nation. But we will be unable to do this effectively without passage of the Genocide Convention.

In sum, it is unlikely that genocide will be committed in any Western democratic nation. It is more likely that genocide will occur in non-democratic, totalitarian or communist states. We need every device at our disposal to preclude that this happens, and if it does occur, God forbid, we need every diplomatic, economic and possibly military asset to stop such events.

We cannot do moral battle against genocide with one hand tied behind our backs.

Second, ratification of the Genocide Convention reasserts our intention to deal firmly with criminals who have violated the most sacred right known to man.

There is firm precedent for ratification of this type of criminal treaty. Just this year, in July, the United States approved a treaty dealing with hostages, unanimously. We were following the same policy on issues such as narcotics (1961), pollution of the sea by oil (1954) and treatment of prisoners of war (1949).

Contemporary practice makes it clear that the Senate has the authority to approve treaties involving international treaties and to hold Americans accountable for their actions before American Courts (as the Genocide Convention and its implementing legislation provides) for actions committed abroad.

Third, the ratification of the Genocide Convention will help our relations with Third World nations as well. Our failure to ratify a treaty so consistent with the high ideals expressed in our Declaration of Independence, Constitution and Bill of Rights, places us in dubious company with nations such as South Africa whose dedication to human rights is clearly questionable. With all other major Free World countries supporting the Convention, our inaction raises unnecessary doubts regarding our ability to lead.

Fourth, the ratification of this Convention would place the United States in a better position to bring our moral influence to bear in specific cases where genocide is alleged. For example, in the early seventies the State Department wrote to me, indicating that our efforts to halt the genocide of Biafrans during the Nigerian civil war would have been strengthened immeasurably had we been a party to the Convention.

Finally, there is a moral imperative to ratify this treaty. Domestic statutes regarding murder are insufficient for, as Senator Javits has correctly pointed out, "genocide is murder and more."

The different effect of this type of treaty is impossible to quantify but, as Bruno Bitker noted during your 1970 hearing, "The requirements of morality are more likely to be recognized if they are also the requirement of law."

SUBMISSION FOR THE RECORD

Mr. Chairman, I have not attempted in my statement to provide a line by line discussion of the Genocide Convention and the arguments that will be raised by Liberty Lobby later in this hearing. Your next panel will be addressing those questions and I have merely attempted to set the stage for that discussion.

However, I would like your permission to include as a permanent part of this record, at the conclusion of my statement, material which I believe will be helpful to the Committee's review:

(1) An article by article analysis of the Genocide Convention just produced by the Congressional Research Service at my request. I have also provided additional copies to every Member of the Committee.

(2) Copies of speeches which I have made responding in detail to the arguments of the new Liberty Lobby White Paper on the Genocide Convention, about which you will be hearing more shortly.

(3) Letters from each branch of the Armed Services and the General Counsel of the Defense Department during the Carter Administration, outlining their support for the Convention.

(4) A listing of 52 labor, civic, religious and nationality groups which endorse the Genocide Convention.

(5) A law review article by Louis Henkin from the April, 1968 issue of the University of Pennsylvania Law Review entitled "The Constitution, Treaties and International Human Rights", which conclusively proves the constitutionality of treaties such as the Genocide Convention.

Mr. Chairman, the fight for ratification of this Convention has often been frustrating. As Senator Javits noted during the 1977 hearings, "The numbers of rumors, innuendos, misconceptions and scares that have been spread about this treaty are literally endless, and this has been done by people who are very, very competent and able in many other ways, but who somehow have an absolute blind spot on this one."

IN CONCLUSION

Mr. Chairman, some opponents of the Genocide Convention want it both ways.

On the one hand, they assert that the Genocide Convention is a strong document, threatening our very civil liberties—a position which is simply not substantiated by this Committee's own hearing record.

On the other hand, they argue that the Treaty is a "paper tiger". Where is the real enforcement authority they ask? Yet this question comes most often from those who would oppose any international enforcement mechanism the most.

Let me get the record straight.

This Senator is no advocate of One World government.

This Senator does not support any Super Government with "enforcement authority" to interfere in our internal affairs.

I do not believe in yielding United States sovereignty in any way.

And this Treaty does not do that.

This is a very limited Treaty. Not a panacea for the world's ills. Not a step toward One World Government.

But it is an important moral statement, a strong diplomatic tool in the hands of the world's most powerful and influential country.

[Prevention and Punishment of Crime of Genocide]

CONVENTION ON THE PREVENTION AND PUNISHMENT OF THE CRIME OF GENOCIDE

The Contracting Parties,

Having considered the declaration made by the General Assembly of the United Nations in its resolution 96 (I) dated 11 December 1946 that genocide is a crime under international law, contrary to the spirit and aims of the United Nations and condemned by the civilized world;

Recognizing that at all periods of history genocide has inflicted great losses on humanity; and

Being convinced that, in order to liberate mankind from such an odious scourge, international co-operation is required,

Hereby agree as hereinafter provided:

ARTICLE I

The Contracting Parties confirm that genocide, whether committed in time of peace or in time of war, is a crime under international law which they undertake to prevent and to punish.

ARTICLE II

In the present Convention, genocide means any of the following acts committed with intent to destroy, in whole or in part, a national, ethnical, racial or religious group, as such:

(a) Killing members of the group;

(b) Causing serious bodily or mental harm to members of the group;

(c) Deliberately inflicting on the group

conditions of life calculated to bring about its physical destruction in whole or in part;

(d) Imposing measures intended to prevent births within the group;

(e) Forcibly transferring children of the group to another group.

ARTICLE III

The following acts shall be punishable:

(a) Genocide;

(b) Conspiracy to commit genocide;

(c) Direct and public incitement to commit genocide;

(d) Attempt to commit genocide;

(e) Complicity in genocide.

ARTICLE IV

Persons committing genocide or any of the other acts enumerated in article III shall be punished, whether they are constitutionally responsible rulers, public officials or private individuals.

ARTICLE V

The Contracting Parties undertake to enact, in accordance with their respective Constitutions, the necessary legislation to to give effect to the provisions of the present Convention and, in particular, to provide effective penalties for persons guilty of genocide or of any of the other acts enumerated in article III.

ARTICLE VI

Persons charged with genocide or any of the other acts enumerated in article III shall be tried by a competent tribunal of the State in the territory of which the act was committed, or by such international penal tribunal as may have jurisdiction with respect to those Contracting Parties which shall have accepted its jurisdiction.

ARTICLE VII

Genocide and the other acts enumerated in article III shall not be considered as political crimes for the purpose of extradition.

The Contracting Parties pledge themselves in such cases to grant extradition in accordance with their laws and treaties in force.

ARTICLE VIII

Any Contracting Party may call upon the competent organs of the United Nations to take such action under the Charter of the United Nations as they consider appropriate for the prevention and suppression of acts of genocide or any of the other acts enumerated in article III.

ARTICLE IX

Disputes between the Contracting Parties relating to the interpretation, application or fulfilment of the present Convention, including those relating to the responsibility of a State for genocide or for any of the other acts enumerated in article III, shall be submitted to the International Court of Justice at the request of any of the parties to the dispute.

ARTICLE X

The present Convention, of which the Chinese, English, French, Russian and Spanish texts are equally authentic, shall bear the date of 9 December 1948.

ARTICLE XI

The present Convention shall be open until 31 December 1949, for signature on behalf of any Member of the United Nations and of any non-member State to which an invitation to sign has been addressed by the General Assembly.

The present Convention shall be ratified, and the instruments of ratification shall be deposited with the Secretary-General of the United Nations.

After 1 January 1950 the present Convention may be acceded to on behalf of any Member of the United Nations and of any non-member State which has received an invitation as aforesaid.

Instruments of accession shall be deposited with the Secretary-General of the United Nations.

ARTICLE XII

Any Contracting Party may at any time, by notification addressed to the Secretary-General of the United Nations, extend the application of the present Convention to all or any of the territories for the conduct of whose foreign relations that Contracting Party is responsible.

ARTICLE XIII

On the day when the first twenty instruments of ratification or accession have been deposited, the Secretary-General shall draw up a process-verbal and transmit a copy thereof to each Member of the United Nations and to each of the non-member States contemplated in article XI.

The present Convention shall come into force on the ninetieth day following the date of deposit of the twentieth instrument of ratification or accession.

Any ratification or accession affected subsequent to the latter date shall become effective on the ninetieth day following the deposit of the instrument of ratification or accession.

ARTICLE XIV

The present Convention shall remain in effect for a period of ten years as from the date of its coming into force.

It shall thereafter remain in force for successive periods of five years for such Contracting Parties as have not denounced it at least six months before the expiration of the current period.

Denunciation shall be effected by a written notification addressed to the Secretary-General of the United Nations.

ARTICLE XV

If, as a result of denunciations, the number of Parties to the present Convention should become less than sixteen, the Convention shall cease to be in force as from the date on which the last of these denunciations shall become effective.

ARTICLE XVI

A request for the revision of the present Convention may be made at any time by any Contracting Party by means of a notification in writing addressed to the Secretary-General.

The General Assembly shall decide upon the steps, if any, to be taken in respect to such request.

ARTICLE XVII

The Secretary-General of the United Nations shall notify all Members of the United Nations and the non-member States contemplated in article XI of the following:

(a) Signatures, ratifications and accessions received in accordance with article XI;

(b) Notifications received in accordance with article XIV;

(c) The date upon which the present Convention comes into force in accordance with article XIII;

(d) Denunciations received in accordance with article XIV;

(e) The abrogation of the Convention in accordance with article XV;

(f) Notifications received in accordance with article XVI.

ARTICLE XVIII

The original of the present Convention shall be deposited in the archives of the United Nations.

A certified copy of the Convention shall be transmitted to each Member of the United Nations and to each of the non-member States contemplated in article XI.

ARTICLE XIX

The present Convention shall be registered by the Secretary-General of the United Nations on the date of its coming into force.

MAX FRIEDERSDORF

Mr. QUAYLE. Madam President, the announcement yesterday that Max Friedersdorf would be leaving the White House staff came as a surprise to most of us here. I would not want the announcement of his departure to pass without saying a few words about a man who has been a great credit to his home State of Indiana and a great credit to our Nation.

Earlier today, a reporter from the Franklin, Ind., Daily Journal, Max's hometown, called my office to ask: "What was the secret of Max's success?"

There is no secret to his success but the ingredients should stand as an example to anyone who is considering a career in politics and government.

Max started as a newspaper reporter in Indiana, Kentucky, and Illinois. He came to Washington as a staff member of Representative Richard L. Roudebush. He moved on to the Senate where he was staff director of the Senate Republican Policy Committee. His career continued to progress as he moved to the White House staff as an assistant in the Congressional Liaison Office.

One of the secrets to Max's success, then, is an intimate knowledge of the Congress. There is an institutional memory here that prescribes how things will work, and who will make them work. These memories are not set down, and no amount of reading or talking to those who have been here can substitute for having been involved in the process.

Second, there is an old saying that goes, "good luck follows hard work." Max's luck has been consistently good because he has always been a dedicated worker.

Finally, Max has a gift of working with people, and for helping people work with each other. Each of us has seen Max take a group of Senators or Congressmen of differing philosophies and differing views, and help them to forge a solution to a problem which was based not on whether it was good for the President, or the Republicans, or good for the Democrats. The solutions have been found because Max had a feeling for what was good for the country.

Those are the secrets to success: A knowledge of his subject matter, hard work, and the ability to work with people.

Max Friedersdorf's years in Washington stand as an example of how a career in politics and Government can bring out the best in people, and how a man or a woman who wants to help our country can have a real impact.

The work Max Friedersdorf did this year alone will have a positive impact on the direction of our country through the end of this century.

I have personally known Max for many years. My friendship with him has been a rewarding one, and though he is temporarily leaving Washington, that friendship with me and others will, I am certain, continue.

I wish him and his wonderful wife, Priscilla, many years in Max's next career, Consul General to Bermuda.

A KEY TO LOWER INTEREST RATES

Mr. PERCY. Madam President, there is not a Senator in this Chamber who does not want to see lower interest rates as soon as possible. We know the damage high interests are inflicting on this country's economy. Large and small businesses alike are failing at near-record rates, housing construction has come to a standstill, auto dealers are closing their doors and thousands of potential home buyers are hoping that maybe next year they will be able to afford that first home.

High interest did not spring up suddenly. Nearly 2 years ago we saw interest rates beginning to rise. By March 1980 the prime rate had broken all records and was in the low 20 percent range. Then it dropped, only to rise again this fall. Interest rates are a function of the high inflation and general economic stagnation that has wracked our economy for a decade.

Last October, however, we took the first steps away from economic disaster. That is when the President's economic recovery program first went into effect: Tax cuts and budget reductions to put the economy right again. These changes in our economy cannot possibly come about overnight. They were over a decade in the making. But we have begun to grapple with them and I gave the President my full support on both tax and budget reduction.

There is more we can do, however, to restore economy. One area that has been entirely neglected are the lending programs that have blossomed in the Federal budget the last 7 years. These loan and loan guarantee programs have worthwhile purposes in many cases, but they are just like spending: Someone must ultimately pay for them.

Under our present system, these so-called off-budget lending programs are like a mist on a foggy night: you know they are there but try and put your hands on them. Our Federal budget takes almost no account of them, even though the billions of dollars in lending pushes thousands of worthy borrowers--like small businessmen and home buyers—out the bank door. When a Federal agency says that a program should be financed through loan guarantees, that means it moves to the top of the lending line. Money does not grow on trees, of course, so someone else is cut off at the end of the line.

I have introduced legislation to halt this senseless system and am pleased that the Director of our nonpartisan Congressional Budget Office—CBO—supports this legislation. She has just written me about it and says that if the procedures outlined in my bill were put to use, and I quote:

> There is every indication that the financial market would respond positively and that interest rates would begin to decline.

That is good news for Americans and I am pushing to bring this bill to a vote as soon as possible. We just cannot ignore a tool that will aid the economy recovery.

I ask unanimous consent that Dr. Rivlin's letter be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CONGRESSIONAL BUDGET OFFICE,
Washington, D.C., November 17, 1981.

Hon. CHARLES H. PERCY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: During my recent testimony before the Committee on Governmental Affairs on the Congressional budget process, you requested that we estimate, if possible, the impact on interest rates of establishing a federal credit budget as envisioned by your bill, S. 265, the Federal Lending and Oversight Control Act.

If the Congress were to begin explicitly controlling the levels of new federal credit, under procedures such as those in your bill, and began reducing total government credit demand, there is every indication that the financial markets would respond positively and that interest rates would begin to decline. Unfortunately, as I told you during the hearing, we are unable to estimate the magnitude of the impact on interest rates.

Financial markets today are concerned about total federal government borrowing, not just the unified budget deficit. Under the multiyear budget plan of the first concurrent resolution, the unified budget deficit as a percentage of GNP is expected to fall, from about 2 percent of GNP in fiscal year 1981 to about 1 percent by fiscal year 1984. There is a risk, however, that total borrowing by the federal government or under federal auspices will not decline. As the table below illustrates, total federal government borrowing in fiscal year 1982 will probably exceed the projected $65 billion unified budget deficit by a considerable margin. Off-budget borrowing, primarily to fund the Federal Financing Bank's loan activities, will add about $20 billion to Treasury borrowing in 1982. Total direct borrowing by the Treasury is, therefore, expected to reach $80 to $90 billion. The federal government will also directly influence the allocation of another $80 billion in new credit through its loan guarantee programs.

Federal budget deficits and borrowing from the public

[In billions of dollars]

	1982 estimate
Unified budget deficit	65
Off-budget deficit	20
Total deficit	85
Less:	
Means of financing other than borrowing from the public [1]	1.7
Borrowing from the public	83.3
New loan guarantee commitments [2]	80

[1] Changes in cash balances, checks outstanding, and seigniorage on coins. Estimates from *Mid-Session Review of the Budget,* July 1981.

[2] Estimates from Office of Management and Budget, July 1981.

The financial markets recognize that federal credit programs have grown more rapidly than direct spending. Loan guarantees and the off-budget lending of the Federal Financing Bank are not included in the binding totals of the budget process. Moreover, until recently, many credit programs have been completely without limits on their level of annual activity. The credit budgets that the Congress has experimented with in the concurrent budget resolutions this year and last are useful first steps. The totals, however, are not binding; nor are other provisions of the Budget Act, such as reconciliation, directly applicable to the credit budget.

The imposition of a binding federal credit budget, as envisioned in S. 265, cannot but help reduce the fears of the financial markets about uncontrolled growth of federal credit. This would reduce upward pressures on interest rates, but we do not know how much.

If I may be of further assistance in this regard, please call on me.

Sincerely,

ALICE M. RIVLIN,
Director.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the

Senate by Mr. Saunders, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

ANNUAL REPORT OF THE DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT—MESSAGE FROM THE PRESIDENT—PM 94

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, together with an accompanying report; which was referred to the Committee on Banking, Housing, and Urban Affairs:

To the Congress of the United States:

I hereby transmit for the information of the Congress the Sixteenth Annual Report of the Department of Housing and Urban Development covering the calendar year 1980.

RONALD REAGAN.

THE WHITE HOUSE, *December 4, 1981.*

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. SIMPSON, from the Committee on Veterans' Affairs:

Charles Timothy Hagel, of the District of Columbia, to be Deputy Administrator of Veterans' Affairs.

Mr. SIMPSON. Mr. President, I am pleased to report that the Committee on Veterans' Affairs has completed its consideration of the qualifications of Charles Timothy Hagel, the President's nominee to be Deputy Administrator of Veterans' Affairs, and the committee, by unanimous vote, recommends that the nomination be confirmed.

Public Law 96-22, Veterans Health Care Amendments of 1979, provided for the nomination by the President, and confirmation by the Senate of the Deputy Administrator of Veterans' Affairs, but exempted the then incumbent Deputy from such a requirement. Consequently today's confirmation vote is a historic first for this position.

The Veterans' Administration has been without a Deputy Administrator since February 25, 1981, when Rufus T. Wilson, the former Deputy, because Acting Administrator of the Veterans' Administration. It is most important that the Administrator, Bob Nimmo, have the assistance of a highly qualified Deputy.

The nomination of Charles T. Hagel was received by our committee on November 16, 1981. A hearing on his qualifications was held on November 25, 1981, with a resulting unanimous vote to recommend confirmation of the nomination.

Chuck Hagel, 34 years of age, most recently served as the deputy commissioner general of the 1982 World's Fair, to be held in Knoxville, Tenn., with responsibilities for coordinating and administering corporate and U.S. Government involvement in the fair.

From January 1977 to January 1981, Chuck was manager of Firestone's Government affairs office in Washington, D.C. From 1971 to 1977, he was administrative assistant to Congressman John Y. McCollister of Nebraska, in charge of McCollister's offices in Washington and Nebraska.

Chuck's background includes radio and television as a newscaster, talk show host, and record show host in Omaha, Nebr., Council Bluffs, Iowa, and Lincoln, Nebr.

Hagel volunteered for U.S. Army service in Vietnam where he was wounded twice while serving in the 9th Infantry Division. His awards include the American Spirit Honor Medal, the Purple Heart with one oak leaf cluster, the Combat Infantry Badge, and the Army Commendation Medal.

I am impressed with Chuck Hagel's work in community activities, in veterans' organizations, with his combat experience in behalf of our Nation, with his enthusiasm, and with his ability to communicate. It is particularly appropriate today that a combat Vietnam veteran be in a high position of responsibility in the Veterans' Administration.

As the VA's Deputy Administrator, he will assist Administrator Nimmo in carrying out the many and diverse responsibilities of the agency which serves over 30 million living veterans. With its 172 medical centers, 226 outpatient clinics, 96 nursing home care units, and 58 regional offices the Veterans' Administration is a large and complex agency. It administers many extremely important programs such as disability compensation benefits, veterans' pension, GI bill education program, and a National Cemetery System. The leadership of the VA faces a tremendous challenge, especially in these days of constrained resources when the needs of veterans are so great.

Chuck Hagel will have a special challenge in following so closely the outstanding service of his predecessor as Deputy Administrator—Rufus T. Wilson, who served during the 4 years prior to February 25, 1981. Rufus gave to the Veterans' Administration 25 years of dedicated and able service, holding many important positions within the VA. For 2 years he was Director of Congressional Liaison; he was director of three regional offices: St. Petersburg, Fla., Lincoln, Nebr., and Baltimore, Md. He has served as Chief Benefits Director, as Associate Deputy Administrator, as Director of Memorial Affairs, and as Acting Administrator of the VA. He received the National Civil Service Award and the VA's Exceptional Service Award—truly an impressive and outstanding record. Rufus is continuing work in behalf of veterans in his new position as minority counsel of the House Committee on Veterans' Affairs.

Members of our Senate Committee on Veterans' Affairs are of the view that Chuck Hagel will be of great service to the veterans of our Nation and will perform the tasks undertaken by him with skill and competence. I urge the Senate to support the unanimous vote of the Committee on Veterans' Affairs in confirming this nomination.

By Mr. PERCY, from the Committee on Foreign Relations, with reservations and with understandings:

Exec. C, 95th Cong., 1st sess. Tax Treaty with the Republic of the Philippines for the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on income and the encouragement of international trade and investment (Executive C), as clarified by a simultaneous Exchange of Notes (collectively referred to as the proposed treaty) (Rept. No. 97-39).

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mr. BENTSEN (for himself and Mr. DOLE):

S. 1910. A bill to amend section 403(B)(2) of the Internal Revenue Code of 1954 with respect to computation of the exclusion allowance for ministers and lay employees of a church; to add new section 430(B) annuity contract includes an annuity contract of a church, including a church pension board; to conform section 403(c) with recent amendments to 402(a)(1); to amend section 415(c)(4) to extend the special elections for section 430(b) annuity contracts to employees of churches or conventions or associations of churches and their agencies; to add a new section 415(c)(8) to permit a de minimis contribution amount in lieu of such elections; and to make a clarifying amendment to section 415(c) by adding a new paragraph (9) and conforming amendments to sections 415(d)(1), 415(d)(2), and 403(b)(2)(B); to the Committee on Finance.

By Mr. SPECTER (for himself and Mr. ROBERT C. BYRD):

S. 1911. A bill to amend the Internal Revenue Code of 1954 to provide for the establishment of reserves for mining land reclamation and for the deduction of amounts added to such reserves; to the Committee on Finance.

By Mr. STEVENS:

S. 1912. A bill to amend title 5, United States Code, to authorize the Administrator, Federal Aviation Administration, to pay additional premium pay to air traffic controllers and certain other employees of the Federal Aviation Administration, and for other purposes; to the Committee on Governmental Affairs.

By Mr. BOSCHWITZ:

S. 1913. A bill for the relief of Joseph R. Williams, major, U.S. Army Reserve; to the Committee on the Judiciary.

By Mr. NICKLES (for himself and Mr. BOREN):

S. 1914. A bill conferring jurisdiction on certain courts of the United States to hear and render judgment in connection with certain claims of the Cherokee Nation of Oklahoma; to the Committee on the Judiciary.

By Mr. STAFFORD (for himself, Mr. LEAHY, Mr. HUMPHREY, and Mr. RUDMAN):

S. 1915. A bill granting the consent of Congress to the compact between the States of New Hampshire and Vermont concerning solid waste; to the Committee on the Judiciary, by unanimous consent with instructions that when the bill is reported it be referred to the Committee on Environment and Public Works for not to exceed thirty days.

By Mr. CANNON (for himself and Mr. PACKWOOD):

S. 1916. A bill to amend the Federal Trade Commission Improvements Act of 1980 to provide for an evaluation by the Federal Trade Commission of the effects on interstate commerce and on consumers of acquisitions of domestic petroleum companies by major international energy concerns, and for other purposes; to the Committee on Commerce, Science, and Transportation.

SUBMISSION OF CONCURRENT AND SENATE RESOLUTIONS

The following concurrent resolutions and Senate resolutions were read, and referred, or acted upon, as indicated:

By Mr. HEFLIN (for himself, Mr. DENTON, Mr. BUMPERS, Mr. PRYOR, Mr. MATHIAS, Mr. SARBANES, Mr. FORD, Mr. HUDDLESTON, Mr. TOWER, Mr. BENTSEN, Mr. MATTINGLY, and Mr. RANDOLPH):

S. Res. 252. A resolution honoring and commending Paul W. "Bear" Bryant; considered and agreed to.

By Mr. DOLE (for himself, Mrs. KASSEBAUM, Mr. BAUCUS, Mr. D'AMATO, Mr. DURENBERGER, Mr. GRASSLEY, Mr. HATFIELD, Mr. HEFLIN, Mr. HOLLINGS, Mr. LUGAR, Mr. MATTINGLY, Mr. MELCHER, Mr. BAKER, and Mr. MURKOWSKI):

S. Res. 253. A resolution expressing the sense of the Senate on "National Circle K Week"; to the Committee on the Judiciary.

By Mr. BAKER:

S. Res. 254. A resolution authorizing the printing of "Enactment of a Law and Other Aspects of the Legislative Branch of Government" as a Senate document; considered and agreed to.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. BENTSEN (for himself and Mr. DOLE):

S. 1910. A bill to amend section 403(B)(2) of the Internal Revenue Code of 1954 with respect to computation of the exclusion allowance for ministers and lay employees of a church; to add new section 430(B) annuity contract includes an annuity contract of a church, including a church pension board; to conform section 403(c) with recent amendments to 402(a)(1); to amend section 415(c)(4) to extend the special elections for section 430(b) annuity contracts to employees of churches or conventions or associations of churches and their agencies; to add a new section 415(c)(8) to permit a de minimis contribution amount in lieu of such elections; and to make a clarifying amendment to section 415(c) by adding a new paragraph (9) as conforming amendments to sections 415(d)(1), 415(d)(2), and 403(b)(2)(B); to the Committee on Finance.

AMENDMENT OF INTERNAL REVENUE CODE RELATIVE TO RETIREMENT BENEFITS

● Mr. BENTSEN. Mr. President, I today reintroduce legislation to amend several provisions of the Internal Revenue Code that unfairly obstruct the acceptable accumulation of retirement benefits for the majority of clergymen and lay employees of the church denominations in this country. The major thrust of this legislation is to accord ministers and lay employees the same right of contribution to their retirement annuities that other classes of poorly compensated employees now enjoy. It represents a large step toward assuring our ministers and lay employees of adequate retirement allowances. I invite my colleagues to join with me in sponsoring this legislation.

By far most of the retirement benefits for ministers and lay employees are provided by annuities described in section 403(b) of the code. Our churches consider annuity programs as ideal retirement systems. Most denominations have used them for decades—some for over a century. They are completely portable and let church workers move freely within their denominations without losing retirement benefits.

Some of the section 403(b) annuity arrangements of the churches are defined contribution programs, while others are defined benefit programs. Section 403(b) imposes no requirement that the arrangement be of either kind. Most churches do not purchase retirement annuities from insurance companies. They administer and fund their own annuity programs. Some denominations fund their retirement annuities internally. But most have formed organizations called pension boards to administer and fund their annuity programs.

These pension boards are usually separately incorporated to protect pension assets. Whether the provider of pension benefits is separately incorporated or not, it fulfills the functions of the church with which it is associated in providing retirement benefits for its ministers and lay employees and is, thus, entitled to classification as an integral and inseparable part of the church.

Since 1958, the "exclusion allowance" in section 403(b)(2) has limited the amount that an employer can contribute to an annuity for an employee under this section without income tax consequences. That amount is the excess of first, 20 percent of the employee's includable compensation for the year times the employee's years of service with his or her employer over; second, the aggregate amounts contributed in prior years that have been excluded from income. Before the exclusion allowance, there were no limitations on contributions to section 403(b) annuities.

The exclusion allowance was designed to prevent then-existing abuses by certain part-time employees (S. Rept. No. 1983, 85th Cong., 2d sess. 36 (1958)). The exclusion allowance was also designed to permit larger-than-usual retirement annuity contributions late in the employee's career to compensate for the years when contributions were low or not made at all. These are called "catch-up" contributions. As I shall demonstrate later, the capacity to make catch-up contributions is extremely important to persons who are poorly compensated.

In 1974, we superimposed a further, and perhaps unnecessary, limitation on contributions to section 403(b) annuities by enacting section 415. We arbitrarily classified section 403(b) annuities as defined contribution plans, whether or not they fit that description, and required that contributions be no greater than the limits under section 415(c)(1).

This further limitation on employer contributions to section 403(b) annuities is the lesser of $25,000, adjusted by the increases in the cost of living, or 25 percent of the participant's compensation. When we imposed those limitations, we realized that the 25 percent of compensation limitation would seriously hinder the ability of poorly compensated employees to make catch-up contributions. So we devised in section 415(c)(4) certain elections a participant could make to override the 25-percent ceiling, except in the instance of the "(C)" election in section 415(c)(4), which substitutes the $25,000-25-percent limitation for the exclusion allowance.

The elections permit relatively high contributions late in the career of an employee who typically has a pattern of low contributions in the early stages of his career (Joint conference Rept. No. 93-1280, 93d Cong., 2d sess. 345 (1974)). But we made these elections available only to employees of educational organizations, hospitals, and home health service agencies. We did not then know that churches also used section 403(b) annuities extensively. We believe that church employees need the elections just as those classes of employees who now use them.

Ministers and lay employees are among the worst-compensated persons in this country. A minister begins his career at a salary of only $5,000 to $10,000. Rarely will his salary exceed $15,000 or $20,000—and then only at the end of his career. Lay employees generally earn even less. Missionaries receive pitiful salaries.

A typical pension of a minister is only $2,000 to $3,000 a year. Lay employees retire on less. These woefully inadequate pensions will continue if we do not amend the limitations we enacted in 1974.

Sections 403(b) and 415 create many problems for church employees. The compensation of many of them, particularly foreign missionaries, is so low that even the exclusion allowance makes worthwhile contributions impossible. They spend their lives in the mission field and expect to retire in the United States. But the combination of the exclusion allowance based on compensation and the high cost of living here makes retirement very difficult for these persons.

Second, the poor compensation of ministers and lay employees makes catchup contributions essential, but the 25-percent limitation renders them virtually impossible. During the first years of a minister's career, contributions may be a function of salary and, hence, be very small. The minister may be employed by a new or struggling church or church agency that cannot afford any plan contributions.

Under section 403(b) the minister may take a reduction in salary to permit his employer to purchase annuity benefits. But salary reduction is usually impractical because for many years he will need every penny he earns to feed and clothe his family, and educate his children. When a minister has reached age 50 or so, his compensation may increase enough for him to purchase additional annuity benefits. Then his personal and

family living expenses may have declined, and he could be in a position to use a part of his salary to supplement his retirement income.

Also, a minister's church may recognize that he is about to retire without an adequate retirement income and, with the help of the congregation, may wish to contribute more funds to bring his annuity up to an acceptable level. But because the 25-percent limitation of section 415(c)(1) is based upon an extremely low salary, it frustrates any effort, by salary reduction or otherwise, to enhance the minister's retirement benefits to any meaningful extent.

A third problem is that the "years-of-service" factor of the exclusion allowance is limited to years of service with the employee's present employer. In computing the exclusion allowance for any year, an employee is not given credit for any years of service with prior employers. In our hierarchical denominations, an employee may be considered employed by the denomination, even though his technical employer may be another church organization. But in our congregational denominations, each organization is a separate employer.

Many ministers and lay employees move frequently from one church to another within their denomination or among agencies of the denomination during their careers. In some denominations a minister or lay employee will change employment every 3 to 5 years. In computing the exclusion allowance, a minister or lay employee of a congregational denomination is, thus, given no credit for past service with other employers in the denomination. For any such employee with frequent job changes, this rule severely reduces the exclusion allowance and the ability to make catchup contributions.

A fourth problem is an emerging policy in the Internal Revenue Service that only licensed insurance companies may provide annuity contracts described in section 403(b). No provision in section 403(b) limits the provider of annuity contracts described in that section to licensed insurance companies. The Service has agreed with this conclusion in published revenue rulings and private letter rulings to church denominations. Yet a growing judgment in the Service contends that churches and church pension boards should not be permitted to provide section 403(b) annuity contracts as they have for many years. I see no reason in logic or equity for denying churches the right to provide section 403(b) annuities for their workers.

A fifth problem is technical. Like many secular plans, some church plans condition the nonforfeitability of rights on a factor such as continued service for a period of time. Nonetheless, contributions are made to the plan on behalf of the participants during the period of forfeitability.

In the case of a qualified annuity plan, it is clear in section 415(c)(1) that annual additions to a participant's account occur in the year to which a contribution is attributed, rather than lumped in the year in which the annuity contract becomes nonforfeitable. Similar treatment seems appropriate in the case of a section 403(b) annuity.

However, in the case of a section 403(b) annuity, it is not clear whether the same rule would apply. It would be unfortunate if several years of contributions were deemed made in the year the annuity became nonforfeitable because of the likelihood the section 415(c)(1) limitations would be exceeded. It is also unclear whether participants in such plans would have the right to the elections in section 415(c)(4) and the right to contribute the de minimis amount already discussed. I believe the law should be clarified in favor of giving such participants these rights.

Mr. President, an important feature of our bill is that a minimum includable compensation is deemed for church employees. This is related to the income poverty guideline calculated yearly by the Office of Management and Budget for an average family size. This provision insures that a minimum exclusion allowance will be available for a church employee even though his actual includable compensation does not produce one under the present formula.

My legislation corrects the inequity of the 25-percent limitation by extending the right to make the elections in section 415(c)(4) to employees of church denominations and their agencies. I believe these persons should have the same right to make the elections as employees of educational organizations, hospitals, and home health service agencies. This legislation also provides a de minimis amount of $10,000, which may be contributed without having to consider either the 25-percent limitation or the section 415(c)(4) elections. This de minimis amount is parallel to the de minimis amount for defined benefit plans in section 415(b)(4).

Like other limiting figures in section 415, it is subject to adjustment for increases in the cost of living, commencing with the calendar quarter beginning October 1, 1974. The de minimis amount will have a simplifying effect on the Code because the elections are difficult to understand and administer. It is intended that all limitations provided in section 415(c), including the de minimis amount, be subject to the further limitations of section 403(b)(2).

Thus, under this bill an employee could not make a "(C)" election under section 415(c)(4)—which substitutes the $25,000 25-percent limitation for the exclusion allowance—and be permitted a contribution of the de minimis account. Accordingly, the 1958 legislation establishing the exclusion allowance and subsequent legislation is in no way circumvented.

The term "agency" of a church is defined in this legislation by reference to that term in section 414(e)(3)(B)(ii) and means an exempt organization either controlled by or associated with a church or a convention or association of churches.

My legislation also would treat the service of a minister or lay employee with any church or church agency of a religious denomination as service with a single employer for purposes of computing the exclusion allowance. All years of service of a minister or lay employee for a church or a church agency, both of which must be described in section 501(c)(3), would be aggregated in determining the exclusion allowance for taxable years beginning after 1980. It would make no difference whether the years of service being aggregated occurred before or after 1980.

The bill will enable section 403(b) annuity contributions to be made on behalf of ministers and lay employees in order to provide them with retirement benefits based on years of service with the denomination rather than with the present employer. This rule will make sure the employees of all the denominations of this country are treated equally in connection with the years-of-service factor.

This legislation also makes express in the statute the long-standing position under current law that section 403(b) annuity contracts may be provided by a church or a convention or association of churches, whether the annuity contract is provided internally by the church or by a separately incorporated entity such as a pension board. A pension board means an organization described in section 414(e)(3)(A). That is an organization, the principal purpose or function of which is the administration or funding of a plan or program for the provision of retirement or welfare benefits for the employees of a church if such organization is controlled by or associated with such church.

This legislation provides that annual additions to a forfeitable section 403(b) annuity are, for purposes of the section 415 limitations, treated like annual additions to a nonforfeitable annuity. Annual additions are, thus, deemed made for the year to which they are attributed, rather than lumped in the year the annuity contract becomes nonforfeitable. This rule is in keeping with that regarding contributions to qualified defined contribution plans before a participant's rights are fully nonforfeitable. This legislation also insures participants in a forfeitable section 403(b) annuity of the right to make the special elections and the de minimis contribution amount.

Finally, the bill will make it clear that constructive receipt is not to apply to section 403(b) annuities by conforming section 403(c) to changes in section 402(a)(1) recently made by the Economy Recovery Tax Act of 1981. By removing the words "or made available" in section 403(c), we eliminate the unnecessary constructive receipt problems caused by them.

Mr. President, I urge my distinguished colleagues to support this bill, and ask unanimous consent that it be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1910

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. Section 403(b)(2)(B) of the Internal Revenue Code of 1954 is amended to read, as follows:

"(B) ELECTION TO HAVE ALLOWANCE DETER-

MINED UNDER SECTION 415 RULES.—In the case of an employee who makes an election under section 415(c)(4)(D) to have the provisions of section 415(c)(4)(C) (relating to special rule for section 403(b) contracts purchased by educational institutions, hospitals, home health service agencies, and churches or conventions or associations of churches and organizations described in section 414(e)(3)(B)(ii)) apply, the exclusion allowance for any such employee for the taxable year is the amount which could be contributed (under section 415 without regard to section 415(c)(8)) by his employer under a plan described in section 403(a) if the annuity contract for the benefit of such employee were treated as a defined contribution plan maintained by the employer."

SEC. 2. Section 403(b)(2) of the Internal Revenue Code of 1954 is amended by adding the following subparagraph:

"(C) NUMBER OF YEARS OF SERVICE FOR DULY ORDAINED, COMMISSIONED, OR LICENSED MINISTERS OR LAY EMPLOYEES.—For purposes of this subsection, all years of service by a duly ordained, commissioned, or licensed minister of a church, or by a lay person, as an employee of a church or a convention or association of churches or an organization described in section 414(e)(3)(B)(ii) of such church (or convention or association of churches) shall be considered as years of service for one employer, and all amounts contributed for annuity contracts by each such church (or convention or association of churches) or such organization, during such years for such minister or lay person, shall be considered to have been contributed by one employer. For purposes of the preceding sentence, the term 'church (or convention of association of churches)' shall have the same meaning as it does for purposes of section 414(e).".

SEC. 3. Section 403(b)(3) of the Internal Revenue Code of 1954 is amended by adding at the end the following sentence:

"Notwithstanding the preceding sentences, the includible compensation of an employee described in paragraph (2)(C) is not less than twice the nonfarm income poverty guideline of a family unit of 4 who resides in the contiguous United States for the prior taxable year in accordance with regulations prescribed by the Secretary. Such regulations shall provide for procedures to establish and revise the nonfarm income poverty guideline which are similar to the procedures used by the Office of Management and Budget for programs in which the poverty line is a criterion of eligibility.".

SEC. 4. Section 403(b) of the Internal Revenue Code of 1954 is amended by adding the following paragraph:

"(9) CERTAIN ANNUITY CONTRACTS.—For purposes of this subsection, the term 'annuity contract' includes an annuity contract provided by a church or a convention or association of churches, including an organization described in section 414(e)(3)(A).".

SEC. 5. The last sentence of section 403(c) (relating to taxability of beneficiary under nonqualified annuities or under annuities purchased by exempt organizations) is amended by striking out "or made available".

SEC. 6. Section 415(c)(4) of the Internal Revenue Code of 1954 is amended to read, as follows:

"(4) SPECIAL ELECTION FOR SECTION 403(b) CONTRACTS PURCHASED BY EDUCATIONAL ORGANIZATIONS, HOSPITALS, HOME HEALTH SERVICE AGENCIES, AND CHURCHES OR CONVENTIONS OR ASSOCIATIONS OF CHURCHES AND THEIR AGENCIES.—

"(A) In the case of amounts contributed for an annuity contract described in section 403(b) for the year in which occurs a participant's separation from the service with an educational organization, a hospital, a home health service agency, or a church or convention or association of churches or any organization described in section 414(e)(3)(B)(ii), at the election of the participant there is substituted for the amount specified in paragraph (1)(B) the amount of the exclusion allowance which would be determined under section 403(b)(2) (without regard to this section) for the participant's taxable year in which such separation occurs if the participant's years of service were computed only by taking into account his service for the employer, as determined for purposes of section 403(b)(2), during the period of years (not exceeding ten) ending on the date of such separation.

"(B) In the case of amounts contributed for an annuity contract described in section 403(b) for any year in the case of a participant who is an employee of an educational organization, a hospital, a home health service agency, or a church or convention or association of churches, or any organization described in section 414(e)(3)(B)(ii), at the election of the participant there is substituted for the amount specified in paragraph (1)(B) the least of—

"(i) 25 percent of the participant's includible compensation (as defined in section 403(b)(3)) plus $4,000,

"(ii) the amount of the exclusion allowance determined for the year under section 403(b)(2), or

"(iii) $15,000.

"(C) In the case of amounts contributed for an annuity contract described in section 403(b) for any year for a participant who is an employee of an educational organization, a hospital, a home health service agency, or a church or convention or association of churches or any organization described in section 414(e)(3)(B)(ii), at the election of the participant the provisions of section 403(b)(2)(A) shall not apply.

"(D)(i) The provisions of this paragraph apply only if the participant elects its application at the time and in the manner provided under regulations prescribed by the Secretary. Not more than one election may be made under subparagraph (A) by any participant. A participant who elects to have the provisions of subparagraph (A), (B), or (C) of this paragraph apply to him may not elect to have any other subparagraph of this paragraph apply to him. Any election made under this paragraph is irrevocable.

"(ii) For purposes of this paragraph the term 'educational organization' means an educational organization described in section 170(b)(1)(A)(ii).

"(iii) For purposes of this paragraph the term 'home health service agency' means an organization described in subsection 501(c)(3) which is exempt from tax under section 501(a) and which has been determined by the Secretary of Health, Education, and Welfare to be a home health agency (as defined in section 1861(o) of the Social Security Act).

"(iv) For purposes of this paragraph the term 'church or convention or association of churches' shall have the same meaning as it does for purposes of section 414(e).".

SEC. 7. Section 415(c) of the Internal Revenue Code of 1954 is amended by adding the following paragraph:

"(8) CERTAIN TOTAL ANNUAL CONTRIBUTIONS AND ADDITIONS NOT IN EXCESS OF $10,000.—In the case of a participant who is an employee of a hospital, an organization described in paragraph (4)(D), or an organization described in section 414(e)(3)(B)(ii), notwithstanding any other provision of this subsection, contributions and other additions for an annuity contract described in section 403(b) with respect to such participant, when expressed as an annual addition (within the meaning of subsection (c)(2)) to such participant's account, shall not be deemed to exceed the limitation of subsection (c)(1) if such annual addition is not in excess of $10,000.".

SEC. 8. Section 415(c) of the Internal Revenue Code of 1954 is amended by adding the following paragraph:

"(9) APPLICATION WITH SECTION 403(b)(6).—If the rights of an employee under an annuity contract described in subparagraphs (A) and (B) of section 403(b)(1) are forfeitable at the time any contribution is made to such contract and if the rights subsequently become nonforfeitable within the meaning of section 403(b)(6), this subsection applies to such contract as if the rights of the employee were nonforfeitable at such time.".

SEC. 9. Section 415(d)(1) of the Internal Revenue Code of 1954 is amended to read, as follows:

"(1) IN GENERAL.—The Secretary shall adjust annually—

"(A) the $75,000 amount in subsection (b)(1)(A),

"(B) the $25,000 amount in subsection (c)(1)(A),

"(C) in the case of a participant who is separated from service, the amount taken into account under subsection (b)(1)(B), and

"(D) the $10,000 amount in subsection (c)(8), for increases in the cost of living in accordance with regulations prescribed by the Secretary. Such regulations shall provide for adjustment procedures which are similar to the procedures used to adjust primary insurance amounts under section 215(i)(2)(A) of the Social Security Act.".

SEC. 10. Section 415(d)(2) of the Internal Revenue Code of 1954 is amended to read as follows:

"(2) BASE PERIODS.—The base period taken into account—

"(A) for purposes of subparagraphs (A), (B), and (D) of paragraph (1) is the calendar quarter beginning October 1, 1974, and

"(B) for purposes of subparagraph (C) of paragraph (1) is the last calendar quarter of the calendar year before the calendar year in which the participant is separated from service.".

SEC. 11. The amendments made by sections 1, 3, 5, 6, 7, 9, and 10 of this Act shall be effective for taxable years beginning after December 31, 1980. The amendments made by section 2 of this Act shall be effective in determining the exclusion allowance under section 403(b)(2) for taxable years beginning after December 31, 1980. "Years of service" prior to January 1, 1981, and thereafter shall be aggregated in accordance with these amendments. The amendment made by section 4 of this Act shall be effective for all taxable years prior and subsequent to January 1, 1981. The amendment made by section 8 of this Act shall be effective for all taxable years prior and subsequent to January 1, 1981, except that the taxpayer may elect, in accordance with regulations prescribed by the Secretary or his delegate, to have such amendment not be effective with respect to contributions made prior to January 1, 1981.●

By Mr. SPECTER (for himself and Mr. ROBERT C. BYRD):

S. 1911. A bill to amend the Internal Revenue Code of 1954 to provide for the establishment of reserves for mining land reclamation and for the deduction of amounts added to such reserves; to the Committee on Finance.

MINING RECLAMATION RESERVE ACT OF 1981

Mr. SPECTER. Mr. President, I am today along with Senator ROBERT C. BYRD introducing the Mining Reclamation Reserve Act of 1981.

The necessity for this legislation results from the position of the Internal Revenue Service that it will not follow

long-standing appellate court cases which permitted taxpayers to deduct the estimated costs of governmentally mandated reclamation expenses. In the 1950's, both the Third and Fourth Circuit Courts of Appeal concluded that deductions for accrued reclamation expenses were allowable under existing tax law. These decisions held that reclamation expenses could be accrued if two criteria were satisfied: The fact of an obligation to undertake reclamation of the mine site had occurred and the amount of the reclamation expenses could be reasonably estimated. However, the IRS has not followed those decisions. As a result, audit controversies and litigation have arisen over the tax treatment of accrued reclamation expenses. The intent with this bill is to clarify existing law.

This bill will help resolve these controversies by making it clear that accrued reclamation expenses attributable to surface mining are deductible if reclamation is required by the Surface Mining Reclamation and Control Act of 1977 or other applicable State or Federal law. This treatment is entirely consistent with proper accrual method accounting rules for accrual basis taxpayers.

In addition, this bill would extend the same treatment for this expense to cash basis taxpayers. With this consistent and comprehensive tax treatment for all taxpayers who are obligated to undertake reclamation of their surface mine sites, I believe there are significant tax, economic, and social policy goals to be served by the bill.

By prescribing appropriate treatment of accruals, the tax savings would assist companies in financially satisfying their obligations to undertake environmentally sound reclamation projects. Further, the legislation would benefit companies engaged in the extraction of coal, our most abundant source of domestic energy, and thereby have a potentially favorable impact in attaining our national energy goals. Moreover, the bill would address the basic inequity of mandating by law the expenditure of substantial sums of money for reclamation without clearly recognizing the obligation imposed for income tax purposes. It does not seem reasonable for the Federal Government on the one hand to impose a reclamation obligation to achieve desirable environmental goals but, on the other hand, to deny the existence of the obligation for purposes of its income tax laws.

It should be noted that under this bill the deduction for accrued reclamation expenditures can be recovered on a ratable method over the life of the mine. However, an argument has been made that reclamation expenditures, once reasonably determined, should be accrued and deducted at the time the ground is disturbed, since it is the act of disturbance which causes the obligation to be imposed.

Since we would want to consider existing practices of taxpayers accruing the obligation and the revenue implications, if any, of accruing and deducting the costs of reclamation at the time the obligation first arises, we reserve judgment on this issue at this time.

It is understood that interested persons, including taxpayers engaged in mining activities, will wish to make their views on this issue known during committee hearings. A broad review of this issue with Treasury officials participating will be helpful.

This bill, except for one technical difference, is identical with H.R. 4815, introduced on October 22, 1981, by Mr. BAILEY and Mr. MURPHY of the House of Representatives. I congratulate these Members of Congress for their leadership on this important effort to clarify this legislation and to aid domestic energy production.

By Mr. STEVENS:

S. 1912. A bill to amend title 5, United States Code, to authorize the Administrator, Federal Aviation Administration, to pay additional premium pay to air traffic controllers and certain other employees of the Federal Aviation Administration, and for other purposes; to the Committee on Governmental Affairs.

(The remarks of Mr. STEVENS on this legislation appear earlier in today's RECORD.)

By Mr. NICKLES (for himself and Mr. BOREN):

S. 1914. A bill conferring jurisdiction on certain courts of the United States to hear and render judgment in connection with certain claims of the Cherokee Nation of Oklahoma; to the Committee on the Judiciary.

ARKANSAS RIVERBED LEGISLATION

● Mr. NICKLES. Mr. President, the legislation I am introducing today with my colleague, Mr. BOREN, will allow the Cherokee Nation of Oklahoma to bring suit against the United States to determine and render judgment for any damages caused by the loss of minerals from the Arkansas Riverbed by the construction of a navigation system by the U.S. Corps of Engineers. This issue remains unresolved after many years of debate between the Cherokee Nation and various branches of the Federal Government.

In 1969, the U.S. Supreme Court, in the case entitled *Cherokee, Choctaw and Chickasaw Nations* v. *State of Oklahoma*, 397 U.S. 620, held that these three tribes owned certain portions of the Arkansas Riverbed. In further litigation, the U.S. District Court determined that the Cherokee Nation owned the entire bed of the Arkansas River within Cherokee country and the north half of the riverbed from the confluence of the Canadian River to the Arkansas State line.

From 1973 to 1975, the Secretary of the Interior under the directions from Congress conducted a study to determine the extent and value of the Arkansas Riverbed. The sand and gravel portion owned by the Cherokee Nation was estimated to have a value of $8.4 million. Unsuccessful attempts to make payment have failed through the legislative and appropriation process.

In 1979, a Solicitor's opinion from the Department of the Interior stated that—

Although I feel that the three Indian Nations are not legally entitled to compensation for the loss of its natural resources in the riverbed, I believe that, had the Secretary of the Interior realized that title to a portion of the Arkansas Riverbed was vested in the three Indian Nations, he would have proposed, at the time Congress was authorizing the construction of the McClellan-Kerr navigation system, that special legislation be enacted to compensate the Nations for the destruction of their property interests in the riverbed.

Mr. President, since this matter cannot be resolved through existing avenues, I believe that the time has come to allow the Cherokee Nation of Oklahoma to have the opportunity to take this issue to the courts for a final judgment. I urge my colleagues to quickly enact this legislation.●

● Mr. BOREN. Mr. President, I am pleased to join in cosponsoring S. 1914, relating to the Cherokee Nation of Oklahoma. This bill authorizes the Cherokee Nation to sue in Federal court for recovery of damages stemming from the loss of tribal assets during and after construction of the Arkansas River navigation system in Oklahoma.

The Cherokee Nation has been frustrated at every turn in seeking compensation for the loss of its sand and gravel assets in the Arkansas River. The U.S. Supreme Court ruled in 1970 that the Cherokees do, in fact, hold title to a portion of the riverbed. After the Supreme Court ruling, an appraisal by the Interior Department set the value of these lost assets at approximately $8.5 million.

Subsequent to this appraisal, the Interior Department ruled it was not legally obligated to compensate the Cherokee Nation for the loss of these assets. The purpose of S. 1914 is to allow the Cherokees to challenge the Interior Department"s ruling in court. I want to stress that passage of this legislation will not automatically make payment to the Cherokees, but will simply provide it the opportunity to present its case for compensation in a court of law.

Mr. President, I call upon the Senate to act expeditiously in approving S. 1914. The Cherokee Nation is entitled to its day in court. I am confident that upon reviewing the facts of this matter, the Senate will act favorably in adopting this bill.●

By Mr. STAFFORD (for himself, Mr. LEAHY, Mr. HUMPHREY, and Mr. RUDMAN):

S. 1915. A bill granting the consent of Congress to the compact between the States of New Hampshire and Vermont concerning solid waste; to the Committee on the Judiciary, and that when the bill is reported by the Judiciary Committee it be referred to the Committee on Environment and Public Works for a period not to exceed 30 days.

SOLID WASTE PROCESSING FACILITIES

● Mr. STAFFORD. Mr. President, I am introducing a bill to grant consent to the States of Vermont and New Hampshire to enter into cooperative agreements to construct and operate facilities for processing solid waste.●

By Mr. CANNON (for himself and Mr. PACKWOOD):

S. 1916. A bill to amend the Federal Trade Commission Improvements Act of

1980 to provide for an evaluation by the Federal Trade Commission of the effects on interstate commerce and on consumers of acquisitions of domestic petroleum companies by major international energy concerns, and for other purposes; to the Committee on Commerce, Science, and Transportation.

FEDERAL TRADE COMMISSION PETROLEUM SUPPLY AND EFFECTS EVALUATION ACT OF 1981

● Mr. CANNON. Mr. President, today Senator PACKWOOD and I are introducing a bill to amend the Federal Trade Commission Act of 1980 to evaluate the effects on interstate commerce and the consumer of acquisitions of domestic petroleum companies by major international concerns. The necessity for such a study has been made clear by the recent events surrounding the hostile attempt by the giant Mobil Oil Corp. to gain approval for their proposed acquisition of Marathon Oil Co.

Recently, the Committee on Commerce, Science, and Transportation in a joint hearing with the House Committee on Energy and Commerce held hearings on this proposed acquisition. The committees heard testimony from such witnesses as an ad hoc coalition of independent small businessmen who are resellers of Marathon products, the attorney general of Ohio, and Marathon Oil Corp. These witnesses were concerned not only about the potential anticompetitive effects on the consumer of this merger. They were also concerned about the domino effect if the merger is approved which would result in a wave of other mergers in the industry.

Yesterday, newspapers reported that Mobil Corp. is attempting to skirt the policy of the antitrust laws. Last Monday, the U.S. District Court for the Northern District of Ohio, ruled that Mobil's $6.5 billion takeover bid for Marathon would violate Federal antitrust laws. Marathon was granted a preliminary injunction blocking the Mobil bid after finding that Marathon had shown a "reasonable probability" of proving that a merger of the two companies would substantially lessen competition in the relevant market. In response to this and to overcome antitrust obstacles, it is reported that Mobil Corp. will make a new offer to purchase Marathon Oil, this time jointly with another leading oil company.

The two commerce committees will again jointly meet on December 14, 1981, to examine these latest developments as well as to consider the necessity for the study called for in this legislation. Congress would benefit from the information provided from such a study as Congress has the responsibility to investigate public policy concerns associated with this merger. Congress also needs facts to evaluate the overall picture of the industry and market in which it operates. Perhaps, Congress may even decide, after careful evaluation, that our present antitrust laws are inadequate to prevent undesirable mergers.

This legislation requires the Federal Trade Commission to study the issue for 1 year. The study requires the FTC to evaluate the trend of major international energy concerns to affect interstate commerce by the acquisition of domestic petroleum supplies by acquiring domestic petroleum companies rather than through the exploration and development of new domestic petroleum reserves; the effects of such acquisitions on the exploration, development, and availability to consumers of domestic petroleum reserves; the effect of such acquisitions on the prices to consumers of petroleum products; and the effect of such acquisitions on interstate commerce in general, including the effects on the prices to consumers of transportation and marketing of petroleum products. The Commission already has many of the relevant documents in its possession as a result of its preliminary investigation in the Exxon case.

Mr. President, we will also be sending a letter to the FTC requesting a study and seeking the support of our House counterparts in making that request.

It is also my intention to introduce legislation next week which would place a 1-year moratorium on the acquisition of domestic petroleum companies by major international concerns.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1916

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Federal Trade Commission Petroleum Supply and Effects Evaluation Act of 1981".

FINDINGS AND PURPOSE

SEC. 2. (a) The Congress finds that—

(1) the production and distribution of energy resources, including petroleum products, can have a major impact on interstate commerce and competition, as well as on the consumers of such resources;

(2) action by the Federal Trade Commission undertaken in the course of a proposed merger within the Commission's jurisdiction may have the decisive impact upon its success or failure and upon both interstate commerce and competition;

(3) major international energy concerns have demonstrated an intent to allocate substantial financial resources to acquire domestic petroleum companies; and

(4) acquisitions of domestic petroleum companies may eliminate important competitive checks on the market power of major international energy concerns and such acquisitions may be against public policy.

(b) It is the purpose of this Act to provide for an evaluation by the Federal Trade Commission of the increasing control over domestic energy supplies by major international energy concerns, particularly the impacts of such control on consumer prices of petroleum supplies and the availability to consumers of petroleum products within all regions of the United States.

AMENDMENT TO THE FEDERAL TRADE COMMISSION IMPROVEMENTS ACT OF 1980

SEC. 3. (a) The Federal Trade Commission Improvements Act of 1980 is amended by redesignating section 23 as section 24, and by inserting after section 22 the following new section:

"ENERGY SUPPLY IMPACTS OF ACQUISITIONS OF DOMESTIC PETROLEUM COMPANIES

"SEC. 23. (a) As used in this section, the term—

"(1) 'major international energy concern' means any person which is engaged in commerce in the United States—whose average net production of crude oil for calendar year 1980 exceeded 500,000 barrels per day and (A) of which more than 40 percent was from sources outside the United States; or (B) which is under the control of one or more foreign persons;

"(2) 'domestic petroleum company' means any person which is engaged in commerce in the United States, which is not a major international energy concern, and whose average net production of crude oil from sources within the United States for calendar year 1980 exceeded 50,000 barrels per day;

"(3) 'foreign person' means (A) any individual who is not a citizen of the United States; (B) any person which is organized under the laws of or has its principal place of business in a country other than the United States; or (C) any other person which is owned or controlled directly or indirectly by one or more of such individuals or persons;

"(4) 'affiliate', when used with respect to any major international energy concern, means any person which controls, is controlled by, or is under common control with a major international energy concern;

"(5) 'control' means the power, directly or indirectly, to direct or cause the direction of the management and policies of a person through ownership of voting securities or otherwise;

"(6) 'person' includes (A) any individual; (B) any corporation, company, association, firm, partnership, society, trust, joint venture, or joint stock company; and (C) the government of any country or any political subdivision or agency thereof; and

"(7) 'evaluation period' means the period beginning December 15, 1981 and ending December 15, 1982.

"(b) Notwithstanding the provisions of section 1 of the Act of June 16, 1933, the Federal Trade Commission shall undertake an evaluation of the impacts on interstate commerce and on consumers of acquisitions of domestic petroleum companies by major international energy concerns, and report its findings and recommendations to the Congress not later than December 15, 1982.

"(c) In conducting the investigation and evaluation required by subsection (b) of this section, the Federal Trade Commission shall evaluate—

"(1) the trend of major international energy concerns to affect interstate commerce by the acquisition of domestic petroleum supplies by acquiring domestic petroleum companies rather than through the exploration and development of new domestic petroleum reserves;

"(2) the effect of such acquisitions on the exploration, development and availability to consumers of domestic petroleum reserves;

"(3) the effect of such acquisitions on the prices to consumers of petroleum products; and

"(4) the effect of such acquisitions on interstate commerce in general, including the effect on the prices to consumers of transportation and marketing of petroleum products.".●

● Mr. PACKWOOD. Mr. President, I am pleased to join my colleague, Senator CANNON, in sponsoring this legislation.

During this past year, a merger wave of distressing proportions has swept this country. Acquisitions of unprecedented size have been proposed, and some have been consummated. Most recently, we have watched as both Mobil Corp. and United States Steel have engaged in a multibillion dollar bidding war for Marathon Oil Co. If Mobil succeeds, the merger will create the largest industrial company in the United States.

Acquisitions of domestic oil companies by international oil concerns, such as the Mobil-Marathon situation, cause a special concern for consumers. Not only may competition be seriously diminished by horizontal acquisitions of such unprecedented size, but consumers may be adversely affected to the extent such acquisitions lead to diminished petroleum development and production. The use of oil profits for the acquisition of one petroleum-producing firm by another adds nothing to our Nation's supply of oil reserves.

Mr. President, the impact of oil company mergers on consumers is not well understood. The House and Senate Commerce Committees are jointly conducting hearings on the Mobil-Marathon merger, and others have made important contributions to this effort. More needs to be done, however, and the legislation being introduced today seeks to address this need.

The Federal Trade Commission has already devoted years of study to the petroleum industry. With this background and its historical concern with both competition and consumer issues, the Commission may be uniquely suited to contribute to the existing body of knowledge respecting oil company mergers. A study of the kind proposed today will be most helpful in evaluating the need for additional antimerger legislation, or possibly a short-term moratorium on such acquisitions.●

ADDITIONAL COSPONSORS

S. 1645

At the request of Mr. MOYNIHAN, the Senator from Minnesota (Mr. DURENBERGER) was added as a cosponsor of S. 1645, a bill to let funds in individual retirement accounts be used to purchase collectibles.

S. 1770

At the request of Mr. INOUYE, the Senator from Arizona (Mr. GOLDWATER) was added as a cosponsor of S. 1770, a bill to direct the Secretary of the Department of Transportation to conduct an indipendent study to determine the adequacy of certain industry practices and Federal Aviation Administration rules and regulations, and for other purposes.

S. 1848

At the request of Mr. GORTON, the Senator from Wyoming (Mr. SIMPSON) was added as a cosponsor of S. 1848, a bill to amend the Congressional Budget Act of 1974 to impose limits on the amount of total budget outlays contained in concurrent resolutions on the budget, and for other purposes.

S. 1888

At the request of Mr. SYMMS, the Senator from Texas (Mr. BENTSEN), and the Senator from Montana (Mr. BAUCUS) were added as cosponsors of S. 1888, a bill to amend the Internal Revenue Code of 1954 to clarify the tax treatment of variable annuity contracts.

S. 1896

At the request of Mr. PELL, the Senator from Missouri (Mr. EAGLETON) was added as a cosponsor of S. 1896, a bill to amend the Internal Revenue Code of 1954 to repeal the special leasing provisions enacted by the Economic Recovery Tax Act of 1981.

SENATE JOINT RESOLUTION 121

At the request of Mr. MITCHELL, the Senator from Pennsylvania (Mr. HEINZ), the Senator from Missouri (Mr. DANFORTH), and the Senator from Iowa (Mr. GRASSLEY) were added as cosponsors of Senate Joint Resolution 121, a joint resolution to provide for the designation of the year 1982 as the "Bicentennial Year of the American Bald Eagle" and the designation of June 20, 1982, as "National Bald Eagle Day."

SENATE CONCURRENT RESOLUTION 26

At the request of Mr. NUNN, the Senator from Georgia (Mr. MATTINGLY) was added as a cosponsor of Senate Concurrent Resolution 26, a concurrent resolution expressing the sense of the Congress that the Congress should encourage educational programs in the area of science and technology; and that the Congress encourages the establishment of a National Science Center for Communications and Electronics.

AMENDMENT NO. 650

At the request of Mr. ROBERT C. BYRD, his name was added as a cosponsor of amendment No. 650 proposed to H.R. 4995, a bill making appropriations for the Department of Defense for the fiscal year ending September 30, 1982, and for other purposes.

UP AMENDMENT NO. 751

At the request of Mr. DOLE, the Senator from Delaware (Mr. ROTH), the Senator from Washington (Mr. GORTON), the Senator from Rhode Island (Mr. CHAFEE), the Senator from Kansas (Mrs. KASSEBAUM), the Senator from Wisconsin (Mr. KASTEN), the Senator from Iowa (Mr. JEPSEN), the Senator from Iowa (Mr. GRASSLEY), the Senator from Illinois (Mr. PERCY), the Senator from Idaho (Mr. SYMMS), the Senator from Utah (Mr. HATCH), the Senator from Oregon (Mr. HATFIELD), and the Senator from South Dakota (Mr. PRESSLER) were added as cosponsors of UP amendment No. 751 proposed to H.R. 4995, a bill making appropriations for the Department of Defense for the fiscal year ending September 30, 1982, and for other purposes.

SENATE RESOLUTION 252—RESOLUTION COMMENDING PAUL W. "BEAR" BRYANT

Mr. HEFLIN (for himself, Mr. DENTON, Mr. BUMPERS, Mr. PRYOR, Mr. MATHIAS, Mr. SARBANES, Mr. FORD, Mr. HUDDLESTON, Mr. TOWER, Mr. BENTSEN, Mr. MATTINGLY, and Mr. RANDOLPH) submitted the following resolution; which was considered and agreed to:

S. RES. 252

Whereas Paul W. "Bear" Bryant is head football coach and athletic director at the University of Alabama;

Whereas this native of Arkansas has previously coached at the University of Maryland, the University of Kentucky, and Texas A&M University during his thirty-seven-year career;

Whereas he has coached football teams that have won or shared six National Championships and twelve Southeastern Conference Championships;

Whereas he has been named Southeastern Conference Coach of the Century and National Coach of the Decade and has received countless other honors and awards;

Whereas on November 28, 1981, he won his 315th game, surpassing the record for most victories by a head coach in college football, long held by the late Amos Alonzo Stagg; and

Whereas it is appropriate and fitting to recognize him on the occasion of this accomplishment: Now, therefore, be it

Resolved, That the Senate honors and commends Paul W. "Bear" Bryant for his achievements in, and contributions to, college athletics in the United States.

SEC. 2. The Secretary of the Senate shall transmit a copy of this resolution to Paul W. "Bear" Bryant, University of Alabama, University of Maryland, University of Kentucky, Texas A&M University, and the Mayors of Moro Bottom, Arkansas and Fordyce, Arkansas.

SENATE RESOLUTION 253—RESOLUTION RELATING TO "NATIONAL CIRCLE K WEEK"

Mr. DOLE (for himself, Mrs. KASSEBAUM, Mr. BAUCUS, Mr. D'AMATO, Mr. DURENBERGER, Mr. GRASSLEY, Mr. HATFIELD, Mr. HEFLIN, Mr. HOLLINGS, Mr. LUGAR, Mr. MATTINGLY, Mr. MELCHER, Mr. BAKER, and Mr. MURKOWSKI) submitted the following resolution; which was referred to the Committee on the Judiciary:

S. RES. 253

Whereas Circle K International is an organization of college students sponsored by Kiwanis International that provides a means for responsible community action by students;

Whereas Circle K International emphasizes the advantages of the democratic way of life and provides the opportunity for leadership training in service;

Whereas Circle K International encourages the adoption and the application of high social, business, and professional standards;

Whereas Circle K International promotes the creation and maintenance of righteousness, justice, patriotism, and good will; and

Whereas the members of Circle K International are presently involved in service projects to help teenagers, the elderly, and the handicapped in need of support under the theme, "Together for Tomorrow": Now, therefore, be it

Resolved, That it is the sense of the Senate that the week of February 7, 1982, through February 13, 1982, be proclaimed as "National Circle K Week".

SEC. 2. The Secretary of the Senate shall transmit a copy of this resolution to the president of Circle K International.

● Mr. DOLE. Mr. President, the Senator from Kansas is today submitting a resolution to proclaim the week of February 7 through February 13, 1982, "National Circle K Week."

For 45 years, Circle K has given college students an opportunity to help those in need, and render a valuable service to our society. The goals that these young people keep in mind are admirable, and their actions are commendable. Whether working on behalf of teenagers, older Americans, or handicapped citizens in need of assistance, this organization has its heart and soul in the right place—wherever help is needed.

Circle K began as a Washington State University fraternity in 1936 with the sponsorship of the Pullman, Wash.,

Kiwanis Club. The organization became international in 1955, under the sponsorship of Kiwanis International. Today, with more than 13,500 members of nearly 800 clubs in 7 countries, it is the world's largest collegiate service organization.

Mr. President, the Senator from Kansas introduced a similar resolution last year, which gained the approval of this body. It is my hope that my colleagues will again join in this worthy effort, and proclaim the week of February 7, "National Circle K Week."●

SENATE RESOLUTION 254—RESOLUTION AUTHORIZING THE PRINTING OF "ENACTMENT OF A LAW AND OTHER ASPECTS OF THE LEGISLATIVE BRANCH OF GOVERNMENT"

Mr. BAKER submitted the following resolution; which was considered and agreed to:

S. RES. 254

Resolved, That a document entitled "Enactment of a Law and Other Aspects of the Legislative Branch of Government", relative to the procedural steps in the legislative process, prepared by the Parliamentarian of the Senate, under the direction of the Secretary of the Senate, be printed as a Senate document.

SEC. 2. There shall be printed eleven thousand additional copies for the use of the Committee on Rules and Administration.

NOTICES OF HEARINGS

SELECT COMMITTEE ON INDIAN AFFAIRS

Mr. COHEN. Mr. President, I would like to announce for the information of the Senate and the public the scheduling of two public hearings before the Senate Select Committee on Indian Affairs.

A committee hearing is scheduled for December 9, 1981, at 9:30 a.m. in room 357, Russell Senate Office Building. Testimony is invited regarding S. 1890, a bill to authorize the Secretary of the Interior to disburse certain trust funds of the Lac Courte Oreilles Band of Lake Superior Chippewa Indians of Wisconsin, and for other purposes.

For further information regarding the hearing, you may wish to contact Ms. Jo Jo Hunt of the committee staff at 224–2251. Those wishing to testify or who wish to submit a written statement for the hearing record should write to the Senate Select Committee on Indian Affairs, 6317 Dirksen Senate Office Building, Washington, D.C. 20510.

A second hearing is also scheduled for December 9, 1981, at 10 a.m. in room 357, Russell Senate Office Building. The hearing is an oversight hearing on Indian elderly programs and will focus on the Federal responsibility for funding Indian elderly projects as well as any problems tribes have encountered under the Older Americans Act, problems with elderly projects interfacing and coordinating with Bureau of Indian Affairs social services, and recommendations for improvements in programs to assist the Indian elderly.

For further information regarding the Indian aging hearing, you may wish to contact Ms. Jo Jo Hunt of the committee staff at 224–2251. Those wishing to testify or who wish to submit a written statement for the hearing record should write to the Senate Select Committee on Indian Affairs, 6317 Dirksen Senate Office Building, Washington, D.C. 20510.

COMMITTEE ON AGRICULTURE, NUTRITION, AND FORESTRY

Mr. HELMS. Mr. President, I wish to announce that nomination hearings have been scheduled by the Senate Agriculture Committee on the nominations of Ralph Ball and W. Proctor Scarboro to be members of the Federal Farm Credit Board of the Farm Credit Administration. The hearings will be held on Wednesday, December 9, beginning at 10 a.m. in room 324 Russell Building.

Anyone wishing further information should contact Denise Alexander or John Cozart of the Agriculture Committee staff at 224–2035.

ADDITIONAL STATEMENTS

GLENN AMENDMENT, UP NO. 742, AS MODIFIED

● Mr. PELL. Mr. President, on Thursday, December 3, the Senate briefly considered an amendment to the Defense appropriations bill dealing with SALT adherence. For procedural reasons, the amendment was tabled, and the Senate did not have a chance for a vote on the merits.

The purpose of the Glenn amendment was to express the sense of the Congress that the United States should not take any action in connection with its defense programs which would undercut existing SALT agreements. The amendment would not be binding and would allow the President leeway if he determines and notifies the Congress that the Soviet Union is no longer restraining itself or that such action is essential to the national security interest.

I strongly supported this amendment and was a cosponsor.

The critical importance of the amendment was highlighted in recent hearings by the Committee on Foreign Relations on strategic weapons proposals. In those hearings, the concept that the United States should continue to respect the existing SALT regime was supported by the Secretaries of State and Defense and the Chairman of the Joint Chiefs of Staff. For example, Gen. David Jones, told the committee that the Joint Chiefs support the administration's position that we do nothing to undercut SALT as long as the Soviets do not do anything inconsistent.

I should note here that General Jones affirmed to the committee that the Joint Chiefs continue to believe, as they testified during the Carter administration, that the unratified SALT II treaty makes a modest but useful contribution to our national security.

Mr. President, the Anti-Ballistic Missile Treaty of 1972 continues to make a valuable contribution to strategic stability. It is also clear that the 1972 Interim Agreement and the 1979 SALT Treaty also are helping to apply some limits to the strategic arms competition. Under the terms of those agreements, the Russians continue to take such useful steps as the dismantling of their older ballistic missile submarines in order to stay within the stated limit.

I believe that it is essential that the new arms program approved by the Congress be coupled as closely as possible to strong, effective, and verifiable arms control agreements. Without arms control, the Soviet threat will be unconstrained. While there are those who believe that the Russians would not do more, they simply cannot be sure. And no one in full possession of his faculties should deliberately choose a murkier nuclear future than we now face.

We must not lose sight of the urgency of doing all that we can to reduce the threat of nuclear war. That is the essential purpose of our nuclear arsenals, and it should be the essential purpose of those of us who participate in determining our Nation's strategic directions. General Jones told the Committee on Foreign Relations that an all-out nuclear exchange against population centers would be the greatest catastrophe in history by many orders of magnitude.

Mr. President, I commend Senator GLENN for his initiative. The amendment would have sent a very clear message to the President of the United States that the Congress understands the imperatives we face and is willing to support him in every effort to preserve nuclear stability and rationality, while moving toward future strategic arms limitation agreements.

I hope that such a message can be conveyed to the President at an early date. With negotiations on theater nuclear forces already in progress and with new strategic arms talks in prospect, the President faces a major test of the willingness and ability of his administration to enhance our national security by achieving better controls on the nuclear arms competition and bringing about actual reductions. It was our intent in the amendment to bolster the President in this effort. I wish him every success.●

SOVIETS ATTACK SENATOR DENTON

● Mr. EAST. Mr. President, the Foreign Broadcast Information Service recently reprinted an article from the Soviet journal, Sovetskaya Rossiya by TASS correspondent B. Ivanov entitled "The Enemies of Détente: Who Are They? The Admiral's Crusade," which is a vicious propaganda attack on my good friend and colleague, Senator JEREMIAH DENTON of Alabama.

Ivanov's attack is especially interesting because it is mainly a recapitulation of similar, equally unfounded accusations against Senator DENTON found in American left-wing publications: Senator DENTON is singled out by the Soviets and their allies because of his strong anti-Communist views, his able chairmanship of the Senate Subcommittee on Security and Terrorism—where I am proud to serve with him—and his profound religious and moral commitments.

Mr. President, the Communists would not attack Senator DENTON unless they felt threatened by him, his activities,

and his example, Ivanov does not mention Admiral DENTON's tribulation as a prisoner of war in Vietnam during which he was subjected to brainwashing, solitary confinement, and physical torture for 7½ years at the hands of Ivanov's Vietcong friends, and of which Senator DENTON has written so eloquently in his book, "When Hell Was in Session." Instead of providing this kind of information for Ivanov's captive readers, Ivanov prefers to lie about DENTON's war record, and describes him as "one of the first to support that bandit adventure," the Vietnam war. Ivanov is so eager to smear that he resorts to insulting Senator DENTON by calling him a racist, a charge so baseless even his political opponents in this country would never think of it.

Senator DENTON's appointment as chairman of the Security and Terrorism Subcommittee, says Ivanov, was a "real triumph for the exteme reactionary forces in Washington," and "JEREMIAH DENTON has taken over the torch of obscurantism and anticommunism from Joe McCarthy."

Mr. President, there is little need to dwell on each of the little obscenities Ivanov has concocted about Senator DENTON, for the insulting and provocative nature of them is evident, as is the fact that the Soviets feel deeply threatened by Senator DENTON and his achievements. Perhaps in the Soviet Union, where a free press and accurate information have been unknown for over 60 years, there is someone thoroughly propagandized enough to believe this nonsense and take it seriously. But its transparent falsity is clear to every individual in the free world—still free, I might add, because of the efforts and sacrifices by men of the caliber of JEREMIAH DENTON.

The Soviet Union is the largest and most tyrannical state in human history. It has been responsible for the murder and torture of millions of human beings in its own country and has actively exported its homicidal and genocidal doctrines and activities everywhere it has been able to do so. Its KGB, founded by Lenin, is the largest secret police and terror organization in the world. It presides over millions of slaves in the concentration camps of the Gulag, and the Soviets themselves have become, since the demise of Nazi Germany, the most racist state in the world. No doubt we are supposed to take seriously its attacks on men like JEREMIAH DENTON, but Mr. Ivanov and his trained propagandists will have to do better than this.

Ivanov's drivel would be laughable were it not for the fact that the Soviet citizenry is prisoner to this kind of rubbish and must read it exclusively day after day. Ivanov can lie with impunity because he knows his readers are forbidden from reading contrary views. How brave of Mr. Ivanov to smear an American Senator while knowing full well the KGB will silence any critic.

We in the free world who do not fear open discussion and free speech, we who know JEREMIAH DENTON and his achievements know how ridiculous Ivanov's rantings really are.

Senator DENTON's heroism in Vietnam, his example as a public leader, his personal conduct as an American and as a human being, make JEREMIAH DENTON one of the most inspiring men I have ever had the honor to know; and I pray that someday the poor slaves and victims of the Soviet empire will have an opportunity to learn the truth about him and the challenge he offers their masters.●

SOLVING THE PRODUCTIVITY PROBLEM

● Mr. HART. Mr. President, the future course of American living standards depends critically on the restoration of our productivity growth. As we resume our debate on taxes and spending for 1982, we should not forget that the decisions we make in the next few weeks can have a significant long-term impact on our ability to solve the productivity problem. A new monograph issued by the Center for Democratic Policy, entitled "Strengthening the Economy: Studies in Productivity," provides some important insights about this challenge.

The monograph provides three separate analyses of the productivity problem and outlines several different proposals for solving it. All three analyses contend that we must take steps well beyond the recently enacted tax cuts and budget reductions. They recommend programs to boost saving and investment, promote development of new high-productivity industries, restructure worker-management relations, and strengthen education, research, and development.

In the first paper by MIT Prof. Lester Thurow, the declining-productivity problem is described as one of "a thousand cuts," requiring "a thousand Band-Aids." He cites demographic and structural factors, rising energy prices, tight money, and slow-growth policies as among the most important factors. To solve the problem, Thurow recommends tax reform to cut consumption and increase saving and investment, as well as a program to augment investment in high-productivity industries. I ask that this thoughtful analysis be included in the RECORD.

The article follows:

SOLVING THE PRODUCTIVITY PROBLEM

(By Lester C. Thurow)

If American standards of living are to resume their upward course, productivity growth must be restored. If we Americans are to maintain a standard of living equal to that of our international competitors such as the Japanese and Germans, productivity growth must not just be restored to its old levels, but raised to levels it has never achieved in American economic history.

This is not going to be easy. If an autopsy on American productivity were being written, it would list the cause of death as "death by a thousand cuts." There is no one thing to which the decline can be attributed; there is no one magic button that can be pushed to raise the economy from the dead. The cure will require a thousand bandaids for each of the thousand cuts. And each of those bandaids is painful and going to be resisted by some vested interest in the United States. Everyone wants a cure to the production problem, but everyone wants the cure to be imposed on someone else. If we cannot find the political will to impose the costs upon ourselves in some fair manner, we simply will not solve the problems facing us.

What is clear is that cure is not to be found by returning to the "good old days." The good old days weren't good enough to compete in today's world and some very real factors (the end of cheap energy, the completion of the shift from agriculture to industry) mean that it is impossible to return to the good old days in any case.

The United States will have to develop new industries and new techniques of managing the economy if it is to survive in the future. There is nothing in the stars that gives America a permanent right to the number one economy. It wasn't always that way (American *per capita* GNP only exceeded that of Great Britain around 1900). It isn't now that way (the U.S. no longer has the world's highest *per capita* GNP). And it may never again be that way.

SOURCES OF THE PRODUCTIVITY DECLINE

Depending upon the exact data set used, American productivity has been falling slightly (0.2 percent per year according to the official productivity statistics) or rising slightly (0.2 percent per year according to the National Income Accounts) since 1977. But for all practical purposes, both indicate that U.S. productivity growth has effectively stopped.

Productivity often declines when output is falling (workers are not laid off as fast as output falls), but the 1977 to 1980 period was not one of falling output. Real output was growing 2 percent per year. As a result, 1977–80 is unique in American economic history. It is the first period with rising output and no productivity growth.

TABLE 1.—GROWTH OF INDUSTRIAL PRODUCTIVITY

[In percent]

Industry	1948–65	1965–72	1972–77	1977–79
Agriculture forestry fisheries	5.0	4.1	1.6	2.3
Mining	4.3	2.4	−4.8	−4.2
Construction	3.4	−1.8	−1.4	−5.9
Nondurable manufacturing	3.3	3.2	3.2	1.9
Durable manufacturing	2.8	2.3	2.5	.2
Transportation	3.1	2.4	1.9	−.2
Communications	5.4	4.5	6.5	4.4
Electricity, gas, sanitary services	6.3	3.4	2.4	−.9
Wholesale trade	3.2	4.0	0	−1.2
Retail trade	2.6	1.8	1.6	1.1
Finance, insurance, real estate	2.0	.8	1.7	−1.6
Service	1.2	1.6	1.0	.7
Private business economy	3.3	2.3	1.8	.2

Note: All sectoral data come from U.S. Department of Commerce, "National Income and Product Accounts of the United States" Survey of Current Business, July various years, Tables 6.2 and 6.11.

While 1977–80 is historically unique, it is unfortunately not a radical departure from recent experience. It merely marks a shift into the negative range after a long period of declining productivity growth. From 1948 to 1965 productivity grew 3.3 percent per year using National Income Account data. This was followed by a 2.3 percent growth rate from 1965 to 1972 and a 1.8 percent growth rate from 1972 to 1977.[1]

An examination of a detailed industrial breakdown does little to mitigate the gloom (see Table 1). Only one industry (wholesale trade) had a faster rate of growth of productivity from 1965 to 1972 than from 1948 to 1965 and only two industries (communications and finance) were able to improve significantly on their 1965 to 1972 performance in the 1972 to 1977 period. In the final period only agriculture is growing more rapidly than it was in the previous period.

Footnotes at end of article.

Where there were no industries with falling productivity in the first period, there were six industries with falling productivity in the final period.

Since there are large differences in the levels of productivity among industries (in 1979 productivity was almost five times as high in finance as it was in agriculture), shifts in the industrial mix can have a large impact on aggregate productivity (see Table 2). National productivity is enhanced if high productivity industries are expanding or if low productivity industries are contracting. Conversely, productivity is reduced if low productivity industries are growing or if high productivity industries are contracting.

AGRICULTURE—THE END OF AN ERA

From 1948 to 1965 the industrial mix was shifting to enhance productivity gains. In 1948 agriculture's productivity was just 40 percent of the national average. Every worker released from agriculture and retained by industry represented a 60 percentage point jump in productivity. And millions of workers were released. From 1948 to 1965, 9.1 billion manhours of work (or 8 percent of the total number of hours worked in the entire private economy) left agriculture to enter into industrial employment. But this process was ending in the 1965 to 1972 period (only 1.8 billion man-hours were released from agriculture) and stopped entirely after 1972 (less than 0.1 billion manhours were released).[2]

As agriculture declined from 17 to 5 percent of all hours worked, it made a major contribution to aggregate productivity. A very low productivity industry was getting smaller and its workers were being transferred to jobs with much higher productivity. But this source of national productivity growth had to end, as it did after 1972, accounting for about 10 percent of the observed drop in productivity growth between the first and fourth periods of time.[3,4]

But this decline is not reversible. It simply marks a new stage in our industrial development.

A MYSTERY IN CONSTRUCTION

Construction productivity has now been falling continually since the late 1960s. Where it was once above the national average, it is now 35 percent below the national average and falling at almost 6 percent per year.

This performance is a major national disaster since construction has two effects on national productivity. First, it is an industry in its own right. But second, and probably more important, it builds the plant and installs the equipment of every other industry. If construction becomes inefficient plant and equipment costs rise. Less plant and equipment are bought and productivity grows more slowly in every other industry.

If construction productivity had continued to grow at its 1948–65 pace throughout the entire period of time, 26 percent of the decline in national productivity would have disappeared.

To say that 26 percent of the national decline has been identified, however, is not to say that there is a cure for 26 percent of the problem. The decline in construction productivity is a major mystery. Since no one knows what caused it, no one knows how to reverse it.

Various explanations have been advanced but none of them is entirely convincing. The problem may even not exist, but be the result of a statistical artifact produced by errors in the way that output is measured in the construction industry. Since construction does not produce a homogeneous output, it is difficult to measure how much output is being produced. Dollar expenditures on construction must be deflated by some price index to yield real output. And if some government statistician is overstating construction inflation, others will be understating construction output. But if output is understated, productivity will also be understated since productivity is simply value added divided by hours of work.

TABLE 2.—LEVELS OF INDUSTRIAL PRODUCTIVITY

Industry	Output per man-hour 1948 (1972 dollars)	Percent of the national average	Output per man-hour 1979 (1972 dollars)	Percent of the national average
Agriculture, forestry, fisheries	$1.48	40	$5.08	61
Mining	6.04	161	10.47	125
Construction	4.16	111	5.40	65
Nondurable manufacturing	3.44	92	9.05	108
Durable manufacturing	4.25	114	8.00	96
Transportation	4.15	110	9.00	108
Communications	4.15	110	20.75	249
Electricity, gas, sanitary services	5.66	151	22.37	268
Wholesale trade	4.51	121	9.85	118
Retail trade	2.74	73	5.32	64
Finance, insurance, real estate	15.01	401	23.19	278
Services	3.58	96	5.19	62
Average	3.74	100	8.35	100

Note: All sectoral data come from U.S. Department of Commerce, "National Income and Product Accounts of the United States" Survey of Current Business, July various years. Tables 6.2 and 6.11.

Some pieces of evidence point in this direction. From 1954 to 1977 construction output is thought to be up 58 percent but the use of construction materials (steel, concrete) rose 133 percent.[5] Can 1977 buildings really take twice as many materials as 1954 buildings? Maybe, but hardly likely. On the other hand, the government makes extensive use of private indexes of construction costs in calculating its own price index. If the government estimates are wrong then major builders, such as the Turner Construction Company, and major users of construction, such as the American Telephone & Telegraph Company and the Bureau of Public Roads, do not really know what it costs them to build.

Alternatively, construction productivity may have gotten bogged down in the fights over nuclear generating plants or a shift from building simple interstate highways across the wide-open spaces of Kansas to building the inner-city highways with their millions of wires and pipes to be moved before construction can even begin. Or construction workers may simply be lazy and doing less work per hour than their fathers.

While there is no doubt that construction is a major part of the national slowdown in productivity growth, there are a great many doubts as to what can be done about it.

A GEOLOGICAL BLOW IN MINING

The reasons for the decline in mining productivity are as clear as those in construction are mysterious. Mining productivity in 1979 was only 72 percent of what it was in 1972, but there is a simple explanation.

Approximately 80 percent of the answer is found in oil—the major mineral "mined" in the United States. America has simply reached a state of geological depletion. Production is falling in old oil wells and new wells yield less oil per well drilled. As a consequence it simply takes more hours of work to produce a barrel of oil. And this geological fact of life explains about 80 percent of the decline in mining productivity.

The remaining 20 percent of the explanation is found in the other minerals mined in the United States. Here environmental protection and occupational safety probably play the major role—there is little evidence of rapid depletion. If open pit mines have to be filled and the land restored to its natural contours, more hours of work are required to mine a ton of coal. If better ventilation and more tunnel supports are required to protect underground miners, more hours of work are necessary to mine a ton of copper.

While mining explains another 10 percent of the national productivity decline, only about one-fifth of this decline is controllable. The rest is a geological blow from mother nature.

FALLING DEMAND IN UTILITIES

Productivity growth in electrical and gas utilities declined from plus 6.3 percent in the first period of time to minus 0.9 percent in the past period of time.

Here again there is an easy explanation but no easy solution. Utilities employ most of their workers in maintaining their distribution network. Relatively few are employed producing gas or electricity. In periods of time when average household consumption is going up very rapidly, productivity rises dramatically. Output is up but more workers do not have to be employed since the extra output can be distributed through the existing distribution network. But when household consumption falls, productivity falls. Less output is being produced but the same work force is necessary to maintain the distribution network.

Utility productivity is a simple direct function of the rate of growth of output. If output grows rapidly, as it did from 1948 to 1965, productivity grows rapidly. If output falls, as it did from 1977 to 1979, productivity falls.

Although utilities explain another 10 percent of the national productivity decline, this part of the decline is in a class with oil depletion and agriculture when it comes to remedies. If energy prices rise rapidly, energy consumption will fall—it is even a national policy to make it fall. But if consumption falls or slows down, productivity must fall or slow down with it.

Together mining and utilities represent the direct "energy" blow to productivity. The decline in oil productivity is one of the reasons that energy prices are up and higher energy prices lead to lower utility productivity. When these direct effects are added to the indirect effects of having to devote investment funds to saving energy rather than raising labor productivity (see below), energy problems probably explain about 25 percent of the productivity decline.

SERVICES: BRAKING PRODUCTIVITY

Services are the mirror image of agriculture. In terms of employment, agriculture was a rapidly declining low-productivity industry. In terms of employment, services are a rapidly growing low-employment productivity industry. Whereas movement out of agriculture was enhancing productivity growth, movement into services is dampening it.

Services growth has been braking productivity growth since World War II. But the brakes have been gradually tightening as service productivity falls relative to the national average. In 1948 service productivity

Footnotes at end of article.

was 96 percent of the national average. Moving a worker into services only lowered productivity 4 percentage points. But by 1979 service productivity had fallen to 62 percent of the national average. Every worker moved into services represented a 38 percent decline in aggregate productivity.

From 1972 to 1979 services absorbed 33 percent of all of the hours of work added to the private economy. Of these 6.8 billion hours of work 42 percent went into health care, largely into nursing homes, and 29 percent went into business services (lawyers, accountants, consultants).

Our economy also added thousands of workers in occupations such as security guards. From 1972 to 1979 an extra 167,000 private security guards have been added to the economy, but security guards are pure negative productivity. They guard existing output and so add to hours of work, but they do not produce any new output and so add nothing to output. The result: declining productivity.

If services employment had not grown relative to the rest of the economy, about 5 percent of the observed decline in national productivity would have disappeared. If service productivity had also grown in pace with the national average, another 8 percent of the national decline disappears. As a result services account for about 13 percent of the national decline.

But the problem of nursing homes, lawyers, and security guards illustrates the difficulties of dealing with service productivity. Bathing and feeding old people may be a low-productivity occupation, but each of us wants to be bathed and fed when old. Lawyers may be a drag on productivity, but we are all using them in increasing numbers. Productivity statistics do not care whether you or some thief has your new stereo, but you care.

INFLATION, THE BABY BOOM, AND CAPITAL INVESTMENT

Particular problems in agriculture, construction, mining utilities and services explain about 69 percent of the productivity decline between the first and fourth periods of time. Most of the remaining 31 percent of the decline can be traced to the interaction of two other factors—the macro-economic policies used to fight inflation and the baby boom.

The amount of equipment per worker—the capital-labor ratio—is one of the key ingredients in productivity growth. With more equipment, workers can produce more output per hour, but new capital is also a carrier of new technologies. To put new, more productive technologies to work, workers must be provided with the new equipment that embodies those new technologies. Without new physical capital it is impossible to translate new knowledge into new output.

In the United States the capital-labor ratio grew at 2.8 percent per year from 1948 to 1965, accelerated to 3.2 percent per year from 1965 to 1972, and then plunged to 1.4 percent per year from 1972 to 1978. And in 1978 the capital-labor ratio actually fell 1.3 percent.[6]

But the slowdown in the growth of the capital-labor ratio did not occur because Americans were investing less. From 1948 to 1965 Americans invested 9.5 percent of the GNP in private plant and equipment. But in the period from 1977 to 1980, while productivity was stagnant, they invested 11.3 percent of GNP.[7] The capital stock was actually growing slightly faster in the 1972–78 period than in the 1948–65 period (3.4 versus 3.3 percent, but the labor force was growing much faster as the post-World War II baby boom entered the working ages.

The growth in hours worked gradually accelerated from a 0.4 percent per year rate in the 1948–65 period to 4.4 percent per year in the 1977–79 period. With an eleven-fold increase in the rate of growth of the private labor force and only a slight increase in plant and equipment investment, simple algebra requires a sharp slowdown in the rate of growth of the capital-labor ratio.

The problem was nicely illustrated in 1978. Americans invested 10.4 percent of their GNP in plant and equipment. The capital stock rose 3.4 percent. But hours of work rose 4.8 percent and the capital-labor ratio fell 1.3 percent. When the capital stock data for 1979 are available, it will undoubtedly exhibit an even larger reduction in the capital-labor ratio. The baby boom effects will, of course, be much less by the mid and late 1980s.

Pollution and energy problems may also be compounding the baby boom effect. To the extent that capital investment is used to control pollution or cut energy usage, there is less investment available to be used to raise productivity. No hard estimates exist to indicate how much of our plant and equipment investment has gone into energy savings since 1972, but about 5 percent of our plant and equipment investment has gone into pollution controls.[8]

If pollution and energy expenditures were excluded from capital investment, the slowdown in the rate of growth of the capital-labor ratio would be even sharper. But even without considering the investment drained off to fight pollution and cut energy usage, the observed slowdown in the growth of equipment per worker explains about 20 percent of the productivity growth decline. If pollution, energy, and the role of capital in carrying new technologies are considered, capital plays an even more important role in the productivity decline than this 20 percent indicates.

But to accelerate the growth of the capital-labor ratio would have required Americans to invest a much larger fraction of their GNP in plant and equipment. There is less equipment per worker not because Americans are investing less, but because there are many more Americans in the labor force. But less consumption is the necessary converse of more investment. And less consumption inevitably means a sharp reduction in standards of living until the baby boom has been equipped with capital, until pollution has been brought under control, until energy usage has been reduced to levels appropriate to the price of energy, and until America has caught up with the new technologies employed by our international competitors. And if the baby boom wants housing, even greater cuts will have to be made in the forms of consumption.

But it is important to understand that the slowdown in the growth of the capital-labor ratio was not irrational or a mistake. It was a perfectly rational response to the economic facts of life. Firms invest to raise the capital-labor ratio when it is profitable to do so. When the cost of capital falls relative to the price of labor, firms find it cheaper to raise production by investing in capital than by hiring more workers. The result is a rising capital-labor ratio. But when capital becomes more expensive relative to workers, firms find it cheaper to raise production by hiring more workers and the capital-labor ratio falls.

Unfortunately, from the point of view of productivity, economic signals have been calling for a slowdown or reduction in the capital-labor ratio. Looking just at the purchase price of new capital equipment relative to the compensation (wages plus fringe benefits) of labor, the price of capital was falling 2.7 percent per year relative to the price of labor from 1948 to 1965.[9] But from 1972 to 1979 the relative price of capital was only falling at a rate of 0.6 percent per year (see Table 3).

The purchase price of new capital equipment is also only part of the total costs of capital. Energy is required to run capital equipment and the price of energy becomes part of the total cost of acquiring and using capital. If energy costs are included, capital became cheaper relative to labor at the rate of 2.9 percent per year from 1948 to 1965 (energy prices were falling).[10] But from 1972 to 1979, the situation had reversed itself. Energy prices were rising and the costs of capital rose relative to that of labor at the rate of 3.1 percent per year.

If financing charges—the interest that must be paid to borrow the money necessary to buy the capital equipment—are included along with energy and purchase price, the turnaround is even more dramatic. While total capital costs fell 1.1 percent per year relative to total labor costs in the first period, total capital costs rose 5.8 percent per year relative to total labor costs after 1972.

Given such a sharp shift in the movement of relative prices, it is not surprising that there was a sharp slowdown in the rate of growth of the capital-labor ratio. Businesses were doing exactly what economic incentives were demanding. But, regardless of the cause, a more slowly growing capital-labor ratio inevitably leads to lower productivity growth.

While investment has not fallen, there is an easy explanation for why it did not rise faster than it did. America has attempted to stop inflation with slow growth and tight monetary and fiscal policies. Whatever their success in stopping inflation, these policies retard investment in a number of ways.

As has already been seen, tight monetary policies raise interest rates and directly increase the cost of capital. Corporate bond rates have gone from 3½ percent in the 1950s to close to 20 percent in 1982. When capital costs, including interest costs, rise, firms invest less.

TABLE 3.—GROWTH IN THE PRICE OF LABOR VIS-A-VIS CAPITAL

[Annual rate of change in relative prices, in percent]

Year	Price of labor		
	Purchase price of capital	Purchase price plus energy costs	Purchasee price plus energy costs plus interest costs
1948–65	+2.7	+2.9	+1.1
1965–72	+2.3	+1.8	−4.5
1972–79	+.6	−3.1	−5.3

Note: These figures are calculated using the National Accounts implicit price deflator for nonresidential plant and equipment investment and the National Income Accounts estimate of compensation per full time equivalent employee. The PPL index for industrial energy was used for energy prices and the interest rate used was the Baa corporate bond rate.

But deflation also means recessions, falling production, and idle capital capacity. Why should firms invest in more capital capacity when they already have vast amounts of idle capital capacity? They shouldn't and very few do. The result is less capital per worker.

While rising interest rates increase the cost of capital during recessions, recessions are supposed to stop inflation by retarding wage increases. With high unempolyment, union workers cannot demand high wage increases. With surplus labor available, nonunion employers have no incentive to give wage increases. But to the extent that this anti-inflation policy succeeds, it lowers the relative price of labor. With capital rising in relative price and labor falling in relative price, firms have every incentive to invest less. While the baby boom would have kept wages from rising relative to capital costs as fast in the 1970s as they did in the 1950s, anti-inflationary policies exacerbated the problem.

In addition, recessions and higher unemployment have a direct impact on productivity. In our mythology, recessions cause firms to redouble their efforts to improve productivity. Since they cannot increase

Footnotes at end of article.

sales, they focus on cutting costs. While some of this effect undoubtedly exists, the basic impact of recessions is very different.

When output falls, firms cannot or do not fire overhead labor (managers, sales or design staffs, researchers) as fast as output falls. Skilled workers also are kept on the payroll long after they are needed because firms worry that they will not be able to hire them back in the next boom. Add to this the costs of massive firings (morale problems, severance costs, psychological distress for both firer and firee) and it is easy to understand why labor is not fired as fast as output falls.

Productivity grows most rapidly when output is growing rapidly. All of the preceding factors are reversed. Workers who have been kept on the payroll are put back to work. Production goes up without hiring more labor, but labor shortages also induce new efforts to find more productive, capital intensive methods of production. Wages are rising and labor is hard to find. Part of the reason that Japanese and German productivity has grown more rapidly than ours since World War II is that firms in these two countries have had to operate in a world of perpetual labor shortages.

Adequate capital investment cannot be separated from macro-economic policies. Regardless of the tax incentives provided, investment only takes place in an atmosphere of economic growth. If the nation deliberately interrupts economic growth to stop inflation, it will inevitably stop investment.

SOLUTIONS

Productivity is like a gold mine. Every vein of ore, no matter how rich initially, eventually peters out. If the same amount of gold is to be withdrawn from the mine, new veins of ore must be perpetually found. Many of the traditional veins of American productivity gains have petered out. Large amounts of labor will never again be shifted out of agriculture. Mining productivity is going to continue to fall in oil-well drilling—more hours of work will be needed to find a barrel of oil. Utility productivity is not going to resume its rapid growth so long as energy prices are rising relative to incomes. Many of the sources of the slowdown in productivity growth are now curable, but must be offset with new sources of productivity gains.

As the previous analysis indicated, government played a limited role in the productivity slowdown. Most of it can be traced to other factors. Just as government was only part of the problem, so will it only be part of the solution. If the productivity problem is left to actions in Washington, D.C., it will not be solved. Everyone has contributed to the productivity problem and everyone will have to change habitual patterns of action to cure the productivity problem.

Many of the needed changes will have to occur within private industry. The Japanese make a distinction between what they call "hard" and "soft" productivity gains. Hard productivity gains are those brought about by more investment or more research and development. Soft productivity gains are those brought about by a better motivated work force willing to act to raise productivity. Soft productivity is an important part of our competitors' success. American firms are going to have to find some technique for getting a work force that is as well motivated and trained as their Japanese competitors. Japanese tax laws and rules and regulations are always going to be as good as ours. Ours can be improved, but that is not going to solve the productivity problem by itself.

The solutions that are suggested in the rest of this paper focus on public actions, since society can only improve the public framework within which private actions are taken. These suggestions will not cure the productivity problem. They will only make it possible for the private sector to cure the productivity problem. In the end, quality-control circles may prove to be more important than tax laws.

CUTTING CONSUMPTION TO STIMULATE INVESTMENT

Since many of the causes of the productivity problem are not reversible, the attention of the public has quite naturally focused on investment. If investment could be made to grow more rapidly, more investment would offset other negative factors and lead to a higher rate of growth of productivity. Every extra 1 percent of the GNP devoted to plant and equipment investment raises the growth of productivity by approximately 0.2 percentage points.[11] And to the extent that the new investment allows the country to use new technologies, the gains may be even greater.

Technically, it is easy to stimulate investment. If the tax system were biased in favor of capital investment—principally by eliminating the corporate income tax—and fiscal and monetary policies were operated to promote growth, low interest rates and consistent economic expansion, there is little doubt that investment would rise.

But to provide the funds necessary to bias the tax system in favor of capital, the tax system has to be biased against consumption. To pay for massive investment tax cuts, consumption taxes would have to be raised unless the revenue could be found by cutting defense or further cuts in social programs. Neither course, however, is likely or desirable.

To raise productivity and become more competitive in international markets, American savings rates must rise. It simply isn't possible to survive as a major industrial power with Americans saving 5 percent of their personal income while Germans save 14 percent and Japanese save more than 20 percent of their incomes.

To accomplish this objective, the long-run strategy should be to shift the American tax structure toward a system of progressive consumption taxes. There are essentially three elements to such a shift. The tax deductibility of consumer and mortgage credit should be limited and gradually phased out of the system. The present progressive federal income tax should be replaced with a progressive consumption tax. And the corporate income tax and the Social Security tax should be replaced with a progressive Value Added Tax.

By allowing the tax deductibility of consumer and mortgage interest, American tax laws encourage consumption. The country must now encourage savings rather than consumption. This means eliminating the tax-deductibility of consumer loans and limiting the tax deductibility of mortgage interest. Mortgage interest deductions should be limited to one house (society has no interest in subsidizing the ownership of second homes) and there should be an upper limit on the amount of interest that can be deducted. There is no magic line where this limit should be drawn, but the limit should be set relative to the cost of the median home. Mortgage interest might only be tax deductible up to loans that were twice the median mortgage loan.

The progressive federal income tax can easily be made into a progressive consumption tax by allowing unlimited Keogh and IRA accounts. Individuals should be allowed to deposit money in tax-free savings accounts for any purpose and for any period of time. But whenever they withdraw money from these accounts they would pay taxes. Thus a $50,000 family that saved $5,000 would owe taxes on its consumption—$45,000. If the same family withdrew $5,000 from its savings accounts it would owe taxes on $55,000—its consumption. Savings would be rewarded; consumption penalized.

President Reagan's tax cuts are highly inefficient when it comes to stimulating saving. If Americans continue to save 5 percent of their income, as they have been doing in recent years, the Reagan tax cuts will only be 5 percent efficient—savings will go up 5 cents for every $1 cut in federal tax revenue. In contrast, unlimited Keoghs or IRA accounts would be highly efficient. A taxpayer at the 50 percent bracket would have to save $2 to get a $1 benefit in lower tax payments—and that benefit only represents a tax postponement. To get savings up, the rich do not need to be made richer and the poor poorer.

By combining an income tax credit with a Value Added Tax, it is possible to construct a progressive Value Added Tax. Suppose the enactment of a 10 percent Value Added Tax and a $1,000 income tax credit. A family spending $10,000 would pay $1,000 in value added taxes as it spends its $10,000, but get the $1,000 back in the form of an income tax credit. The $20,000 family would pay $2,000, get $1,000 back and be a net taxpayer of $1,000. The $30,000 family would pay $2,000 net and so on up the income ladder.

The revenue from the Value Added Tax should be used to finish eliminating the corporate income tax (by 1990 it will for all practical purposes cease to exist because of the depreciation laws adopted in 1981) and to eliminate the Social Security tax. The corporate income tax should be eliminated to stimulate investment and to prevent the distortions that will emerge from the 1981 tax revisions. The Congress essentially adopted in 1981 a backdoor elimination of the corporate income tax law. But by eliminating the tax with accelerated depreciation, they chose to eliminate the tax for capital-intensive corporations while retaining it for labor-intensive firms. This creates a tremendous tax incentive to merge capital and labor-intensive firms. But there is every reason to believe that tax-induced mergers will harm the operational efficiency of the economy. They need to be prevented. But they can be prevented only by eliminating the corporate tax for everyone—not just the capital-intensive firms.

There are a number of reasons for replacing the Social Security tax. It is a tax on earnings and work. In the context of supply-side incentives for investment, similar incentives should be given for work and human capital investment. With the elimination of the corporate income tax, the Social Security tax represents a tremendous distortion of relative prices. By 1986, a 14.3 percent tax will be levied on the first $46,000 of earnings. This raises the price of labor relative to the price of capital and tells firms to fire workers and buy equipment. Hardly a message that any society wishes to give. The payroll tax places much more of a burden on the poor than a progressive Value Added Tax. The Value Added Tax encourages workers to save. Workers get their Social Security benefits cheaper if they save. The VAT is also a vehicle that could be used to generate a surplus in the Social Security trust funds to fund current benefits, prepare for the retirement of the baby boom generation in 2012, and raise national savings.

To introduce the tax without an inflationary shock, however, it will be necessary to purge the Consumer Price Index of indirect business taxes so that the adoption of a Value Added Tax does not increase inflation by raising the Consumer Price Index and, hence, indexed wages. Mrs. Thatcher did not do this in Great Britain and essentially doubled the rate of inflation when she increased the Value Added Tax.

DIFFERENT MONETARY POLICIES

The United States will have to fight inflation with something other than tight monetary policies and slow economic growth if

Footnotes at end of article.

rapid productivity growth is to resume. New technologies and investments will not be put in place rapidly with high interest rates and stagnant markets.

If the tax system were shifted toward a structure of progressive consumption taxes and used to run a surplus in the government budget, budgetary policies could play a major role in lowering interest rates by raising the supply of savings. A budgetary surplus is also the fairest way to raise the national savings rate. Governments can and should play a major role in raising savings.

The current Reagan strategy is tight monetary policies (high interest rates) and easy fiscal policies (big deficits). Given the problems facing the United States, the strategy could be exactly the reverse—low interest rates and large surpluses to raise national savings.

A NATIONAL FINANCE COMMITTEE

But investment problems go beyond those of simply raising the fraction of the GNP devoted to plant and equipment investment. Other countries not only invest more; they have a more systematic method of moving funds into new growth areas. The Japanese operate through MITI, the Ministry of Trade and Industry, and the Bank of Japan. The French and Germans have a much more important investment-banking sector that is often backed by government. In each case, the aim is to direct capital into new growth areas—sunrise industries.

To compete in world markets the United States is going to have to develop some equivalent institutions. What it needs is the national equivalent of the corporate finance committee. As in any corporation, this committee would not seek to plan the economy, but to direct some of the economy's investment funds into new growth areas.

Consider the semiconductor industry—an industry pioneered in America. This industry is in the process of shifting to much larger and more capital-intensive techniques of operation. In an economy such as the United States, where industries operate with low debt-to-equity ratios and depend upon retained earnings to fuel investment, the shift to the new production processes occurs at a pace that is limited by current profits.

But the Japanese are entering this industry with massive amounts of debt capital ultimately lent by the Bank of Japan. Their aim is to jump directly into large scale, capital-intensive techniques of production; proceed rapidly down the learning curve; sell at prices lower than those of the rest of the world; and capture most, if not all, of the market. If American industry limits its investments to those that can be financed by retained earnings, we will simply be driven out of the semiconductor industry.

The problem cannot be solved by pretending that it does not exist. U.S. industry simply will not be able to compete in the modern world of international trade without changes in the ways that it has traditionally operated. With perpetually falling exchange rates, Americans will always be able to export. But falling exchange rates do not preserve our ability to compete as equals. If we choose to compete with low productivity and falling exchange rates, we are deliberately allowing our standard of living to fall relative to the rest of the industrialized world. We may also lose our comparative advantage in high-technology products and essentially become an exporter only of raw materials and agricultural products.

Maybe America would be better off if no government engaged in investment banking, but other governments do. And American firms have to compete with foreign firms that are backed by investment facilities that new small American firms do not have. Unless a country is able to take advantage of product innovations and develop new large-scale sunrise manufacturing industries to replace its old large-scale sunset industries, it does very little good to develop a product first.
